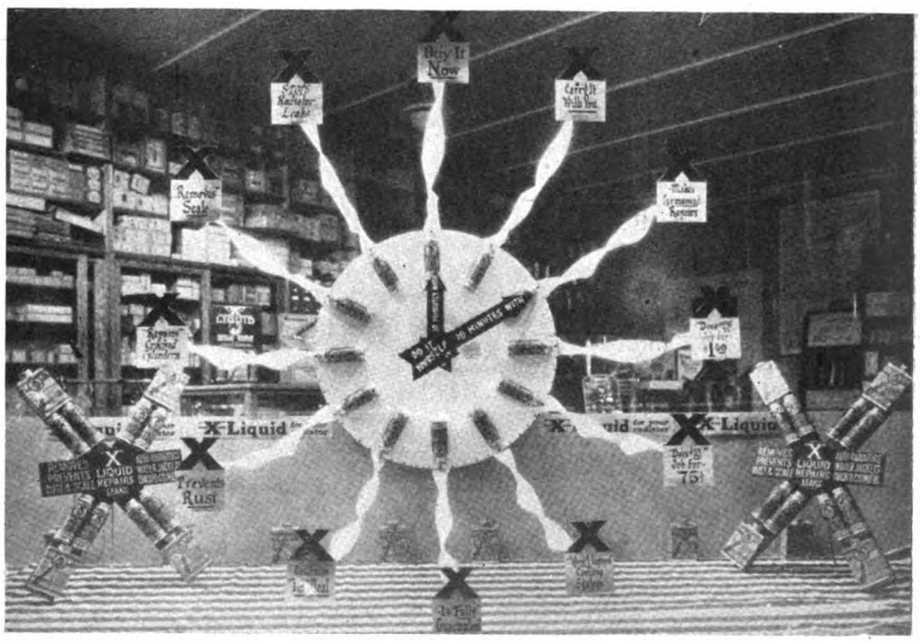
KILLING TIME?
Does your engine loaf on the job at times? Better be fixed now.



ABOUT TIME
Have you seen the dash-board clock we sell?

EARLY AND LATE
Always somebody on the job here to give you service.

Many Forms of Service at This Station

THE Sun-Ray Service Station at Elkhart, Ind., fairly radiates service to the motoring public. Here are some of the things this station does for the public: Drains crank cases free of charge, puts water in radiator free of charge, inspects differential free of charge, has cool drinking water for motorists, wash rooms for motorists and touring information with location of nearby camps for all motorists.

Prize Winning Windows

Among the many striking displays of "X" Liquid, made by jobbers and dealers throughout the country in the recent contest conducted by X Laboratories, Brooklyn, N. Y., were the two shown. The upper one was done by the Kansas City Auto Supply Co., jobber, and the lower by Glen St. Service Station, Glens Falls, N. Y., dealer. The upper window shows the effective use of a large object in a window to attract attention to the merchandise displayed and put across a selling message. The lower window differs in that the product itself occupies the center of attention with the selling message contributory in the display. In this window the signs carrying the selling messages were attached to the window, the streamers running to the clock arrangement on which the merchandise was displayed

Power and Economy Depend on Carbureter Adjustment

General Principles of Adjustment Applying to All Carbureters and Detailed Instructions for Some Widely Used Models

(*Continued from August 16 issue*)

Hupmobile

The Hupmobile carbureter is a Stromberg which is provided with two gasoline adjustments, an auxiliary air adjustment, and a butterfly valve adjustment. The main adjustment controls the gasoline supply from the float chamber and regulates the mixture through the whole driving range. Turning the main adjustment nut anti-clockwise, or to the left, raises the needle and gives more gas. Turning it in a clockwise direction gives less gas. If an entirely new adjustment is necessary, the main adjusting nut is turned clockwise, until the needle seats. It is then opened three complete turns to the left, which will give a mixture considerably rich. The mixture is then regulated for the best driving. The gasoline for idling is taken in above the throttle and controlled by dilution with air from the outside of the carbureter, as regulated by the idling adjusting screw, which should be between one-half and one and one-half turns to the left, or anti-clockwise from the seating position. The idling adjustment is effected only when the throttle is nearly closed. In order to obtain maximum power during the extremely hot months, it is advisable to place a steel gasket, with a ⅜ in. hole in the center, assembled with copper asbestos gasket on either side between the exhaust manifold and intake manifold heater. The small hole in the gasket reduces the amount of exhaust gas which passes around the intake manifold, thereby cooling the charge to secure maximum power.

Studebaker

Studebaker uses two carbureter types, a Ball & Ball on the Big Six and a Stromberg plain tube type on the Special Six. The Ball & Ball carbureter is of the two-stage type. Through a given range of throttle opening, all the gas is drawn through the first stage throat. The capacity of the first stage is sufficient to take care of all level road speeds up to approximately 40 m. p. h. The cam arm integral with the main throttle shaft coming into contact with the roller on the arm of the second stage throttle shaft, causes the second stage throttle to open under additional pressure. The resultant action is to draw an additional or secondary supply of gas mixture through the second stage throat. The gasoline drawn through the first stage throat, after leaving the first stage jet, passes through a tube, which is adjustable in height and is known as the idling adjustment screw. By raising this screw, the idling mixture becomes leaner and by lowering the screw the mixture is made richer. This is the only adjustment on the carbureter, aside from the throttle stop.

The Stromberg plain tube carbureter, used on the special Six, has fixed air and gasoline passages which cannot be adjusted. It is impossible to enrich the mixture with high speed adjustment, beyond the quantity, as regulated by the high speed jets. It is, however, possible to reduce this quantity by means of the high speed adjustment, to any leanness desired. When the high speed adjusting screw is out five turns from a position, the amount of gasoline supplied by the carbureter is entirely controlled by the jet. Turning the high speed adjustment screw down, in a clockwise direction, makes the mixture leaner. To adjust the idling adjustment, the low speed or idling adjusting screw should be turned in until it stops. It is then screwed out in a counter clockwise direction ten notches, which is the approximate normal adjustment. To make the idling mixture leaner, screw out counter clockwise, and to make the mixture richer, screw in clockwise. The idling adjustment does not affect the mixture at about 8 to 10 miles per hour. When the engine is idling properly, there should be a steady hiss in the carbureter. If there is a weak cylinder, a manifold leak, or if the idling adjustment is too rich, the hiss will be unsteady.

Buick

In adjusting the Buick carbureter, the gasoline adjustment is turned to the

Better Mechanics

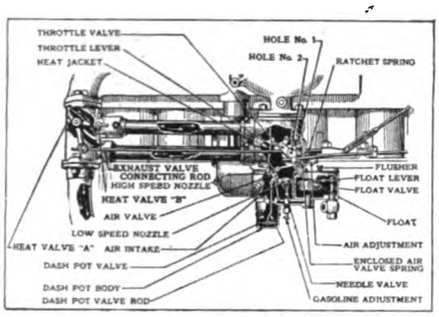

Fig. 8—Buick carbureter

right until the needle valve is closed gently against the seat. It is then opened from seven-eighths to one full turn. Set the air adjusting screw so that the end of the screw is even with the end of the ratchet set spring above it. Start the engine and allow it to warm up. With the spark lever fully retarded, turn the gasoline adjustment to the right, closing the needle valve until the engine idles smoothly. The normal adjustment of the needle valve is about three-fourths of a turn. Advance the spark lever and turn the air adjustment screw to the left, a little at a time, until the engine begins to slow down or skip, indicating too much air. Then turn it to the right until the engine idles smoothly. If the engine idles too fast with the throttle fully closed, change the closed position of the throttle by means of the throttle lever set screw.

To test the adjustment, leave the spark lever advanced and open the throttle lever quickly. The engine should accelerate instantly. If it skips or pops back, open the gasoline adjustment slightly by turning the needle valve to the left. Do not change the air adjustment unless it appears necessary. The best adjustment is obtained with the gasoline set at about three-fourths of a turn open, and the air adjustment carried as light as possible for quick acceleration.

The position at the end of the air screw should be about even with the ratchet set spring above it.

In addition to the setting of the carbureter itself, there are three settings of the heat setting that will affect the running of the engine.

Velie

The Velie uses a Zenith carbureter, the adjustment of which is controlled by the size of the four following fixed parts: choke, main jet, compensating jet, and idling jet, which regulates the mixture of gas and air. The idling mixture is regulated by means of the knurled nut on top of the cylindrical tube on the inner side of the float chamber. Screwing up the nut shuts off the air and thus enriches the mixture. Screwing down admits more air, which makes the mixture leaner. The adjustment of the idling speed has no bearing whatever on the high speed adjustment.

Paige

The Paige uses a Rayfield carbureter. There is no air valve adjustment, but there are two gasoline adjustments. Both of these are turned to the right for a richer mixture and to the left for a leaner mixture. The low speed adjustment is completed before adjusting for high speed. To adjust for low speeds, close the throttle and with the dash control down, the nozzle needle should be closed by turning the low speed adjustment to the left, until the box slightly leaves contact with the cam. It should then be turned to the right about three complete turns. The throttle hand lever is then advanced about 1 in. on the quadrant. If the spark hand lever has been advanced, it should now be fully retarded and the throttle should be closed until the engine runs slowly without stopping. The final low speed adjustment may be made by turning the low speed screw to the left, until the engine slows down. It should then be turned to the right a notch at a time, until the engine idles smoothly. If the engine does not throttle low enough, the screw on the stop arm, on the lever end of the throttle valve stem, should be turned to the left until the engine runs at the lowest number of revolutions desired. To adjust for high speed, the spark control hand lever should be advanced about one-third of its traveled distance on the sector, and the throttle opened rather quickly. Should the engine back fire,

this indicates a lean mixture which may be corrected by turning the high speed adjusting screw to the right, about one notch at a time, until the throttle can be opened quickly, without causing the engine to back fire.

Chalmers

The Chalmers 630 has a dash adjustment of the carbureter, to give a lean or rich mixture, by turning the dash adjustment button to reach or lean, if desired. To secure an entirely new adjustment to the carbureter, with the engine stopped, fully advance the throttle, and press the choke valve on the dash at the extreme lean position. Verify this by putting the finger on the butterfly valve in the air horn to see that the butterfly valve is fully opened. With the choke valve in the lean position, the economizer adjustment at the extreme right, turn the high speed adjustment to the left, until there is a small amount of play in the economizer lever. Turn the high low speed adjusting screw to the right, until this play is taken up, or the lever cannot be moved without raising the needle valve. Continue to turn the high speed adjustment through two complete turns to the right and one notch. Turn the economizer adjustment to the left,

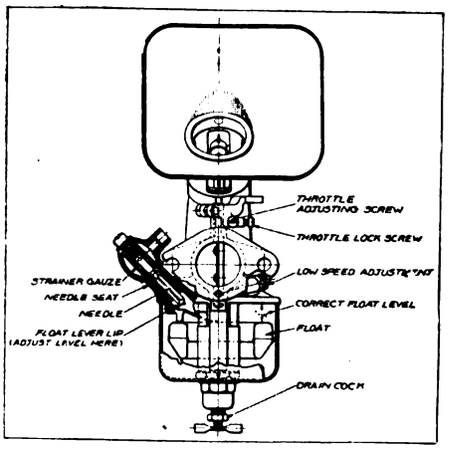

Fig. 12—Carter carbureter on Dort

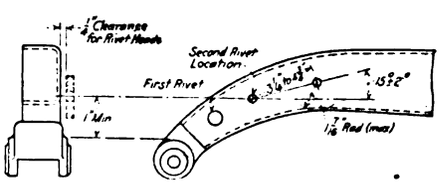
so there will be approximately 1/64 in. clearance between the high speed and the economizer nut. This is the approximate high speed adjustment. Turn the low speed adjusting screw to the right, until it seats, then open by turning to the left one complete turn. This is the approximate low speed adjustment. Final adjustment is obtained by running the engine and refining the adjustment.

Dort

The Dort engine has a model N Carter carbureter. A low speed adjustment is provided to regulate the strength of the mixture at idle engine speed. Turning the screw in makes the mixture richer, and turning the screw out makes it leaner. To adjust properly, close the throttle lever, retard the spark lever, and turn the screw out until the engine misses on account of the mixture being too lean. Then turn the screw in, just enough to get the engine hitting properly. The float level should be exactly one-half in. from the carbureter body. If the float is removed from this position, it should be restored by bending the float lever lip where it touches the needle. Only a slight bend is necessary. If either of the jets becomes clogged, the engine will operate all right at low speed, but will tend to stall when the throttle is open. If the low speed jet is clogged, the engine will operate satisfactory above 15 or 18 m.p.h. but will stall at lower speeds. The main gasoline nozzle may be removed with a short, heavy screw driver, after taking off the body and bowl connecting nut. The low speed jet may be cleaned by taking off the carbureter bowl, unscrewing the assembly, and removing the jet plug.



Bumper Attachment Standardized by S. A. E.

THE Society of Automotive Engineers at its recent summer meeting made numerous modifications in its standards, some of which are of interest to the dealer and service man. In order to facilitate the mounting of bumpers on passenger cars, a standard method of frame drilling has been provided. The previous bumper standard stated that the overall bumper length should be from 59 to 60 in. and the face of the bumper should be flat. It further provided that the height from the center of the bumper face to the ground should be 21 in. in the case of a front bumper and 22 in. for a rear bumper, and that the minimum width of face of a front bumper should be 2 in. and 2½ in. for a rear bumper.

The old standard is incorporated in the new standard, which further specifies how bolt holes required for the attachment of the bumper shall be drilled in the frame. The illustration gives the location of the holes. The two bolt holes are 33/64 in. in diameter and must be located on or near the center line of the frame. The first bolt hole back from the spring eye may coincide with first or second rivet hole. If a second bolt hole is to be used for mounting a shock absorbing device, it must not be nearer than 1 7/16 in. from the bottom of the frame channel at the nearest point.

Changes were also made in the standards covering incandescent lamp voltages and sizes. The S. A. E. standard lamp voltages are now 6-8 and 12-16. The 8-10 and 18-24 volt ratings are no longer included in the standard. Only focusing type lamps G8 and S11 are now listed in the Society standard, types G8, G12 and G16½ having been eliminated. The changes in the voltage rating standard and in the focusing lamp type standard were made because the ratings and types discontinued are no longer used.

In order to eliminate the trouble that

The proper position for the holes required for bumper attachment are shown in this drawing

manufacturers of gasoline pumps are experiencing in providing suitable nozzles because of the lack of uniformity of gasoline tank filler-pipe openings on cars and trucks, the Society adopted a standard to cover this difficulty. Gasoline tank filler openings on cars, trucks and tractors must have a minimum clear opening 2 in. in diameter to comply with this standard.

A Truck Sales Letter to Contractors

HERE is a truck sales letter that was particularly successful when used by several Reo dealers in canvassing contractors in their territories. The letter is good because it begins with an idea that is uppermost in every contractor's mind and leads that idea around and connects it with the purchase of a truck. Maybe it contains an idea for a letter to contractors that will sell trucks for you:

Dear Sir:

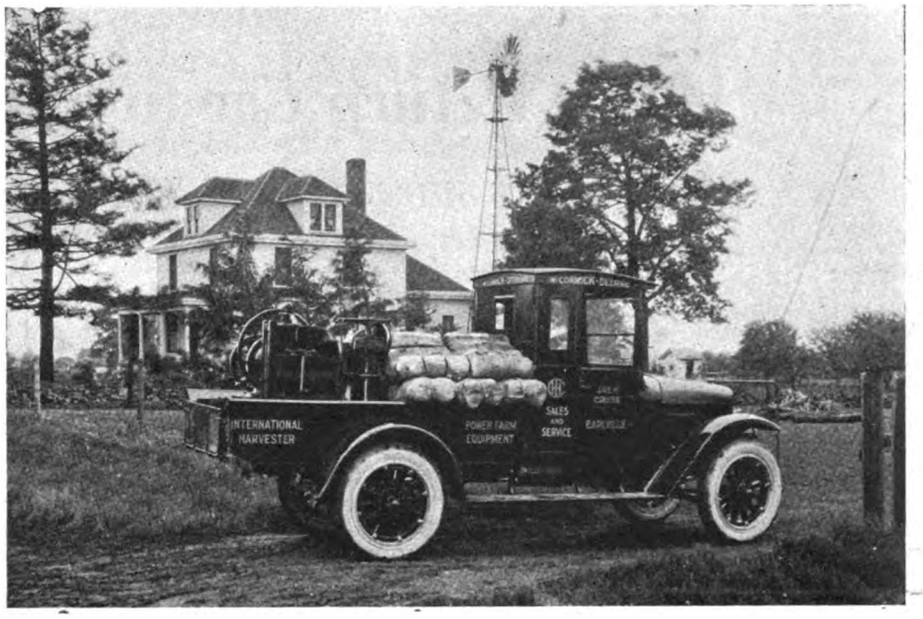
In bidding on a job the contractor's greatest worry is the cost of hauling the material.

During rainy weather he knows that he does not have to pay his crew but with transportation cost an uncertainty, many a contractor has lost a good job by bidding "high enough to be safe" while some other fellow with accurate records gets the job at a profit.

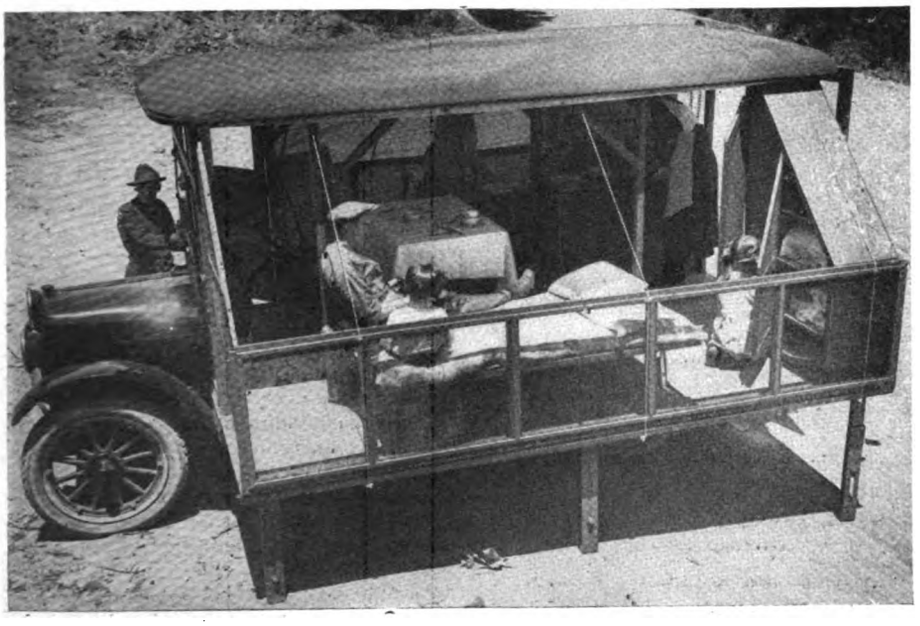
We can tell you almost to the cent what it will cost you to operate REO SPEED WAGONS on your next job and we will appreciate an opportunity of figuring with you.

After you have arrived at your lowest figure with your present equipment, let us go over our SPEED WAGON cost sheets with you and show you how much cheaper the work can be done with a SPEED WAGON.

Inclosed is a folder showing a comparatively new use for the REO SPEED WAGON.



It is with surprise that contractors and county officials learn that when fitted with the road floater it cuts the cost of maintaining gravel highways in some cases as high as 80 per cent.



Very truly yours,

Demonstrating Truck Gives Farm Equipment Service

A demonstrating truck carrying a load of farm operating equipment is proving a successful means of finding prospects and selling for James S. Cruise, an International dealer in Carlville. While the farmer is being canvassed for the sale of a truck, the dealer's salesman, at the same time, checks over the farmer's power equipment and offers suggestions and supplies parts to put the equipment into first-class condition. The above photograph shows the truck at the entrance to one of the farms in its territory

All (or Nearly All) the Comforts of Home

This Reo truck has been fitted with a special camping body which when closed up for running does not look greatly unlike a conventional moving body. When the sides are let down there is considerable floor space available for cots, a table, and other conveniences. The equipment includes two beds, a kitchen sink, a 40-gal. water tank, clothes lockers, cook stove, ice box and cabinets. The Dumas Folding Auto Home Co., Los Angeles, Cal., has recently been organized to build these bodies in quantities. The body with all equipment except chinaware and linen sells for $700

Street Frontage Sells for This Equipment Dealer

Two large display windows are selling automotive equipment for the Beck & Corbitt Iron Co., equipment dealers in St. Louis, Mo. The sign, extending up the front of the building, stands out, yet it is at the same time neat and dignified

Must Return Car to Rescind Sale

Missouri Court Holds That Buyer Must Return or Offer to Return to Get Back Purchase Price

WHEN a buyer of a motor car seeks to rescind the sale and get back the purchase price, he must first return or offer to return the car, was the decision in a late Missouri case.

The car was sold for part cash and a forged check. The court held that the seller could not recover the car back from a third party to whom the buyer sold it, as the contract could only be rescinded by the buyer in the way set out above, and if he did not choose to rescind, the third party, if he had title, might keep the car.—Sellner vs. Meyer, 240 S. W. pg. 247.

Cannot Recover for Baggage Lost in Unlicensed Vehicle

That in the absence of any statute or ordinance requiring a license for persons furnishing automobiles and chauffeurs for hire, persons hiring a car and chauffeur from a company which did not solicit business on the streets or other public places, could not recover for the loss of hand baggage intrusted to the chauffeur while they were at luncheon, on the theory that defendant was a common carrier; it being under no obligation and not holding itself out as being ready and willing to furnish such services to the public at fixed charges, was the decision in the New York case of Tract vs. Grand Concourse Service Co., 192 N. Y. S. 88.

"Hold the Car and Consult Counsel"

Editor Motor World: I notice in Motor World of April 12, 1922, and May 17, 1922, mention is made of the fact that repairman's lien is not superior in New York on car held for repair bill over lien of the holder of a chattle mortgage, or installment contract on said car. In the June 7, 1922, Motor World, you printed that the garageman's is superior over a chattle mortgage. Now which is right?

I am holding a car that was brought in to me for repair. The fellow who brought the car in said he had money to pay the repair bill before I started to repair it. After it was practically finished, he told me that he would leave it with me until he got the money to pay for it. Later on I found out he had bought the car on the installment plan of a Ford agent. I had a talk later on with the Ford agent, and he claimed that if the first party failed to make payments on contract the Ford agent could come and take the car away from me, without paying the repair bill; and if I got anything I would have to look to the one that brought the car here for repairs. Where do I come in under the New York lien law, or go out?—A Reader, Preston Hollow, N. Y.

Answer.—The two cases you mention are confusing. The one which held that the repairman's lien was inferior in New York was printed merely as a news item. The general rule which is well established in New York by many decisions is that a repairman's lien comes first—before the lien of a chattel mortgage or conditional bill of sale. Consult local counsel if necessary, but by all means hold on to the car.

Co-Insurance Clause Defined

Editor Motor World: The attached is respectfully submitted referring to Motor World, April 26:

The co-insurance clause in a policy is no more or less than an agreement between the assured and the company to the effect that at the rate written the assured will at all times carry insurance to value according to the percentage defined in the policy.

The 80 per cent or 100 per cent co-insurance clauses that you find in a policy become *inoperative* if an assured carries 80 per cent or 100 per cent of insurance to value at time of loss, and failing to do so, an assured is penalized *only* in the proportion that the insurance is short according to the agreement. If he is, say, 1/6 short, the loss paid is 5/6, the assured standing 1/6.

Your example is all right, but you cannot say the 80 per cent is a much better clause, except in the case of partial loss.

The clause in either instance does not apply in case of *total loss*, or if the amount of loss is beyond the percentage limit.

There is generally a reduction in rate for the application of the 100 per cent clause.—E. C. Cary, Newark, N. J.

Answer.—It is a pleasure to receive letters like the above from subscribers, as they show how carefully the legal page is being read. The subscriber in this instance points out a fact on which sufficient stress was not laid in the article he refers to. That is, that in case of total loss the clause used is immaterial. Still, isn't it true that only in a minority of cases is there a total loss?

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Burden on Person Suing in This Vermont Case

THAT the burden is on a person suing, for damages which he claims he sustained by reason of the negligence of another person in leaving his motor car unattended on a public highway with its lights shut off, to show that the fact that the lights were turned off was the proximate cause of the accident, was the decision in a lately decided Vermont case.

The court pointed out that when a person is confronted with a sudden peril, such as coming upon an unattended vehicle without lights in the dark, he is not bound to use the same degree of care as when he has time for reflection, as the law recognizes that a prudent man, brought face to face with unexpected dangers, may fail to use his best judgment.—Hatch vs. Daniels, 117 A. pg. 105.

THAT a person who sells a business and agrees not to engage in a similar business in or adjacent to the town to which the business sold is located, is only bound not to engage in such a business within a "competing distance," was the decision in the lately decided Delaware case of Scotton vs. Wright, 117 A. pg. 131.

That a jury holding, that an automobile owner who attempted to protect his car by seizing hold of the bumper of a truck moving toward his car, whereupon he was injured, was not guilty of contributory negligence, was valid, was the decision in a recent New York case.—Wardrop vs. Santi 134 N. E. pg. 272.

An automobile tax is not a property tax but a privilege tax, according to the decision of the Supreme Court of Arkansas in a recent case.—Whaley vs. Northern Road Improvement Dist. of Arkansas Co., 240 S. W. pg. 2.

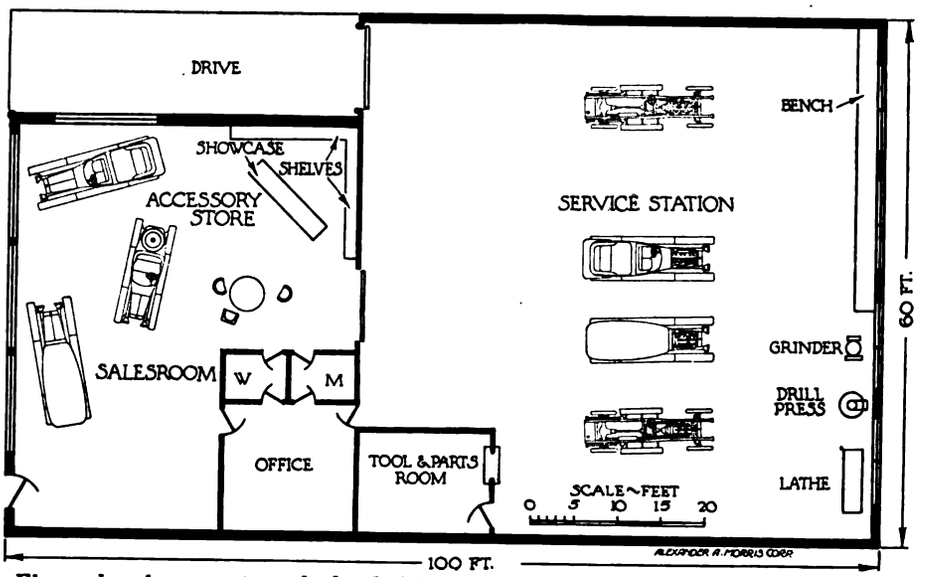
Open Driveway Gives Light and Display



Sales and Service Provided for in Dealer Building on Lot 60 x 100 Ft.—Salesroom and Accessory Store Combined

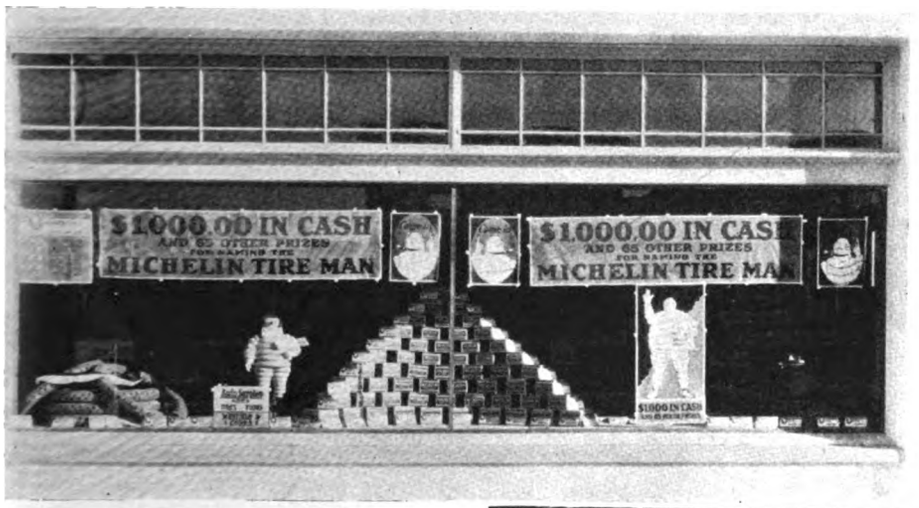
Motor World's Department of

Better Business Buildings

Is a weekly feature of the paper.

Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage should be given when making inquiries.

Floor plan for one-story dealer building on interior lot 60 x 100 ft. Over half the floor space is devoted to service



SALES and service facilities are provided in the plan shown on this page. The building is to be erected on an interior lot 100 feet deep with 60 feet of street frontage.

The driveway to the service station at the rear is of the open type. This construction allows windows to be placed in the wall facing this driveway, thus providing natural light for this side of the salesroom. This arrangement also adds something to the value of the salesroom from the display standpoint as a person coming along the street can look across the driveway into the salesroom before the building is reached.

The front of the building contains car salesroom, accessory store, office and toilets. There is plenty of room for the display of three cars. A small table with a few comfortable chairs might well be placed back of the car display for the convenience of patrons. The accessory store is located in one of the rear corners of the salesroom. The offices and toilets are located in the opposite corner.

The service station is approximately 60 ft. square. The machine equipment should be located along the rear wall and, as far as possible, all fine work should be done here as the light is best. The combined tool and parts room is located directly in back of the office.

The roof over the service station should be supported by trusses. The interior portions of the shop will be lighted with skylights.

Prize Windows in Tire Display Contest

The Michelin Tire contest for naming the Michelin tire man was just concluded recently. Michelin Tire Co. offered prizes to dealers for the best window displays. There were a number of prizes for the dealers in each branch territory. Herewith are shown two of the prize windows. One was made by Horst & Wilkinson, dealer in Davenport, Iowa, and the other by Mayfield & Cordo, dealer in San Luis Obispo, Cal.

Equipment to Sell

New Devices for the Car and Truck

Hayes Pathfinder

Hayes Motor Truck Wheel Co., Jackson, Mich.

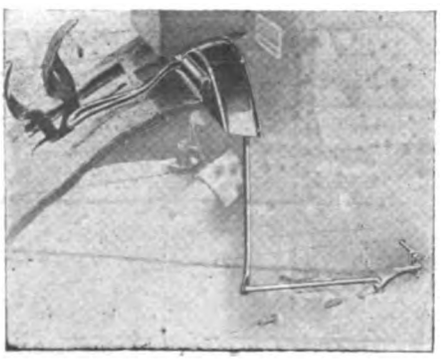
Price $8.50

This light is provided with an inside control, reflector is coated with silver and the shell with black enamel. Any adjustment of the light can be made from the driver's seat without lowering the windows of a closed car or without reaching through the curtains of an open car.

HusKee Gasolarm

HusKee Tool Mfg. Co., 586 Public Street, Providence, R. I.

Price $2.50.

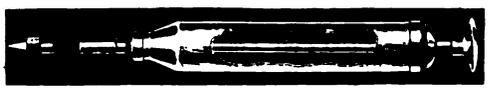


The device replaces the cap in the gasoline tank and gives a warning signal when the gasoline reaches the depth for which it is set. The bell inside the tank makes sufficient noise to be heard from the driver's seat. After the alarm has been sounded and the tank filled it is wound up for action the next time.

Farco Foot Accelerator for Fords

Farco Mfg. Co., 30 Church Street, New York.

Price $2.75.



The principal feature of this device is that it mounts on the dash entirely independent of the floorboards. The construction and installation is illustrated in the accompanying cut.

Saal Oil Shooter

H. G. Saal Co., Chicago.

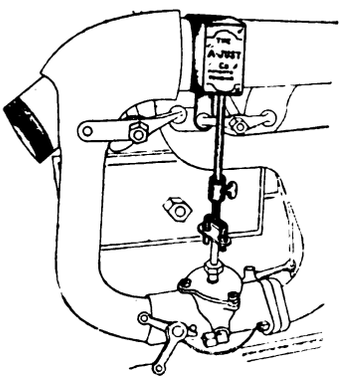
Price $8.

This is a high pressure lubricating system for using heavy oil exclusively. The metal gun is 12 in. long with a diameter of 1½ to 2 in. This will force heavy oil under a pressure of 2,000 lbs. With the pump are supplied a forty-two solid brass fitting which is more than sufficient for the largest car. Attached to the oil shooter is a steel nickel plated holster to be fastened on the dash under the hood.

Ensign Stop Signal

Spengler-Loomis Mfg. Co., 58 East Washington Street, Chicago.

Price $7.50.

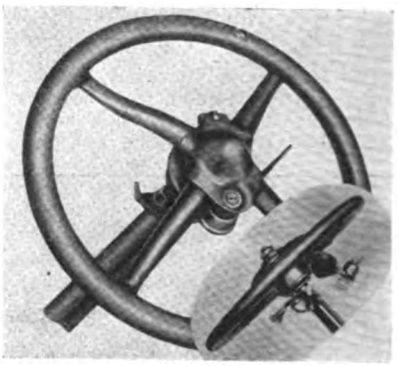


The momentum of the car operates this signal. When the car slows down the signal flashes. The frame is cast aluminum and heavily enamelled. The reflector is silver plated. The signal is designed so that it does not operate when going down hill or over bumps.

A-Just for Fords

Grundy Mfg. Co., 2900 Meldrum Avenue, Detroit

Price $2.



This device admits more gasoline automatically when the engine is cool and reduces the supply when the engine has warmed up. It is operated by a thermostat which actuates a rod, one end of which is attached to the control lever of a needle valve. The heating chamber is finished with polished nickel and the rods are also nickel. The installation is said to be simple.

Motoright Lock for Fords

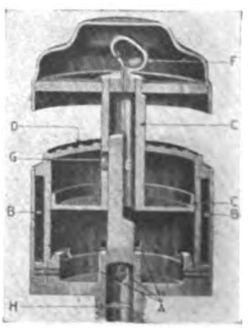
The Packard Engineering Co., Cleveland, Ohio.

Price $4.90. With wheel $9.49.

This lock screws on in place of the steering gear cover and can be installed with wrench and hammer in five minutes. It does not interfere with the arrangement of the standard Ford parts. The key slot is above the wheel and in front of the driver. The lock has the approval of the Underwriter's Laboratory.

New Firestone Dipped Cord Tire

Firestone Tire & Rubber Co., Akron, Ohio.



Price $13.75 for 30 x 3½ in.

A new gum dipped cord tire has been added to the Firestone line. The process is said to be an old one originally perfected by Firestone and recently revived. It consists of dipping the fabric for the tires in a special gum to add strength and resiliency to the tire carcass. It is made in sizes from 30 x 3½ to 34 x 5.

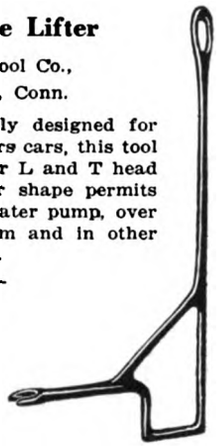
Sentree Alert Alarm Co.

609 N. La Salle Street, Chicago.

Price $8.50.

This is a cooling water temperature indicating device. It is mounted in place of the radiator cap. Vapors arising from the radiator pass through the port A and circulate the chamber B, where they are condensed and returned to the cooling system. In case of overheating the increased pressure will raise the piston C and expose the surface D, which is red. More pressure will send the piston higher and blow the whistle F. In case the water in the radiator boils the piston will be raised still higher and steam escapes through the opening G.

Digitized by Google



Equipment for the Shop

New Machinery and Tools

Roy's Valve Lifter

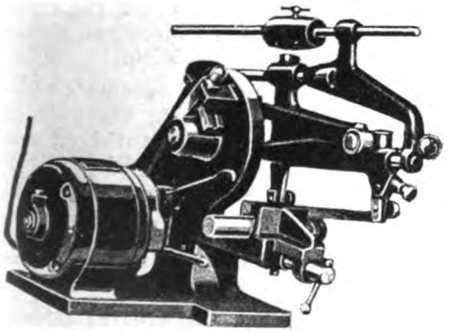
J. D. Roy Tool Co.,
Willimantic, Conn.

Although specifically designed for use on Dodge Brothers cars, this tool may be used on other L and T head engines. Its peculiar shape permits its use around the water pump, over top of ignition system and in other inaccessible positions.

Luther Electric Bench Grinder

Luther Grinder Mfg. Co., Milwaukee

The bench grinder is operated by a 1 hp. single phase 110 volt motor which runs at 1750 r.p.m. It is of the ventilator type with bronze bearings and wick filled oil wells. The switch is a Cutler-Hammer and the work rest is adjustable. The wheel size is 5 x 1. The weight is 37 lbs. and the grinder is furnished with 10 ft. of cord and attaching plugs.

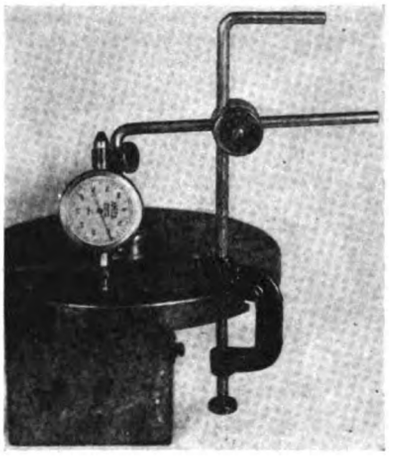


G. M. C. Metallic Grease

Gearo Mfg. Co., Quincy, Ill.
Price 30 cents per 1 lb. can.

The grease has been developed for the lubrication of gearsets, differential, ball and roller bearings, etc. It contains an anti-friction metallic composition which is said to increase the lubricating qualities.

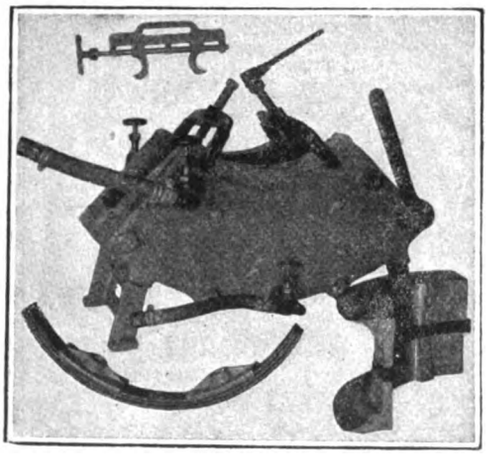
Edlund Portable Bench Hack Saw



Edlund Machinery Co., Inc.
Cortland, N. Y.

This portable hack saw cuts stock up to 1¾ x 2⅝ in. It is driven by 110 volt universal motor operating at 1750 r.p.m. The complete weight of the device, including motor, is 80 lb. It is provided with an adjustable vise for holding the stock being cut. It is also built for belt operation.

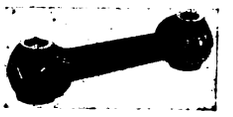
Ames Junior Universal Attachment



B. C. Ames Co., Waltham, Mass.
Price $5 for attachment; dial gage $10; Gage Mount, $5

The junior universal attachment is made to go with the Ames junior dial cylinder gage outfit or can be purchased separately. It makes use of the junior dial gage head and is a universal testing outfit. It clamps in any position and permits gaging at any angle. It will clamp to any object that will go between the jaws of the clamp. Can be used for showing straightness of crankshafts, camshafts, and valve stems and will check the lift of valves and valve cams. It will show thickness of piston rings, shims, bearing liners, etc.

Western Single Cavity Truck Tire Mold



Western Rubber Mold Co.,
321 North Crawford Avenue, Chicago

The single cavity truck tire mold is adjustable to fit 5, 6, 7, 8 and 9 in. tires. This is accomplished by means of a split mold with spacers and reducing shells. The mold is constructed in both semi flat and round cavity type and is used for both resetting and repairing all nature of injuries.

Fits-All Socket Wrench

Fits-All Wrench Co., Providence, R. I.
Price $1.

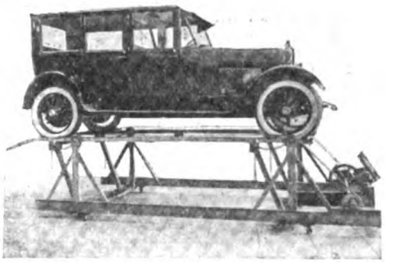
The wrench has ten different size openings which are not adjustable and cannot slip or spread. It fits hexagon sizes ⅛ to 1⅛ and square sizes ⅛ and ⅜. It also has spark plug sizes.

Reed Height Gage Round Base Attachment No. 7

Reed Small Tool Works
Worcester, Mass.

The round base attachment is intended for height gage purposes and has a large base area. The reamed hole fits the measuring rod and the upper end of the support is split vertically at right angles to afford a sliding friction as the rod is inserted. It holds the base and micrometer measuring rod intact when the tool is lifted from one surface to another.

Branford Water Nozzle

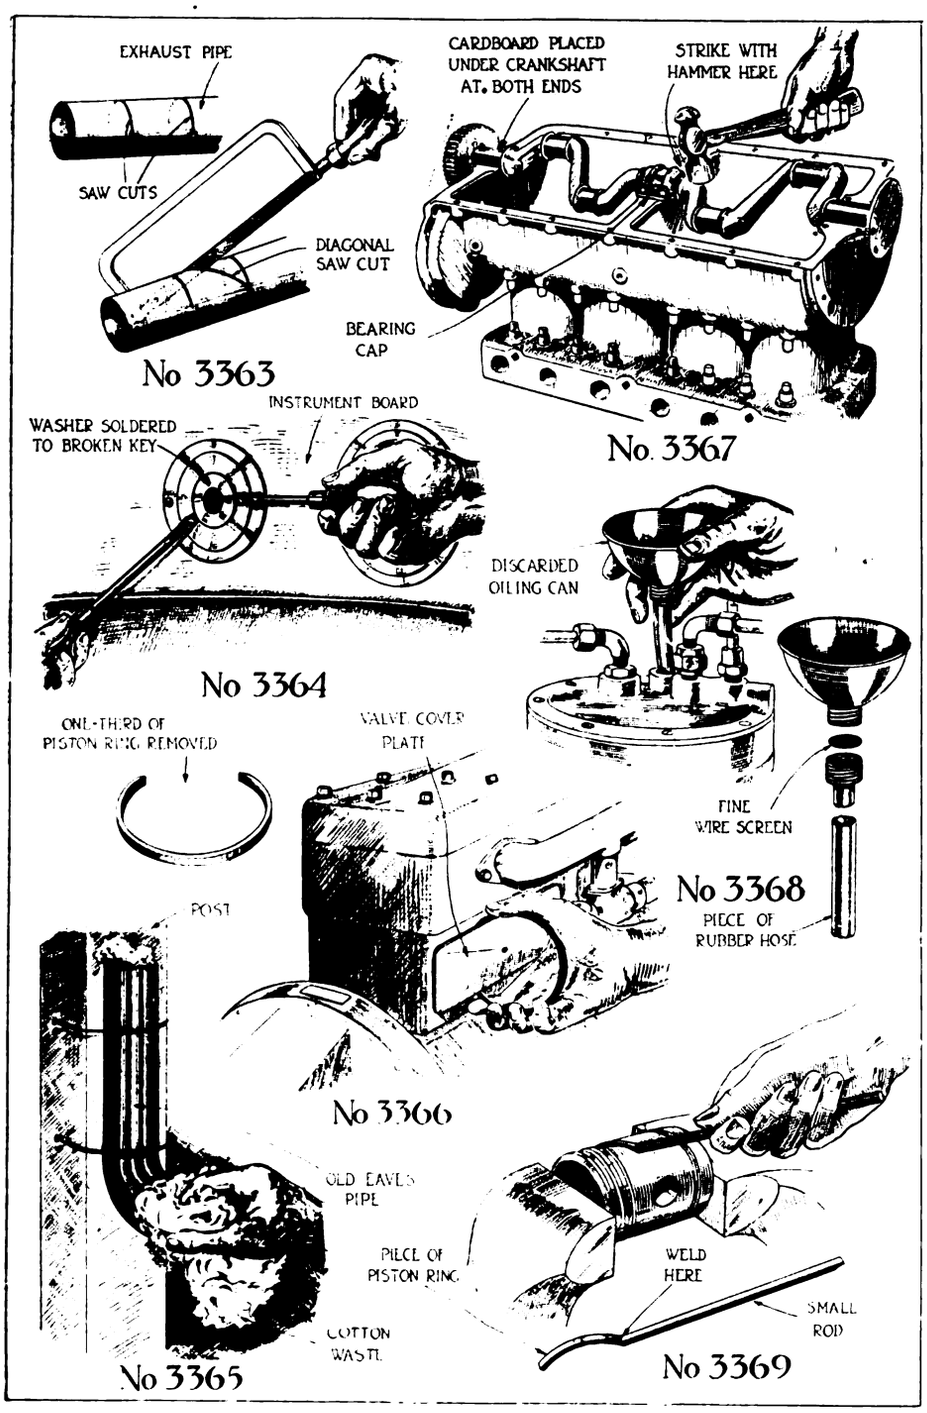


Malleable Iron Fittings Co., Branford, Conn.
Price $5.

This water nozzle has a spray adjustment. It is provided with a quick acting lever shut-off which operates without changing the spray adjustment. When the pressure on this lever is released the water is cut off.

Davis Auto Lifting Device

Davis Auto Lifting Co., 500 Auzerais Ave., San Jose, Cal.



The automobile is run on two U-shaped steel runways which are raised by means of a gear and pulley arrangement to any height up to 4 ft. The lift is operated by turning a crank. This places the car in a position where it may be conveniently worked on from underneath.

Repairshop Shortcuts

Why Not a Complete Suit?

A SUBSCRIBER in Cortland, N. Y., contributes a shortcut which we are not able to illustrate, our fashion artist being on his vacation. Our subscriber suggests that a tube bag folded down makes a fine mechanic's hat, and that the right size can be obtained by tightening the draw string. We counter with the suggestion that such a changeable size hat would be a fine thing for fellows with swelled heads. Furthermore, a 36 x 6 tube might make a fine pair of trousers if you have thin legs. Send in some more clothing suggestions. We won't pay a dollar each for them but we will pay for ideas accepted for the column below. How about cotter pins for suspender buttons, or don't you wear suspenders?

No. 3363—Cutting a Slot in an Exhaust Pipe—An oblong slot is cut in an exhaust pipe for installing a cut out, whistle or heater by making two cuts across the pipe with a hacksaw and a diagonal cut. The triangular flaps are then bent outward and sawed off.—A. C. Knicht, Service Garage, Warrentown, Va.

No. 3364—Removing a broken key—A key which has broken off in a switch or lock can often be removed by soldering a plain washer at right angles across the break and prying the washer with small screw drivers.—Donald McClean, Cleveland.

No. 3365—Container for waste—Pieces of waste for cleaning finished jobs are kept in a long narrow tin chute made from rain spouting. This is wired to a post.—Donald McClean, Cleveland.

No. 3366—Removing valve covers—About one-third of an old piston ring is cut out and the ends of the remainder ground or filed to a sharp point. The ends are strung apart to catch the edges of the valve cover plates.—Donald McClean, Cleveland.

No. 3367—Straightening a Crankshaft—A three bearing crankshaft can be straightened with a hammer if a press is not available. The engine block is removed and turned bottom side up and pieces of leather or thick pasteboard placed in the end bearing. The shaft is laid with the bend up, and the center bearing cap drawn down and the cheek of the cranks struck with a hammer.—Arthur Ansley, Blennie, Mich.

No. 3368—Funnel for vacuum tank—A small funnel for filling the vacuum tank is made from a discarded oil can by removing the bottom and filing a light groove around the nozzle, breaking it off at the desired length. A disconfined wire screen is placed between the nozzle and body where they screw together.—Floyd D. Elmore, Bethesta, Md.

No. 3369—Piston ring groove tool—A tool for cleaning piston ring grooves is made from a small rod and pieces of piston ring which are welded together. The end of the piston ring is sharpened to a chisel point to easily remove the carbon.—Reader.

Optimism Follows Tire Conference

MAKERS SHOW DESIRE TO ASSIST DEALERS

Price Question Not Discussed —Many Questions Brought Up for Consideration

NEW YORK, Aug. 18—Out of the meeting of the committee of the National Tire Dealers' Association and executives of the Rubber Association which has been held here will grow a spirit of co-operation that will result in the ultimate solution of the mutual problems of both, according to a statement made by R. F. Valentine, president of the National Tire Dealers' Association.

"We feel gratified that the opportunity was given us to present directly to the manufacturers the aims and objects of the National Tire Dealers' Association," said Valentine. "The reception accorded us and the consideration and discussion which was given the various merchandising problems was such as to indicate a sincere desire upon the part of the manufacturers to help dealers solve their problems."

Valentine would not at this time give any details of the progress that was made. Arrangements were made, however, for future meetings to which both organizations will send representatives to discuss problems that arise.

The tire dealers were represented at the conference by R. F. Valentine, R. J. Walters of Baltimore, George J. Berger, New York City, and Frank Zeman, Chicago. The manufacturers had at the meeting, Messrs. Shugart of the United States Tire Co., Mowe of Kelly-Springfield, Broadwell of Fisk, Miller of Goodrich, Plumbe of Madison, Duncan of Hood, Phelps of Kenyon, DeLisser of Ajax, O'Neil of the General, Waddell of Goodyear and Fairbanks of Firestone.

Dealers Make Requests

The price question was not discussed at the meeting.

The dealers made these requests:

That the national and commercial accounts be eliminated;

Car agencies be compelled to sell all change-overs at regular list prices or turn the tires into the nearest branch at cost;

The price of tires be increased to the car manufacturers to a basis that will insure a reasonable profit and take away incentive for resale at retail;

Publication be discontinued of all lists other than consumers' price list;

Retail distributing agencies be classified and the discounts proportioned in the ratio of the value of each classification;

Retail hardware, drug, confectionery and grocery stores be put in one class; wholesale groceries, hardware and department stores be put in another class and the legitimate tire dealer in a third class;

Purchasers of equipment be held to actual requirements and such an arrangement be effected that will prohibit absolutely these same car manufacturers and their agencies from disposing of any stocks at less that regular prices.

The dealers' program provides for the elimination of every tire whose quality is not proved, or where there is any question of the policy and methods of the manufacturer; an appropriation of not less than 2 per cent of gross business for advertising purposes and absolute loyalty to the manufacturer whose goods are sold.

ONE REEL ROAD FILMS ARE NOW OBTAINABLE

WASHINGTON, Aug. 18—A series of one reel motion picture films illustrating modern practice in the construction of the various types of highways, as being best adaptable to automotive use, has been prepared under the direction of the Bureau of Public Roads and is now available for free distribution upon application to the United States Department of Commerce.

The films are intended for use in engineering colleges, road meetings and other public gatherings and are issued for the purpose of fomenting greater interest in the problem of good roads throughout the United States.

FORD DEALERS PLAN MEETINGS IN SOUTH

ATLANTA, Aug. 18—Ford dealers in Georgia, Florida and the Carolinas are planning to hold co-operative shows during the coming month featuring industrial power and equipment and principally the Fordson tractor.

The first of these shows will be held at Jacksonville, Fla., Aug. 21 to 23; the second wll be in Atlanta, Aug. 29 to 31, and there will be a third at Charlotte, N. C., Sept. 6 to 8.

The various dealers in the states named are issuing thousands of invitations by mail to heads of industrial enterprises to attend these shows, as it is principally the industrial end of the tractor that will be demonstrated.

Monitor Plant Sold

COLUMBUS, Aug. 18—The plant of the Monitor Motor Car Co., which has been in the hands of E. W. Pavey as receiver for more than a year, has been sold to the Clark Grave Vault Co., which will soon occupy it. The transaction includes two and a half acres and a two-story building with a floor space of 50,000 square feet.

BRIGHT FUTURE SEEN BY MERGER OFFICIALS

On Return from Visit to Three Plants They Forecast Quantity Production

CHICAGO, Aug. 18—Quantity production at the National motor car plant at Indianapolis, the Traffic truck plant at St. Louis and the Kentucky wagon manufacturing plant at Louisville, where the Dixie Flyer automobile is made, was forecast by the visit just made to these plants by a group of officials of the Associated Motor Industries who have returned to Chicago.

Will I. Ohmer, chairman of the board, and Louis Ruthenburg, president of Associated Motors, with technical assistants, spent a week at these plants outlining their part in the production plan of the merger and making the preliminary arrangements for them to produce their quotas.

"We are more than pleased with the progress that has been made," Ohmer said. "All the plants we visited were in splendid condition, and arrangements necessary to fit them into the co-ordination plan of the merger were well under way. An assembly unit of Associated Motors is to be operated in connection with each of these three plants, and we gave some time to preliminary planning of these buildings."

Other plants in the merger probably will be visited by the officials within the next week or 10 days.

NEW WILLS BUILDINGS TO COST HALF MILLION

PHILADELPHIA, Aug. 17 — The Wills Sainte Claire Co. of Pennsylvania has completed negotiations for two large buildings, one for sales and the other for service, to be erected at a combined cost of upward of $500,000.

The salesroom and general offices will be in a structure containing six stories and a basement. The showroom will measure twenty-two feet from the floor to the ceiling, and there will be a mezzanine for offices in the rear. The building will have both passenger and freight elevators.

The new service station will contain 2500 sq. ft. of floor space on the ground floor. W. J. Foss is president of the company, and associated with him as vice-president is A. F. C. Keleher of Pittsburgh.

Finance Body Moves

CHICAGO, Aug. 16—The Central Automobile Finance Association has moved its offices to 20 West Jackson Boulevard.

DISTRIBUTORS TAKE 1923 STAR OUTPUT

Start on Manufacture at Lansing Plant Will Be Made on Sept. 15

DETROIT, Aug. 18—Contracts signed with distributors this week will take practically the entire output of Star cars by the Durant factory, Lansing, for the entire year of 1923, according to a statement issued by factory officials following a two days sales session. The Lansing plant will manufacture Stars for the entire territory between the Alleghenies and the Rockies and its plant capacity is 400 cars daily.

A start on the manufacture of the Star will be made at the Lansing plant on Sept. 15, but it is not expected to get into capacity operation much before the first of the year. Two assembly tracks are now completed at the plant and there remains only the installation of minor machinery. Delays in material and parts shipments will hold back operations temporarily, officials said, but this situation will be overcome rapidly.

Downes Addresses Dealers

Carroll Downes, president and general manager of the Star corporation, addressed the meeting of dealers. No statement on the proposed method of distribution of the product was forthcoming from the meeting, it being said that Downes would make a statement on this within a short time. It is reported in Detroit that the plans involve the financing of the cars until sold by the dealer.

Most of the middle western territory was reported represented at the meeting, though there remains some territory yet to be assigned. Among the distributors represented were the following:

Teter McGregor Co., Minneapolis; K. T. Wiedmann Co., St. Paul; H. A. White Auto Co., Memphis; Chidester-Frint Co., Milwaukee; Conant Automobile Co., Houston; Baker-McDowell Hardware Co., Oklahoma City; Inter-Mountain Motor Car Co., Salt Lake City; San Antonio Cadillac Co., San Antonio; S. B. Hicks Motor Co., Shreveport. W. J. Cart, Hot Sulphur Springs, Col.; Herchede Motor Car Co., Cincinnati; Peiter Automobile Co., Grand Rapids; Mosher Motor Sales Co., Cleveland; Lostre Auto Sales Co., Columbus; D. A. O'Dell Motor Car Co., Duluth; Heison & Tyler, Webster City, Iowa; Bozer-Patten Automobile Co., Indianapolis; Hathaway Motor Co., Kansas City; Hawry Motor Co., Louisville; F. G. Stroop, Dayton; A. Murphy & Son, Omaha; Spalding Motor Co., St. Louis; S. Y. Brigham Motor Co., Toledo; A. G. Graben Motor Co., Des Moines; Hutchings Motor Co., Cedar Rapids.

Anderson Dealers to Convene

ROCK HILL, S. C., Aug. 21—Anderson dealers will assemble at the factory here on Thursday and Friday to witness the unveiling of the new Anderson light aluminum six. Both the phaeton and the coach models will be on exhibition. Among the speakers on the first day will be Mayor J. B. Johnson; J. G. Anderson, president of the Anderson company; J. W. Anderson, vice-president and general manager; D. K. Roberts, assistant sales manager, and H. M. Kiesewetter, vice-president of the Wales Advertising Co. Many of the Anderson dealers have promised to attend and drive cars home.

GEORGIA BUS BILL TABLED BY SENATE

ATLANTA, Aug. 21—The bill introduced before the Georgia State Legislature by the short line railroads seeking to have the motor bus declared a common carrier subject to the rules and regulations of the State Railroad Commission, will not become a law this year.

It came up for a final hearing before the senate this week, and by an overwhelming vote was tabled.

This means that it will not again be considered this year at least, and that the automotive industry has won a complete victory in the campaign to accomplish the defeat of the measure.

BUMPERS LEAD SALES, IS REPORT OF JOBBER

NEW YORK, Aug. 22—An eastern jobber, whose business is quite typical of a good many along the Atlantic seaboard, states that his best business of the current season has been on bumpers, shop equipment, stop lights, luggage carriers, monogram radiator caps and motometers. He states that bumpers have had a tremendous sale, shop equipment is going remarkably well and the other items are selling rapidly. Business in general lines is a little better than fair.

HUDSON-ESSEX SEE BETTER HALF YEAR

DETROIT, Aug. 18—Sales of Hudson and Essex cars for the last six months of 1922 are expected to run from 20 to 25 per cent heavier than in the first six months. Reports received at the factory from dealers in all parts of the country indicate ready demand for cars, in some sections the dealers being considerably behind on deliveries. Closed car sales are reported increasing.

Shipments of Hudson-Essex for the first fifteen days of August were higher than for any similar number of days in the company's history. The demand for cars has resulted in the factory increasing its tentative schedules for the later months of the year three separate times. Orders now on hand assure capacity operation for several weeks. No let up in production due to the coal or rail strikes is anticipated.

"ASK 'EM TO BUY" TO SELL TRACTORS

State Fairs Will Be Used by Exhibitors to Carry Message to Farmers

CHICAGO, Aug. 21—The "Ask 'Em to Buy" policy, so vigorously pushed by the Automotive Equipment Association has been adopted by the tractor folk, who hope to stimulate a year-round buying of farm machinery in this way through the medium of the countless state fairs now in progress.

Propaganda to this end has been prepared by the National Institute of Progressive Farming of Chicago, which points out that the state fairs will attract at least 20,000,000 people, mostly farmers, who can be surprised out of their non-buying lethargy by means of intelligent displays of farm machinery. Suggestions are made as to the proper methods of display and exhibitors are urged to "say it with pigs and sheep" in driving home the fact that the farm tractor has been cut in half as to price since the pre-war days of 1913.

Comparison of Figures

A most convincing argument is offered in a comparison of figures in that the price of tractors has been materially lowered while the value of hogs and lambs has gone up amazingly. "Not only has the farm tractor been cut in half as to price since 1913 but hogs are nearly 50 per cent higher than then and fat lambs more than double," says the Institute. "Where we could talk the cash difference to the farmers on a tractor to start them to buy and show a 50 per cent advantage in price, not to mention a better power plant, we can translate it into hogs and show 150 per cent advantage, or into sheep and show more than 200 per cent in favor of buying a tractor now."

Talking in language the farmer can understand, it is pointed out that whereas it took 80 hogs to buy a tractor in 1913, 34 will buy it now. Before the war it required 260 sheep; now only 64 are needed.

Demand for A. E. A. Space

CHICAGO, Aug. 22—Upwards of 200 applications for space at the annual business exhibit of the Automotive Equipment Association have been received by the show committee which had a meeting here last week.

Applications are running far ahead of the number received at this time last year.

The show will be held in the Coliseum coincidentally with the annual convention of the association November 13-18. The show this year, unlike previous shows, will be open only to members and their accredited representatives. Exhibit space at previous shows has been restricted to manufacturing members but representatives of manufacturers and jobbers outside the association membership have had the privilege of attending.

NO CHANGE PLANNED IN STUTZ PERSONNEL

Schwab Visits Plant—Program of Expansion and Enlargement Assured

INDIANAPOLIS, Aug. 17—Charles M. Schwab, president of the Bethlehem Steel Corp., who obtained control of Stutz Motor Car Co. of America, has announced that he will be actively interested in the Stutz management, but that the personnel of the Stutz organization will not be changed. A program of enlargement and expansion is said to be assured.

William N. Thompson, president and general manager will be continued, Schwab said, as will the entire factory organization. Schwab stated that the men who have guided the company through the recent uncertainty of the motor car industry are best qualified to handle the new control. "It is farthest from my thoughts to change the personnel," he added. "I hope the relations will be as happy as in all the industries and corporations with which I am associated.

Schwab Issues Statement

In his statement Schwab said:

It is not as if my associates and myself were acquiring a new property in the automotive field, and making our début in the motor car industry by acquiring control of the Stutz. We have long been interested in the company in a substantial way. What is more natural that under the circumstances we should desire to control the property as we do in the case of all the other properties with which we are identified.

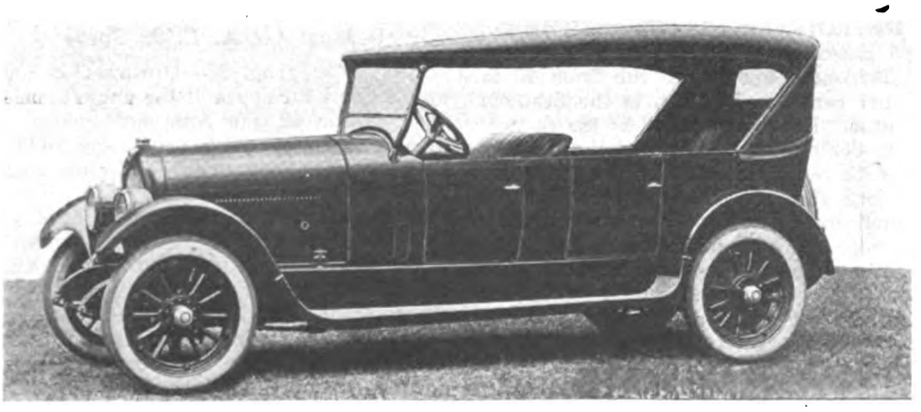
Our plans for the Stutz simply embrace a continuation of the business on a basis that will permit it to proceed as it deserves to progress—to make the most of the possibilities which lie within its range of ability. We regard the Stutz as a valuable property—one that has potential possibilities that recommend it as deserving of the best thought and effort that can be put forward in its behalf. We are going to develop the Stutz along sound, substantial lines. We intend to make it attractive to the trade.

Although the Stutz company has never been embarrassed so far as its finances are concerned, and at present is in one of the healthiest conditions of any company in the business, in order to enable it to go forward at once with the development that we have planned for it, substantial finances have been provided which will be placed at the disposal of its executives to carry on their work.

Though I have been associated in my career with some motor car enterprises from a different angle, this is the first time that I have applied myself actively to the management of a company. I have been here many times and have studied the Stutz. I know the men who are with the Stutz. I have been in a position to watch them proceed.

I have the sincerest admiration for their work, and I am convinced that if these Indianapolis men cannot put the Stutz where it belongs, there is not a group of men in the country who can do it. Mr. Thompson will continue in full control of the policies of the company and will have the entire suport of my associates and myself in all that he does, just as every other man entrusted with the development of the company will have our co-operation in every possible way.

FARMING EQUIPMENT WILL FORM PAGEANT



MINNEAPOLIS, Aug. 19—The Northwest Tractor Trade Association has arranged with the board of managers of the Minnesota State Fair for a power farming equipment day to be held Friday, Sept. 8. The principal feature of the day will be a parade, entitled "Pageant of Progress in Power Farming," on the fair grounds and the race track in the afternoon.

The parade will be open to all power farming exhibitors at the fair who observe the rules of the committee.

Powe Gives Full Time to A. E. A.

CHICAGO, Aug. 18—The Automotive Equipment Association announces that W. R. Powe has discontinued his connections with all other organizations and will hereafter give full time as general traffic manager of the association.

Marmon Seven-Passenger Phaeton Has Stationary Top

The hood on this new Marmon model has been lowered, the lines from front to rear have been straightened, the body has been lengthened an inch and the over-all height has been reduced four inches. The "panorama" top is of the stationary type and is featured by the absence of supporting bows. The price is $3185

NEW TRUCKS BUT OLD PARTS, IS CHARGED

Complaint Issued Against Lease Motor Co. by Federal Trade Commission

WASHINGTON, Aug. 21—Charging that in the assembling of automobile trucks it used worn or second-hand parts and sold the completed product as new trucks without disclosing the true origin and facts concerning the building of the trucks, the Federal Trade Commission has issued a complaint against the Lease Motor Co., Inc. The complaint also is directed against its subsidiary the Acoma Motors Co., Inc. Both companies are located in Long Island City.

The Lease company is engaged in the business of repairing motor cars and trucks and in the rebuilding and selling of automobile trucks. The Acoma concern is principally a sales agent for the Lease company in the distribution of the latter's trucks. In the advertisement and sale of these trucks, the complaint alleges, the public was misled and deceived and it is charged that the practice was an unfair method of competition as against competing concerns.

The respondents are given 30 days in which to answer, after which the case will be tried on its merits.

Denies Charges

NEW YORK, Aug 21—"The Lease company will put in a defense on Sept. 28," says Robert Lease, president of the Lease Motors Co., against which the Federal Trade Commission has issued a complaint, charging the use of worn or second hand parts in the assembling of trucks which later were sold as new. "We deny the charges. I feel that they originated with a couple of export houses with which we have had some friction. We build trucks and we never have used worn or second hand parts in their construction, as charged.

"The Lease company has been in bankruptcy since April 1, with Eli Newman as the receiver. It is about to be sold to a new concern, the Panther Motor Truck Co., which will manufacture trucks in the Long Island plant. The matter has been brought to the attention of the court which yesterday signed the order permitting of the sale."

"ELITE" REPLACES COLUMBIA "DE LUXE"

DETROIT, Aug. 22—The Columbia Motors Co. has replaced the de luxe series of six-cylinder cars with the Elite line. The principal mechanical change consists of the substitution of the Continental 8 R engine for the 7 R engine used formerly. Five body models are included in the series—five passenger phaeton, two passenger roadster, four passenger sport, four passenger coupe and five passenger sedan.

Digitized by Google

CHEVROLET UNVEILS WINDOW IN NEW PLAN

Will Be Changed Monthly and Serve as Suggestion to Dealers

DETROIT, Aug. 22—The first window dressed by the retail sales branch of the Chevrolet Motor Car Co., as part of its plan of making monthly display suggestions to dealers, was unveiled in the salesroom in the General Motors building.

In the windows of the branch the automobile will be shown in a different setting each month—a setting based upon seasonable conditions, in which the car is the important factor in making possible for its owners a trip to the scene shown.

The window will be suggested as a key for displays throughout the entire Chevrolet retail sales organization. Through its sales department, the company will send photographs and complete descriptions of the scene depicted in the central windows. It is expected that replicas of the display can be used effectively by all dealers in cities of 50,000 upward.

Cost Need Not Be $1,000

On the scale to be employed in the Detroit windows the display will cost about $1,000 a month. Reproductions of the scene can be put on at lower cost, as all showrooms will not have the window space that is available in the General Motors Building, and even if they have, the cost of reproducing can be made lower than the cost including original design.

The scene for August represents a midsummer scene, where the automobile, a Chevrolet sedan in this instance, has enabled its occupants to seek out a sequestered beach, where bathing and its attendant pleasures might be enjoyed away from the usual summer crowds.

The cost of this scene was about $3,000, but it included the purchase of the wax figures, all the bathing paraphernalia and the various properties used, as well as the cost of originating and designing. The cost will be less hereafter, as the plan is to use the same figures and obtain the use of costumes and properties required from stores dealing in these goods, and give credit for their loan by cards displayed with the scene.

Part of Sales Effort

George E. Merkle, manager of the Detroit Chevrolet sales branch is the originator of the plan for stronger appeal in the display of cars. By showing the part that a car may play in bringing variety into life, he declares the attention of persons who have never owned one may be better centered upon purchase.

Displays of this kind are expected to lend themselves to showing the particular advantages of certain models, including the utility of the coupe in business, the convenience of closed cars in all sorts of weather conditions and for all occasions, and the comfort of the open models for ordinary uses. Though the trend of buying is steadily toward closed cars, approaching 50 per cent of all Chevrolet sales, the open models will always be favorites with many buyers.

Harry K. Shockley Dead

CINCINNATI, Aug. 18—Harry K. Shockley, manager of the Cincinnati Automobile Dealers Association, died at his home here. He was one of the best known men in the trade in Cincinnati and had long guided the destinies of the dealers' association.

Winton Branch Dividend

BALTIMORE, Aug. 17—The board of directors of the Winton Co. of Baltimore, Inc., has authorized the payment of dividends at the rate of 8 per cent per annum to June 30, 1922 on the preferred stock, to stockholders of record as of July 31, 1922.

Franklin Stockholders Exceed 6000

SYRACUSE, Aug. 14—Franklin stockholders now number more than 6000, according to F. A. Barton, secretary and treasurer of the H. H. Franklin Manufacturing Co. This represents an increase of 20 per cent since the first of the year.

Ohio Tire Changes Name

PORT CLINTON, O., Aug. 18—Purchasers of the Ohio State Rubber Tire Co., which was sold recently at receiver's sale for $150,000, have changed its name to the Wildman Tire & Rubber Co.

SALES OF TRACTORS AHEAD OF LAST YEAR

Increase Is Also Noted in Farm Lighting Plant Business

CHICAGO, Aug. 17—The monthly trade review issued by the National Association of Farm Equipment Manufacturers notes that up to July 15 tractors were moving fairly well and that the sale of general farm equipment, including gas engines, was at least equal in volume to the corresponding period of last year. Speaking of the business done by jobbers in the equipment lines, the review says:

> Generally speaking, it is reported from 50 to 75 per cent of normal, although a few of the firms whose goods they handle are doing a normal business. During July and August a slowing up of trade is not unexpected due to the seasonal character of the goods sold, but jobbers anticipate that the period will show an improvement over last year unless the railroad and coal situations complicate matters unduly.

Sale of farm lighting plants is reported far ahead of last year, although still below normal. Production is said to be at a low point, shipments being made out of stock to a great extent. The eastern and central states are said to be showing the most interest in lighting plants.

A majority of manufacturers reported tractor and thresher shipment ahead of those for last year. Production, the report says, has been increasing since the first of the year, and would be greater were it not for the difficulty of securing labor. Tractor sales are said to have been well scattered throughout the agricultural states.

First Window Dressed for Chevrolet Dealers

This job cost $3,000, including purchase of the figures, which will be used in other displays, expected to cost about $1,000 each. Photographs and descriptions of this and later displays will be sent to Chevrolet dealers. A new window, fitting the motor car into the people's convenience and recreation, will be dressed each month

ADVOCATE GASOLINE TAX FOR ROAD WORK

Bureau of Public Roads Would Put Most Burden on Motorists

WASHINGTON, Aug. 17—A readjustment of taxes for good road construction, so that a larger proportion will be paid by the automobilist road user and a lesser percentage from state and local taxes will be advocated by the Bureau of Public Roads. The equitable method of raising good roads funds, the Bureau advocates, should be on a gasoline tax basis.

"Approximately $40,000,000 annually could be raised for road building and maintenance by a tax of one cent a gallon on gasoline," Thomas H. MacDonald, chief of the bureau, estimates.

As evidence that the gasoline tax method is growing popular with state and federal legislators as a means of securing funds for good roads, the bureau cites the fact that the method is already employed in seventeen states.

OAKLAND PREPARING FOR BIG SEPTEMBER

PONTIAC, MICH,. Aug. 19—With a temporary lull during August while shifts are made in manufacturing arrangements at the plant here, the Oakland Motor Car Co. is preparing to have in September the biggest production and sales month of the year, according to W. R. Tracy, assistant general sales manager.

The only difficulty confronting the factory is means of getting material into the shops during the railway tie-up.

RADIO NOW EMBRACES PAIR OF MOVING CARS

RACINE, WIS.. Aug. 21—Incident to the various spectacular activities in exploiting the new "F-50" motor, the Mitchell Motors Co., Inc., has successfully experimented along a new line, namely, the application of radio-telephony to mobile motor cars. Starting with a single car, one of the "White Streaks," now running in various parts of the country, which was equipped with a three-tube amplifier, which gave street corner concerts and provided other forms of entertainment, the idea met with such instantaneous response that it has been developed to embrace a pair of cars.

C. P. Robinson, during the war an expert radio operator, conceived the idea of inter-car wireless communication. By adding a microphone to each radio outfit, he was able to build up individual sending stations, each able to transmit messages over distances ranging from one to two miles. The apparatus is rugged enough to withstand the hazards of all ordinary road travel, and the occupants of the two cars are able to carry on an uninterrupted conversation within the distance limit.

A Correction

Through an error an advertisement in Motor World of August 16, page 105, listed the Roamer car as equipped with Zenith carburetor. The Romer is the car that should have been listed.

The Widest Street in America. Next!

Keene, N. H., was claimed to have the widest paved street, 140 feet, by a native son and a picture of that thoroughfare was printed in the July 26 issue of Motor World. Lo, here comes Onawa, Iowa, with a street that also is claimed to be the widest—150 feet. Well, let's get the yardsticks out, maybe there's a wider one whose fame is yet unsung. Send in a picture

ACTIVITY ON COAST IN PLANT ERECTION

Associated Motor Industries Planning to Establish Assembling Factory

SAN FRANCISCO, Aug. 18—The automotive manufacturing and assembling industry is more active in the cities around San Francisco Bay than it has been at any time within the past five years. The Chevrolet Motor Co. of California has applied to the city council of Oakland for permission to close certain streets in order to provide more ground on which to erect extensive additions to its assembly plant.

Announcement also is made that the Associated Motors Industries, of which W. I. Ohmer, of Dayton, Ohio, is chairman of the board of directors, will establish one of five assembling plants for automobiles and motor trucks at Oakland. The other cities at which similar plants are to be established are given as Indianapolis, Boston, Louisville and St. Louis.

The plant of the Durant Motors Co. at Oakland, construction work on which was started last November, and which has cost to date approximately $1,000,000, is ready to start production of cars, according to announcement by George R. Scott, factory manager. Associated with Scott in the program of construction was L. R. Holm, resident engineer for the company. R. C. Durant, resident of the company, will maintain headquarters in the administration building, as will also Manager Scott, C. M. Steves, sales manager, and A. L. Warmington, comptroller.

Truck Assembling Plant

The Indiana-Pacific Motor Truck Co. will erect an assembling plant in San Francisco this year, according to C. M. Menzies, of this city, who has charge of all territory west of Denver for that corporation, and who has just returned from a trip to the eastern headquarters of the company.

The Walter M. Murphy Motor Co., which has been handling the Lincoln in San Francisco, Oakland, Los Angeles, Pasadena and Fresno since the Leland-built car first came on the market, has been named authorized sales representative in these cities for Ford products.

The Joseph Mulvihill Co. has been organized in San Francisco to distribute Marathon oils and greases throughout northern California. Joseph Mulvihill, member of the San Francisco County Board of Supervisors, is president of the company and Thomas Keough is secretary and treasurer.

Herbert Kayser, of San Francisco, has sold his interest in the firm of Kayser & Hannay, Ford dealers, and has joined the sales organization of Chester N. Weaver Company, Studebaker distributors in San Francisco, with which firm he was affiliated up to about one year ago.

SALES IN CHICAGO FALL OFF SLIGHTLY

No Evidence of Slump, However—New Kind of Salesmanship Developing

CHICAGO, Aug. 21—It is the general opinion of close observers of retail automobile sales in and around Chicago that whatever effect the recent price reductions of a number of lines had it was to slow up sales and that in the slowing the lines reduced suffered as much or more than other lines. Sales have fallen off so slightly, however, that it is doubtful whether any of the decline should be attributed to the price reductions. Certainly a seasonal decline of some degree was due after the unusual selling of June and July, and all things considered the decline in sales has been less than was expected and by no means great enough to be called a slump.

Behind on Deliveries

Some of the more popular medium-priced cars are selling as well as at any time this season. The Chicago agency for a well established make selling under $1,000 is just as far behind with deliveries as at any time this summer and is now booking orders for delivery in 60 days. This company has lost many sales this summer because of this situation. A popular car in the high price class which was announced this summer is now being sold in Chicago for delivery in December at the earliest.

Some of the agencies for popular cars are catching up with deliveries and the ability of buyers to get fairly prompt delivery on the established lines has caused the cars not so well established to suffer some loss of sales.

The record of time sales compiled by the Central Automobile Finance Association shows that sales thus far in August have been about on the same level as July. For the first two weeks of July the time sales numbered 1,973 and in the first two weeks of August the number was 1,892.

Closed Cars Sell Well

Sales of closed cars have been running unusually heavy. A dealer with a large number of orders on hand for delivery as soon as possible finds that the orders for open cars exceed those for closed cars by only 20 per cent. Another dealer in a position to make deliveries within two or three weeks is making 80 per cent of his sales on the closed models.

Salesmen, spurred on by the unusual buying spurt of the last few months, are working hard all the time and a new kind of salesmanship is the result. Few dealers are experiencing hard times selling their trade-ins, "because," explains one, "we are able to dispose of them at a price that does not startle the average used car buyer and because there is a better kind of used cars being sold."

Medium-priced cars are leading the field in sales, with low priced cars running a close second. Many dealers are already at work on a winter merchandising plan, and it is a safe prediction that closed car sales this winter will eclipse previous records.

Accessory dealers and tire merchants report "wonderful times" with sales at the same high level that has prevailed since the opening of the season.

BUFFALO SATISFIED WITH 1922 BUSINESS

BUFFALO, Aug. 15—Buffalo's automobile dealers are well satisfied with the business done so far this year, and are correspondingly pleased with the fall trade outlook

July's business ran ahead of June, which had showed some falling off compared with May, when sales were slightly less in volume than in April, the banner month of the year.

Some of Buffalo's retailers in the medium priced field complain of being unable to get deliveries from their factories on certain models, and say the volume of their sales during July would have been considerably greater if their factories had been able to supply their demands.

Dealers say they have no complaint to make on the present condition of the used car market. They have been able to sell most of the used cars which they had in stock at the beginning of the year, and they state the demand is preventing accumulation of used cars on their hands. Buffalo's street railway strike, which has been in progress since July 2, has stimulated slightly the demand for the lower priced used cars.

CONDITIONS IN WEST FORECAST GOOD TRADE

DETROIT, Aug. 21—Reports on conditions brought in by executives of prominent automobile companies who have been traveling through the West are encouraging. Corn, they say, is in good condition and promises a profitable crop. When the corn money comes in, the farmers will be in a better financial condition than they have been for some time and this will help in the sale of cars.

Conditions, too, are improving in Utah, where the copper smelter works were closed for some time.

New Miller Tire

AKRON, Aug. 21—A new line of cord tires, called the Wedge Tread, in sizes ranging from 30 x 3½ to 35 x 5, is announced by the Miller Rubber Co. The 30 x 3½ clincher lists at $12.50; the 30 x 3½ straight side at $13.50; the 32x 3½ at $19.25; 31 x 4, $22.20; 32 x 4, $24.50; 33 x 4, $25.25; 34 x 4, $25.90; 32 x 4½, $31.45; 33 x 4½, $32.15; 33 x 5, $39.10; 35 x 5, $41.05. The new Rellim fabric sells at $9 for the 30 x 3 and the 30 x 3½ at $10.

USED CAR ALLOWANCE DROPS IN MILWAUKEE

Price Cuts on New Automobiles Result in Flooding Market There

MILWAUKEE, Aug. 21—While reports of retail trade following the formal announcements of 1923 models and new prices are conflicting, on the whole dealer trade has undergone a very respectable stimulation, in the past week especially. As a rule those who have not felt this betterment in demand are dealers representing cars that have not been reduced.

A good many people who did not buy passenger cars last spring during the big rush find eminent satisfaction in new models and prices and are beginning to place orders. Trade, however, probably will not get into a real swing until dealers are better able to place cars into the hands of purchasers at the time of closing the deal.

At the same time the demand for closed cars is relatively much heavier than at any time in the history of the business. It is a matter of much favorable comment among buyers that manufacturers have succeeded in bringing the cost of closed types closer to the price of open cars, and many people are buying coupes and sedans who felt they could not afford them when the difference was so great as it has been up to a short time ago.

Prospects Holding Off

As might be expected, dealers in cars that have not been reduced in price encounter constantly the expression of a conviction on the part of their prospects that they will be able to buy more cheaply later. And, as usual in the case of general reductions by large quantity producers of the best known cars, some people insist that the "end is not yet," and they intend to hold off a little longer to see if the price of their favorite is actually reduced further.

The used car situation has been aggravated further by the new buying movement, and the market is virtually flooded. However, allowances made by dealers have dropped sharply with the trend of new car prices, encouraging the market to some extent. Almost every vacant lot at advantageous intersections is being used as a curb market, prejudicing to some measure the more orderly and substantial effort of legitimate dealers to merchandise their large stocks of used cars.

Garage Sold for $1,200,000

PHILADELPHIA, Aug. 18—The ten-story Pennsylvania Garage & Service Co. building at 329 South Broad Street, brought $1,200,000 at auction, following a $219,000 judgment of the Atlantic Refining Co. The purchaser is Harry Weitzenhoffer. The property is assessed at $700,000.

LOUISIANA LEADING IN ROADS UNDER WAY

State's Program Is 89 Per Cent Complete, Federal Report Indicates

WASHINGTON, Aug. 17—Progress report on the Federal aid highway construction program shows that on July 31, last, 14,348 miles of highways had been completed and paid for; 3951 miles completed and not yet paid for, and that 14,912 miles are under construction.

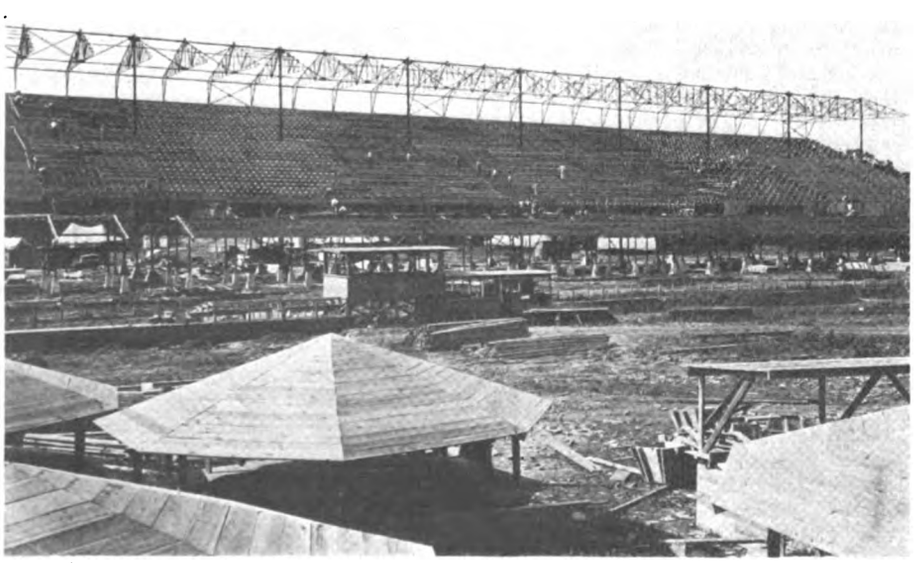
Reports made to the United States Bureau of Roads show that the states completed 600 additional miles of good roads during July. Including projects not yet under construction but authorized under Federal aid, approximately 40,000 miles of road building comprise the Federal-states' program for the fiscal year ending July, 1925.

Louisiana ranks first in the progress made on good roads under construction, her program having been 89 per cent completed. Her program contemplates the construction of 254 miles of good roads during the fiscal year ending July 31, 1923. Maryland, the figures show, is at the bottom, with a program of 29.7 miles, of which but 15 per cent is completed.

The largest amount of construction on roads is being done in Texas, where 1484 miles are under construction. Iowa comes next with 1043 miles, and Nebraska is a close third with 985 miles. In Rhode Island but 6.6 miles are under construction for the year, of which 55 per cent have been completed.

Haynes Promotes Radoye

KOKOMO, IND., Aug. 18—Gilbert U. Radoye, who for the last three and a half years has been director of advertising and sales promotion for the Haynes Automobile Co. has been appointed director of sales and advertising for that company. He will continue to direct the advertising and sales promotion divisions in addition to his new duties. Before becoming associated with the Haynes company, Radoye held important positions in the sales and advertising departments of other automobile manufacturing concerns. He is a member of the advertising committee of the National Automobile Chamber of Commerce.



MASSACHUSETTS PUTS LIMIT ON WEIGHTS

BOSTON, Aug. 19 — Massachusetts will have a law in effect next month that will bar from the highways, at the discretion of local officials, all trucks of five tons or more, and limit the capacity carried by three and four ton trucks. While the law does not state specifically what tonnage trucks are affected by the law, the wording limits the weight to 10,000 pounds for vehicle and load.

Out of all the 50 odd laws put into the legislature for consideration this year, but five were passed. The truck law was a compromise. After the big fight on motor truck fees and a tax of one cent a gallon on gasoline ended in the defeat of these measures, the Department of Public Works centered its efforts on a bill to lower the weight limit, which now allows 14 tons, inclusive of vehicle and load.

A bill was under consideration to cut this down to 20,000 pounds, which would mean limiting the capacity of the large trucks very materially. The new law fixes the 10,000 pound limit in making it discretionary with local officials to prohibit such a total weight when it is apparent roads are being injured because of it.

Building Steel Grandstand at Kansas City Speedway

One of the two steel grandstands at the new Kansas City Speedway, now under construction. Each will seat 17,500 people. They are 800 feet long and 80 feet high, giving a remarkably fine view of the 1¼-mile track

KANSAS CITY READY FOR SEPTEMBER RACE

Attendance of More Than 100,000 Is Expected at Opening Classic

KANSAS CITY, Aug. 17—The completion of the new $500,000 Kansas City Speedway in time for the opening with a 300 mile International Speed Race on Sept. 16 is now assured. The widespread interest throughout the Middle West indicates an attendance of more than 100,000 at the opening classic. The list of drivers who have already entered includes: Murphy, Milton, Sarles, Wonderlich, Bennett Hill, Joe Thomas, Al Melcher, Harry Hartz and others well known in speedway events.

E. E. Peake, secretary and general manager of the Kansas City Speedway Association, points to the fact that John S. "Jack" Prince, veteran speedway builder who is constructing the Kansas City bowl, has promised a product that will be the fastest circular track in existence. As an example of the effort of Prince to attain this end, he is banking the turns to an angle of 40 degrees. Prince believes this will permit a speed of 120 miles an hour.

Another innovation is the steel grandstands, of which there are two. They are more than 800 feet in length and have a combined seating capacity of 35,000. The highest point in the seating arrangement is 80 feet above the track level, affording an exceptionally fine bird's-eye view of the track.

Peake has arranged with the American Legion to provide them a liberal allowance of the receipts, and the men in turn are conducting an active ticket selling campaign throughout Missouri and Kansas.

Receivers for Hydro-United

PHILADELPHIA, Aug. 19—Receivers for the Hydro-United Tire Co., of Pottstown, Pa., have been appointed by the United States District Court of the Eastern District of Pennsylvania, which has named John P. Hall and Ephraim Lederer. The receivership was applied for, it is stated, for the purpose of conserving the assets of the corporation and working out its affairs for the best interests of all the parties concerned.

Burnett Joins Homer McKee

INDIANAPOLIS, Aug. 19—Leo N. Burnett has resigned as advertising manager of the Lafayette Motors Corp. and will join the copy and planning department of the Homer McKee Co., Inc., advertising agents, Indianapolis, early in September. Burnett has directed Lafayette advertising since the inception of the company three years ago and was previously advertising manager of the Cadillac Motor Car Co. of Detroit.

TARIFF BILL HALTS GASOLINE INQUIRY

R. L. Welch of Petroleum Institute Only Witness Heard So Far

WASHINGTON, Aug. 15—The Senate gasoline probe which has been under way for more than two months has been temporarily halted, pending the passage of the tariff bill. Members of the Committee on Manufactures, who are conducting the probe, state that the investigation will be resumed as soon as possible.

An offer to testify in the probe has been received from W. C. Teagle, president of the Standard Oil Co. of New Jersey by Senator McNary, acting chairman of the committee. Teagle's invitation will be accepted according to Gilbert E. Roe, in charge of the probe, who states that the Standard's head leads the list of those who would be subpoenaed. The only witness that has been heard to date is R. L. Welch, secretary of the Petroleum Institute.

"In the aggregate the automobile users of the United States have already profited by the investigation, but it is the expectation that before the committee shall have finished its investigation gasoline prices will not only be lower but will be more stable," Roe said.

INDUSTRIAL PICKS BOULDEN FOR SALES

ROCHESTER, N. Y., Aug. 19—The Selden-Atlas merger is considered to be of far-reaching significance in the automotive world, and men of recognized commercial and industrial standing are its sponsors. At the sales conference of the field men of both the Selden and Atlas corporations, Allan Cosgrove, vice-president of the Atlas Truck Corp. and also of Industrial Motors, formally placed entire charge of the Atlas trucks and Atlas field men in the hands of H. T. Boulden, vice-president of the Selden Corp. and sales director of Industrial Motors.

The policy of the Industrial Motor Corp., the holding company, so far as it concerns the advertising, sale, manufacture and service of Selden and Atlas trucks, will be controlled by a committee composed of Frederick M. Small, president of the Martin-Parry Co. and president of Industrial Motors; George C. Gordon, president of the Selden Truck Corp. and vice-president of Industrial; Allen Cosgrove, vice-president of both Atlas and Industrial corporations, and H. T. Boulden, R. H. Salmons, vice-president of the Selden Truck Corp., is another of the Selden officials who will act as vice-president of Industrial Motors.

Receivers for World Tire Corp.

CHICAGO, Aug. 18—A petition in bankruptcy has been filed against the World Tire Corp., in the U. S. District Court by the Columbia Tire & Rubber Co., chief creditor, claiming $12,000 due it on goods delivered to the World company, the Seaman Paper Co., $200 and F. E. Scott, $216.

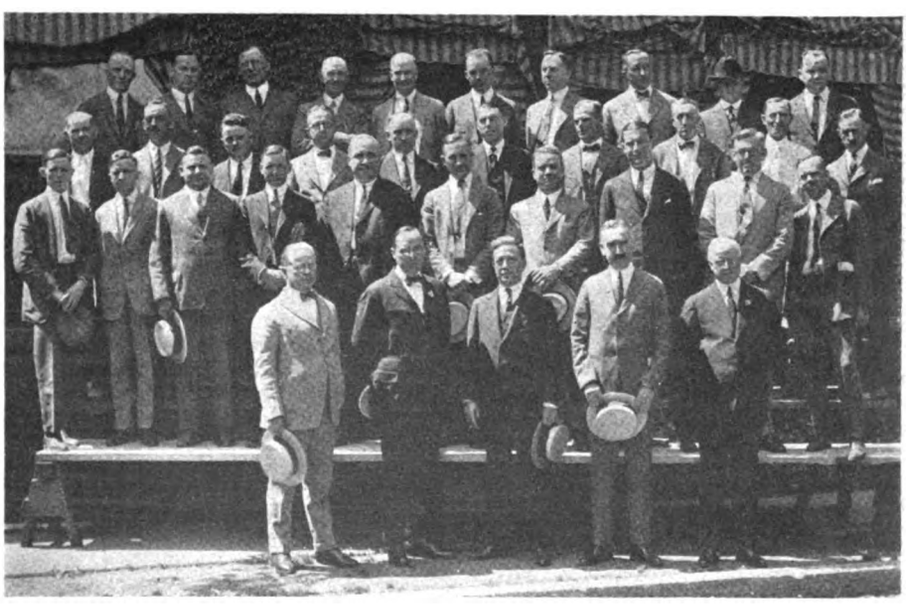
The Columbia company claims that the World firm, realizing its insolvency, undertook to pay off its creditors by favoring the Tire Co. of America with a shipment of goods amounting to $10,000. E. D. Buell has been appointed receiver. The World Tire Corp. controls a number of retail stores throughout various parts of the country.

"THE SALES EXECUTIVE" ISSUED BY A. E. A. IN ITS MERCHANDISING CAMPAIGN

Chicago, Aug. 15.

THE Automotive Equipment Association has undertaken the publication of a second periodical to assist in carrying out the merchandising campaign. The new publication, which contains four pages, is The Sales Executive, which, as its name indicates, will be sent to sales executives of both manufacturing and jobbing members. The Automotive Equipment Merchandiser, another four-page issue which is brought out occasionally and addressed to the salesmen of the manufacturing and jobbing members, will be continued.

Both these little periodicals will be edited by Ray W. Sherman, merchandising director of the A. E. A. The Sales Executive will disseminate information which can be used by sales managers, both of manufacturing and jobbing houses, in promoting the A. E. A. campaign. The Merchandiser, as in the past, will devote itself to presenting ideas for co-operation in the campaign by salesmen of both manufacturing and jobbing members.



The A. E. A. will continue its distribution of sales promotion literature to retailers in the automotive equipment field through the 32-page books, "A Greater Business and Greater Profits" and "Shop Profits," which supplement, respectively, the "Ask 'Em to Buy" and "Shop Profits" films, and which dealers and garagemen can have for the asking.

NEW WORKING CAPITAL FURNISHED REPUBLIC

NEW YORK, Aug. 15—Following a conference between C. H. Poppenhusen, representing the bankers committee, and M. N. Buckner, representing the note holders' committee, it is announced that ample working capital has been secured for the Republic Motor Truck Co., Alma, Mich., which will permit of the carrying on of the business.

Details of the plan providing for a readjustment of the company's capitalization and indebtedness are now being worked out.

Selden and Atlas Managers Confer

When the division sales managers and branch managers of the Atlas Truck Corp. met with the Selden field and home office organization at Rochester, N. Y., for a three-day conference the control of the Atlas organization was turned over to H. T. Boulden, Selden vice-president, who is the sales director of the Industrial Motors Corp., an organization formed by the merger of the two companies. The officers in the front row are, left to right: H. T. Boulden, George C. Gordon, Selden president; Allan Cosgrove, Atlas vice-president; William C. Barry and R. H. Salmon, Selden vice-presidents

CHANGES IN THE TRADE

Stephen Haas has taken over for eastern Pennsylvania, New Jersey and Delaware the distribution of Ames bodies for Ford cars.

Carleton Brothers, Davenport, Iowa, has taken over the Jewett and Paige agencies, formerly handled by the **Mohl Motor Truck Co.**

R. Hallan recently became manager of the Chicago branch of Mack Trucks, having been transferred from the Cincinnati branch, of which he was manager.

A. S. Johnston of Atlanta will open an agency in Columbus, Ga., for the sale of Willard batteries, the firm to be known as the **Johnston Battery Co.**

Milwaukee Automobile Service Co., Milwaukee, Velie dealer, has changed its corporate title to the **Velie Sales Corp. of Milwaukee.** E. B. Deffer is secretary.

Corcoran & Meadows has established a store at Columbus, Ga., for the handling of automobile equipment. The members of the firm are **E. M. Corcoran** and **J. T. Meadows.**

Sheboygan (Wis.) Auto Parts Co. has been organized by **George Regh** of Milwaukee and on Sept. 1 will open for business as a jobber of and dealer in general automotive equipment.

Cruse-Crawford Co. of Birmingham will open up a branch of their sales business in Bessemer, Ala., where they will carry a stock of Willys-Knights, Overlands and Hupmobiles.

Valley Inn Buick Co., Neenah, Wis., has been organized by **L. H. Bleecker**, formelry Ford dealer, to handle the Buick line in Neenah-Menasha and vicinity. **Carl Achtenhagen** is associated with Bleeker.

Midland Garage, Davenport, Iowa, formerly Koepke Bros., has been taken over by **Edward C. Stokes**, Davenport, and **M. W. Stokes**, Chicago. The latter has been with the Baker-Franklin agency, Chicago.

Chicago-Lexington Co., of which O. T. Mitchell is president, has opened its third branch outside of "motor row." The new store is at 4006 Washington Boulevard, where both Lexington and Gardner cars will be sold.

Neel-Cadillac Co., Philadelphia, has appointed the **F. W. Peters Motor Car Co.**, Bordentown, N. J., and Burlington, N. J., and **Branson & Doerr**, with territory including Vineland and Millville, as Cadillac dealers.

Overland-Piedmont Co., handling the Overland at Spartanburg, S. C., has been taken over by the Asheville branch of the Overland-Knight Co., headed by M. O. Jackson. P. B. Foster of Spartanburg is in temporary charge.

F. Earl Richardson, for 10 years a leading figure in Cleveland retail and wholesale motor car circles, has been elected as president and general manager of the **Avenue Motor Co.**, Maxwell-Chalmers dealers in Cleveland.

Darling Motor Co. has been organized and has established a Ford agency and service station at Buckhead, Ga. **Southerland Motor Co.**, another recent organization, has established a Ford agency and service station at East Point, Ga.

General Motors Truck Co. has opened a branch in Louisville to serve that territory. **E. W. Boyes** has been appointed branch manager. The branch covers not only Kentucky but sections of southern Indiana, West Virginia, Ohio and Illinois.

Harry W. Cassleman, president of the West Side Nash and Stearns Co., Chicago, who recently purchased the D. & W. Motor Sales Co., 4700 Madison St., Chicago, announces that the latter company will continue to handle the Hupmobile.

Latex Tire Co., Fond du Lac, Wis., manufacturer of tires and tubes under the brands of Latex, Ranger and Winnebago, has opened the first of a series of factory branches at Milwaukee, under the management of **Walter F. McDowell.** The branch will handle all of the southern part of Wisconsin.

B. B. Burns, president of the Illinois Automobile Trade Association, has disposed of his used car business, in which he was exclusively engaged at Decatur, Ill., and will take a vacation before announcing his future business plans. He sold his lease and part of his equipment to **Porter & Watkins**, Hupmobile and Oakland dealers, and closed out his stock of used cars.

H. P. Carter, for three years manager of the Buick branch in Chicago, has been appointed district sales manager with headquarters in Chicago. His territory embraces the Chicago, Milwaukee, Battle Creek and Minneapolis branches and the Minneapolis distributors. **C. F. Yonkers**, sales manager of the Chicago branch for the last three years, succeeds Carter as branch manager.

R. T. C. Motor Co., recently incorporated at Marshalltown, Iowa, will be direct district factory agency for the Studebaker lines. Territory includes Marshall and Hardin counties and parts of Story, Tama and Franklin counties. **W. R. Thomas** is president of the company, but the agency will be under personal direction of **John F. Risewick**, formerly sales manager for Sheriff-Blair Motor Co., Des Moines.

Black & Maffett, Dodge Brothers distributor in Atlanta has been dissolved, **D. C. Black** retiring, and **F. E. Maffett** taking over the business under the new name of the **F. E. Maffett Motor Co.** Both Black and Maffett are among the best known automobile men in the South, each having served in an executive capacity at some time or other on the state dealer association and the Atlanta dealer association. Black has been appointed Buick dealer for South Atlanta.

NEW STEPHENS FIRM FORMED IN NEW YORK

NEW YORK, Aug. 21—The formation of the Stephens New York Motor Car Co. marks a change in representation of the Stephens in the Metropolitan district. An entirely new company has been formed of which Rufus S. Cole is president. New quarters have been opened at 1853 Broadway. Territory awarded covers the Metropolitan district, takes in all of Connecticut, except Tolland, New London and Windan counties; New York state up to and including Columbia county; all of northern New Jersey and the entire foreign representation for Stephens. The company is incorporated for $100,000, with Cole the controlling factor.

In taking up this agency Cole retires from the exporting house, the Robertson-Cole Co., with which he was identified for six years and in which time that company exported nearly 18,000 cars. Previous to that time Cole was Oriental sales manager for the Hupmobile. His long experience in the exporting business caused President Peek of the Stephens to ask him to take over the foreign representation of this car in addition to the Metropolitan territory.

J. Fred Hunter will continue to represent the Stephens factory in this territory as district manager. A. J. Higgins, former Metropolitan distributor for the Stephens, has become a sub agent for Maxwell.

BRUNSWICK SELECTS NEW BRANCH HEADS

CHICAGO, Aug. 19—The following changes in the personnel of the Brunswick Balke Collender Co., manufacturer of Brunswick tires and tubes, have been announced by Joseph F. Rosenberg, general manager:

Walter F. Higgins, formerly at Baltimore, is now district manager for the southeast with headquarters at the Atlanta branch. **A. I. Butler**, district manager for New York, takes over also the district of Philadelphia and Baltimore. **Dr. Burnett Tower**, formerly district manager at Kansas City, has been transferred to West of New York district with the Buffalo branch as headquarters.

Richard E. Cameron, for many years district sales manager of the Ajax Rubber Co. operating out of Pittsburgh, takes over the Brunswick-Cincinnati district, which includes Tennessee, Kentucky and West Virginia, as well as Southern Ohio. His headquarters will be in Cincinnati. **James K. Beach**, formerly with the Federal Rubber Co. of Texas, is now in charge of the Texas division with the Dallas branch as his headquarters.

Howard W. Makley, formerly with the Ajax Rubber Co. at St. Louis, has been made Brunswick district manager for the St. Louis district with headquarters in that city. His territory includes southern Illinois, Missouri, Arkansas, western Tennessee, Louisiana and western Alabama.

E. H. Brandt, assistant general manager, has entire charge of the field operations of the company with 23 branch houses throughout the country.

M. A. M. A. To Move

NEW YORK, Aug. 19—The Motor and Accessories Manufacturers Association will move its headquarters on Oct. 1, having leased office room on the twentieth floor of the new Fisk building, Broadway and 57th Street. The association will have 50 per cent more space than it at present occupies in Aeolian Hall, 33 West 42d Street, where it has been located for the past 10 years.

Ask Metz Bankruptcy

BOSTON, Aug. 19—The Metz Company of Waltham, Mass., makers of the Metz Master Six, was petitioned into bankruptcy here yesterday by three creditors. A hearing will be granted on the petition next week. Two of the creditors brought the proceedings as a result of judgments received against the company last June and a third has an assigned claim.

ASSOCIATION ACTIVITIES

Birmingham Dealers Convene

BIRMINGHAM, Ala., Aug. 17—At the semi-annual meeting of the Alabama Automobile Dealers' Association there were more than 100 visiting and local dealers in attendance.

The business session was held in the forenoon at the Tutwiler hotel, when a number of short addresses were delivered by local men and visiting delegates. During the afternoon the dealers enjoyed a barbecue on Little Cahaba river, tendered by Birmingham members of the association to their out-of-town guests.

Freight rates were discussed by O. L. Bunn, manager of the Birmingham Chamber of Commerce, who declared that thousands of dollars in freight have been saved to the automobile dealers of Birmingham by the Chamber of Commerce.

Walter Brower, in an address before the meeting, advocated a standard form of sales contract for automobiles and suggested that abstracts be required for automobiles the same as for real estate. Stricter laws for the protection of automobile owners were urged by Mr. Brower.

A strong plea for a committee to investigate the present dealers' license fees, which he declared excessive, was made by Sterling Edwards, local dealer. L. G. Adams, of Mobile, maintained that factory discounts should be given only to legitimate agents, while Joe Lyons, also of Mobile, spoke in behalf of closer unity among the dealers of the State.

The association accepted an invitation extended by the Montgomery Chamber of Commerce to hold its next convention in the capital. The next meeting will be held in January, when new officers will be named.

Service Association Grows

DETROIT, Aug. 16—The Automotive Electrical Service Association, composed of electrical service stations in various parts of the country, has built its membership from 62 to 250 during the past year, according to reports read at a meeting of the board of governors here.

The governors discussed plans for furthering the work of the association, whose object is to make specialized electrical service work available both for dealers and owners.

Mechanics to Organize

ATLANTA, Aug. 18—Mechanics employed by the garages and service stations at Augusta, are planning to form a city organization there this month to include in its membership bonafide automobile mechanics only.

The idea is being sponsored by C. M. Hill, head of the shop department of the Buick agency of that city, the purpose of the organization being to place the mechanics on a higher plane along with other professions, and not being at all in the nature of a union.

The plan is to establish club rooms where reading matter will be provided and the members can gather for a social evening occasionally, and to hold regular meetings for the exchange of ideas in regard to mechanical work and the problems the automobile workers come in contact with in the shops and service stations.

Montreal Closed Car Salon

MONTREAL, Aug. 16—Applications are now being received for the Montreal closed car salon which is now being organized by the Montreal Automobile Trade Association, Ltd. It is reported that applications are coming in very rapidly and that those intending to exhibit should make application immediately as all space available is practically taken up at present. The date for holding the show, sometime this fall, has not been fixed. Only closed cars will be shown. There will be no accessory exhibits.

Acting in Car Thefts

HOUSTON, Aug. 21—The Houston Automobile Trades Association has perfected a new plan for aiding in suppressing the traffic in stolen cars. The association has long been receiving reports of its members on used cars bought and sold, especially sold, and now the association will receive instant reports through its members to its secretary of any used cars being offered at ridiculously low prices or any suspicious action shown by the persons offering cars for sale or visiting shops. These reports will be made to the police immediately. In case the police get on the scene too late the association has a description of the car offered, and furnishes this to all members. The association believes it will soon reduce the car thefts and stolen car traffic in Houston and South Texas to the minimum.

Timken Stock Offered Public

NEW YORK, Aug. 23—For the first time in the history of the Timken Roller Bearing Co. the public is being given an opportunity to buy into its ownership. Members of the Timken family, now sole owners of the corporation, have decided to sell one-third of their holdings and 400,000 shares of stock of no par value are offered at $30 each. Hornblower & Weeks, New York brokers, are directing the sale of the stock, aggregating $1,200,000.

The sale has no elements of refinancing for the Timken company. It is stated by officials that the corporation has ample working capital and that the proceeds of the stock sale will not go to the company.

There will be no additional members of the board of directors and no change in policy or management.

MOTO-METER WIDENS SERVICE UNDER PLAN

NEW YORK, Aug. 21—More than 5000 authorized service stations have been appointed in four months, since the Moto-Meter Co. announced a service station policy. News from the factory indicates that the number is being increased rapidly in all parts of the country.

The service station policy, inaugurated to accommodate Moto-Meter users, has as its object the prompt replacement of damaged Moto-Meters with new instruments. Under the plan a car owner whose Moto-Meter has become damaged by breakage of a part can go to any dealer operating under the service station plan, turn in the damaged instrument and get a new one for half price. The dealer is credited with the 50 per cent allowance and also with an additional service allowance.

The company also has a list of prices on parts applying to cases where replacement of an easily installed part is all that is necessary to put the instrument in working condition.

The new policy makes it possible for owners to keep Moto-Meters on their cars at slight additional expense instead of having to drive around with a cork in the radiator cap for two or three weeks while the damaged instrument is being sent to the factory, repaired and returned.

In connection with the service plan, the company is furnishing dealers with service station signs, display materials and window transparencies.

Louisville Dealers at Annual Frolic

The Louisville (Ky.) Automobile Dealers Association held its outing on July 27 at Bauer's Park. The burlesque figure near the center is W. A. Thomas, Grant dealer, who acted as umpire of the ball game which was a feature of the outing

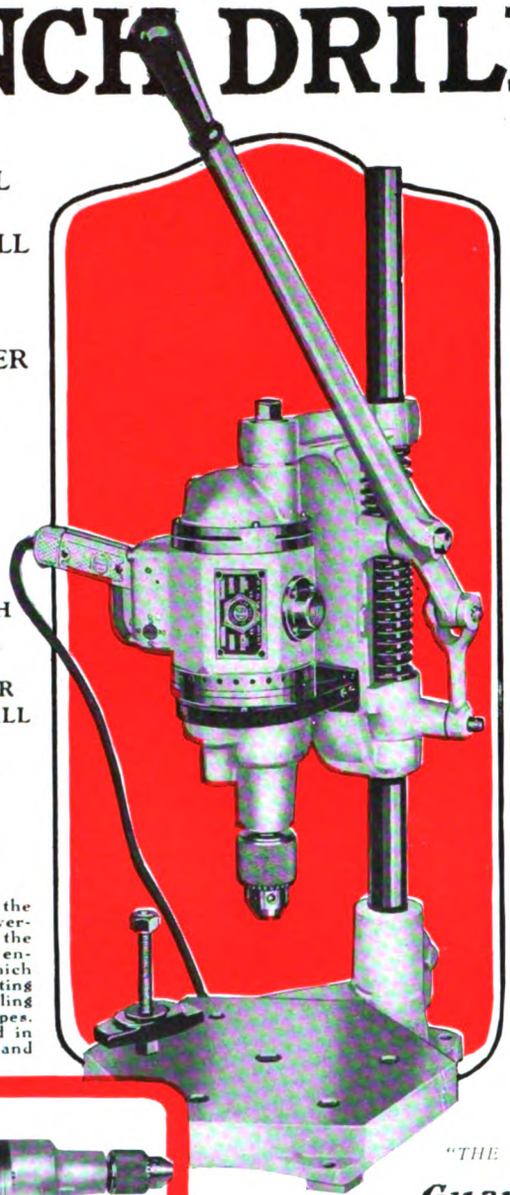
BLACK & DECKER BENCH DRILL STAND

BENCH DRILL STAND WITHOUT DRILL

$33.00

BLACK & DECKER SPECIAL HALF INCH DRILL



$85.00

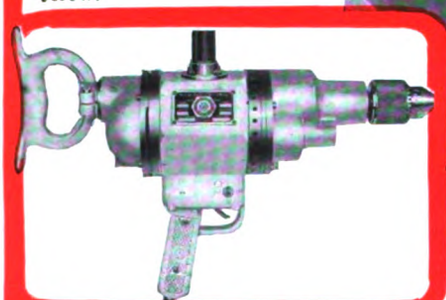


ILLUSTRATION SHOWS BENCH DRILL STAND *with* BLACK & DECKER SPECIAL ½″ DRILL

COMPLETE AS SHOWN

$118.00

The bracket supporting the drill may be raised or lowered to suit the height of the work and may be swung entirely around the post, which is a big advantage in locating the hole and for handling large jobs and odd shapes. The bracket is secured in position by means of a hand screw.

This is the new Black & Decker Special Half Inch Drill, which has created such a sensation in the trade by reason of the fact that it combines Black & Decker quality and an exceptionally low price.

YOU can always tell a good mechanic by his tools. He never buys inferior tools because they are cheap, if he can avoid it. But if he is a good business man as well as a good mechanic he guards against unnecessary expenditure.

In most shops a portable electric drill is absolutely indispensable and a drill press often necessary. Good mechanics everywhere are using Black & Decker Portable Electric Drills; and to make it possible for them to have the advantages of a drill press at minimum expense we have produced the Black & Decker Bench Drill Stand.

The Black & Decker Portable Electric Drill can be mounted in this stand in a few seconds and dismounted just as readily. The Stand sells for only a fraction of what it would cost to install a drill press.

The Black & Decker Post Drill Stand is similar in all respects to the Bench Drill Stand except that it has a longer column and is arranged with brackets so that it can be mounted on wall or post and the drilling table is secured on the vertical column with a hand screw so that it can be raised or lowered or swung around.

You Can Do It
with a
HOLMES AUTO WRECKER

A fifty-foot direct lift has no terrors for the garageman equipped with the Holmes Auto Wrecker. Where the fellow with a straight tail-end crane is out of luck, the Holmes-equipped man comes home with the bacon.

Pretty fat bacon, too, on a job like this.

It's the Holmes bridge-idea that does it. You run the cable of the opposite winch to a tree or pole, and lower the foot of the crane that's to do the lifting. Then there's no strain on the chassis.

Turn the handle, and up she comes. Hook her on with the Holmes V tow-bar that prevents accidents, and away you go. If she won't roll pick her up bodily.

Holmes Wrecker fits any large car or light truck chassis. Shipped complete, ready for work on the day of arrival. Ask now for full specifications. There's coin in it.

ERNEST HOLMES CO.

Chattanooga, Tenn.

On your Money Every Year

The McCaskey Safe Register Credit Section that keeps accounts with "One Writing" and gives Fire Protection, is combined with the McCaskey Cash Section which registers, lists and adds to give the merchant the most complete and saving system possible for his business.

Ask About The Cash System That Adds

Find Out How The Business Recorder Keeps Every Total

YOU WANT TO SAVE

The average of 50c daily that goes into forgotten charges;
The few cents worth of time each day wasted in mental addition of totals and error making;
At least 25c a day thrown into adjustments on disputed accounts;
The 50c and more a day which it costs you to try to keep your books posted and balanced;
Innumerable other losses and wastes which can be stopped to the extent of adding to your income, increasing your collections and sales and completing your record knowledge of the business.

You can make such a saving with the use of the McCaskey System for your business; you can obtain these advantages either in handling your credit business, your cash business or both through the McCaskey Complete System equipment. The system is a better investment than merchandise. You can afford to buy less, next time, and install a McCaskey. It will place money in your pocket!

Send the coupon today! It will not obligate you! It can tell you about the safest investment you can make for your business success.

National Conference Called on Used Cars

Trade Association Secretaries and Dealers Will Meet in Chicago in September to Study Latest Co-operative Plans—Practical Used Car Men on Program

SOME dealer associations have tried co-operative used car plans and have given them up as unworkable. Some other dealer associations have such plans in successful operation, with the result that used car losses have been eliminated or reduced to a negligible figure.

Why will used car co-operation work in one city and not in another?

Are the various co-operative plans so different that some are doomed to failure at the start while others have gone on for many months, in some cases years?

Automobile trade association secretaries of the country, with some of the dealers their associations serve, are going to search for answers to these questions at a conference in September.

The National Association of Automobile Show and Association Managers, with membership in most of the States, has called a National Used Car Conference, to be held at the Congress Hotel, Chicago, Thursday and Friday, Sept. 14 and 15. Trade association secretaries and dealers throughout the country are invited to attend. Many have already signified their intention of being present to take part in a discussion of one of the trade's serious questions, a discussion which promises to turn the light particularly on association effort to minimize used car losses. Time will also be given to used car merchandising by the individual dealer and to suggestions for improving the selling power of the automobile shows.

Some men in the trade call the used car situation a menace to the industry. Others say it is the chief obstacle to continuously profitable business for distributors and dealers. On all sides it is conceded that the dealer's lot would be much more pleasant and his future more assured if buying and selling of used cars could be put on a substantial business basis in every community and every dealer organization.

Chairman of Conference

ROBERT E. LEE

Secretary, St. Louis Automobile Dealers Association

The National Used Car Conference does not expect to discover a "cure" for the used car ailments of the trade. It does expect to bring out the good and bad features of various co-operative plans, assisting dealers and trade association secretaries in improving conditions in their own communities.

Robert E. Lee, veteran secretary of the St. Louis Automobile Dealers' Association and acting president of the association secretaries' organization, will preside over the conference. All sessions will have a period for general discussions, when delegates will be encouraged to ask questions and tell about practical used car methods followed in their cities and towns.

In order to get the discussions started along the several channels contemplated, the association has arranged for the presence of men from the trade, well informed on used car merchandising, as speakers.

One speaker will be L. B. Sanders, secretary of the Used Car Statistical Bureau operated by the dealers in Boston. Sanders will give the details of the Boston plan, one of the few that has been a success in a large city. Boston dealers claim that they have virtually eliminated losses on used cars, that they have been able to educate both the trade and the public to valuations of used cars based on their worth in the market and that the tone of the Boston trade has been elevated by the co-operated plan, which has been in operation since February.

Another speaker will be Ginder Abbott, head of the Abbott Automobile Co., Ltd., Packard and Franklin distributor in New Orleans. Abbott is the author of the New Orleans plan, whfch informs dealers not only of the reasonable re-sale value of a used car but also of its salability, as the information exchanged in the co-operative plan shows the makes and models of used cars in dealer's hands and indicates how long they have been in stock. The New Orleans plan has

Digitized by Google

other details which go farther along the line of dealer co-operation than most of its contemporaries.

A representative of the Saginaw, Mich., Automobile Dealers' Association, which has had a used car co-operative plan in operation since 1917, will be another speaker.

It is also the plan to set forth the results accomplished by association exchanges of used car sale price records and the association secretaries in Detroit, St. Louis and Kansas City, where such plans are in operation, will give brief reports of the experiences of their members.

To call attention to progressive methods of handling the used car question within an individual dealer organization two speakers have been arranged for, B. B. Burns, used car dealer in Decatur, Ill., and president of the Illinois Automotive Trade Association, will be one of these speakers. Burns is the only used car dealer in the country holding office in a State trade association. The big city dealer's used car problem will be discussed by S. E. Comstock, vice-president of Williams & Hastings, Hupmobile distributor in Detroit. A round table discussion will follow these addresses.

The final afternoon of the conference will lay aside the used car question to bring about an exchange of association secretaries' ideas on shows. The question, "What Can Be Done to Make the Automobile Shows Sell More Cars?" is expected to start this discussion. The discussion will be more or less informal, but some additional questions will be stated by the chair to assist in getting ideas on the floor for discussion:

1—Can the shows be laid out so that there will be an opportunity, at least for a fair percentage of the people attending, to sit down part of the time instead of having to mill around for hours and go out more or less exhausted?

2—Would it pay to have historical exhibits showing the progress of transportation and particularly automotive transportation?

3—Would it pay to have highway exhibits, in some cases to arouse public interest in better highways and in other cases to sell the non-car-owning public on the allurements of fine highways in the vicinity already built?

4—Would it pay to have educational exhibits along traffic and safety lines?

The association holding the conference has sent invitations to all automobile trade association secretaries throughout the country. If any have been overlooked, because of incomplete records of association names and addresses, the officers would like to have them accept this article as an invitation to attend. As the association is an organization of trade association secretaries it was decided not to send invitations to individual members of local associations, that is, to dealers, but all dealers will be welcome as guests of the conference and participants in the discussion.

The National Association of Automobile Show and Association Managers is an organization of several years' standing. Its members come both from large and small cities. Its meetings have developed many of the most progressive ideas employed in the conduct and promotion of the automobile shows. It has also investigated other association and dealer activities and generally has been a clearing house of ideas for its membership.

The members decided upon a used car conference for the September meeting because the heavy trading of the past few months, followed by the present tapering off in both new and used car sales, is expected to bring dealers' used car annoyances forcibly to the front again. It was decided to open the meeting to non-members so that all interested secretaries and dealers might have the benefit of the information brought out.

The conference room will be in the Congress Hotel and the first session, Thursday morning, Sept. 14, will be called to order at 10.30 a. m., Chicago daylight time. The conference is expected to conclude late Friday afternoon.

Officers of the association have asked Motor World to extend through its columns a general invitation to association secretaries and dealers to attend. Persons accepting it should notify Neal G. Adair, secretary, 239 West Thirty-ninth Street, New York.

Program—National Used Car Conference

THURSDAY, SEPT. 14

Morning and Afternoon

How Boston Dealers, Through Co-Operation and Education Determine Actual Used Car Values
By L. B. Sanders, Secretary, Boston Used Car Statistical Bureau

Industrial Tractor Market Still a Field Barely Scratched

Dealers Who Want to Get Into It Will Have to Make Close Study of Economies Tractors Can Perform in Particular Industries

By E. A. WHITE

THE industrial market for tractors is attracting keen interest. Ever since its introduction the tractor has been sold to a limited extent in industry but it was not until the agricultural market fell off so markedly two years ago that attention was turned with renewed vigor to the industrial market. When the agricultural slump came some tractor manufacturers immediately concentrated selling efforts in the industrial field, with the result that a large percentage of their output during the past two years has been taken by industry while others who paid practically no attention to this market were agreeably surprised to find that dealers representing them had developed substantial outlets in this field.

The result is that the tractor is already successfully used in a large number of industries. The problem to-day is to explore this field and develop its maximum possibilities.

To a greater extent even than the farmer, the manager of an industrial plant or operation demands to be shown just what economies the use of the tractor will produce in his own particular case. Successful salesmen in this field report that the men directing industrial plants and operations, as a rule, have little conception of the possibilities of this form of power generator; in fact, many of them have never thought of it and others are already more or less prejudiced against it because of failures resulting from injudicious attempts to use the tractor for various industrial purposes.

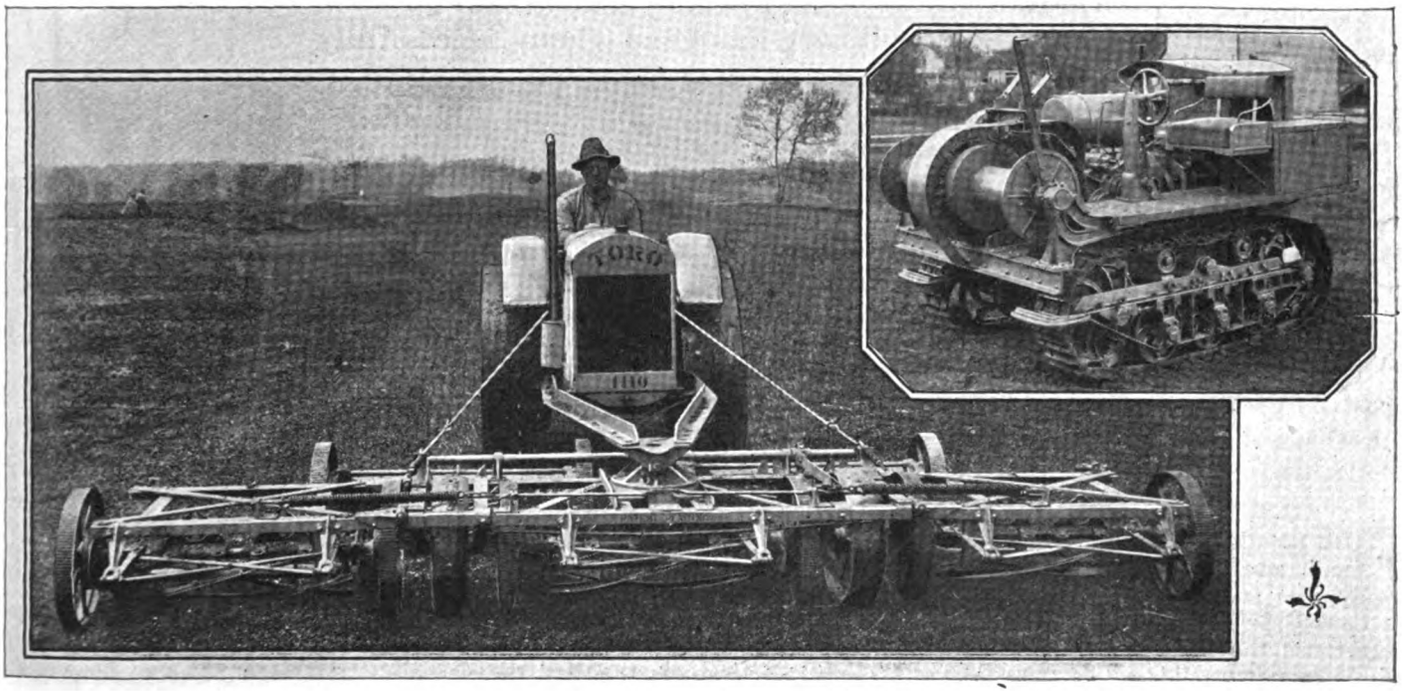
It may as well be frankly admitted that in some industries the tractor has failed because salesmen did not familiarize themselves with conditions to be met and unwisely attempted to oversell the tractor. It was simply impossible for the performance of the machine to come up to the pictures painted. This served to unsettle the prospect regarding the value of the tractor and to convince him and others to whom the report drifted that the salesmen knew nothing of the problems to be met or the possibilities of the product being sold.

One example will illustrate this point. A fuel company had a problem of moving coke. The motive power in use was pulling three coke wagons about the yard. The tractor salesman painted a glowing picture and promised to haul ten of these coke wagons at one time. The customer did not attempt to dispute the claim but demanded a demonstration. On the first trip with the ten wagons the tractor stalled for lack of traction and the salesman was laughed out of court. The sale was not made and the door was closed against further demonstrations. There was a chance to have made the sale if the tractor had pulled four or five wagons, which it could have done, and showed even a slight reduction in the cost of operation. However, opportunity was not offered to demonstrate this because confidence had been undermined by the failure of performance to approach claims made in sales talk. Overzealous salesmen can defeat their own ends.

Contrast this result with the methods and results of another salesman. This man became convinced that the tractor could be used efficiently in large lumber yards. He went to various yards and studied their problems. Finally he was able to get a prospect interested to the extent of allowing a demonstration. In order to meet the demands of this particular job it was necessary to develop a new type of trailer. This the dealer did at his own expense. The first attempt was a failure for the trailer broke down but the way was kept open for further demonstrations. After repairs had been made with some changes in the design of the trailer a two-day demonstration resulted in a sale. The use of this outfit has resulted in cutting in half the cost of unloading and handling lumber for this firm. Of course the profits from the sale of this outfit did not cover the expense incurred but an effective entry was made into the field. Now other lumber yards can be approached on the basis of this experience. The right start has been made.

These experiences illustrate how the industrial market must be approached. Constructive salesmanship is required. In industrial fields such as road building, where the tractor is established, the dealer can look for immediate business, but in other cases the field must be investigated, problems analyzed and sometimes new equipment developed to permit the tractor to be used to the best advantage. In the latter case it is logical for the manufacturer to take the intiative except in case of the larger dealers, who believe that the possibilities warrant the outlay required by pioneer work.

A CONSIDERABLE number of tractors have already been sold for road construction and maintenance, oil field uses, lumbering, care of golf grounds and to a more limited extent for municipal uses, but outside of these fields the industrial tractor market is still virgin territory. Here and there possibilities have been opened up, just enough to indicate where the dealer may wisely look for business. In 1921 one large tractor company conducted an investigation and found that without any direction from the company's home office approximately eight per cent of dealers' sales had been for other than agricultural purposes. Now the officials of this company are convinced that there is a large industrial market awaiting development and active steps are being taken in this direction.



As many fields of the industrial market are virgin territory from the standpoint of tractor sales it is desirable to indicate where the tractor has been used to advantage. Highway construction and maintenance is perhaps the best

Digitized by Google

developed field as far as the sale of tractors is concerned and promises to continue to be an important outlet on account of the ever increasing interest in good roads. The various sizes of tractors will operate tractive road machines and equipment from the smallest to the largest sizes. In addition to these classes of operations there are the driving of belt machines, such as rock crushers and pumps, for which the tractor is admirably adapted. In some cases the tractor has been used in the hauling of road building materials with marked success. A number of manufacturers are putting out special road building cars and for numerous odd jobs. One packing plant in Chicago keeps a small tractor busy doing nothing else than odd jobs. Lumber yards are using the tractor to take lumber from the car to the pile. One lumber yard in Chicago operates its pick-up wagon with a tractor. These are drawn about the yard and the orders filled from the various piles. In this way five trucks are kept busy delivering. In many instances golf courses are now kept in condition with tractor-driven mowers.

Enough has already been done to indicate that there are big possibilities for the sale of tractors in the indus-

Two Interesting Suggestions of Industrial Tractor Uses

The larger picture shows a Toro with a mower attachment at work on a golf course. In the insert is a Monarch with a winch attachment

tractors with features which make them especially well adapted to meet the requirements of this particular kind of work.

IN the oil fields the tractor is used for hauling, especially in opening up new fields, and with winch attachments for pulling pipes and casings. In the lumber fields it is used for pulling logs out of the woods, loading and hauling. Winch attachments are also used in this industry. Municipalities have purchased tractors for use in cleaning streets of snow and dirt, maintaining dirt streets, operating plows and scrapers and the disposal of garbage and refuse. One city is using a tractor to push refuse over the edge of a dump at a considerable saving over hand methods. Contractors are using this mechanical motor for excavating, driving drills and hoists, hauling raw materials and moving from job to job. The mover of buildings needs a more efficient prime mover than he has used in the past. Sometimes the building is small enough to permit the tractor to be attached direct. Where larger units are moved a winch is used and the tractor anchored to hold it in place. In addition to this the tractor furnishes power for placing heavy timbers and moving from one job to the next. Manufacturing plants are using the tractor to move raw and finished materials, spot freight trial field. This market is just opening up. It is a field where wise planning and constructive salesmanship are necessary. While considerable effort may be necessary to develop some industrial fields this is compensated for by the prospect of relatively large sales, as the tractor will be used in fleets. In other cases the field is ready for sales effort which makes the first work the finding of prospects. There is an opportunity for the dealer to capture this market and hold it for his own.

THE first step of the dealer who has not previously canvassed his territory for industrial tractor sales may very properly be a census of the industries in the territory and the classification of them according to the type of work that the tractor may be expected to do.

Then, with this list as a basis, the selling effort, including direct mail and canvassing, may be planned to appeal to the individual groups intelligently and effectively.

An important phase of the presentation of the tractor in the industrial field undoubtedly is the economies that may be effected by its use. Observance particularly of the use of tractors by firms that have been successful with them will provide the dealer with the kind of selling ammunition that presents the tractor in a practical way.

Delivering the Selling Punch with Small Daily Advertisements

A Discussion of the Advantages of the Small Space Ad and How a Boston Dealer Has Used Them Successfully for Several Years

SOME dealers are finding it economical and decidedly effective to use small, daily, high powered ads in local papers instead of less frequently appearing quarter, half and full page insertions.

The practice has several distinct advantages and these advantages are sometimes enhanced by an occasional half-page or page "spread" when special conditions such as the arrival of a number of new models, a price change, the addition of equipment or some new refinement present themselves.

One of the strongest arguments in favor of the small advertisement is that it may be used daily at a cost no greater than a large ad used weekly would be. Another is that the consistent and continual appearance of the ad in a newspaper has a strong accumulative selling force that is lost in less frequent plan of insertions.

STILL another advantage in the small advertisement is that it usually gets much better position on the newspaper page than the larger ad, because the printer, in "making up" his page, pyramids his ads on one side or the other, and the small ads generally fill in in the "stepping" of the ads next to the reading matter.

However, a fact to be considered in connection with the small space ad is that its smaller dimensions demand so much greater selling power in the use of the space to get results. Compressing into nine to twelve square inches what the ordinary dealer ad consumes 100 to 150 square inches to tell, calls for judicious use of type and white space. It means making every word count.

In order to insure attracting attention the small ad used daily should have a certain similarity in appearance and at the same time a power, once the reader's eye is caught, to fasten onto his interest and make him read to the bottom.

One of the pitfalls that the dealer using small space ads is very liable to fall into is making the copy too fat. That is, writing more words than will fit into the space and still leave enough white paper to make them attractive and easily readable.

A series of ads that is particularly attractive and has been eminently successful is used by the Beacon Motor Car Co. of Boston. It is an interesting fact that this dealer was one of the pioneers in this practice in advertising in the automotive trade, using as far back as 1916 ads that are remarkably similar in appearance with those used to-day. This, in itself, may be regarded as proof of the value of this type of advertising.

The collection of Beacon Motor Car Co. ads shown on the next page is typical of the ads that have been appearing in Boston papers since 1916.

In commenting upon them, John L. Snow, president of the company, says: "The principal value of this small advertising is: First, we display conspicuously something that is always identified with the Peerless car; second, the story we tell is always a short one and easily read in a glance; third, small-sized ads, if properly set up, catch the eye just as quickly as larger ones. There are some objections to large ads, particularly if they have a great deal of reading matter, and besides a small ad can be run more often at the same expense, and this feature is a distinct advantage."

Snow tells many interesting stories about this form of advertising, but one of the most interesting, perhaps, came from an advertising agency back in 1917. Snow was writing most of the ads himself in those days, but occasionally the advertising man would submit one.

None of those suggested by the ad man, however, appealed to Snow and he continued to write his own copy. Finally the advertising man bought a Peerless, and after he owned the car for a couple of weeks he sent in another ad, unknowingly. He wrote in a letter: "It does all you say and more." In fact, many of the most effective are just sentences taken out of letters from customers and friends.

For a while Snow used a cut of a Peerless radiator showing a license number. These numbers were not "faked" but were actually the numbers of Peerless owners. This feature gave the ads a strong personal twist that was effective. Peerless owners and friends of Peerless owners noticed when a familiar license number appeared, and they talked about it, which, of course, increased the circulation of the ad.

The text of the advertisements usually is confined to one subject and the size, which averages two columns, three inches deep, naturally limits the number of words to about twenty. After using these ads for about two years on inside pages daily they were shifted to the front page and used every other day. Snow believes that every other day on the front page is equally as effective as daily.

Small Space Ads with High-Power Selling Appeal

THESE are some samples of the small advertisements that have been used for several years by the Beacon Motor Car Co., Peerless distributor in Boston. Note the character in all of the ads which makes them stand out, also the force with which the selling punch is delivered in a very few words. Daily appearance of these ads gives them the advantage of their cumulative effect, which so often is lost in larger space ads used infrequently

"We Must Keep It Easy and Pleasant to Drive a Car"

A Story About Traffic and Traffic Problems That Every Automotive Man Should Read

By HERBERT BUCKMAN

Manager, Cleveland Automobile Manufacturers and Dealers Association

TRAFFIC conditions are growing to a point of sales resistance. Therefore, it behooves people in the motor car business to take a greater interest in this kind of automobile legislation.

The point of sales resistance has been reached in some places right now. In other places it is less than three years away. The time to act, therefore, is now. Traffic conditions affect the automobile business from two principal angles—congestion and hysterical prosecution of owners and drivers.

The fundamental fact is that we must keep it easy and pleasant to drive a motor car. As soon as the use of a car becomes unpleasant or odious, just that soon will sales be affected adversely. There is the dollar and cents reason for the interest of the dealer. I mention dealer rather than factory, because traffic is a local problem. Just remember that. Traffic is a local problem. It is all fine to talk about uniform traffic regulations, about interstate touring under one set of traffic laws, but it is not a practicability because our cities are too dissimilar. The problem in Detroit with broad, flat boulevards is not the same as in Pittsburgh, with narrow streets along the hillsides. Therefore, traffic is a local problem and must be viewed in the light of *your* city and the councilman from your ward.

Not long ago in Chicago I asked some friends of mine who can well afford automobiles, why they do not own cars. The answer was nearly always the same: "What good would an automobile do me in Chicago? The congestion is too great to make it worth while. For short business trips I use a taxi, and why should I put a couple of thousand dollars into an automobile to use one day a week, and then you ought to see our roads on Sundays!"

There is definite sales resistance, and Chicago's problem to-day is the problem of a hundred or more cities to-morrow morning.

Chicago's trouble is that it has developed into a one street town. They have built marvelous Michigan Boulevard, but by the time it is completed two or three parallel thoroughfares are needed to give motor traffic that freedom of movement which is deserves and which the growth and development of the community demand.

Congestion is our chief foe. There are two principal causes of congestion—physical limitations, such as narrow streets or lack of through thoroughfares; and legal restrictions on operating cars.

When we find a city beginning to think about its traffic problems, we must turn the destructive thinking along the lines of more severe speed regulations into the constructive process of new and

HERBERT BUCKMAN

better streets. Let a city find itself standing unduly prominent in accident statistics and what happens? Newspapers, politicians and a lot of other folks indulge in hysterical razzing of the automobilist. "Send him to jail!" "Cut down the speed limit!" "Make them travel single file!" Those are some of the cries echoed in the daily papers and eagerly made the rallying cry of notoriety-seeking politicians or reformers. It gets people's names in the paper, but it does not help the automobile business.

And then too often we find the automobile interests of the community sitting back afraid to raise their voices to say in understandable terms, "What we need is better traffic facilities, to relieve congestion, to prevent accidents and *liberate, not restrict* motor traffic."

Now some well-meaning brethren are going to wax indignant that the automobile interests would be put in a position of defending the reckless and careless driver. Nothing of the kind. Let's not be mealy mouthed about this.

For a community to grow and develop it must have proper facilities for motor travel. Transportation by rail is no longer adequate. We must have the freedom, the speed, the flexibility, the wide range afforded by the automobile. Instead of passing laws against speed and sending people to jail who drive faster than 20 miles an hour, our cities should be constructing thoroughfares where motor cars can be safely driven at 30 miles an hour or better. We have not begun to use the automobile in the full sense in which it can serve the transportation needs of our communities; we have not scratched the surface. When cities have thoroughfares on which motor cars can be more completely utilized, then the automobile business will be even better than it is now. Every time a new boulevard is opened or new country roads built, the sales possibilities of motor cars are increased.

Now just a few concrete examples of legal restrictions and their causing congestion.

We have a good state law on speed in Ohio. It's pretty pliable and makes exceeding certain limits merely presumptive evidence of reckless driving. Now what did they propose to do, after a typical speed crusade by the police and a municipal judge? The chief justice of the municipal court proposed this ordinance.

"Section 2271. No person shall operate * * * *a motor vehicle or motorcycle on the public roads, streets or highways of said city* at a rate of speed greater than is reasonable or proper, having regard for the width, traffic, use and general and usual rules of such road, *street* or highway. * * * *A rate of* speed greater than fifteen miles per hour in the *business* or congested district *of said city* * * * or *more than* twenty miles per hour in other portions thereof, shall *be presumptive evidence of a rate of speed greater than is reasonable or proper.*

"The foregoing presumptive shall be conclusive unless it can be shown that there were no intersecting streets crossed or to be crossed by a vehicle exceeding

Digitized by Google

the rate of speed provided for aforesaid, to wit: fifteen miles per hour in the business or congested district, and twenty miles per hour in the other portions of said city, and that such rate of speed should be indulged in at the time and place in question with absolute safety to the occupants of such vehicle and all other persons and property lawfully upon such highway."

Ridiculous Policies

What indescribable conditions would be brought about if such a 20-mile limit were enforced throughout the city, coupled with a police judge who announces in advance a policy of sending to the workhouse every person convicted of exceeding the speed limit!

Then the Safety Council proposed to strengthen the prohibition against reckless driving by making these three offenses reckless driving punishable by jail sentences:

"Passing another vehicle going in the same direction in front of a school or public playground on such days as they are open."

"Passing or *attempting to pass* two other moving vehicles going in the same direction, which are abreast or *nearly abreast*, except when directed by the department of police or one of its officers."

"Driving at more than half the legal speed when passing within six feet of a standing street car headed in the *opposite direction.*"

Roll your own conclusions of the traffic conditions if such ordinances were enforced.

Do you think they would cause congestion of the kind to injure the sale of motor cars?

Untrained Thinking

There is only one answer.

A chief trouble is that there is too much untrained thinking on the subject of traffic, which is an involved and difficult problem demanding expert knowledge. Just because a man is a good lawyer, or has walked a police beat for ten years, or is a civil engineer, he is not necessarily a traffic expert, nor competent to lay out traffic regulations. But if there happens to be a series of accidents, some politicians will get on the platform and rant about reckless driving, and some newspaper will make a sensation out of it, and the result will be conditions making the operation and use of an automobile less popular and more difficult.

Those are the conditions to be avoided, and it must be part of the automobile interests in the respective towns to help avoid them.

One of the worst features of the spasms of traffic hysteria that periodically afflict communities is that as a result there is often enacted regulatory legislation that hampers traffic, causes congestion and so in turn retards the sale of cars.

Dealers must be ready to fight the battle of their own business on these grounds.

Selling An Association to Its Membership

Is There a Suggestion for You, Mr. Secretary, in the Montreal Idea?

MEMBERSHIP in an association is helpful to just the extent that a dealer uses the facilities that the association provides for helping him. One of the big jobs of the fellows who run associations is selling its members on the advantages that membership offers. This presentation of its benefits was made recently by the Montreal Automobile Trade Association, Ltd., in the association's official organ, *Auto Meter*. It contains a hint for other secretaries who may wish to use the idea in a bulletin or otherwise.

Looking over the list of 20 activities of the Montreal association it looks as though the secretary and his staff are pretty busy people. Also it looks as though they are perfectly willing to be busier. There is a suggestion here for the secretary who complains that after he has wound up the show season it is hard to find something to do the rest of the year.

"WHY WORRY OVER THESE THINGS?"

Business conceals enough troubles without having to lose time with details that can be handled by the Association's experts. Each one of our departments is the hook you can always drape with the mantle of worry.

It is becoming old-fashioned to worry over details. The modern business man passes them to his Association

While the members of the Montreal Automobile Trade Association, Ltd., are pretty well versed on the regular departments of services, there are short ways of doing things through the Association's facilities and the extent of its organization, that do not always occur to the member, and the following table has been compiled for your own personal reference.

Every member of our Association is urged to avail himself of the Service that we are in a position to render to him. If you are not a member, but, are of the opinion that we might be able to help you, give us the opportunity to prove that we can be of real service to you or your organization.

"LEGAL DEPARTMENT." The most influential and competent Lawyers, we know of, are at your disposal to help you solve your business problems, as Legal Advisers of this Association.	**"CAR REGISTRATION BUREAU."** For the Province of Quebec, this department has the address of all car owners, sub-divided according to make of car. Service open to members for circularizing at cost.	**"CATALOGUES" SERVICE DEPARTMENT.** Any member can obtain catalogues or list price of any automotive product, Manufacturer or Jobber, by writing to this department.	**"DISTRIBUTING DEPARTMENT."** Names of Local or Canadian distributors for any make of cars, trucks, tractors, or parts will be furnished to you upon request to this department.
"TRADE MAILING LIST DEPARTMENT." This department which takes care of the circulation of the "Auto-Meter" possesses a very complete and up-to-date list of all those who are engaged in the Automobile industry in the Province of Quebec. Service open to members for circularizing at cost.	**"TRAFFIC & GOOD ROADS BUREAU."** The Board of Directors and Executives of the different sub-sections continually make representation on your behalf to the proper authorities concerning the above mentioned subjects with a view to bettering the automobile traveling conditions and therefore helping to increase the business of every one of us.	**"TRAVELLING DEPARTMENT"** We will make reservations for your business or pleasure trips. This service includes, railroad or steamship information, and reservations; full data concerning motor trips, including in many cases road cards, supplied free upon request.	**"PRINTING DEPARTMENT."** This department positively guarantees to print anything you want at a cheaper price than what you pay, as the result of co-operative organization. **TRY IT.** **IT WILL SAVE YOU MONEY** Quality guaranteed.
"EMPLOYMENT SERVICE." Applications taken for benefit of members who want help of any kind. Service works both ways in aiding employers and applicants. We guarantee to give you the kind of help you need—Live wires—no dead weight. There are no charges.	**"BETTER BUSINESS BUREAU."** Operated for stoppage of all fake advertising schemes, and providing the truth in advertising. Investigates the soundness of any proposition at instance of a member	**DEPARTMENT."** **"INTERIOR** Committees operating under this department promptly investigate grievances among the members. Every effort is made to adjust difficulties and arrive at an amicable understanding.	**"PUBLICITY BUREAU."** Publicity of general character, showing soundness and enormity of industry emanates from this department. Regular monthly publication the "Auto Meter" published in the interest of members of industry.
"BETTER BUSINESS BUILDINGS DEPARTMENT." This department will be glad to receive and answer inquiries for Salesroom or garage plans. To avoid delay kindly give following information: Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; Number of cars to be shown in Salesroom; Number of cars in garage; any other pertinent details.	**"MANUFACTURING DEPARTMENT."** This department will absolutely give you the name and address of the manufacturers of any automobile, truck, tractor, or spare parts Anything that goes on or in an automobile, you can find where to buy from the maker by writing or calling this department Parts for orphan cars can also be secured through this service department	**"ADVERTISING DEPARTMENT."** Whether you spend a dollar or a million in advertising, this department composed of men who have the experience, and who know, will help you get the benefit of your advertising by planning, writing, correcting and placing your copy This is one of our most important departments, and you are at liberty to use it PERFECT—French or English.	**"LEGISLATIVE BUREAU."** The executives of the Association who are in charge of this bureau, keep in touch every day with all proposed legislation, municipal, provincial or federal. With the large memberships which they represent they are very powerful in stopping all unreasonable legislation which might cause hardship upon our industry and its members.
"USED CAR VALUE BUREAU." Will honestly tell you how much the other fellow is offering for that trade-in car or truck. Don't get stung by believing anybody that can talk, but avail yourself of this information.	**"GROUP AND GENERAL MEETINGS."** Group meetings of each branch of industry held regularly, from time to time. General meetings of all branches also held on call of President.	**"AUTOMOTIVE EXHIBITS DEPARTMENT."** All Automotive shows, special demonstrations and tours are held under the auspices of this department	**"GENERAL INFORMATION BUREAU."** If you require certain information and do not know—how or where to get it—Phone or write this department, nine out of ten times it can help you.

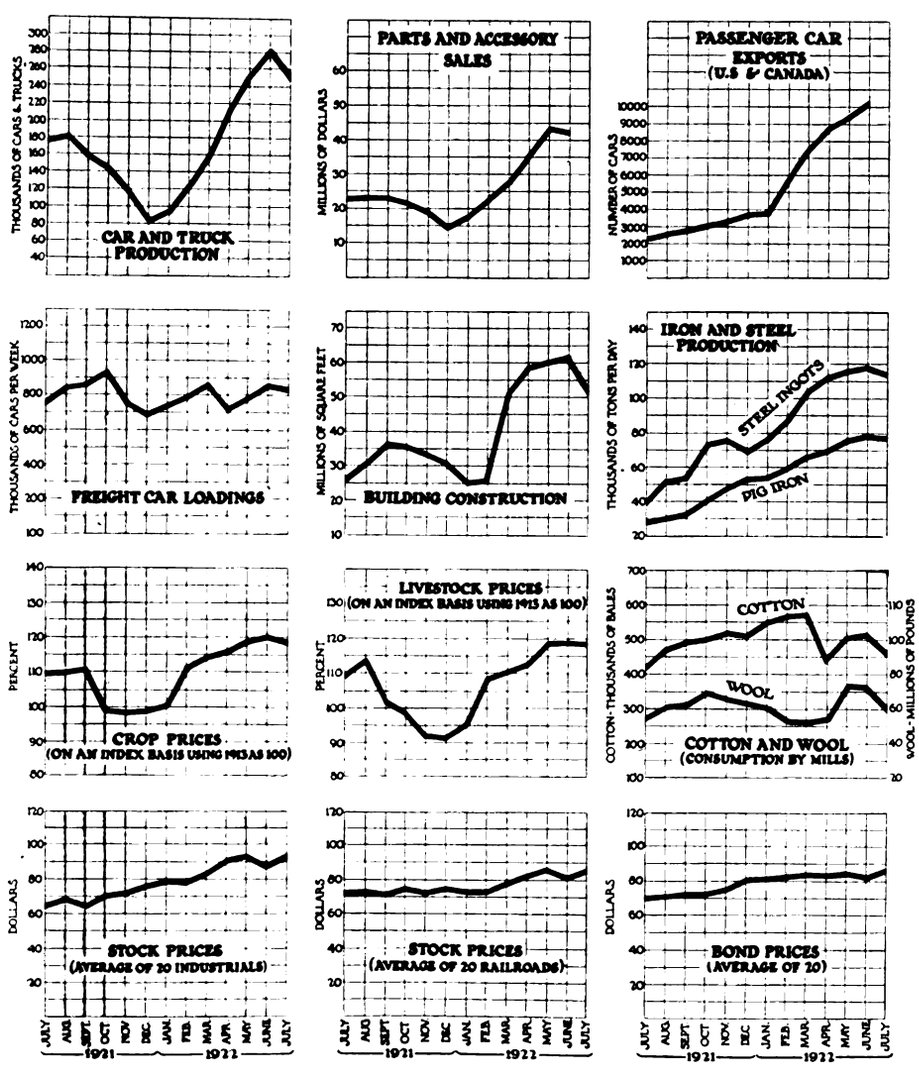
Strikes the Only Real Black Cloud on Business Horizon

Summer-end Quiet Prevails in Many Lines in Many Sections but Fall Outlook Is Good Unless Coal and Transportation Difficulties Continue

THE automotive business man looking for indications of fall business finds himself confronted with uncertainties caused largely by the coal and railroad strikes and their effects upon industry, commerce and agriculture. On all sides are indications that the country would have had a decidedly prosperous fall and winter, but for the depressing influence of the fuel and transportation difficulties. Even with these obstacles there is still promise of brisk business ahead, unless the coal deadlock, partially broken, and the railroad shopmen's strike, which has affected without demoralizing transportation, are long continued.

A review of conditions throughout the country shows wholesale and retail trade in all lines considered in combination running from quiet to fair in different sections. Except in the centers of the automotive industry, where production is still running high, manufacturing is not rated better than fair anywhere. Collections are slow to fair. Crops, which more than anything else are pointers to the condition of future business, are good in 30 out of 40 districts and fair in the others. From no section are poor crops reported.



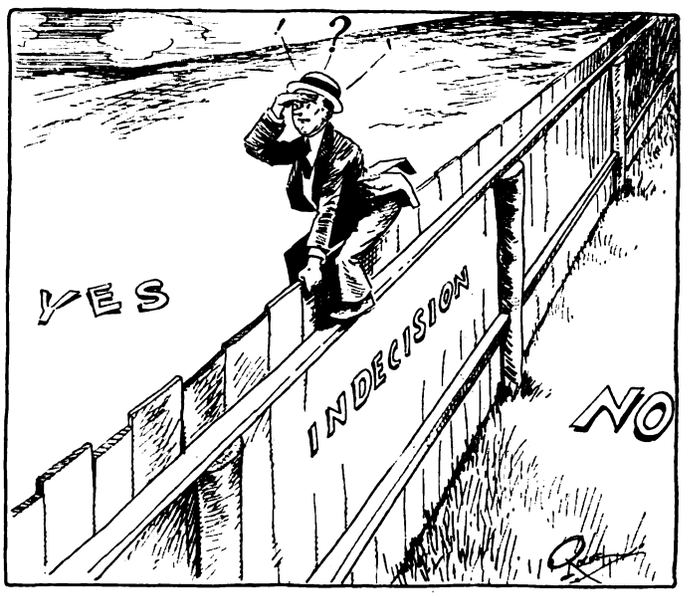
Students of business generally forecast a virtually immediate upturn in production and sales if coal mining is put back on a full-time basis and the railroads, either by settlement of the shopmen's strike or in spite of it, are able to meet the transportation demands of the country, particularly to move the crops now being harvested, and the fuel supplies which must be moved in extraordinary volume from now until cold weather, if winter needs are to be met. The uncertainty in the fuel and transportation situations is creating hesitation in other lines of business. This naturally makes the future market of the automotive dealer somewhat uncertain, but he has the advantage of dealing in a prime essential—transportation and its maintenance—and his outlook consequently is brighter than in many other lines.

Referring to the curves plotted on this page, the tremendous strides made by the automotive industry in recovering from the dullness of a year ago are emphasized by reference to what has happened in other lines. Yet there is nothing but encouragement in the other curves. Despite the railroad strike and the falling off in coal shipments, freight car loading in July showed only a slight falling off from June and were more than 60,0000 cars a week ahead of the same period last year. Building construction has had a seasonal decline and has suffered also from labor troubles and from transportation delays, but it is so far ahead of last year as to make a comparison decidedly encouraging. Iron and steel, backbone of industry, climbed steadily until coal and railroad difficulties began seriously to affect them in the past two months.

The farmer will have no boom prices, but they are far enough above last year's to promise considerable in agricultural territory buying.

Cotton and wool consumption, that is, manufacturing, have been depressed by strikes and a hesitant market. In the field of investment the trend of prices, after a decline in June, is on the way up again.

A Year's Picture of Business



THE curves show the volume of business in three important fields of the automotive industry and in nine other important divisions of American business for the twelve months from July 30, 1921, to July 30, 1922. It is significant that despite recent declines in the curves depicting production and sales, the volume in July in all cases was ahead of that of a year ago—far ahead in most cases. Crop and livestock prices, barometer of the farmer's prosperity, also are higher than in mid-summer of 1921. Stock and bond prices are on the upward trend, indicating the confidence of investors in the business future.

On the Fence

Reilly Talks About a Malignant Business Disease

By NEAL G. ADAIR

"BUT if you don't know, who does?"

The question, sharpened by a tone of exasperation, came from Cornelius J. Reilly, distributor of Sennett cars and Sayanna trucks in Callawassa, who had been trying for half an hour to get some inkling of the fall plans of Chadwick, his dealer at Oldtown.

Chadwick, who had been selling the Sennett for a couple of years, wasn't sure whether he would take on the truck. He hadn't made up his mind whether he would act on Reilly's suggestion that he hire another salesman to go more aggressively after car sales out in the farming country. He had been talking for six months about installing some speed tools in his repairshop—and was still talking.

"Now about your October allotment" —Reilly turned to this subject as a last resort to get the conversation on a yes and no basis—"you'll want your full quota, of course?"

"Well, I don't know—it's pretty hard to tell—," Chadwick began, and it was then that Reilly, approaching the end of patience, demanded:

"But if you don't know, who does?"

The dealer started to reply, but the distributor made it plain that he was going to anwer himself, with flourishes.

"Chadwick," he said, "do you realize that you are in the early stages of the worst disease that can get hold of a business man—I-don't-know-*itis?* I have asked you what you were going to do about four things that are vital to your business and you have hemmed and hawed and have failed to make up your mind on a single one of them."

"But they are serious questions; a fellow can't make up his mind in a minute," Chadwick protested.

"You bet they are serious questions—every one of them—and that's why they have to be decided," Reilly retorted, "not necessarily in a minute but before it's too late and with the speed of modern business it may be too late tomorrow or an hour from now."

"But a man's got to have some time to think," Chadwick persisted.

"Now you're talking," Reilly shot back. "You bet a man's got to have time to think. That's the word—*think.* If he thinks he will decide. When he doesn't decide it's a sure sign he hasn't done any thinking."

"Chadwick," Reilly continued, "you would have to hunt around some to find a man who has succeeded in business because he never made any mistakes. But there are men who have failed because fear of making mistakes kept them from making decisions. To questions of customers, employees, competitors and almost everybody they came in contact with they said 'Perhaps' or 'Maybe' or 'I'll let you know later.' They lost everybody's confidence, and then because no one else had confidence in them they lost confidence in themselves. And when a man has done that he's on the direct road to failure.

"I'll admit it's pretty hard sometimes to know what to do. Sometimes you can get advice and it's credit to any man to take advice if he can get it and it's worth taking. But advice or no advice, there's only one way to make a decision and that's on the basis of the facts as you see them—the *facts* as *you* see them, Chadwick."

"But if I decide wrong?" Chadwick suggested.

"Then you've learned something. You've made a mistake, you'll discover it's a mistake and you won't do it again. And you won't make so many mistakes as you think you might if you actually make your decision on the facts as you see them, as I said a moment ago. Get the subject to be decided right out in the open where you can see it, throw all the light you can on it, examine the pros and cons, temper common sense with a little imagination and then say 'I'll do it this way' and go ahead and do it. You'll have the satisfaction of sweeping the cobwebs of doubt out of your mind and substituting action for inaction and the folks around you will say, 'There's a bird who does things,' and give you credit for being a live wire in the community."

"But this allotment of mine and these other things we were talking about—what about them?" Chadwick asked.

"You'll have to decide them on the *facts*—as *you* see them," Reilly said, "but possibly I can help you to set the facts up in good order where you can get a good look at them.

"Your allotment for October is ten cars. You wonder if you can sell that many. Let's see if there are any facts to help settle that question. You sold thirty in June, twenty in July and ten in August and you don't seem to be worrying about disposing of ten more in September. That gives some idea of what you ought to do in October, but there are still more facts in the records of your October sales a year ago as compared with last year's business in these other months we've mentioned. Can you see much reason, looking at the thing this way, for taking the chance of running short of cars in October this year?

"Then there's the truck business. Somebody is selling trucks in your territory. You know that and you know the Sayanna is a good truck, with sizes and models adapted to the needs of towns like yours. You know that some of your Sennett owners use trucks and will need new ones some day. You know we'll help you get started selling and servicing them. Isn't it worth trying?

"Two of your competitors have men travelling from town to town in your farm country in demonstrators, selling cars. Some of your farmers have no cars at all. Others are going to have some money from their crops to buy better cars than they have, and the Sennett is a better car. Aren't these some facts on the subject of putting on a country salesman?

"And your shop—well, I've talked facts and figures on that subject until both of us were dizzy. You have always seemed to agree with me that you needed to improve your equipment but you have never done anything about it.

"I'm beginning to see," Chadwick said.

"And you've got to keep right on seeing," Reilly answered. "Every man in business has got to have vision or supervision. If you are going to stay in business for yourself you've got to see things as they are and do something with what you see. That's vision. If you can't or won't do that, sooner or later you will find yourself working for somebody else. That's supervision."

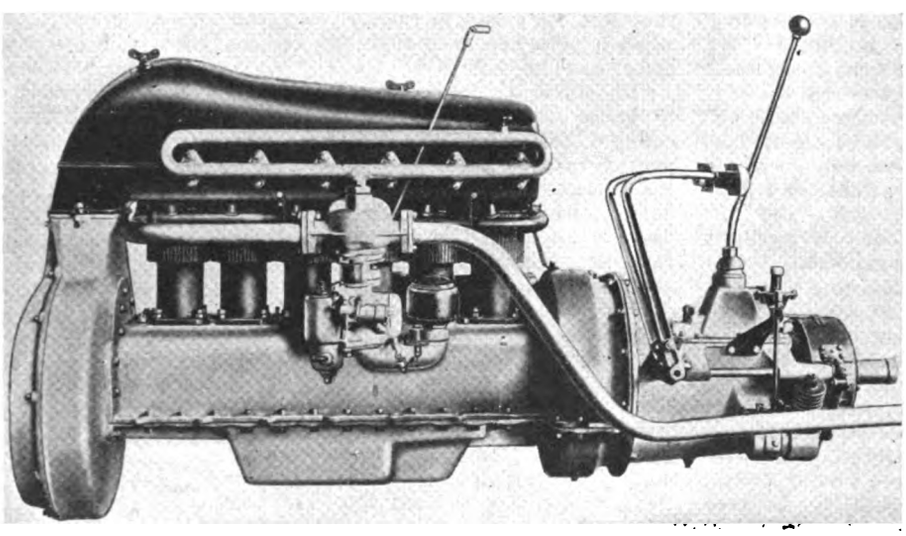
New Franklin Model 10-A Has Changes in the Cooling System

The Air Is Now Pushed Through with a Separate Fan Instead of Being Pulled Through by Flywheel Fan—Clutch and Gearset Are in Unit With the Engine—No Change in Price

A NEW Franklin car to be known as series 10-A is now in production and ready for delivery September 1. It replaces the series 9. The new model embodies a number of changes, most of which are in the power plant, but the general design is much as before.

The cooling system has been extensively redesigned, and an important change in cooling principle incorporated. The air cooling system, which has been a Franklin characteristic for many years remains, but the air instead of being drawn through the cooling jackets by the flywheel fan is pushed through with a Sirocco blower, which is mounted on the front end of the crankshaft. This new blower handles more air than the former type flywheel fan, and the delivery system, connecting it with the cylinder jackets, including the volute blower casting, is so designed that the power required to move the greater volume of air is less than that consumed by the flywheel fan.



Another important change is the addition of an exhaust-heated fuel vaporizer intended to prevent liquid fuel from reaching the cylinders. An electrically heated priming device is provided to facilitate starting, especially in cold weather.

In the previous Franklin engine the jackets were surrounded by a horizontal deck dividing the upper and lower part of the space between engine and hood. Air was drawn into the upper part of this space through a grating in front of the bonnet, passed through the jackets to the lower part and was exhausted therefrom by the flywheel fan.

New Design Jackets

In the new design the air passage outside the jackets themselves is formed by rigid aluminum castings and is of such form that the air speed is substantially the same at all sections. There being no abrupt changes in section, the likelihood of forming of eddies, which are always a source of loss, is minimized, and, moreover, the rigid air passage walls are in no danger of being bent out of shape in service, with resultant loss of cooling air. The result of these improvement has been that now about 2.5 times more air is circulated through the jacket space at a given engine speed, while a material reduction in the power consumption of the fan has been effected.

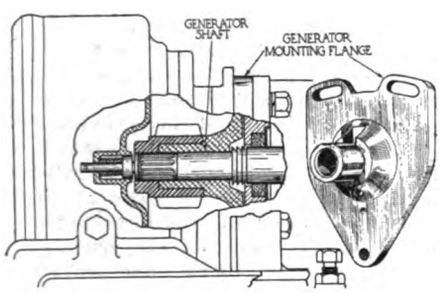
The large open grille at the front of the hood is said to allow free passage for fully four times the volume of air used by the blower. This excess is used to cool the outer surface of the cylinder fins and the aluminum crankcase, which receives its heat partly from the oil.

The new Franklin powerplant showing the Sirocco blower on the crankshaft

The engine has six 3¼ x 4 in. cylinders, cast separately, as in the past. Cylinder and head are a single casting, with the sheet steel cooling fins set into the mold and cast into the cylinder wall. A change has been made in the form of these fins whereby their cooling capacity has been increased. Formerly the fins were flat strips and were surrounded by a separate sheet iron jacket, which, since it did not have any intimate metallic connection with the fins, had but little effect as cooling surface. Now the outer part of the fins are turned over at approximately right angles, so their edge comes close to the next fin, thus forming a closed jacket space without a separate outer jacket. This form of construction has made it possible to reduce the jacket diameter and length, while the fin cooling area itself remains identically the same as before.

The blower of the cooling system is mounted on the crankshaft at the forward end and is of the Sirocco type, with a 14 x 3½ in. impeller. This impeller is placed in a volute housing to increase its efficiency and air capacity. The air inlet to the housing is smoothly rounded so as to avoid the formation of eddies and its back plate forms the cover of the case enclosing the chain which drives the camshaft and generator. The aluminum air housing extends lengthwise over the top of the cylinders and is provided with six circular openings fitting the upper ends of the cylinder jackets. The housing is made in two parts, with a joint in a horizontal plane at the center of the inlet and exhaust fittings. Deflector plates are located inside the air housing so as to distribute the air equally to all of the jackets. The air housing is held to the top of the engine by means of two studs with wing nuts and can be quickly removed. Single cylinders can be removed without disturbing adjacent parts, and the engine is generally more accessible owing to the elimination of the sheet metal decks formerly employed.

Another noteworthy change in Franklin design is the use of a unit power plant. Instead of being separate units, the clutch and gearset are integral with the engine, although the construction is practically the same as in the previous model. Some other changes of a minor nature have been made in the engine itself. The piston pins now float and are held from drifting by means of steel rings over the ends. The pins are easily removed by taking this ring off. The ring in a free state has a smaller diameter than the piston bore and consequently does not press against the cylinder wall. The die cast aluminum pistons are continued. The connecting rods are made of drop forged duralumin. This has resulted in a lightening of the reciprocating parts. The case hardened



Digitized by Google

crankshaft is to be continued in the new model.

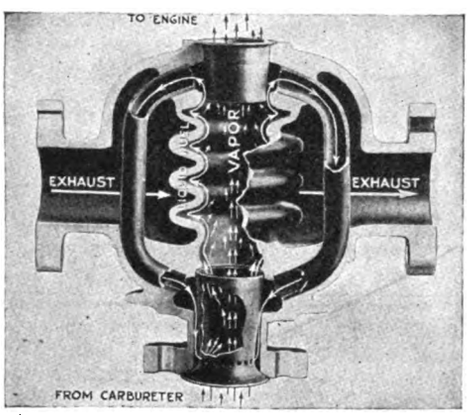
All of the bearing surfaces are on die casting bushings of Franklin manufacture. These are backed directly by the aluminum of the crankcase and duralumin of the rods. The upper end of the duralumin of the rod bears directly upon the steel of the piston pin.

At the forward end the engine is supported by an angle-shaped, pressed steel member extending between the side members of the main frame. This support is now placed ahead of the forward cylinder instead of between cylinders Nos. 2 and 3. At the rear, supporting arms of pressed steel are bolsted to the sides of the bell housing, the ends of these arms resting on top of angle iron brackets, secured to the inside of the wood frame sills.

A triangular chain drive is used for the camshaft and generator. Adjustment for this drive is obtained by a pivotal mounting for the generator.

Sprocket which drives lighting generator is so arranged that the generator can be removed without disturbing the sprocket or chain

There is a separate duralumin flange between the cam gear housing and the generator, on the hub of which the chain sprocket rides. This permits of removing the generator without disturbing the chain drive. A hardened plug is forced into the end of the sprocket, and a hardened plunger, pressed against this plug by a spring, takes up end thrust on the shaft.



A rather unusual feature on passengers cars is the provision of an air cleaner of the self-cleaning centrifugal type on the carburetor air inlet. The carburetor is cast in aluminum for the sake of lightness.

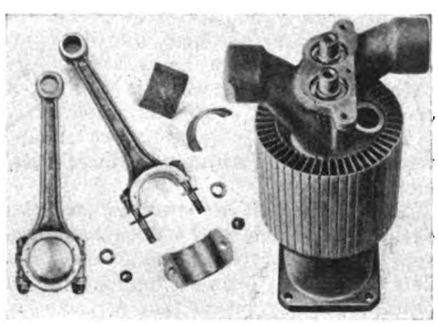
The whirling action set up by the vanes and rotor in the cleaner cleanses the main charge by centrifugal separation to the extent of throwing all of the dirt particles out into the excess one-quarter volume, which is then discharged at the lower circumference of the cleaner. This process is continuous under all conditions and requires absolutely no attention.

Special efforts have been made in the design of the carburetor to facilitate starting in cold weather, and to this end the gasoline is electrically vaporized and superheated. The primer button closes a solenoid actuated choker, opens the primer vapor passage, and allows 80 amperes to flow through the heater coil, which is enclosed in a special porcelain tube. One end of both the tube and the coil is touching gasoline. This forms a gray vapor or permanent gas which soon fills the suction yoke and provides an ignitable mixture in sufficient quantity to keep the car running at 18 m.p.h. for an indefinite period.

Closed Circuit Ignition

The improved Atwater-Kent closed circuit ignition system is standard equipment. The distributor, which is more accessible than formerly, is provided with an automatic advance governor to follow the special timing curve found best for the Franklin, but an auxiliary hand spark control mounted on the cowl board is provided.

Sectional view of the Franklin fuel vaporizer. The liquid fuel trapped on the walls is vaporized by passage through the hot tubes

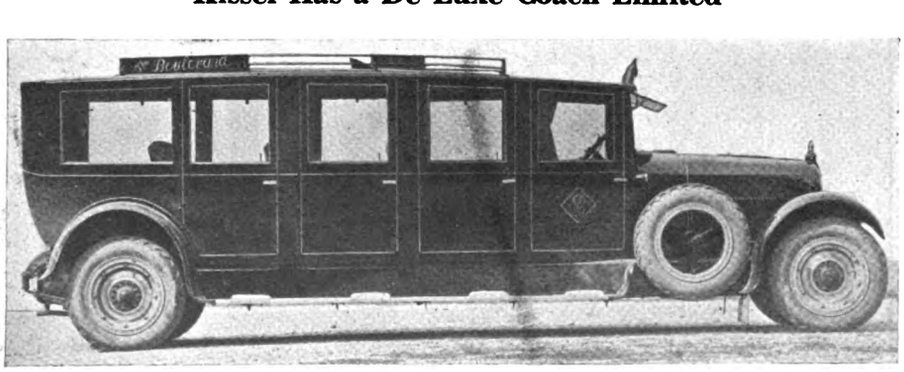


The ignition and lighting circuits are operated by means of a Briggs & Stratton switch on the instrument board. The electrical equipment, aside from the ignition system, consists of a Northeast generator and starter, with third brush output control for the generator and new Bendix drive for the starter, which meshes into a heat-treated steel ring gear shrunk onto the cast iron flywheel. The storage battery furnished with the car is a Willard 6-volt. Wires of different colors assist in tracing circuits.

A change which has been made in the lubrication system as installed on the previous model consists in retaining all piping on the upper half of the crankcase, with holes extending from the pump distributor through holes in the case jacket to the inlets of the various leads.

The lower flywheel guard has been eliminated, thus increasing the full load ground clearance 25 per cent.

A Borg & Beck 10-in. plate clutch is fitted, but the Franklin company uses its own three-speed gearset fitted with standard S.A.E. shift. The tire pump is now driven off the idler in the gearset. An improved rocking pin ball-handled lever is used for operating the gears and a Yale lock is now incorporated.



Back of the gearset is located the transmission brake, and an oil collector is provided to prevent oil from the gearset getting on to the friction surface. A shield has also been fitted to prevent water from getting on to the brake band. Two Spicer universal joints are combined with a Franklin tubular propeller shaft of nickel steel to form the connection between gearset and rear axle.

The duralumin connecting rods are shown at the left and the new fin design at the right. The fins are steel, cast into the cylinder wall

The rear axle is of the semi-floating type and is provided with an underrunning truss. The axle housing is built up of a cast aluminum center part and nickel steel tubes with slightly tapered ends, which are pressed into the aluminum housing and hot riveted in place. The spring saddle, brake brackets and bearing housings are all drop forgings. The axle is fitted with Gurney ball bearings of a type capable of taking thrust loads equal to their radial load capacity. The emergency brake is actuated by a cable which is adjusted for length by removing a pin and pulling up to next hole.

Kissel Has a De Luxe Coach Limited

This coach is built along sedan lines, but with the size and seating capacity increased so that it will accommodate eighteen persons. The top is constructed to hold a half ton of baggage. The width of the body is 76 in., length 194½ in. and wheelbase 202 in. All doors are controlled from driver's seat.

New Mitchell Line Has Body Curves Rounded Out

Prices on Two Models Increased $100—Chassis Refinements and Improvements in Engine Design

MITCHELL cars with revised bodies and refined chassis are now in production. While there are changes in almost every part of the car, making the car a really new job, yet the fundamental design and construction are practically identical with the previous model. The car has been improved both mechanically and in looks and in step with this advance in class is a slight increase in price in some body models.

The new prices given here include wood wheels and without De Luxe equipment.

The bodies have been entirely redesigned and the sharp lines have been replaced by curved lines. Many of the details have been changed to facilitate greater production and do not really show. The same F-50 engine is used but the tappet guide blocks are made in pairs now instead of blocks of six. This has been done to relieve the stress on the cylinder block and in the guides themselves. The method of making the rear axle shaft and hub is new. A billet of steel 4 x 11 in. is used in forging out the entire axle and hub. The rear hub caps have been greatly increased in size.

Mitchell Prices

	Old Price	New Price
3-pass. roadster ..	$1,490	$1,590
5-pass. phaeton ..	1,490	1,590
4-pass. sport	1,690	1,690
4-pass. coupe	2,050	2,050
5-pass. sedan	2,275	2,275
7-pass. phaeton ..	1,690	Not announced
7-pass. sedan	new	Not announced

The Mitchell line is now confined to two wheelbases, 120 and 127. The 7-pass. phaeton and 7-pass. sedan are mounted on the longer chassis and prices on these models have not yet been announced. All other bodies are on the short wheelbase.

All of these cars are finished in blue or maroon, with gold striping on the maroon and cream on the blue. The cars are equipped with the F-50 engine designed by P. J. Batenburg, chief engineer and built entirely in the Mitchell factory. This engine was described some time ago in these columns. One of the chief characteristics of this engine is a high torque at relatively low speed.

Among the visible features of the open models is deck line and hood which are made with a slight curvature so that the reflected light on the hood gives the appearance of a straight line extending the length of the car. The shoulders of the radiator, the cowl and fender crown have been worked out to harmonize with the body curves. Drum type headlamps add to the appearance. On the sport model these lamps are fitted with lenses of French fluted glass.

The windshield is of the two-piece ventilating type. Two handles are fitted to the lower section to equalize the pull and prevent breaking the glass when opening it. One of the features of the side curtains is that they fasten both inside and outside, thus giving ample protec-

The tappet guide blocks on the new Mitchell are made in pairs as shown at the upper left. At the upper right is shown the arrangement for stowing the curtains. The new hub, which is considerably enlarged, is shown at the lower left and the tool compartment in the left front door is shown in the remaining view

Digitized by Google

tion in inclement weather. They open and close with the doors.

The weight of the various models including water, gasoline, oil, spare rim, tools, etc., is as follows:

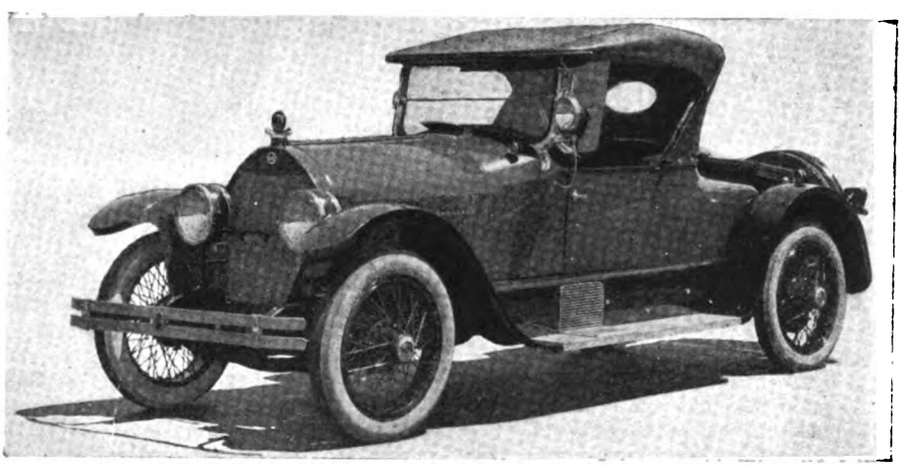
5-passenger phaeton	3396 lbs.
3-passenger roadster	3287 lbs.
4-passenger coupe	3685 lbs.
5-passenger sedan	3823 lbs.
7-passenger phaeton	3565 lbs.
7-passenger sedan	4117 lbs.
De Luxe sport model	3417 lbs.

The equipment on the De Luxe sport model is very complete and includes wind deflectors, bumpers front and rear, roll type visor, windshield wiper, mirroscope, extra tire and cover, bar type radiator cap, Boyce motometer, clock, French fluted lenses, nickeled lamps and tools. All models are fitted with a motor driven horn and a tire pump driven from the engine.

The frame is pressed channel steel 6 in. deep and of 3/16 stock. There are four main cross members and six including the rear engine arms and radiator support bar. The frame is bottle neck type, hot riveted, 2 in. wide and made by Mitchell. It is mounted on semi-elliptic springs in the front and cantilevers in the rear. These are respectively 40 in. by 2 in. and 50 by 2½ in. There are eight leaves in the front spring, nine in the rear and as high as eleven in the large sedan. All springs have a rebound plate. The De Luxe sport has fourteen thin leaves in the rear springs. The shackle bolts are 9/16 in.

Wood wheels are regular equipment, with disk on the De Luxe models. Cord tires are fitted; 32 by 4½ in. on the 120 in. chassis, excepting the sedan, which with the large phaeton and sedan have 32 by 4½ in. tires.

The front axle is of conventional design and built in the Mitchell factory. It is equipped with ball type thrust bearings on the spindles. The knuckles are chrome vanadium steel. The front wheels have a caster of 3½ deg. The steering gear is, also, of Mitchell make, worm and gear type and fitted with an eccentric bushing on the cross shaft to take up wear. All adjustments are on the outside of the frame. The steering wheel is walnut finish and 18 in. in diameter.



A full-floating rear axle, made by Mitchell, is used. Spiral bevel gears with a reduction of 4.42 to 1 are fitted, the pinion and shaft being forged and machined in a unit. There is a bearing behind the pinion and two ball-bearings ahead of it. The drive is taken through the springs and the axle torque and braking reaction through a tube. The axle shafts including the flanges on the wheels are made from a single billet of steel, which in its original state measures 3½ in. in diameter and 11 in. long. This makes for strength in the shaft. The brake drums are 14 by 2 in., with foot brake external and hand brake internal operating through cams. The hand lever is placed to left of the gearshift lever.

A Borg & Beck clutch is fitted with an outside adjustment. A single universal joint is placed between the clutch and gearset, the latter being mounted amidships where it is very accessible. The universal is of the block and trunnion type. All gears have a ¾ in. face, the teeth being 6-8 pitch. The mainshaft is mounted on ball bearings and the countershaft on roller bearings. The adjustment for the countershaft gears is on the outside of the case. The diameter of the drive shaft is 1⅜ in.

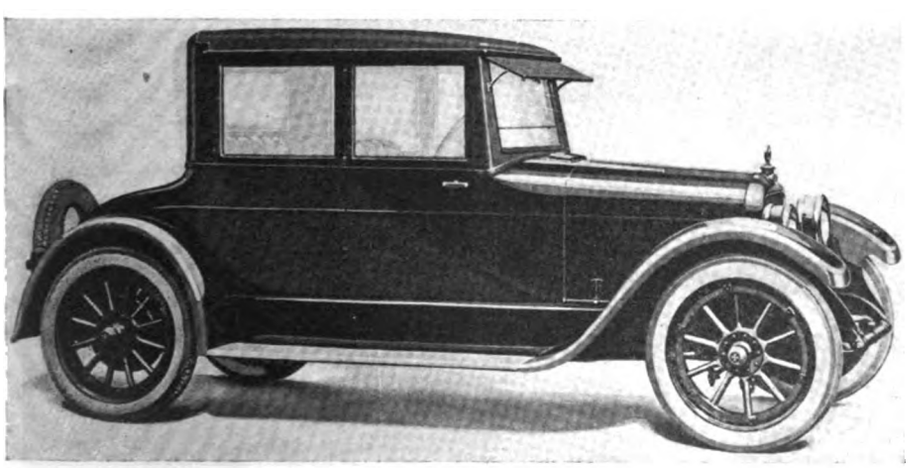
A Harrison radiator is used and this is spring mounted on a cross bar ⅜ in. thick by 2 in. wide. The water capacity of the cooling system is 6 gal. and this is circulated once every minute when the engine runs at 1800 r.p.m.

The body framework is of ash and maple, with steel panels. Upholstery is carried out in machine buffed leather, French plaited. The top is lined with gray whipcord. The bodies have been made very rigid by the use of long and substantial brackets, which are drop forged steel in place of castings.

New Stutz Speedway Roadster Is $2,760

A NEW model, introduced by the Stutz Motor Car Company, as an addition to its line of open cars, is the Speedway Roadster, a two-passenger De Luxe sport car.

The cars are furnished in a variety of shades with upholstery to match.



One of the features of the Speedway Roadster is the circular trunk which fits into a specially designed well in the rear deck of the car. This is of bass-wood covered with patent leather, duck bound at the sides and ends with heavy genuine leather and fitted with nickel trimmings. Inside it is lined with cretonne and holds two large suitcases.

In addition to the distinctive barrel-type headlamps and spotlight, which are standard equipment on all Stutz models, the Speedway Roadster is provided with two small cowl lights of a design that correspond with that of the headlamps, and a parking lamp, mounted on the left rear fender.

Two extra wheels, equipped with cord tires, are affixed conveniently at the rear. They are furnished with weather-proof tire covers of moleskin.

Other equipment includes the double bar bumper; plate glass side-windshields; adjustable cowl ventilator; automatic windshield cleaner; rear vision mirror, and individual scuff and step plates.

New Templar Coupe Is $2,650

The nem Templar coupe, which replaces the present job, is mounted on the standard chassis. It has seating accommodations for four, the seats being staggered but the doors are in line. The interior is trimmed in plain dark blue broadcloth and option of dark blue or Brewster green are to be had on the body. The rear deck has an opening covered with a water tight lid, this being secured with three locks

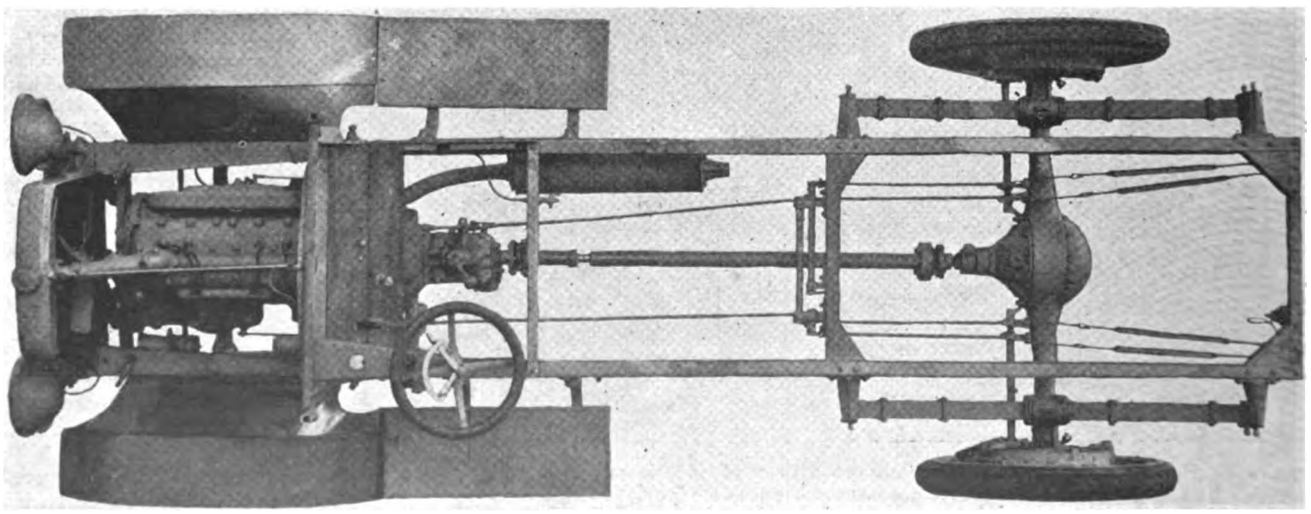
Vim Has Entirely New Speed Truck

Chassis Lists at $995—New Truck Bears No Resemblance to Former Model—Rated at ½ to ¾ Tons Capacity—Large, Slow Speed Engine Makes It a Good Hill Climber

A NEW Vim truck, which bears no resemblance to the former model of that name, is now being produced by the Vim Motor Truck Co. of Philadelphia. The new model is a speed job and is conservatively rated at from 1000 to 1500 lb. capacity. It has ample power and shows unusual hill climbing ability. The chassis lists at $995. Fitted with open express body, the price is $1185 and with panel body $1210.

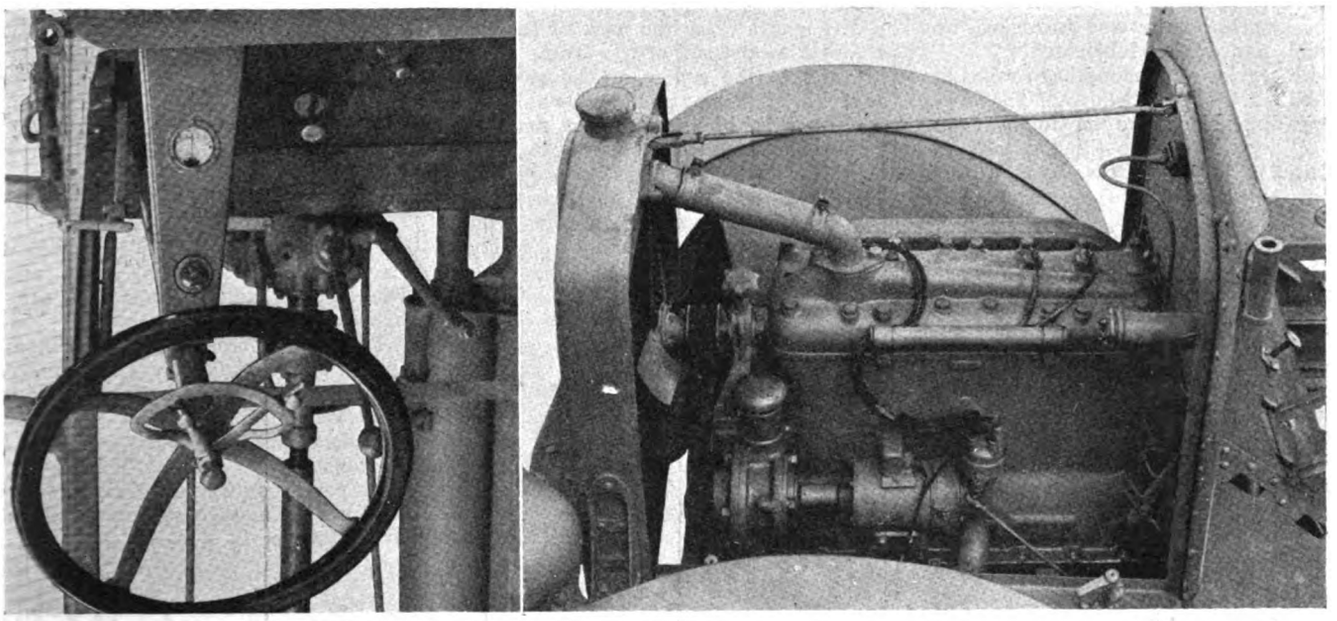
The four-cylinder, L-head engine is a rugged, heavy duty design. The cylinder dimensions are 4 x 5 in., giving it a rated horsepower of 25.6. On the block, the engine shows an actual horsepower of almost 39 at 1600 r.p.m. The compression is 53 lbs. The maximum speed of the truck is 52 m.p.h. The engine is run-in and given a dynamometer test at the factory.

The crankshaft is of vanadium steel and is balanced both statically and dynamically. It is carried in three main bearings all 2 in. in diameter. The front bearing is 3 3/16 in. long, the center bearing 3¼ in. long and the rear bearing 3 5/16 in. long. The upper halves of the main bearings are bronze-backed. The connecting rod bearings are 2 in. in diameter and 2¼ in. long. The rods are drop forgings of I-beam section and are clamped to the piston pins, which are 1⅜ in. in diameter. The piston pins work in removable bronze bushings in the pistons. The pistons have three rings, two above the pin and one below. These rings are ¼ in. wide.



The Vim chassis fitted with the panel body shown in this picture lists at $1210. This body is designed especially for general merchandse delivery

The valves and valve operating parts are located on the right side of the engine and are entirely enclosed. They are made readily accessible, however, by the removal of two cover plates, each of which is held in position by a single stud bolt. There are 4 spiral timing gears. The right hand gear drives the camshaft, and the one on the left drives the combination generator and distributor through a coupling.



Oil is supplied to the main and connecting rod bearings under pressure. The oil pump is driven through spiral gears from the rear end of the camshaft. The pump is located at the extreme rear of the sump and at the lowest point. Consequently it is supplied with oil under all conditions. Oil draining back into the crankcase is filtered before entering the pump. The pump is of the gear type and develops about 10 lbs. pressure at 1000 r.p.m. of the engine. An oil pressure gage is located on the dash, and there is a bayonet type of oil gage for measuring the quantity of oil in the crankcase.

Fuel is fed to the 1-in. Zenith carburetor by gravity from the tank under the seat. The intake and exhaust manifolds are cast integrally, a hot spot being provided to heat the mixture. Air entering

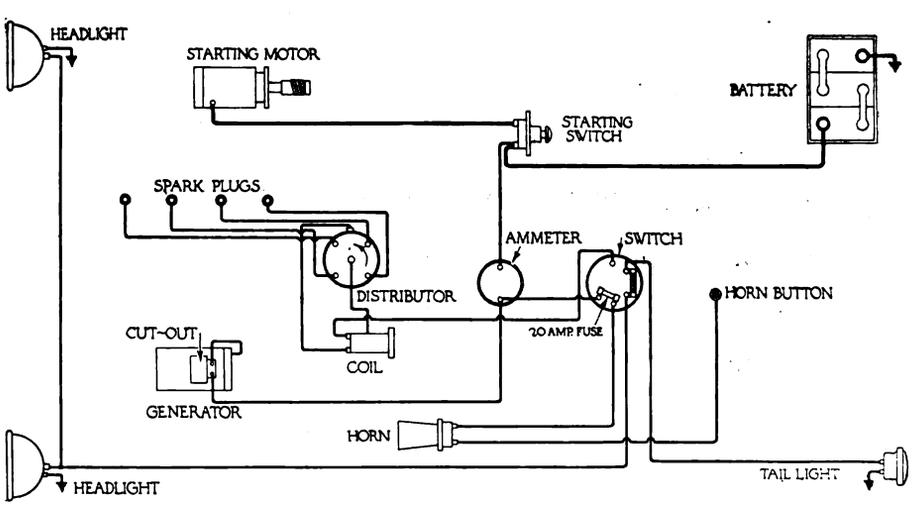
Plan view of Vim chassis. Springs are provided in the brake linkages to take up for wear and to eliminate rattles. Torque and propulsion are taken through the springs

Digitized by Google

Left—The steering column support carries the lighting and ignition switch and the ammeter. The starting switch is on the floor. The steering wheel is 18 in. in diameter. Right—Left side of Vim power plant. The inlet and outlet water connections on both engine and radiator are removable which makes it unnecessary to disturb the hose clamps in breaking the connections at any of these points.

the carburetor is preheated by passing through a stove on the exhaust pipe. Due to the fact that the carburetor and manifolds are on one side and the ignition system on the other side of the engine, the power plant has an unusually clean appearance and is very accessible.

Cooling water is circulated by thermosiphon. The radiator is of the tubular fin type. The radiator core is carried in a pressed steel shell, which is spring-supported on the frame. The outlet and inlet connections on both the radiator and engine are removable, so it is not necessary to touch the hose clamps to break the connections at any of these points. The fan is driven from a pulley mounted on an extension of the shaft which drives the generator. The fan-shaft may be adjusted vertically to take up slack in the fan belt. The capacity of the cooling system is 7½ gallons.



Electric starting, lighting and ignition are regular equipment. The starting motor and combined generator and ignition unit are Westinghouse and the battery is a Willard. The system is a 6-volt, ground return type. The generator is mounted on a bracket on the left side of the engine. The starting motor, which has a screw shift, is located on the right side underneath the air intake pipe leading to the carburetor. The lighting and ignition switch and the ammeter are mounted on the steering column support. Single contact bulbs of the following sizes are used: headlights 18 cp., and taillight 2 cp. The diameter of the headlight lens is 9 in.

The clutch and gearset are a unit with the engine. The clutch is a multiple dry disk type with five driving and five driven disks. A clutch brake is provided. The disks are faced with asbestos, 8 in. outside diameter, 6 in. inside diameter and ⅛ in. thick. The gearset provides three speeds forward and one reverse. The ratios are 3.24 to 1 in low, 1.66 to 1 in second, 1 to 1 in high and 4.16 to 1 in reverse. The mainshaft in the gearset is mounted in ball bearings and the countershaft is plain bearings. A power take-off is provided for tire pump only.

The propeller shaft has two metal universal joints of the self-lubricating type. The rear axle is semi-floating and has a road clearance of 9½ in. Spiral bevel reduction gears are used, the ratio being 4.7 to 1. Torque and propulsion are taken through the springs. The sleeves surrounding the pressed steel axle housing and carrying the spring chairs extend far enough toward the center of the axle so that the rubber bumpers on the bottom of the frame side members strike them and not the axle housing. The differential ring and pinion are mounted as a unit, so that the complete carrier may be removed from the housing without disturbing the adjustment. The pinion-shaft is supported by two roller bearings, both forward of the pinion.

The side members of the frame are pressed steel channels 5 in. deep with 1¾ in. flanges. The frame is braced laterally at five points. The front cross member is in front of the radiator and protects it in case of collision. The second cross member is a steel forging which serves as the front engine support. The flywheel housing acts as the third cross member. Brackets are riveted to the frame to which the front engine support and the supports on the flywheel housing are bolted. The fourth cross member is at the point where the front hangers for the rear springs are attached, and the fifth connects the rear ends of the side members.

The springs are semi-elliptic front and rear. The front springs are 2 in. wide and 38 in. long, and have nine leaves with two rebound plates. The rear springs are 2¼ x 50½ in. and have ten leaves with three rebound plates. The spring bolts are applied to the hangers by means of clamping bolts which elim-

The wiring diagram for the new Vim showing the connections of the starting, lighting, ignition and signalling systems

Digitized by Google

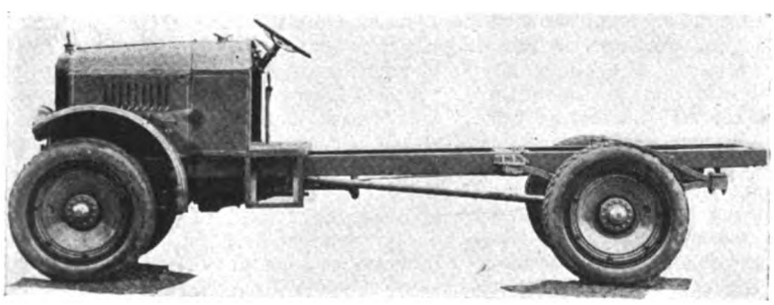
inate the possibility of their working loose. Spring bolts are hardened and ground, and are oil lubricated.

Both service and emergency brakes are located on the rear wheels. The brake lining dimensions are as follows: external service brake—length, 48 in., width, 2½ in., thickness, 5/32 in.; internal emergency brake—length, 46⅝ in., width, 2¼ in., thickness, 5/32 in. Springs are provided in the brake operating mechanism to take up wear in clevis and shafts and to eliminate rattles automatically.

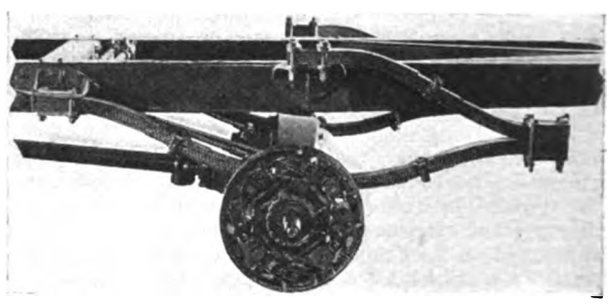
The steering gear is a worm and wheel type. The steering wheel is 18 in. in diameter. Hand spark and throttle controls, and horn button are located on top of the steering column. The carburetor choke is also located on the steering column. The turning radius of the truck is 19 ft. The wheelbase is 108 in. Wood wheels with 32 x 4 in. cord tires on Firestone rims are regular equipment.

The length from the back of the driver's seat to the end of the frame is 76½ in., and to the center of the rear axle 44¼ in. The maximum allowable body overhang is 10 in. and the maximum body width between rear wheels is 46¾ in. The driver's seat is 44½ in. wide. The extreme width of the frame is 30 in. and the distance from the ground to the top of frame, assuming the truck is fully loaded, is 27¼ in.

The dash is built of one main plate of 11 gage sheet steel to which the floor board supports are hot riveted. Chassis equipment includes electric headlights with approved lenses, tail light, motor-driven horn, complete set of tools, front fenders, gasoline tank, running boards, jack and pump.



The open express body is ruggedly constructed. The uprights are made of ash and the steel sides are bolted to them. The tailgate is 12 in. high and is supported by covered chains. The seat is comfortably upholstered. The inside loading dimensions are: length, 85½ in., width at floor, 44½ in., and the height, 55¼ in.



The panel body is intended for general merchandise delivery. The frame of this body is ash reinforced with steel. The rear doors have glass windows. The body is painted a dark olive green with black trim and natural wood wheels. The inside loading dimensions are the same as for the express body.

The Vim company is now controlled by an entirely new organization. The new truck is being produced at a new plant located in the Nicetown section of Philadelphia. The units entering into the construction of the truck are for the most part manufactured elsewhere, but they are in most cases produced exclusively for use in this vehicle.

Indiana One-Ton Speed Truck Priced at $1425

Three-Quarter Elliptic Springs of Unusual Design Are a Feature—Maximum Speed 30 to 35 m.p.h.

Left—The new Indiana speed truck priced at $1425, has a maximum speed of from 30 to 35 m.p.h. The engine is a 4-cylinder, 3¾ x 5¼ in. Waukesha. Right—Unusual three-quarter elliptic spring construction on new Indiana one-ton speed truck

THREE-QUARTER elliptic springs of unusual design are a feature of the new Indiana one-ton speed truck, which will be known as the Highway Express. These springs are used in both front and rear. The construction is such that shackles and ground bolts are eliminated, thus making lubrication at these points unnecessary. The drive is through the springs, and the driving strains are carried by a number of main plates instead of by one main plate, as in the conventional construction.

The power plant is a four-cylinder Waukesha with 3¾ in. bore and 5¼ in. stroke. The carbureter is a Stromberg, and ignition is by Bosch generator and distributor with Presto-Lite battery. Starting motor, motometer and electric horn are regular equipment. The clutch and gearset are mounted as a unit with the power plant and are of Brown-Lipe manufacture. The rear axle is a semi-floating type with spiral bevel drive. The pressed steel frame is 5 7/16 in. deep with 3¼ in. flanges. The wheelbase is 132 in. Disk steel wheels with 34 x 5 in. pneumatic tires are standard.

The capacity of the truck is 2000 lbs. with a body allowance of 900 lbs. The maximum speed is between 30 and 35 miles per hour. The engine speed at 33 miles per hour is 2000 r.p.m. The truck is said to have done 13.4 miles per gallon of gasoline on test.

The price is $1,425. The manufacturer is the Indiana Truck Corp., Marion, Ind.

Lexington Adds New Models and Cuts Old

CONNERSVILLE, IND., Aug. 23—Lexington line for 1923, just announced by the Lexington Motor Co., shows ten body types included in the list of Series 23 models. The company has decided to confine its line to one chassis, the Ultimate, with 123 in. wheelbase, abandoning for 1923 the 122 in. and the 128. The Ansted motor will be the only engine used in the new line.

Of the 1922 family only two models are retained, the 5 passenger phaeton, which has been reduced from $1,745 to $1,695, and the 5 passenger sport model, which has been dropped from $2,100 to $2,045. The rest of the new line consists of a 2-passenger roadster, which lists at $1,695; a 7 passenger phaeton at $1,795; 5 passenger California top, $1,995; 7 passenger California top, $2,095; 5 passenger Royal Coach, $2,145; 4 passenger coupe, $2,345; 5 passenger sedan, $2,545, and 4 passenger brougham, $2,645. The roadster, Royal Coach and brougham are brand new additions to the line.

Barley to Produce Medium Priced Car

DETROIT, Aug. 23.—The Barley Motor Car Co. is preparing to bring out a medium priced car following the general lines of the Roamer, according to a statement by George Hopkins, secretary of the company, in an address before the Kalamazoo Exchange Club. The car will not be called the Roamer, this name being reserved for the higher priced vehicle. Hopkins declined to give any details concerning the new car, though he declared plans and specifications have been completed and production will be started in the near future.

How I Make Shop Profits in Winter

Will You Tell the Trade How You Do It—in Motor World?
$50 for the Best Story, $25 for the Next, $10 for the Next, and $5 for All Stories Accepted

OLD Man Winter's a tough-looking customer — old, cold, lean and tight-skinned. Doesn't look as though you could get much out of him. Lots of folks are like that—and lots of folks like that are pretty well lined with cash. But you never know it until you shake 'em down.

A good many men in the automobile business have found that Old Man Winter isn't as tight-skinned as he looks. They've been shaking him down—and getting shop profits.

Perhaps you have, Mr. Garageman, or you, Mr. Service Manager. If you have, Motor World would like to have your story.

How do YOU make shop profits in winter?

Will you tell the story in 500 words, or less, and send it in to Motor World?

The story will naturally divide itself into two parts:

1—What kind of work do you get to keep your shop and your men busy in cold weather?

2—How do you get the work?

Perhaps you specialize in winter overhaul jobs, or painting, or service to cars and trucks kept running in winter or attachment of cold weather accessories. Whatever you do to MAKE YOUR SHOP PAY IN WINTER, will you tell what it is and how you do it? You have an effective way of getting this work into your shop, possibly by advertising, possibly by canvassing, possibly by still another method. What is the method and how do you carry it out?

These must be FACT stories, with your name and the name of your company and town. Put the story in simple language and write it with a typewriter on one side of the paper.

Mail the story to Motor World not later than September 23 and earlier than that if you can. If yours is the best story—the most practical description of a practical method of making shop profits in Winter—Motor World will send you a check for $50. For the second best story we will pay $25, for the third, $10, and for all stories good enough to print, $5. The editors of Motor World will be the judges.

Please remember—500 words or less. And if you are a car, truck or tractor dealer, a little bit out of touch with the intimate details of the shop, pass this offer on to your service manager and give him a chance to compete.

Editorial Notes

Don't Advertise Wrecks

IN a fair sized Eastern city there is an automobile dealer with a large repairshop who makes a specialty of towing in and repairing wrecks as a side line of his motor car business. He has a vacant lot alongside his sales and service building onto which wrecks are hauled and often left standing for days and sometimes for weeks at a time before their repair is undertaken. This practice undoubtedly serves to advertise the towing and repair features of the dealer's business, but apparently he hasn't given much thought to the sales resistance set up against passenger car sales by this more or less continuous reminder to the public of the dangers of motoring.

One would think that this dealer would keep these wrecks indoors or in the backyard or would build a fence around them if circumstances force him to store them in a vacant lot. Well informed people know that the ratio of accidents to the total volume of traffic is small, but not all people are well informed, and evidences of accidents such as presented by lining up wrecked cars alongside a busy sidewalk are likely to defer some prospects from becoming owners and drivers of cars. There is enough sales resistance set up by the publicity given to highway accidents by the newspapers, but the reading of stories of this sort does not create any such impression as does the sight of a row of cars with wheels and bodies smashed in a way to suggest that some of the occupants suffered serious injury or death when these crashes occurred.

Some day the dealer mentioned may be awakened to the fact that his array of wrecks is a persistent obstacle in the way of new and used car sales, but when he awakens there will still be many other dealers in different parts of the country letting this sort of heedlessness stand in the way of business and profit in the merchandising division of their business.

An Ideal Highway

IT is interesting news that contracts have finally been let for the construction of a section of "ideal highway" on the Lincoln Highway running through Indiana.

This road, which will present a 40-foot surface of reinforced concrete paving 10 in. thick and laid out in the middle of a 100-foot right of way, will be truly ideal and will be a high mark for road builders throughout the country to aim at. It cannot be expected, of course, that the average community can have any such highway, at least under present methods of financing, but it is a tribute to public interest in adequate motor highways that the Lincoln Highway Association, with contributed funds and with the assistance of federal and state resources, has been able to undertake a piece of construction of this sort.

It is stated that the highway will carry 20,000 vehicles a day without danger or congestion. It will not be a speedway, like some of the private projects throughout the country, but a highway. It should stimulate study leading to scientific highway building and, with the vision it holds out for a much improved type of highways for coming generations, it should encourage the highway pioneers to carry on their work with reasonable expectation of growing public support.

Speedmaniacs and Sales

THE public has become pretty well calloused to news of automobile accidents in which reckless sons of millionaires have plunged themselves and their friends to death or serious injury by speeding on the public highways. Recently, however, the news contained the story of a particularly atrocious violation of the road, in which the guilty motorist met his death, but which resulted also in the maiming of several persons in other cars who suffered from his recklessness.

This is the type of violation of traffic rules that should be punished with the greatest severity as a warning to other potential violators. There is no call for much sympathy for any motorist who is injured as a result of his own recklessness, but where persons driving carefully along the highways are hurt and sometimes killed as a result of the speed mania or heedlessness of others, a direct blow is dealt to fair play and to expansion of motor travel.

The average prospect for an automobile is likely to feel that he is capable of operating a car with sufficient skill to keep him out of accidents of his own causing. However, if he finds his newspaper continually filled with accounts of injuries to careful motorists inflicted by drivers of the reckless kind, his ardor is likely to be somewhat dampened and the dealer or salesman who is trying to sell him may find himself stumped by sales resistance which otherwise should not exist.

Automotive men everywhere will do a service for themselves and for the public, including all motorists, if they will lend their support to insistence that reckless driving be suppressed as far as possible by proper traffic control and when necessary by punishment of flagrant offenders. There is a difference between fast driving and reckless driving. On an open highway, with no other cars in sight, a driver can hardly be called reckless if he utilizes some of the speed capabilities of his car, but when he resorts to racing and speeding against time, tactics which should be confined to speedways, he should be made promptly to feel the heavy hand of the law and his reprehensible conduct should be held up to public attention.

Unlawful to Use Photo Without Permission

New York Statute Protects Persons Against Use of Their Portraits in Advertising

Editor Motor World:—Can you advise us on the following question?

Some time ago a crowd of us were on an outing and had our photographs taken. When I got my copy, I put it in the window of the store that I use as a supply shop. One of the crowd remarked to me the other day, in more or less of a joking way, that I was committing a misdemeanor by doing this. Is there any chance of my getting in trouble because I put this picture in my window?—S. H. E., Buffalo, N. Y.

Answer:—There is a New York Statute on the matter of using photographs of persons for advertising purposes without their consent in writing. But I certainly do not think it was ever meant or intended to cover a case where a member of an organization puts a group picture, in which his own photograph appears, in his window, for display purposes. In any event, I can hardly conceive of anyone going to the trouble or expense in a case of that kind. What the law was intended to cover is a case where a person's picture is used to advertise somebody's tooth powder or shaving soap, or the like.

The New York Statute on this matter provides:

Right of Privacy.—A person, firm or corporation that uses for advertising purposes, or for the purpose of trade, the name, portrait or picture of any living person without having first obtained the written consent of such person, or, if a minor, of his parent or guardian, is guilty of a misdemeanor.

Any person whose name, portrait or picture is used within this State for advertising purposes, or for the purpose of trade, without the written consent first obtained as above provided, may maintain an equitable action in the Supreme Court of this State against the person, firm or corporation so using his name, portrait or picture, to prevent and restrain the use thereof; and may also sue and recover damages for any injuries sustained by reason of such use; and if the defendant shall have knowingly used such person's name, portrait or picture in such manner as is forbidden or declared to be unlawful by the last section, the jury, in its discretion, may award exemplary damages.

But nothing contained in this act shall be so construed as to prevent any person, firm or corporation practising the profession of photography from exhibiting in or about his or its establishment specimens of the work of such establishment, unless the same is continued by such person, firm or corporation after written notice objecting thereto has been given by the person portrayed.

Unless a dealer wishes to run the chance of an expensive lawsuit, it is always well to get the written permission of the person whose pictures you wish to show before using it.

Another Decision Gives N. Y. Artisan's Lien Priority

That under section 184 of the lien law a garage-keeper has a lien for storage, maintenance, etc., of motor vehicles, which is superior to the lien of a chattel mortgage, was the decision in the recent case of Bardasch vs. Kalisch, 193 N. Y. S. 719.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

The court said: "The provision of the statute which allows the artisan to retain possession of the chattel until his lien is paid indicates an expressed intention on the part of the Legislature to create a prior lien in favor of the artisan as the provision for such possession could have no other affect than to create a right superior to that of the mortgagee. The effect of a chattel mortgage in this state is to transfer ownership of the chattel to the mortgagee subject to being defeated by the payment of the amount of his lien. If such ownership is subject to the absolute right of possession in the artisan, it must necessarily follow that the artisan's lien is prior to that of a mortgagee."

Replevin According to Common Law in Maryland

Editor Motor World:

Accepting your offer for legal inquiries through the Motor World, we would like to learn the law in Maryland for replevining a truck.

The truck in question was sold by us last fall on a lease. The lessee skipped town and sold the truck in the State of Maryland. We have located the present owner of the truck and desire to regain our property.

Thanking you in advance for this information, we are—W. W. Co., Worcester, Mass.

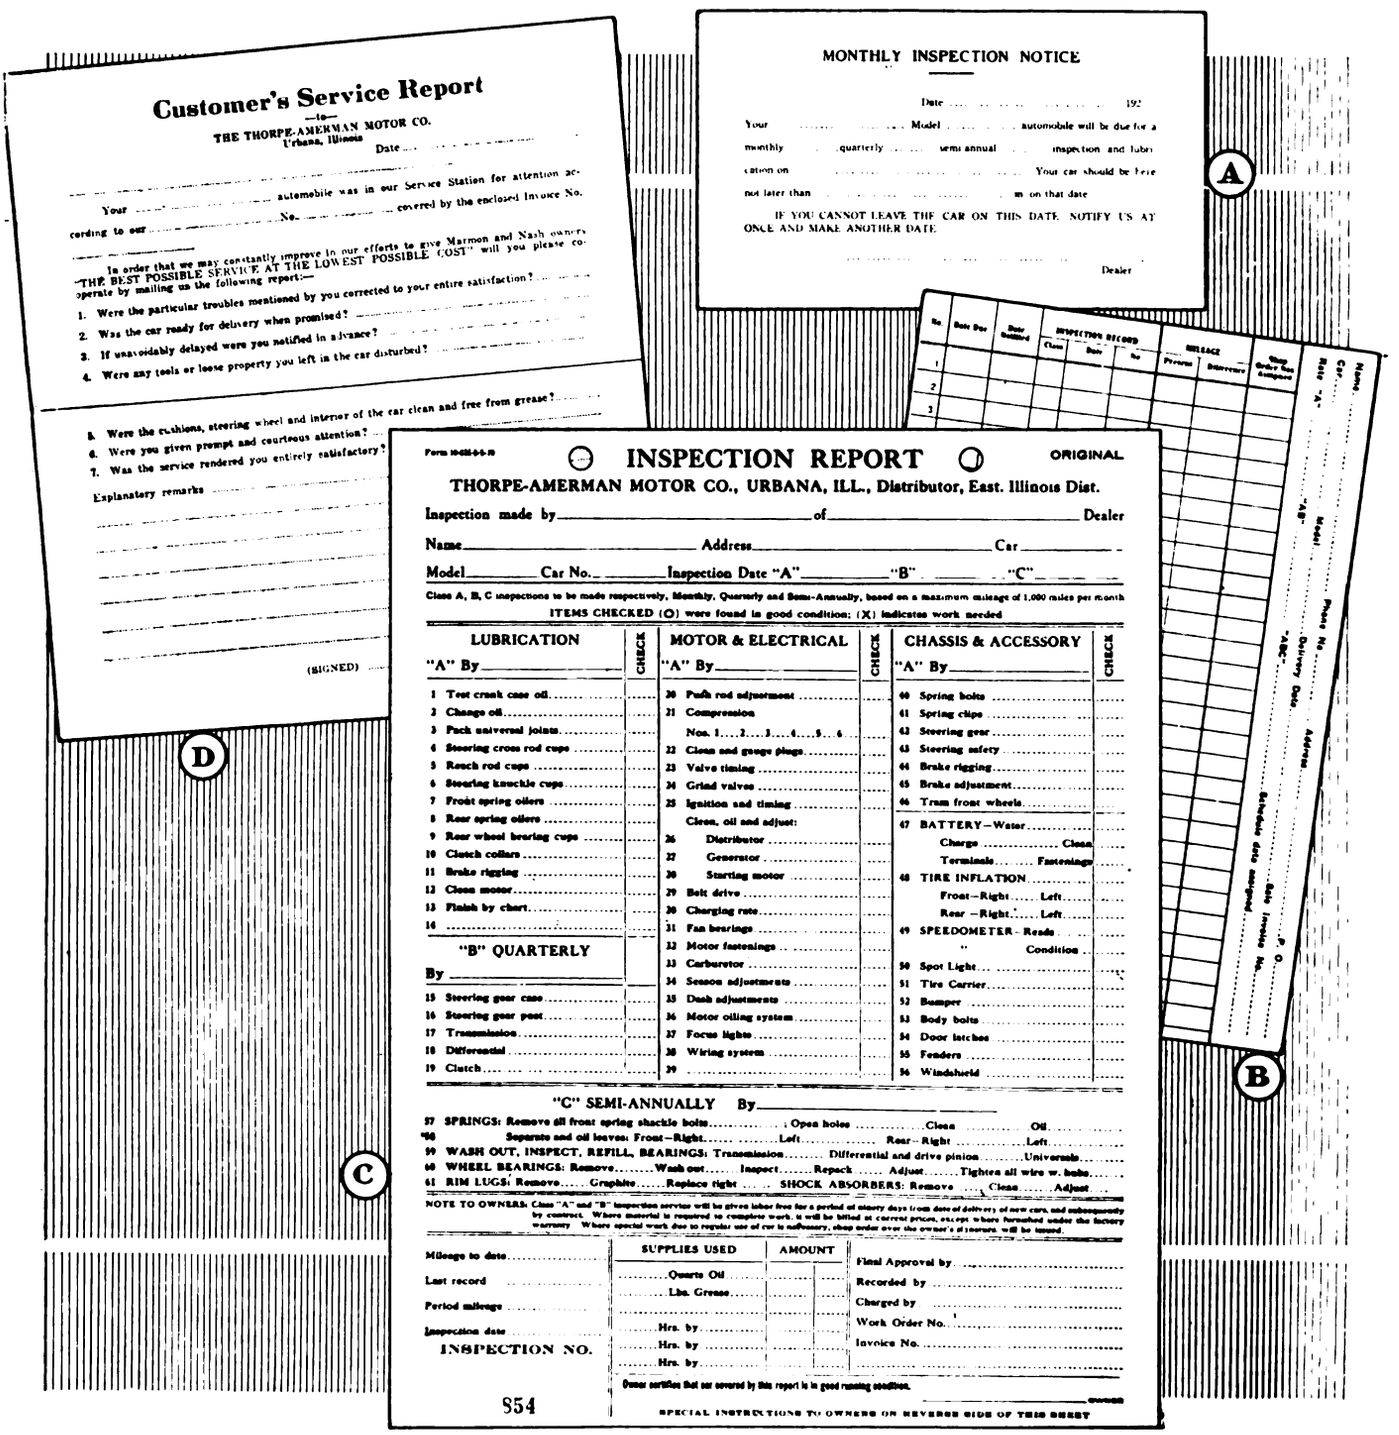
Answer.—I suggest that you retain an attorney in the town where your customer is now located and let him advise you as to what course you should proceed. In Maryland, replevin is according to common law. The sheriff executes the writ when you file a bond for double the value of the goods and returns them to you—whereupon the other fellow has a like right to get the goods back upon filing a bond himself. Finally the action is tried and either you or the other fellow gets the goods, the attorneys on both sides get their fees and the court passes on to the next case which may be for divorce or murder or something else which is a whole lot more interesting.

Fire Extinguisher Inoperative; Owner Can't Collect

The Supreme Court of Arkansas in the recent case of Union Marine Insurance Co. vs. High decided that, where a reduction of premium was allowed on an insurance policy in consideration of the covenant that a fire extinguisher would be kept on the car, the car owner could not recover damages for the loss of the car through fire when it appeared that at the time the car caught fire the extinguisher was empty, naving been exhausted at a previous fire.—239 S. W. 741.

Truck Owner Liable in Negligence Case

That where a truck owner agrees to do all trucking work for another concern and to furnish gasoline, chauffeurs, etc., it is liable for a death caused by negligent driving, was the decision in the case of Braxton vs. Mendelson, which recently came up in the New York courts.—135 N. E. 198.



That in replevin by lessor of automobile under a writing, which was plain, clear, and wholly free from ambiguity, and provided for a lease and not a sale, court did not err in refusing to charge the jury that they might find that the alleged lease was in fact an absolute sale, was the decision in the recent California case of Automobile, Truck, Tractor and Implement Co. v. Salladay, 203 P. 163.

Keeping in Touch with the Customer

THE ideal of the dealer would perhaps be realized if he could keep in constant touch with every car buyer. If he could perform all the service on every car he sold in his territory, he would not only get the profit from his service, but would probably be able to resell the customer when the time came for him to buy a new car.

The Thorpe-Amerman Motor Co., distributor of Marmon and Nash cars in Urbana, Ill., uses a system of records and notices that help materially in keeping this very necessary touch with the customer through service. Every owner in the territory is listed and is given a certain time appointment for regular inspection. Four days before the appointed time he is sent a postal which is shown at A. When the car comes in, an inspection report shown at C is made out and the 61 items checked off. If any repairs are necessary a regular shop order is made out and the work goes through as in any regular job. After the job is completed a record is made on form B, which is kept on file in the office. This condensed record is of great value in determining the condition of the car, age of parts, etc., in case of a used car trade and also to settle any disputes that might be brought up by the owner as to when certain work was done or how much it amounted to. The return post card shown at D is used with every repair job and is primarily intended to check up any carelessness on the part of mechanics. Notice the questions asked.

Customer's Service Report

—to—

THE THORPE-AMERMAN MOTOR CO.
Urbana, Illinois

Date .....

Your ..... automobile was in our Service Station for attention according to our ..... No. ..... covered by the enclosed Invoice No. .....

In order that we may constantly improve in our efforts to give Marmon and Nash owners "THE BEST POSSIBLE SERVICE AT THE LOWEST POSSIBLE COST" will you please cooperate by mailing us the following report:—

1. Were the particular troubles mentioned by you corrected to your entire satisfaction?
2. Was the car ready for delivery when promised?
3. If unavoidably delayed were you notified in advance?
4. Were any tools or loose property you left in the car disturbed?
5. Were the cushions, steering wheel and interior of the car clean and free from grease?
6. Were you given prompt and courteous attention?
7. Was the service rendered you entirely satisfactory?

Explanatory remarks .....

Accessory Store in Service Station Pays

Service Salesmen Sell Automobile Equipment in Cadillac Station in Detroit and Increase Their Earnings

SERVICE salesmen sell accessories in the Cadillac service station in Detroit. The plan is proving very successful, and although the accessories store in the service station has been in operation only a short time, sales already have reached a volume of $10,000 a month.

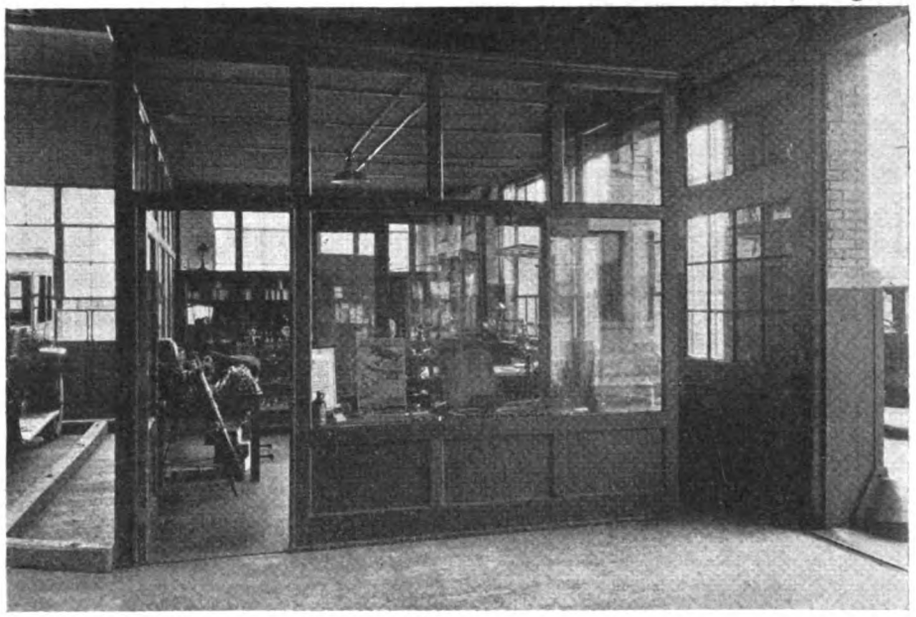
The store is conveniently located in the court or reception garage into which the service customers drive. This small accessories store handles bumpers, spotlights, tires, etc.

The service salesman is permitted to sell at opportune times to the customers such items as he thinks will be of value to them. The salesman on such sales is allowed 3 per cent commission on most merchandise and 2 per cent on other merchandise such as tires and tubes.

The service station accessory store in this case has not only increased the sales of accessories and provided a source of profit, but it has resulted in an opportunity for the service salesmen to appreciably increase their earning capacity, and this has had an appreciable effect in the morale of the men.

Get His Name

ACCESSORIES are like peanuts—the more you get of them the more you like them. So the wise dealer will keep the name and address of each person who buys an accessory from him and every three months or so he will solicit this individual by personal call, phone or letter for other accessory sales. Considerable business can be secured in this way which, otherwise, would probably be lost.



Furnishes Garages with Price Cards

THE Wayne Cylinder Grinding Co. of Fort Wayne, Ind., has a very comprehensive price card which it distributes to all garages which do not do cylinder grinding so that these garages can show the price card to folks wanting such a job. On this price card is the price for all size bores and for grinding alone, grinding and new rings, complete job, etc. By this distribution of the cards the concern gets a considerable amount of extra business and the flat price card appeals to all motorists.

How to Ask 'Em to Buy a Tire Gauge

WE find it a simple proposition to sell tire gauges to a good percentage of all the autoists who buy gas from us," said a middle western accessory dealer. "When a man is getting gas we say to him: 'Isn't that one tire a little flat? You better put your tire gauge on it.' To this a good percentage of the autoists reply that they haven't any gauge. And it is then merely a matter of good salesmanship to sell them a gauge. We've worked up quite a lot of extra business in this way, and I've no doubt but what this plan would work equally well for other dealers."

Service Station Corner Makes $10,000 a Month Accessories Sales

This is a small accessory store in the Cadillac service station in Detroit, which, although only opened recently, already has reached a value of $10,000 a month sales. Service salesmen sell the accessories and are paid 2 and 3 per cent commission

A Novel Tire Service Truck

THE Perfection Tire Co. of Sioux City, Iowa, uses a service truck with the delivery end of the truck shaped like a section of a huge tire casing. There is a regular bend in the imitation section, as there would be in the real thing, and with vivid lettering on the sides of the truck this service car never fails to get a lot of attention.

Timely Advertising Sells

WHENEVER it rains during the touring season a middle western garage, which handles a full line of accessories, makes a display in its show windows of anti-skid chains and of spotlights. With this diplay it uses a sign reading like this:

"THE ROADS NEAR HERE ARE *GOOD*,

"but this rain may make other roads bad. Be prepared for emergencies by getting skid chains and spotlights here NOW. Don't take a chance."

This timely advertising has enabled this concern to make a number of sales which otherwise it probably wouldn't have made.

Touring Information on Sign at Filling Station

A MIDDLE WESTERN filling station has a large placard attached to the side of the station on which, in large letters and figures, is painted the distance to nearby touring points and to far touring points to which many motorists head. This sign never fails to attract a lot of attention from motorists, and it is believed by the owners of the filling station that it has been instrumental in bringing a lot of trade to the station which otherwise might have passed by.

Fitting, Renewing and Adjusting Engine Bearings

Service Stations and Equipment Manufacturers Have Developed Methods Which Are Quicker and Superior to Hand Fitting

By J. Howard Pile

Part I.

DUE largely to the development of special equipment it is now possible to fit engine bearings in much less time than was formerly the case and with more knowledge of bearing metals, clearances and other things that affect bearing operating it is possible to get longer lived bearings.

Assuming a set of properly fitted bearings in the first place and the proper kind of care on the part of the car owner, there is almost no limit to the life of modern engine bearings. The greatest causes of bearing trouble are neglect of lubrication and improper lubrication. Allowing the oil supply to run out will, of course, cause the bearings to burn out in practically no time. A more lingering form of bearing death is the dilution of the crankcase oil by seepage of liquid gasoline past the piston rings into the crankcase. This thins out the oil and leaves a liquid in the crankcase which has little viscosity and practically no lubricating value. With present day gasolines containing as they do a considerable quantity of kerosene, it is recommended that the crankcase be drained every 700 miles. Previous practice had been to drain every 1000 or 1500 miles but this is too long to allow between drainings even in very hot weather. In winter the period should be cut down to every 500 miles to allow for more frequent use of the choke and the greater difficulty in vaporizing due to lower temperatures.

Bearing Knocks

Loose bearings, of course, evident themselves by knocking. A slight knock can be located and usually by removing some of the shims the play can be taken out and the knock will disappear. A bearing knock will never mend itself, but will continue to get worse. A bearing which is properly fitted will stay put a long time but a loose bearing has a tendency to pound the oil out of itself and the shaft acts like a hammer. To illustrate the action, imagine pounding a nail with a hammer. You cannot drive it very far when the head of the hammer is pressed against the head of the nail. But if the hammer is raised a trifle, more effect will be produced because of the momentum of the hammer. The greater the distance from the nail to the hammer, the greater will be the force exerted on the nail. It is the same way with shafts and bearings. Lost motion or looseness gives the shaft momentum to hit the bearing a hammer blow with force behind it. That is the reason that a knocking bearing will get rapidly worse.

Bearings which wear loose naturally after a natural period can usually be put back in good shape simply by taking up on the bolts after removing the required amount of shims from both ends of the bearing. It is customary to fit each bearing separately, removing enough shim material to make the shaft bind when the bolts are tightened up, then adding just sufficient to give them a running fit. After fitting, each bearing is loosened a trifle, so that the next one can be given the same fit without the slight tightness of the bearing which has already been adjusted affecting the bind on the shaft. Some engines, especially eight and twelves of the V-type, require more care in fitting, and it is sometimes necessary to use feeler gages in getting the correct clearance.

Endplay in the bearings has in the past only received attention when it produced a knock. This endplay might exist in either the crankshaft or the camshaft. It has been more recently found that the end clearance on the bearings in engines using the pressure system of lubrication has a decided effect on lubrication and the accumulation of carbon in the combustion chamber This subject has been mentioned in these articles before several times. In a pressure system using a hollow crankshaft the pressure shown on the gage is dependent not only on the pump and the bypass adjustment but on the area of the space through which the oil finally escapes which is around the bearings. If the bearings are tight, there is considerable resistance offered to the flow of oil and the pressure is high. If the area is large due to loose bearings or endplay, the oil will rush through as fast as it can be pumped and although many times the quantity of oil is going through the system, the gage will register a low pressure. This excessive amount of oil pass-

Better Mechanics

Article No. 255

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous isues.

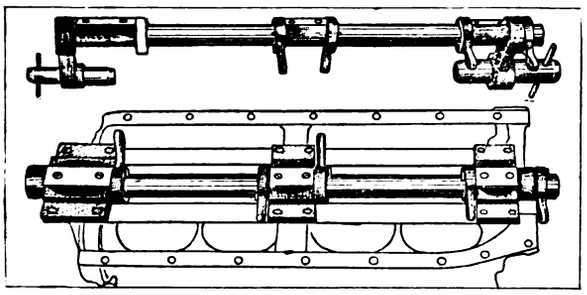

Fig. 3—Bearing rebabbitting jig

ing through the system allows a surplus to be thrown on the cylinder walls with the result that a good deal of it gets up to the combustion chamber.

When bearings are so loose that they have a decided knock there are liable to be other things the matter besides the wear of the babbitt metal itself. A bearing which has been loose for some time is liable, in the case of the connecting rod to have worn a slightly flat place on the crank pin. This comes from the fact that on the firing stroke the bearing has been striking a hammer blow at exactly the same point on the crank pin at every revolution. Similarly other flat places will have developed when the bearing hits the shaft on the intake and exhaust strokes. In other cases the crankpin will have worn oval.

Another defect that develops with loose bearings and to a greater extent on the smaller crankshafts is the springing of the shaft so that the main bearings are out of line.

Crankpins and main bearing portions of the crankshaft can be trued up for roundness in several ways. If the surface is merely cut in rings without being out of round, the shaft can be swung in a lathe and the surfaces lapped or turned and lapped to a good finish. If the shaft is out of round the same process can be used.

There are a number of tools on the market known as crankshaft turning tools which will do this truing work either with or without the use of a lathe. One such type is shown in Fig. 1.

Another piece of equipment for testing and straightening a crankshaft is shown in Fig. 2. This is a shaft straightening press provided with testing centers and a dial gage. Either the crankshaft or the camshaft can be tested and straightened on this machine. It is absolutely impossible to maintain a fit on bearings when the crankshaft is out of line and much expense is gone to in some shops that do not have adequate equipment for testing and straightening. The testing part of the operation can be done between the centers of a lathe, using a dial gage in the same manner. The testing is done in either case by swinging the shaft between the center and applying the plunger of the dial gage to the center main bearing with the dial set to zero. A variation of more than a half thousandth should receive attention. Shafts will often be found to have a variation of ten to fifteen thousandths. The high side of the bend is marked with chalk and the shaft bent in the press.

Several testings and bendings will usually be necessary to get the shaft back in line. Where the shaft has more than three bearings the job is more complicated and tests will have to be made on all the bearings to find out just where the bend is.

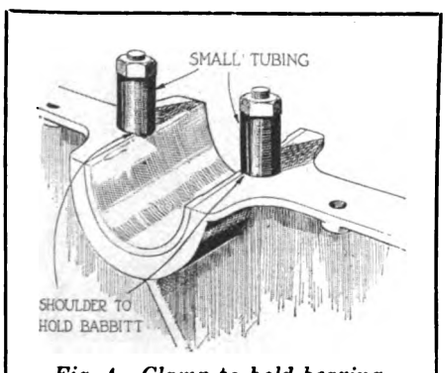

Fig. 4—Clamp to hold bearing down in crankcase

Before starting to fit new bearings, it is assumed that the crankshaft is true, perfectly round and the surface which revolves in the bearings has a mirror polish without scratches or cuts. The fillets must also be perfect.

Some engines have the babbitt bearings cast right in the crankcase. The Ford is an example of this class. In replacing the bearings on this kind of an engine it is first necessary to cut out the old bearings, clean out the anchor holes and pour the bearings with new metal, using the right kind of a jig. It is possible to cast the bearings without a jig but several things have to be taken into consideration and the job is a pretty delicate one. The gear distance has to be maintained exactly and a rebabbitting jig will determine this distance. The shaft must also be positioned so that it is exactly at right angles to the cylinder walls. If this is not done excessive wear on the pistons, connecting rod bearings and piston pin bushings will take place and the pistons will stick and bind at first, developing a slap later.

Fig. 5—Line reamer for main bearings

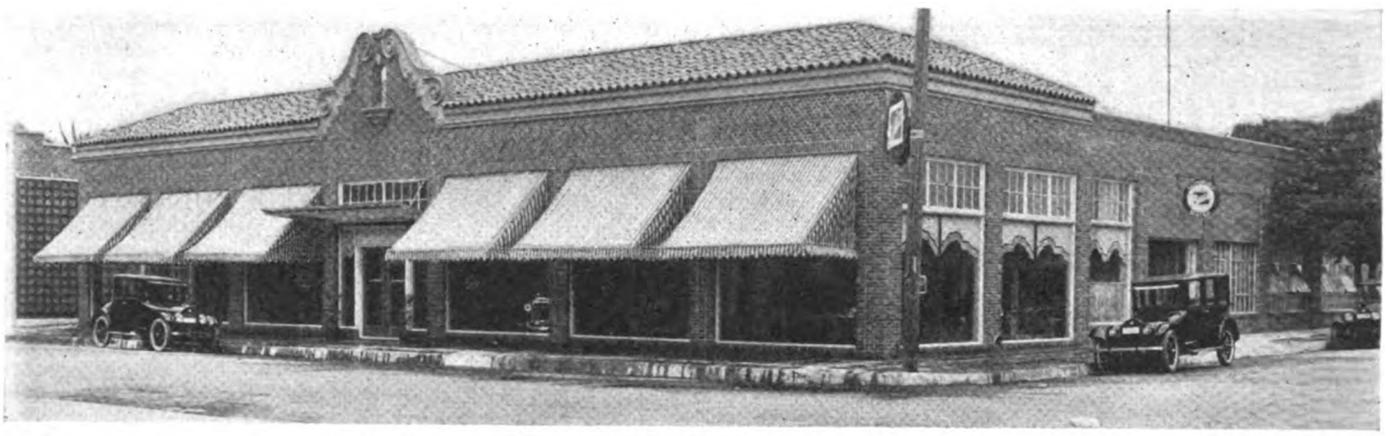
Most engines have die cast bearings of the removable type which are affixed to the crankcase with either dowels or screws. If the bearings are to be fitted by the hand scraping method it is necessary to force the bearings down to the casting before starting to mark them. This is done by using the bolts and clamps shown in Fig. 4. Otherwise one or more of the babbitts may spring up and give a false marking.

No matter what type of bearing is used, the main bearings should be line reamed before proceeding with further fitting. The line reamer reams all main bearings at the same time, gets them exactly in line and at right angles to the cylinder walls when the reamer is correctly set up.

Further fitting of the main bearings is either by the burning in process or by hand scraping. Details of the burning-in and hand scraping methods will be given in the September 6 issue.

PART II of this article on refitting engine bearings will appear in the next issue of Motor World. It deals with the detailed procedure of burning-in and hand scraping. Many service stations are applying burning-in and running-in in preference to hand scraping and while the process has heretofore been confined largely to Ford shops, other shops are seeing the advantages of the method and are applying it to engines of other makes.

Novel Stunt Advertises New Car Laundry



ONE of the best advertising stunts staged in Pine Bluff, Ark., in a long time was that of the Pines Auto Laundry, a new firm just recently opened up at 205 Walnut Street, in that city, the proprietors being John Baldridge and R. E. Cash.

In order to let folks know they were in town, Messrs. Baldridge and Cash rigged up an outfit calculated to give the people a mild shock, and drove over town with it. It was one of the oldest, most dilapidated buggies it was possible to secure. A steering wheel and steering arrangement were rigged onto the front part of the buggy, and one of the proprietors sat in the buggy and steered, while a horse *pushed* the outfit. It wasn't exactly pushing, either, but to say the least, the cart was before the horse. Attached to the bottom of the rear end of the buggy were a couple of two by four pieces of timber long enough to serve as shafts, and nailed across the rear end of these shafts was another short piece of timber to serve as a singletree. Hence, when the horse pulled, he pushed, and the buggy was propelled forward.

Cards and banners were attached to the outfit here and there announcing the opening of the Pines Auto Laundry, and inviting people to bring their cars there to be washed and greased.

A small negro boy rode the horse.

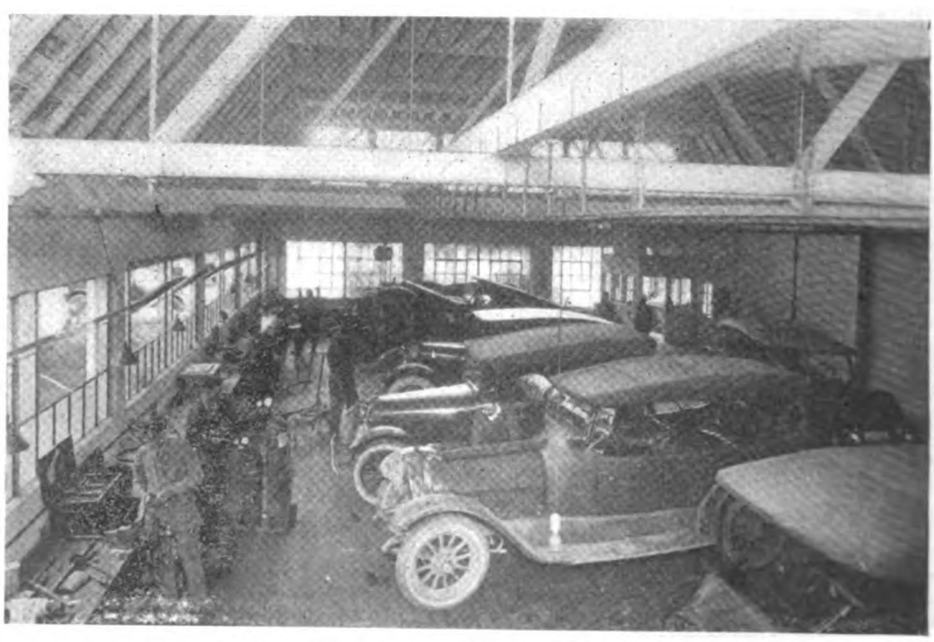
New Dealer Building Is Well Arranged

Salesroom Provides Splendid Display Facilities—Shop Has Good Light and Air

ADEQUATE sales facilities and a service department that has been laid out with the idea of efficient service in mind, are found in the new building of the Reid Motor Co., Santa Ana, Cal. The building is of reinforced concrete construction, Spanish Colonial design, with red tile roof with light brown hand ruffled brick facing. It has a street frontage of 125 ft. and is 100 ft. deep with a brick addition 45 x 50 ft. in the rear which is used for new car storage. No provision is made for the handling of a general garage business, as the building is designed for the sale and service of Buick cars exclusively.

The salesroom is 107 ft. wide and 30 ft. deep. The ceiling height is 17 ft. The walls and ceiling are finished in very light gray, the woodwork in ivory white and the floor is a very dark brown tile, the tiles being 12 in. square. An accessory store is located at the rear of the salesroom. Next to it and extending across the rear of the salesroom are general offices, president's office, manager's office, sales office and toilets. There is a mezzanine balcony over the offices which is used for the storage of parts.



The shop is 72 x 40 ft. Metal sash of the ventilating type furnish ample light and air. The shop floor is of 2 in. tongue and groove pine laid on a 4 in. concrete base. This construction affords much greater comfort to the men in the shop than a cement floor would.

Floor plan of Reid Motor Co.'s building showing layout and proportions of various departments

An overhead monorail crane is used for the transportation of heavy parts and also for hoisting cars, thus eliminating the necessity for a pit. A vat with cleaning solution kept at the boiling point is installed for cleaning parts. Other equipment includes electric valve grinder, connecting rod and piston alignment jig, arbor press, electric drill, 14-in. lathe, acetylene welding outfit and a number of special Buick speed tools.

In laying out the shop special attention was given to the provision of space around the cars in the shop so that the workmen would not be hampered by crowding. The foreman has a well appointed office near the entrance to the service department. The time clock used by the men on all shop operations is installed just outside his door. For the convenience of the shop employees there is well-lighted and ventilated lavatory and locker room.

Favorable working conditions make shop employees more efficient. Here is a service department that has good light and ventilation and a wooden floor to make it easier for a mechanic's feet

Motor World's Department of

Better Business Buildings

Is a weekly feature of the paper.

Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage should be given when making inquiries.

Equipment to Sell

New Devices for the Car and Truck

Imperial Spare Tire Lock

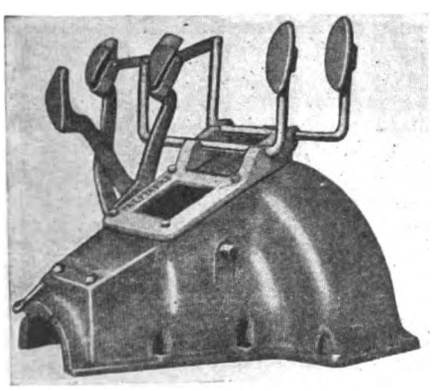
Imperial Brass Manufacturing Co.,
1200 West Harrison Street, Chicago.

Price—Small size, $1.25.
Large size, $1.50.

The lock consists of two heavy brass lugs. The upper one slips up on the tire stem while the lower lug fits snugly against the upper one and when rotated one-quarter turn engages threads in the valve stem. An ordinary padlock locks the lugs together, thus securing the tire. The standard package contains five large size and five small size locks. Each lock is packed in a separate box.

Forer Fendagard

Fendagard Mfg. Co., 138 Dwight Street, Springfield, Mass.



Price $5, black enamel; $6 nickel.

The device is attached to the rear spring shackle and extends outward to protect the rear fenders from injury in backing or parking. It does not project beyond the line of the fenders and consequently cannot hook another machine. It does not interfere with the jacking of the car or with the devices carried on the rear.

Safety Control for Fords

Selleck Motor Co.,
710 Bank Street, New London, Conn.

Price $5.50.

In teaching a person to drive it is advisable to provide duplicate controls so that the instructor may bring the car to a stop in the case of an emergency. This device provides duplicate control on Ford clutch and brake pedals. It bolts on to the Ford transmission cover plate, using the same holes that are tapped to take the transmission cover plate screws.

Adjustable Commutator Contactor

P. J. Durham Co.,
244 West 49th Street, N. Y. City.

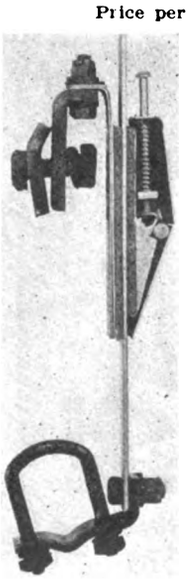
Price $5.

A special tool for electrical service stations. It may be used with any armature tester. To measure the drop in voltage between commutator bars or induced current in coils. It maintains a positive contact and correct position while armature is being rotated.

No-Float Carbureter

F. L. Huber Co.,
219 No. Channing Avenue, St. Louis, Mo.

Price $7.50.

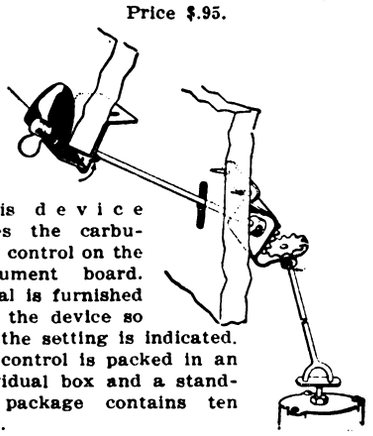


This carbureter has no float or reservoir for fuel, neither has it any adjustments. It is entirely controlled by the vacuum of the engine.

Checkers for Fords

Wellman Wieber Checkers Co.
7016 Euclid Avenue, Cleveland.

Price per set of four $14.

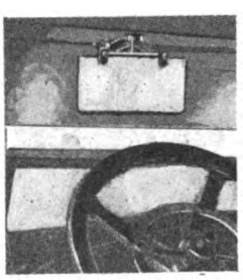


A shock absorbing device for Ford cars. A steel blade travels between two pieces of friction material. One of these is mounted in the housing and the other is fastened to a floating wedge. A roller acts between the wedge and the inclined surface of the housing and an adjustable spring presses down the wedge. The effect is a heavy constant resistance on the rebound and a much lighter resistance to upward movements of the axle. The device is adjustable. The steel straps are nickel plated and all other metal parts are japanned and rustproofed

Imperial Carbureter Control for Fords

Imperial Brass Manufacturing Co.,
1200 West Harrison Street, Chicago.

Price $.95.



This device places the carbureter control on the instrument board. A dial is furnished with the device so that the setting is indicated. The control is packed in an individual box and a standard package contains ten units.

Security Glare Eliminator

Security Mfg. Co.,
263 Central Avenue, Rochester, N. Y.

Price $2.50

This device consists of an adjustable colored glass shield which attaches to the top of the windshield. It is made for all types of cars and in various colors of glass.

Warner Elgin Speedometer

Stewart-Warner Speedometer Corp.
1826 Diversey Boulevard, Chicago.

Price $110.

This speedometer is known as Model 78-A. It consists of a 75-mile speedometer, 100,000 total mileage recorder, 100-mile trip register and an Elgin seven jewel, eight day timepiece. The clock is compensated for temperature changes and is constructed to withstand vibration. The speedometer operates on the magnetic principle.

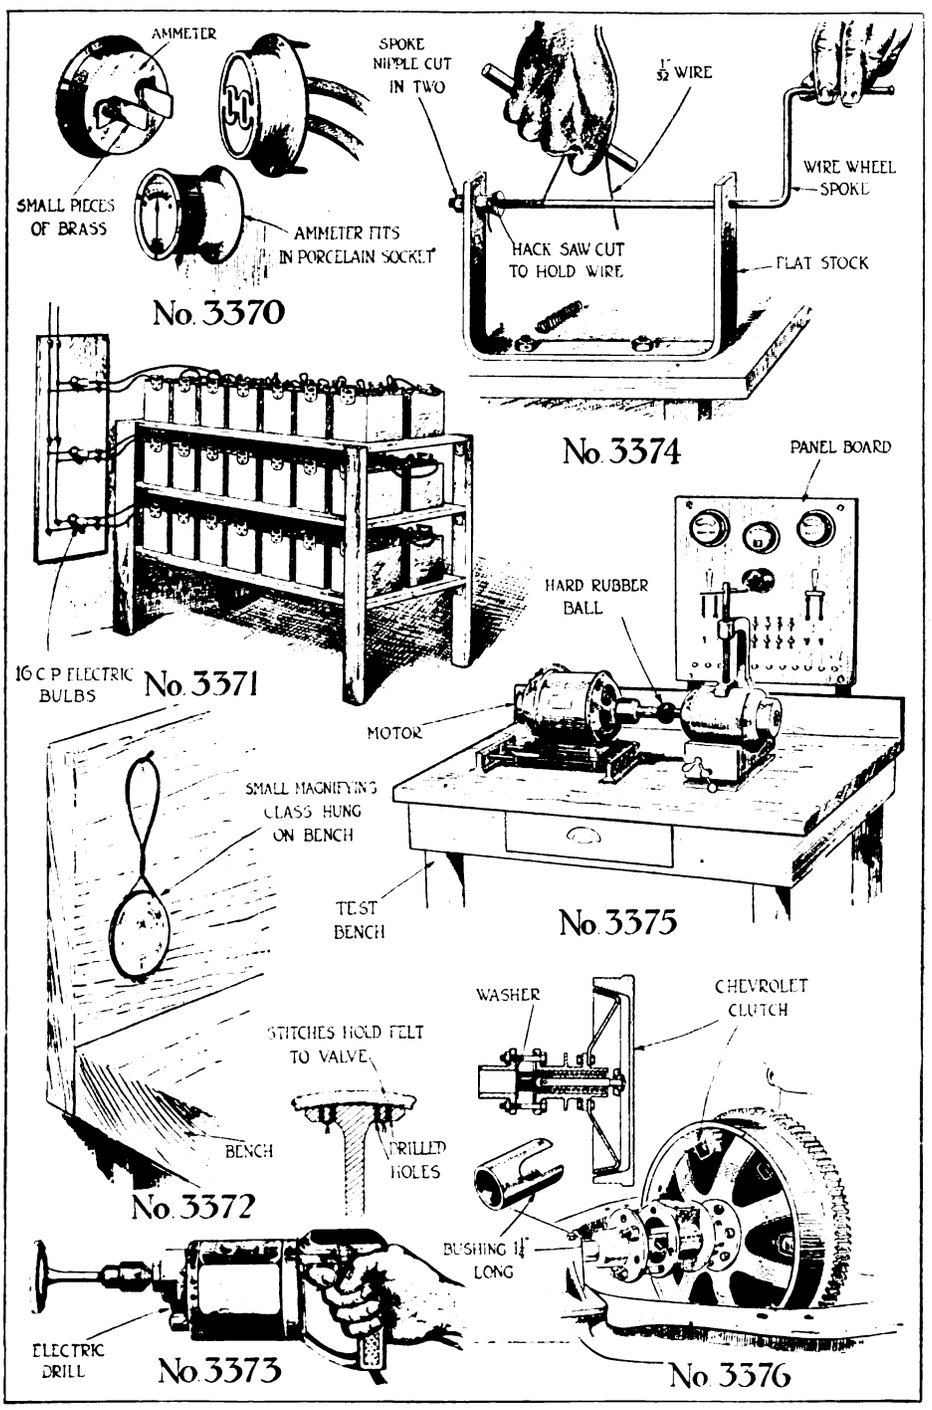
Repairshop Shortcuts



Nobody Has a Corner on Good Shortcuts—What Are Yours?

ABOUT half a century ago or more some fellow resigned from the patent office in Washington because, he said, everything had been invented that possibly could be thought of, and he felt he wasn't needed any more.

As we turn to the Repairshop Shortcut page in Motor World each week, and particularly as we note the fact that more than 3000 ways of doing something a little better and saving a little time and money have been invented, we may have a feeling somewhat like that of the fellow in the patent office.

But, if we do, we are just as far away from being correct as he was because there is hardly a shop in the country that isn't doing some little thing a better way and nearly all of us have little pet tricks that we've used so long that we don't recognize that they may be real new to some fellows. Sort of another case of intimacy breeding contempt.

Motor World pays a dollar for every idea printed on this page. How many shortcuts do you know? Let's cash in on 'em.

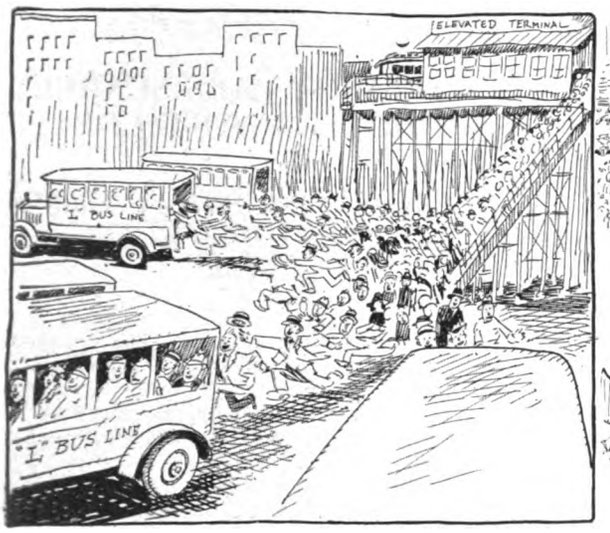
No. 3370—Removable Ammeter—Two brass blades are attached to the binding post of the ammeter. The blades are spaced so that they fit into openings in a receptacle connected in the charging line. This makes it easy to change ammeters in case of breakdown.—J. Harry Hearnen, Trenton, N. J.

No. 3371—Three Story Charging Bench—This bench is used to carry batteries in wet storage. In the winter months, it replaces the regular charging bench. The batteries receive a continuous charge at one-half ampere, the current being regulated by a 16 cp. carbon lamp.—J. Harry Hearnen, Trenton, N. J.

No. 3372—Magnifying Glass for Shop Use—A small magnifying glass, preferably one with a wire handle, is useful in the shop for examining finished surfaces, breaks, etc. It can be held on a nail at the back of the bench.—Donald McClean, Cleveland.

No. 3373—Rotary Rubber—A rubber for polishing or buffing small surfaces is made by attaching a piece of heavy felt to the end of a poppet valve, the valve being placed in the chuck of a portable electric drill.—Arthur G. Raabe, Long Island City, N. Y.

No. 3374—Winding a Small Spring—A small spring is wound by bending a wire wheel spoke into the form of a crank. This is mounted in a piece of flat stock bent to a U-shape and the nipple is split in two to position the spoke in the frame.—R. G. Reeksting, Boksburg, M., Transvaal, South Africa.



No. 3375—Electric Test Bench Coupling Protector—Some electric test benches use a spring to couple the generator to the motor for testing. To prevent this spring from flying out at high speeds a hard rubber ball is placed between the generator and motor and the generator pushed up tight.—C. R. Stafflet, Kobe & Smith Auto Co., Scattville, Mich.

No. 3376—Clutch Puller for Chevrolet 490—A puller for removing the Chevrolet 490 Clutch is made up of parts as illustrated. By sorting tho two cap screws then screwing down the nuts the spring is compressed until the pin can be removed.—A. C. Knight, Service Garage, Warrenton, Ore.

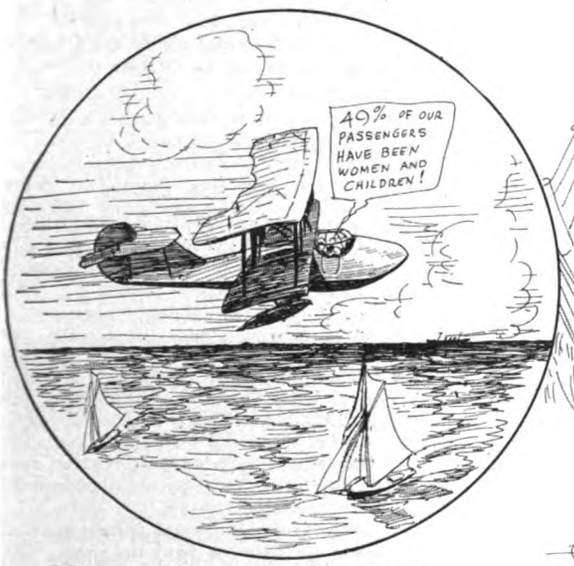
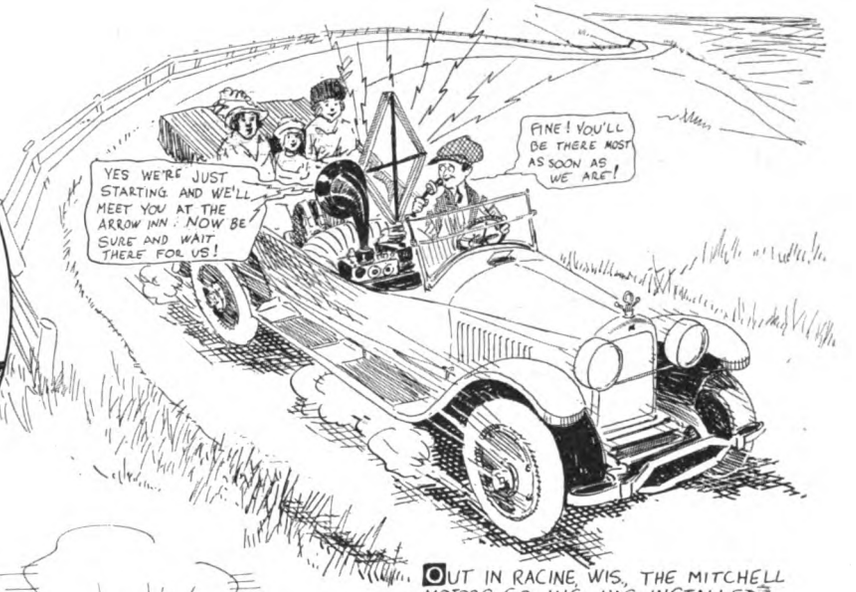
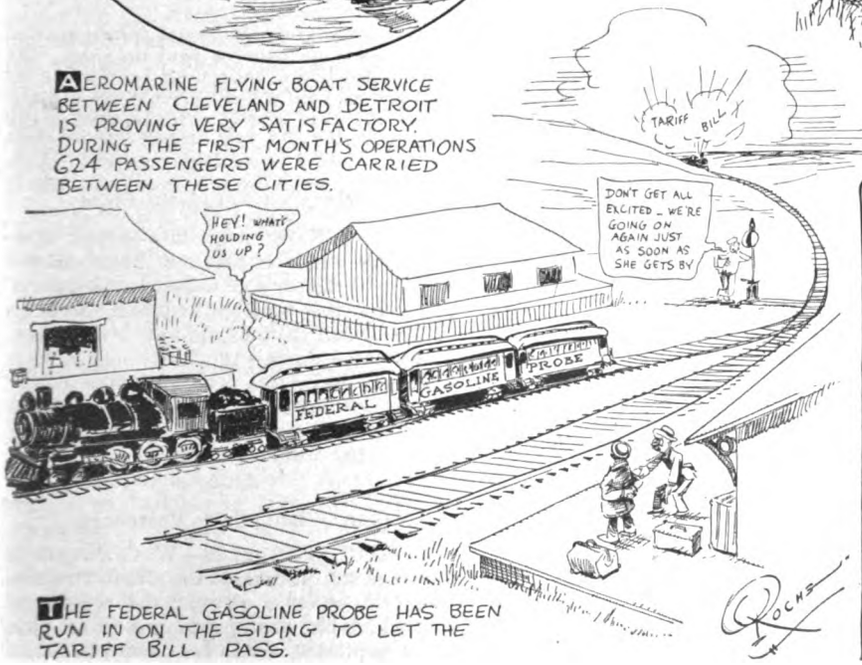
Along the Automotive Newsway



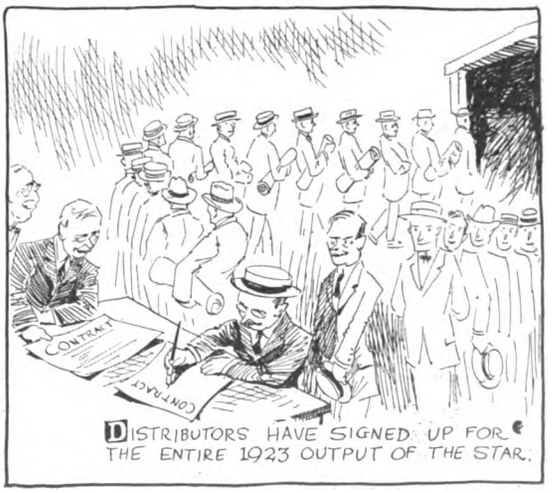
By Leo Roche



CHICAGO "L" TO USE BUSES TO SUPPLEMENT ITS ELECTRIC RAILWAY SERVICE



DEALERS THROUGHOUT THE COUNTRY WILL TAKE ADVANTAGE OF THE WONDERFUL SALES POSSIBILITIES OF THE STATE AND COUNTY FAIRS



AEROMARINE FLYING BOAT SERVICE BETWEEN CLEVELAND AND DETROIT IS PROVING VERY SATISFACTORY. DURING THE FIRST MONTH'S OPERATIONS 624 PASSENGERS WERE CARRIED BETWEEN THESE CITIES.

OUT IN RACINE, WIS., THE MITCHELL MOTORS CO, INC, HAS INSTALLED RADIO TELEPHONES ON TWO OF ITS CARS. CONVERSATION BETWEEN THE TWO CARS CAN BE SUCCESSFULLY CARRIED ON UP TO TWO MILES.

THE FEDERAL GASOLINE PROBE HAS BEEN RUN IN ON THE SIDING TO LET THE TARIFF BILL PASS.

DISTRIBUTORS HAVE SIGNED UP FOR THE ENTIRE 1923 OUTPUT OF THE STAR.

Digitized by Google

August May Exceed July in Output

SHIPMENTS THUS FAR ARE RUNNING AHEAD

If Pace Is Maintained Month May Be Within 10 Per Cent of Record June

NEW YORK, Aug. 28—Anticipating a smart fall business, the automotive industry is not experiencing as much of a seasonal slump in production as is usually the case at this time of the year. Instead, there is every indication that the August figures will show more automobiles produced in this month than during July, which was the third greatest month in a production way in the history of the industry. Returns to date from railroads, boats and drive-aways show August ahead of July at this time of the month. If the pace is maintained the rest of the month, it is thought August will be within about 10 per cent of June, the record holder, which turned out 288,000.

And this big production is being maintained in the face of manufacturing difficulties out of the ordinary in the way of a scarcity of both fuel and materials. The problem of the manufacturers has been to maintain adequate supplies of some materials and parts which has not been possible in the case of some of the factories, despite the employment of aggressive "parts chasing" methods.

Many New Models

The industry is already feeling somewhat the effects of the coal shortage. There is no accumulation of supplies. Factories generally have been able so far to avoid curtailment because of lack of power.

With the price reduction wave apparently wholly spent, the attention of the industry has been turned to new passenger car models, of which there has been a wealth since Aug. 1. Several old line companies, whose designs have been changed only slightly, if at all, have modernized both their chassis and body construction. Many manufacturers have added more models, particularly in the sport line. The fall season will open with a rich array of automotive merchandise for public inspection.

Reo Increases Working Week

DETROIT, Aug. 28—The Reo Motor Car Co. will resume operations on a full five and a half day week, after being on a five day operation throughout the summer. It had been the company's plan to work the short week through the warm weather period but sales have increased to such a point that it is necessary to get largely increased production. The speed wagon business, which has been steady all year, has been augmented by large increases in passenger car business following the reduction of prices and the presentation of new models.

JULY OUTPUT TOTAL PLACED AT 244,444

WASHINGTON, Aug. 28—Official production figures received by the Department of Commerce give July production as 223,201 passenger cars and 21,243 trucks. With few exceptions the reports each month are from identical firms and include approximately 90 passenger car manufacturers and 80 truck manufacturers.

The production figures for the first seven months of the year with the revisions made from the published figures for May and June are as follows:

	Pass. Cars	Trucks
January	81,693	9,344
February	109,170	13,121
March	152,959	19,651
April	197,221	22,227
May	232,431	23,803
June	263,017	25,985
July	223,201	21,243

75 PER CENT INCREASE IS EXPECTED BY STUTZ

INDIANAPOLIS, Aug. 26—Present shipments from the plant of the Stutz Motor Car Co. factory will raise August deliveries at least 75 per cent over July and about 100 per cent over the shipments of the same month a year ago.

The response from the dealers to the price cut, the dealer protection and the new outlook for the company has been prompt and will permit the record month shipment to be made in spite of the fact that the great activity of the period has come in the later part of the month.

Present indications point to a brisk September trade and fall records that will continue to surpass previous marks.

Canada Boosting Good Roads

EDMONTON, ALBERTA, CANADA, Aug. 28—Better highways propaganda has been put on an aggressive basis in Alberta by launching of a new publication, *Good Roads*, organ of the Edmonton Automobile and Good Roads Association. It will be issued monthly and will encourage motoring and bettering motoring routes.

FREIGHT CARS SCARCE; DRIVEAWAYS INCREASE

Effects of Rail Strike Certain to Affect Deliveries This Fall

NEW YORK, Aug. 28—The National Automobile Chamber of Commerce is closely watching the coal priority rulings to see that the industry is placed at no undue disadvantage compared with other manufacturers.

"Preference in the matter of coal is given first of all to the railroads in this crisis, for if the railroads are not operating no one can get coal in quantities, says James S. Marvin, assistant general managers of the N. A. C. C. Then come hospitals and public utilities and institutions. Therefore the automobile industry is on the same plane with other industries."

Continuing he said:

"Even if the rail strike is settled soon, the automobile industry is going to be affected in the matter of deliveries this fall. Already driveaways are becoming more and more necessary because of the increasing difficulty in getting the necessary freight cars. This may get worse before it gets better and adds to the difficulty of keeping automobile cars in this service.

"Despite the strikes, general business is improving to an extent that the demand for freight cars is increasing. On top of this comes the crop movements which need still more freight cars. With the automobile industry in heavy production right now difficulty is found in getting enough transportation to carry its product, despite the fact the railroads now have more automobile freight cars than ever before.

"Fortunately this scarcity of transportation is not going to make us shut up shop. We have learned how to deliver cars over the road and this fall will see driveaways utilized to get the new cars into the hands of the dealers."

Working on Lafayette Plant

MILWAUKEE, Aug. 28—Actual construction work on the new plant of the LaFayette Motor Car Corp., Indianapolis, adjoining the four-cylinder car division of the Nash Motors Co. at Milwaukee, was started during the past week. It is hoped to have the first buildings ready to receive the equipment of the present plant by Dec. 1 and the entire new works in running order by Jan. 1.

Gear Plant Sale Postponed

SYRACUSE, Aug. 28—W. C. Durant is expected to purchase the New Process Gear Co. of this city at the receivers' sale which has been postponed from Aug. 22 to Sept. 6.

Digitized by Google

Coal Shortage Hits Ford Factories

WILL CLOSE SEPT. 16; OPENING INDEFINITE

Depends Upon Price of Coal—Production Averages 5000 Cars Daily

DETROIT, Aug. 28.—Blaming the coal shortage on Wall Street manipulators, Henry Ford has ordered the closing of his plants on Sept. 16. He states that he will not re-open his factories until he can get coal at a fair price. Telegraphic notices have been sent out to about 2000 sources of supply to cease shipment until further notice.

A formal notice signed by Edsel Ford states: "On account of coal shortage we will be unable to operate our plant after Saturday, Sept. 16. No material will be received if shipped other than as detailed in the letter following."

It is estimated that the closing of the Ford plants will be responsible for the laying off of over 1,000,000 workmen. There are approximately 50,000 at the Highland Park plant, 20,000 at the River Rouge and other Detroit plants and 30,000 at Ford branches throughout the country. There are 1500 plants scattered throughout the country whose principal business is the supplying of parts and materials for Ford cars.

Henry Ford reiterated the statement this morning that he will not pay excessive prices for steel or coal. He states that he could get coal if he were willing to pay over the market price, and that he had been offered 60,000 tons at $6 a ton. He refuses to pay more than $4.50.

Ford has sufficient coal on hand to run until Sept. 16 and then to keep his ovens and boilers warm for an indefinite period. Ford production has been running in excess of 5000 cars per day.

None of the other plants are affected as seriously as Ford. When asked when plants would resume, Ford stated that he had no idea and that the situation seemed to him impossible.

Mining Resumed in Illinois

CHICAGO, Aug. 26—Coal mining in Illinois has been resumed, following the settlement Tuesday of the strike which had been in effect since April 1 and which was settled in other fields by an agreement reached at Cleveland last week.

Many factories connected with the automotive industry in Chicago and Illinois will feel the effect of the settlement, as many of them were beginning to run short of fuel, although lack of coal has not necessitated the closing of any automotive factories of consequence here. Many had seen their fuel reserves dwindle and others had kept in operation only at the expense of higher prices and additional freight charges on coal brought from other states.

The shortage of coal and the unsettled business condition incident to the strike resulted in a considerable depression in the sales of automotive accessory manufacturers located in Chicago.

MAXWELL USES CANAL TO SHIP TO NEW YORK

DETROIT, Aug. 28—Shipment of 40 automobiles from the Maxwell plant by an all water route through the New York State barge canal and thence down the Hudson to the Colt-Stewart Co., New York City, will be made the subject of considerable publicity by the State of New York in its campaign to show the practicability of the barge canal for all water shipments to seaboard from Great Lakes cities.

The publicity attending the shipment is not supported by factory officials because of the strong feeling which Detroit shares with other great lakes cities for the development of the St. Lawrence River project which would open the lake to sea going vessels. The State of New York, however, has seized the opportunity to back its opposition to the St. Lawrence project by making the shipment the subject of favorable barge canal propaganda.

BANK GIVES DEALER WINDOW FOR DISPLAY

CHICAGO, Aug. 28—Chas. J. Dempsey, Inc., Ford dealer, has tried the "friendly co-operation" thing with the Madison Kedzie State Bank, a neighboring firm. The bank is located on a busier corner than the automobile dealer but use of one of the bank's windows was arranged for by the dealer, because, if the dealer sells more cars, he will have more money to put into the bank, and then, too, it makes a better impression on the folks in the neighborhood.

Former Tire Head Dies

SPRINGFIELD, OHIO, Aug. 28—After an illness of two years from heart trouble, Van H. Cartmell, aged 72, former president of the Kelly-Springfield Tire Co., died at the home of his son Robert Cartmell.

NO LET UP IN A. E. A. MERCHANDISING WORK

Warm Weather Does Not Hinder Activities—Meetings Held in South

CHICAGO, Aug. 29—The merchandising work of the Automotive Equipment Association has progressed without abatement during the warm weather, according to records from the office of Ray W. Sherman, merchandising director. In the first 11 months of the movement more than 600 "Ask 'Em to Buy" meetings were held and there was reason to expect that activity might lessen during the summer months. On the contrary, June, July and the early part of August recorded 82 additional meetings, most of them in the Dixie section.

Ozburn, Abston & Co.'s representative, George A. Brusch, operating out of Memphis, has the largest string to his credit. Next comes the McCauley-Ward Motor Supply Co., Waco, Tex., which is working a schedule of successive days from Aug. 1 to Sept. 5.

The Peoria, Ill., jobbers, following their big meeting of 555 people on July 28, held meetings in Paxton, Aug. 11 and Springfield, Aug. 21. Another was scheduled at Monmouth Aug. 28.

Company Has Film

The Multibestos Co. has produced a 1000-foot reel on how to sell its brake lining, and several other manufacturers and jobbers have inserts and added reels in prospect. The Multibestos reel fits into either the "Ask 'Em to Buy" or the "Shop Profits" pictures.

Tentative arrangements have been made for meetings in the Twin Cities during the Minnesota State Fair, the first week in September, in Richmond Sept. 18, and in Milwaukee, Sept. 22.

Successful Anderson Meeting

ROCK HILL, S. C. Aug. 28—The convention of dealers and stockholders of the Anderson Motor Co., held Thursday and Friday, was a decided success. The new light six was enthusiastically received, and the company reports the placing of orders by the dealers that will exhaust the year's output.

The annual meeting of the stockholders resulted in the election of the following officers: John G. Anderson, chairman of the board; J. W. Anderson, president; W. A. Anderson, vice-president; C. J. Henry, treasurer; E. H. McConnell, secretary.

Finances of the company were found to be in excellent shape, and steady progress has been made in enlarging the output.

FORD ADOPTS ONE-MAN TOP AND NEW SHIELD

Also Makes Gypsy Side Curtains Regular Equipment—Prices Not Increased

DETROIT, Aug. 28—A one-man top, slanting windshield and Gypsy side curtains are now regular equipment of Ford cars coming through from the factory and assembling plants. It is understood that the change has been in contemplation for some time and production facilities are now completely worked out.

The slanting windshield, in addition to adding to the appearance of the car, gives increased comfort due to the fact that it can be opened and adjusted to any angle at both top and bottom. In making the change in the windshield it has been possible to slightly change the cowl lines and the rake of the instrument board. No change in prices is made with the new equipment.

Cadillac Surpassing Schedules

DETROIT, Aug. 24—In a statement issued by H. H. Rice, president of Cadillac Motor Car Co., the rate of production and sales at the present time is declared to be considerably in excess of all previous schedules. A majority of distributors, he reports, find business by far the best that they have ever enjoyed. Cadillac distribution has been increased until it now includes a majority of small communities.

Bowser Makes Staff Changes

FORT WAYNE, IND., Aug. 28—L. E. Porter has been appointed assistant general manager of S. F. Bowser & Co. Porter for the past three years has been director of publicity. Roscoe L. Heaton, formerly assistant to the president, succeeds him as advertising manager.

WOULD MAKE DYER LAW COVER EXPORTS

NEW YORK, Aug. 28—A movement to interest Congress in adopting an amendment to the Dyer law which now makes it a felony to take a stolen car across a state line, has been started by the National Automobile Anti-Theft Association.

The proposed amendment would forbid steamship lines from issuing their bills of lading for the transport of any car, whether or not boxed, until its engine and factory numbers have been certified by an inspector of customs as intact (and recorded); and until the automobile has been further certified as not on the list of stolen cars to be required to be kept posted in the office of the collector of customs of each port of entry in the United States.

LOUISVILLE HAS SOLD 8361 CARS IN 1922

LOUISVILLE, KY., Aug. 28—There were 8361 automobiles sold in Jefferson County, of which Louisville is the county seat, during the first seven and one-half months of 1922, according to figures compiled by the Louisville Automobile Dealers Association.

Total sales for the entire period amounted to 4497 new cars and 3864 used cars. Of the total number of new cars sold, 8 per cent were in the high-priced class, 28 per cent in the medium-priced and 64 per cent in the low-priced.

An increase of more than 2000 new automobiles sold during the period over new cars sold during the entire year of 1921 is shown.

MINNEAPOLIS PLANS BIG CENTRAL GARAGE

Part of Building Would Be Given Over to Stores—And Part to Repair Shops

MINNEAPOLIS Aug. 28—Garage space in the center of the loop district for 10,000 cars—that is the project now before the Minneapolis City Council.

The proposal includes the erection of a five-story building with four or five sub-basements, each floor to be made easily accessible to car owners by means of spiral driveways. On the ground and perhaps the second floor would be located stores handling automobile accessories and other merchandise, as well as automobile repair shops.

The parking charge contemplated is only 10 cents a day; and the revenue from parking at this charge, together with the revenue from store rentals, will, it is estimated take care of the upkeep of the building and retire the bonds with interest.

Pierce Manages Federal Sales

DETROIT, Aug. 28—W. C. Rowley, vice-president in charge of sales of the Federal Motor Truck Co., has resigned but will remain as a director of the company. He has been sales director for the past five years. F. F. L. Pierce, sales manager, is now in charge of the sales department.

Cyclone Receivers Named

GREENVILLE, S. C., Aug. 28—The Cyclone Motors Corp., formerly known as the Cyclone Starter & Truck Co. has been placed in the hands of receivers. The court named C. G. Eidson, president of the company, Frank J. Leigh and Ricketts as receivers. The Cyclone company began business about two years ago.

Southern Buick Dealers

Buick dealers from Georgia, Tennessee, Florida, Alabama and South Carolina, who met in convention at the offices growing business through the late summer and fall.

PHILADELPHIA SALES OF ACCESSORIES GOOD

Outlook for Fall Trade Is Regarded by Dealers as Particularly Promising

PHILADELPHIA, Aug. 25—Reports for the past week reaching the Philadelphia Automobile Trade Association headquarters show that sales of new cars are fair. A few dealers claim to be considerably ahead of last year's figures at this period.

Thus far in the month sales of accessories and parts have been unusually good, notwithstanding that a very large number of cars have been withdrawn from the immediate territory through the absence of their owners at mountain and seaside resort and on prolonged tours.

Some distributors of automotive equipment state that July business was far ahead of the corresponding month a year ago and that it looks as if August sales might be in the same class. A good start has been made and the outlook for fall trade is regarded as particularly promising.

Customers who have been holding back for some time will be compelled to make purchases in a month or so.

The used passenger car business has slumped in the last month and a half, until there is little or nothing doing in that line at present, either in the traded-in cars at the agencies or among the houses along North Broad Street and elsewhere that make a specialty of handling this stock.

Business in the trailer field is quiet. The tractor trade, which took a small spurt following the recent Fordson show here, is again dull, and the truck business, which for a few weeks gave promise because of some large sales of units for fleets, appears to have subsided.

BUSINESS MEN JOIN IN OPERATING BUSES

BIRMINGHAM, ALA., Aug. 25—The Merchants' and Business Men's Association of Ensley, a suburb of Birmingham, have started to run motor buses from the small industrial and mining towns of the surrounding territory for the purpose of increasing trade.

Ensley is a complete town in itself, although a part of Birmingham, and the association that is backing this movement is composed of eighty-five firms. The population of Ensley proper is about 20,000 people.

SYRACUSE BUSINESS ALMOST EQUALS 1920

SYRACUSE, Aug. 22—Syracuse automobile dealers have had one of the most prosperous seasons in the history of the trade in this part of the state. A total of 3,639 new cars have been delivered to owners within the last five months, which is 20 per cent better than for the same period a year ago and nearly equal to the high record of 1920.

July sales this year were 25 per cent bigger than during the same month in 1921, while during May there were more cars delivered than in any other month.

Many dealers now have unfilled orders on hand and the usual slowing up of business will shortly be noticed here.

Tourist Camp an Attraction

MILWAUKEE, Aug. 28—Since the city of Milwaukee established a tourist camp in Lake Park, on Lake Michigan, late in May, this year, 1211 persons from twenty-six states have made use of the facilities.

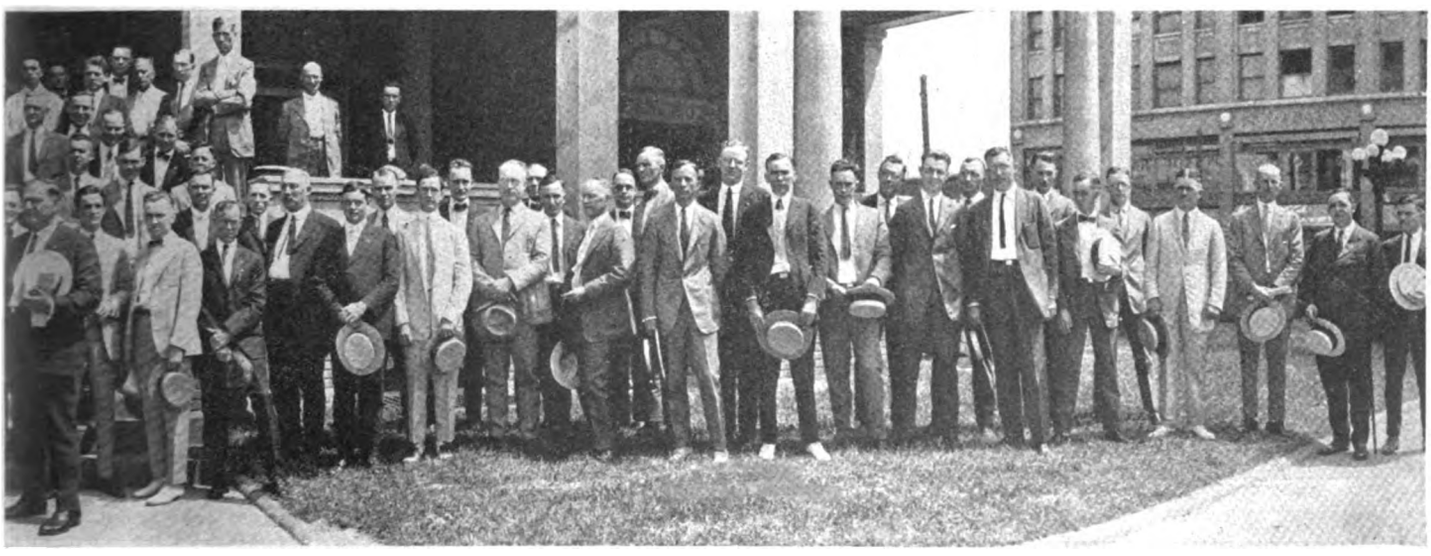
STRIKE CONDITIONS AIDING TRUCK SALES

Farmer Demand Is Expected to Quicken with Opening of State Fair

MILWAUKEE, Aug. 28—With the annual Wisconsin State Fair opening here to-day, distributors as well as dealers look for a definite increase in wholesale and retail sales, perhaps not so much in Milwaukee, but throughout the State. This event, due to the peculiar conditions obtaining at present, is expected to bring about a genuine revival in farmer demand, which has been slowly but surely developing after an extended period of slackness.

Locally retail sales are increasing as prospective buyers are being acquainted more and more with the true effect of price reductions recently established, and a better consciousness aroused by merchandisers.

Watson Receivership Ends



SYRACUSE, Aug. 28—Federal Judge Ray has signed an order authorizing the reorganization of the Watson Products Co. of Canastota and ending the receivership which has been in effect about two years.

The Watson Truck Co. is the name of the new concern. Indebtedness of the old company will be met by giving first preferred stock in the new concern to all creditors with claims of more than $1,000.

International Output Greater

MILWAUKEE, Aug. 28—The Milwaukee works of the International Harvester Co. are operating at approximately 62 per cent of capacity, and prospects seem to be for a material increase in this rate, due to the brilliant crop outlook.

in Optimistic Mood

of the Buick Motor Co.'s Atlanta branch, showed keen interest in the 1923 models and reported prospects for a About 150 dealers attended the convention, in two groups

MAXWELL CUTS PRICES ON ITS CLOSED CARS

Reductions Are $150 — No Change Made with Company's Open Models

DETROIT, Aug. 28—Prices on the Maxwell sedan and coupe have been reduced $150, effective immediately, while no change has been made in the open models, which remain at $885.

President William Robert Wilson states that the preference shown by the public for closed models has led to the decision to increase production on the sedan and coupe.

The revised list is as follows:

	Old Price	New Price
2-pass. roadster	$885	$885
5-pass. phaeton	885	885
Coupe	1,385	1,235
Sedan	1,485	1,335

PEERLESS SETS LIST FOR ITS NEW MODELS

CLEVELAND, Aug. 28—Prices for the new Peerless line show an increase of about $200 over the retired series, although there can be no comparison in the prices for the reason that the new line has many changes and refinements not found in the old. The prices of the new models are as follows:

4-pass. phaeton	$2,990
7-pass. phaeton	2,990
2-pass. town coupe	3,300
4-pass. suburban coupe	3,400
5-pass. town sedan	3,900
7-pass. suburban sedan	4,090
7-pass. berline limousine	4,390
4-pass. opera brougham	4,900

Lincoln Prices Changed

DETROIT, Aug. 26—The Ford Motor Co. has reverted to a 136 inch wheelbase for all models of the Lincoln car. The coupe was the only model having a 130 inch wheelbase. Prices have been decreased $200 on the sedan and increased $500 on the coupe. The new list is as follows:

	Old Price	New Price
Sedan	$4,900	$4,700
Coupe	3,900	4,400

Paterson Reduced

DETROIT, Aug. 24—W. A. Paterson Co., manufacturer of the Paterson car has reduced prices on all its models as follows:

	Old Price	New Price
5 passenger	$1,550	$1,390
7 passenger	1,585	1,425
Coupe	2,595	2,395
Sedan	2,595	2,395

AMERICAN LIST LOWER; 25,000-MILE WARRANTY

PLAINFIELD, N. J., Aug. 28—A new series is announced by President Carl H. Page of the American Motors Corp., which is accompanied by a guarantee on each car against defects in materials for 25,000 miles.

The new series on which deliveries already are being made include both open and closed models, equipped with a larger engine (3½ x 5 in.), in addition to such special equipment as dash clock, cowl light and ventilators, tonneau lights, windshield wiper and inside mirror.

List prices have been reduced from $65 on open models and $210 on closed types, including extra equipment. The revised list is as follows:

	Old Price	New Price
4-pass. roadster	$1,995	$1,885
5-pass. phaeton	1,850	1,785
7-pass. phaeton	1,925	1,850
Sedan	2,695	2,485

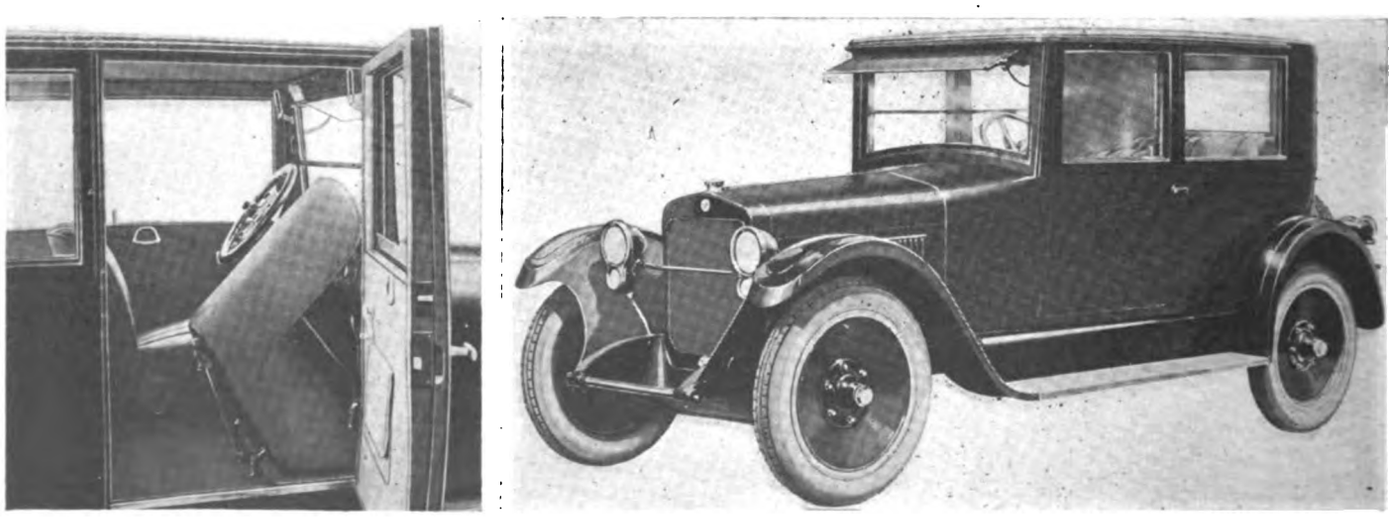
Wills Planning Additions

MARYSVILLE, MICH., Aug. 8—C. H. Wills & Co. is contemplating an addition to its present plant at Marysville, Mich., to afford 104,000 sq. ft. more space.

SENATORS PREDICTING MORE GASOLINE CUTS

Preliminary Report Made—Special Committee Resumes Probe Into Price Situation

WASHINGTON, Aug. 28—The probe into the price of gasoline, which has been resumed by the special Senate committee, has produced a preliminary report in which the committee predicts further reductions in prices, which is based on the recent cut in the price of crude oil. The committee feels that this will reflect itself in the cost to the ultimate consumer of the refined product.



Continuing, though, the committee holds that small oil producers and refiners are suffering because of the present organization of the gasoline industry and because of the violent price fluctuations which have followed control of a large percentage of stocks by the larger companies. The small independent concerns, it is said, really produce more than half the nation's crude oil.

GROUND IS BROKEN FOR DOBLE FACTORY

SAN FRANCISCO, Aug. 28—Ground has been broken at Atascadero and work started on the first unit of a factory to be built for the Doble Steam Motors Corp. which will be completed in four months. The plant is to be of reinforced concrete construction, with 90 per cent of the wall area of glass incased in steel frames.

The Doble company is a $10,000,000 organization to build the Doble steam car, designed by Abner Doble, who is president of the company. The directors include W. A. Doble, Jr., and Warren Doble, who control the Doble Laboratories; Harold Haven and F. G. Lewis.

Wills Sainte Claire Adds a Brougham, $3,375

A 5-pass. brougham has been added to the Wills Sainte Claire line. Passage from the door to the rear seat is by tilting the front seat. Granite weave or gray velour upholstery is provided and the body colors are blue or maroon with the upper panels black. Special disk wheels to conform to the lines of the body are fitted. A trunk platform with nickel bars on the rear is standard. The lighting equipment includes large and small headlamps with the standard magnetic control.

CHAIN STORE IDEA USED IN CAR SALES

Dealer in Chicago Has Four Establishments, Each to Handle Different Line

CHICAGO, Aug. 25—The Broadway Motor Sales Co. opened its fourth motor car sales establishment in Chicago with rather an elaborate function. The handsome storeroom was transformed into a flower trimmed ballroom and there was music, dancing, refreshments and the automotive display was limited to sport models and dolled up cars of the Paige and Willys Knight lines. The Jewett and Overland cars also will be sold here.

This salesroom is finished in a cream white tile and has exceedingly high ceilings and a handsome indirect lighting system. It is quite a remarkable salesroom to be located as far out of metropolitan activities as 6335 Broadway, which is eight miles from State and Madison Streets. The owners refer to this store as the "farthest north in Chicago." It is the coming neighborhood, however.

The Broadway Motor Sales Co., which is directed by the Brothers Bernstine, is adapting the chain store idea to the motor sales work. In each of the stores a different line of cars is handled. There is a central maintenance department, which is run as an independent company. All except emergency service is sent to this company. Also such work as warehousing cars in off seasons and other overhead activities are cared for by special departments. A special department cares for the used cars.

These stores are located in different parts of the city and in communities that are expected to develop. The Bernstines believe that they have a new and profitable idea in metropolitan car sales, and they expect to extend their store system until they are selling in some of their stores the better known lines.

In their advertising they are making maintenance prominent, and over the spacious storage and maintenance department at the new store there is a sign, "Service with a Smile."

NEW BOSTON COMPANY WILL HANDLE MARMON

BOSTON, Aug. 28—The Marmon Boston Co. has been organized to handle the Marmon line in the territory of Eastern Massachusetts as successor to Frank E. Wing. While factory executives are officials of the new company it is not a factory branch, being a Massachusetts corporation. Col. E. S. Correll is president and treasurer; A. R. Heiskell, vice-president and Fred E. Moskovics, secretary.

The company has taken over the lease of the Winton building on Commonwealth Avenue and St. Paul Street that has 40,000 sq. ft. and is practically new. Winton vacated it when a change was made from a branch to a distributorship.

The nucleus of the sales and service force for the new company was secured from Wing's organization. L. S. Dean has been placed in charge of retail sales; E. L. Harrison is wholesale manager, and J. N. Hatch, service manager.

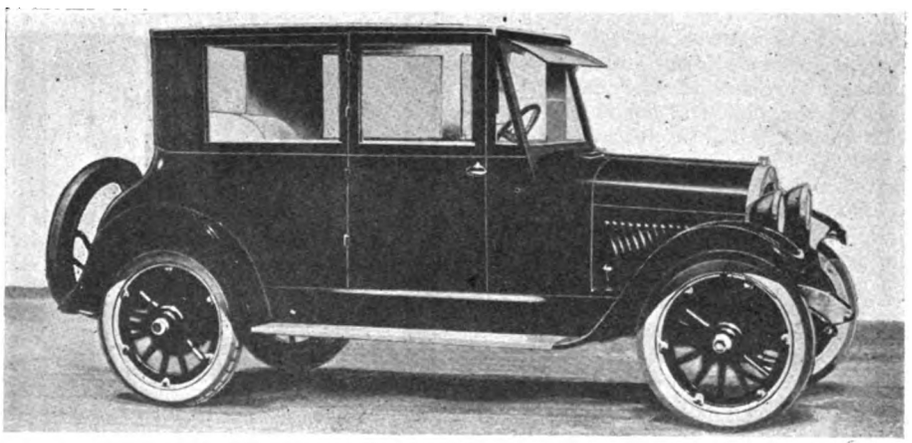
G. M. Vice-Presidents Return

NEW YORK, Aug. 25—Alfred P. Sloan, Jr., vice-president of the General Motors Corp., in charge of operations; J. J. Raskob, vice-president and chairman of the finance committee, and Alfred H. Swayne, vice-president in charge of banking relations, who have been abroad for the last seven weeks, returned last Wednesday on the Majestic.

BARLEY WILL MARKET NEW CAR IN 30 DAYS

Not to Be Called Roamer — Change Is Made in Name of Company

KALAMAZOO, MICH., Aug. 26—A. C. Barley, president of the Barley Motor Car Co., announces that models of a new light six to be made by the Roamer organization, but not to be called "Roamer," will be on the market in 30 days. At the outset the line will consist of a five passenger phaeton, a five passenger sedan and a five passenger touring sedan. Later a coupe model will probably be added.



The car will be equipped with a new type of Continental Red Seal motor. The wheelbase is to be 115 inches. Prices will be set when the first shipments are made, or about Sept. 20.

Roamer models will be continued as in the past. New closed models will be on the streets in the near future. They will carry the new 12-XD Continental motor. Duesenberg engines will also be used in certain specified types of Roamers.

Barley reports that orders for the new Light Six and Roamers are coming in rapidly and that the production for next season for the local plant should be well in excess of 2000 cars, all models included.

In connection with the manufacture of the new car, announcement is made of an issue of $300,000 first mortgage real estate gold bonds, paying 7½ per cent interest and maturing in three to ten years. Olmsted & Mulhall of Kalamazoo and Corrigan, Hilliker & Corrigan of Grand Rapids, participated in underwriting the issue. The Grand Rapids Trust Co. is trustee. This issue is guaranteed by the Roamer Motor Car Co. which has just been incorporated as successor to the Barley Motor Car Co.

Oldsmobile Brougham, $1,425; Only $280 Above Phaeton

Oldsmobile has started production on a brougham which is only $280 more than the phaeton. It is mounted on the standard four-cylinder chassis. It carries five passengers and provides access to the rear seat by a tilting front seat. Among the features are an extra large rear window, metal sunshade and locked tool compartment under rear deck

SELDEN-ATLAS MAKES CHANGE AT BRANCHES

ROCHESTER, N. Y., Aug. 28—The building and facilities of the Hartnett-Stewart Motor Co., Chicago, have been taken over by the Selden Truck Corp. and will be operated as a direct factory branch. The branch will be known as the Selden Sales & Service Co., with James W. Stewart as branch manager.

The Hartnett-Stewart Co. has represented the Selden Truck Corp. in Chicago since the first of the year. The Selden Sales & Service Co. will be a combination of the Atlas Truck Corp. and the Selden Truck Corp. branches. J. Ira Hartnett will remain as Selden sales manager and Randall H. Crouse will be the Atlas sales manager.

At Philadelphia, the Atlas Truck Corp. branch has been united with the Selden branch to operate as the Selden Sales & Service Co. handling both Atlas and Selden trucks. George H. Covert will remain as branch manager in charge of Selden sales. H. A. Woodruff will continue in charge of Atlas sales at the Philadelphia branch.

At York, Pa., another branch operated as the Selden-Atlas Sales & Service Co. has been opened with H. M. Heiges as manager.

MAXWELL MAY TAKE TITLE TO CHALMERS

If Proposed Plan Is Accepted, Production Will Be Increased

DETROIT, Aug. 28—President W. R. Wilson of the Maxwell Motor Corp. and Chalmers Motor Co. said to-day that a basis had been arrived at between the bondholders committee of the Chalmers Company and representatives of the Maxwell Company for an exchange of bonds outstanding of the Chalmers Company for class A and B stock of the Maxwell corporation. If the plan is ratified by 90 per cent of the Chalmers bondholders, it will become effective and Maxwell will take title to the Chalmers Company.

With the consent obtained, steps would be taken at once toward refunding the Chalmers organization and placing it in a satisfactory financial position.

An outline of the production possibilities of the Chalmers Company has been drafted through to next July and with the financing plan effective, production would be started upon the scale outlined. This is considerably larger than production now which has been held to a point which Wilson determined was consistent with its financial position.

Much larger production, he said, was warranted by the demand for the car, but it was financially unable to extend its operations. The material inventory at the plant has been practically worked off, Wilson said, and purchases are being made to meet manufacturing requirements until the future operation of the plant has been determined. The reduced prices announced this month have brought a large increase in business which the company has been unable to meet because of its financial condition.

Enjoin Lug Companies

PHILADELPHIA, Aug. 28—In United States District Court, Northern District of Ohio, Eastern Division, Anthony Gerosa and the Hudson Motor Specialties Co. of Philadelphia have secured a perpetual injunction against the Simmons Manufacturing Co., Lake Erie Accessories Co., the M. & M. Co., and the American Signal Co., restraining them from manufacturing or selling lugs for power plant support for motor vehicles embodying the inventions held by the complainants or from using the term "Crank Case Repair Arm."

N. A. C. C. Service Association Paster

The National Automobile Chamber of Commerce is promoting the formation of local service associations by means of letter head pasters similar to this. The pasters are in orange and blue and a number of car manufacturers are using them

Earl Motors Balance Sheet

JACKSON, Mich., Aug. 28—Total assets of $5,984,153, including current assets of $1,557,759 against current liabilities of $793,396 are reported in the balance sheet of Earl Motors as of April 30. The total deficit is $1,439,419.

CHICAGO "L" TO USE BUS LINE AS FEEDER

Electric Line Gives Recognition to Utility for Passenger Transportation

CHICAGO, Aug. 26.—Plans for the operation of buses to supplement its electric railway service are announced by the Chicago elevated lines. This step involves a recognition by the management of the elevated lines of the utility and convenience of the bus for passenger transportation, so capably demonstrated during the recent strike on the street and elevated railway lines, and indicates a determination to take advantage of the bus as a feeder for the electric lines.

Three bus lines are proposed for the inauguration of the service and, to begin with, 14 buses will be operated on these routes. The bus routes begin at the end of three elevated lines and extend from one to two and a half miles through well populated districts.

The bus lines will be an integral part of the elevated service available to the passengers without extra fare. Transfers will be issued from buses to electric trains or from trains to buses.

It is estimated that probably 40 buses will be required when the service is fully developed. The company expects to use buses seating about 25 passengers, lighted and heated by electricity. Formal application has been made to the Illinois Commerce Commission and to the city authorities for permission and license to operate the buses.

ACTIVITY MARKING FLINT OPERATIONS

FLINT, MICH., Aug. 28—An investigation of manufacturing conditions shows that Buick is adding to its employees at the rate of 100 a day; Mason Motor Truck Co. and the Martin-Parry Corp. are about to open plants; Chevrolet declares that its force will be increased by about 3,000 by next spring and Durant building plans call for the completion of the Flint factory by spring.

There is no unemployment in the city now and it is reported that all of the new help required will have to come from outside the city. There are fewer than 100 available dwellings reported and many real estate agents report a waiting list of persons seeking homes in certain sections.

Gillam Directs Service Sales

WABASH, IND., Aug. 28—G. L. Gillam, formerly associated with the International Harvester Co. in the sales department of the truck division, has been appointed sales manager for the Service Motor Truck Co. Rolfe C. Spinning has severed connections with the company as advertising manager and has accepted a position with the Service Corp. of Troy, N. Y. His place is being filled by W. B. Murphy.

A New Earl Custom Roadster, $1,485

The roadster is furnished with option of three colors of paint and upholstery. Wire or disk wheels are standard equipment. Radiator, lamps, marine type ventilators on the cowl, windshield frame and standard and light fittings are nickeled. A feature is the left hand ignition and dimmer switch to facilitate night driving on main roads

Digitized by Google

HEADLIGHT STATIONS ADOPT A. E. A. SLOGAN

Lamp Adjusters in California Reap Benefit from Sales of Lenses, Etc.

SAN FRANCISCO, Aug. 28.—The California Automobile Trade Association reports that during the last three months official headlight adjusting stations, which it established to meet the existing law, have adjusted more than 12,000 pairs of headlights. The association's engineers spent seven months appointing the 200 stations.

"A southern California adjusting station employs one man at $250 a month to do nothing but headlight adjusting," Robert W. Martland, secretary-manager of the association, says. "The average net receipts from this department is in excess of $30 a day. A flat rate of 75 cents is made for adjusting, but that is the least of the profit. The unusual opportunity to 'ask 'em to buy' better lenses, new bulbs, wire, sockets, etc., soon runs into real money for the dealer. The average charge throughout the state is about $2.85, which proves that the 75 cents for adjustment only drops into the background because the stations are asking 'em to buy.

"Motorists are given an official certificate of adjustment which is honored by all authorities. Police officials are really enforcing the headlight law for the first time in the history of the state. This is undoubtedly due to the fact that they know it is now possible for a car owner to have his lights properly adjusted and at a nominal charge."

210 PER CENT GAIN REPORTED BY HUPP

DETROIT, Aug. 28—Reports for the first seven months of 1922 show that Hupp Motor Car Corp. sales were 210 per cent of those for the 1921 period, with July deliveries showing an increase of 87 per cent over the same month last year. August business so far is 114 per cent greater than a year ago.

In the way of sales the books show about 19,000 cars disposed of, while the shipments for the seven months exceed those of any preceding full year. April, May and June were the best months in the company's history and for the first three months of 1922 net profits before federal taxes were paid were $383,656.

Pandolfo Sentence Affirmed

CHICAGO, Aug. 28—The United States Circuit Court of Appeals has affirmed the sentence of 10 years in the penitentiary and a fine of $4,000 imposed on Samuel C. Pandolfo, formerly head of the Pan Motor Co., of St. Cloud, Minn., who was convicted on a charge of using the mails to defraud.

The sale of stock through the mails was the basis of the prosecution, it being charged that Pandolfo had represented that the company had assets of $2,000,000 and that tractors actually were being built and sold. More than $1,000,000 was alleged to have been realized by stock sales.

HE MAY BE GOVERNOR TWO YEARS FROM NOW

BOSTON, Aug. 26 — Lieutenant Governor Alvan T. Fuller of Massachusetts, Packard distributor for Boston and much of the adjacent territory, is again a candidate in the primaries for that office. Winning in the primaries is equivalent to election, as he is running on the Republican ticket.

If he is successful this year it leaves the road open to the Governorship two years from now. As he won the election two years ago after a close three-cornered fight it is expected that he will secure the nomination again.

Moon's Report for Six Months

NEW YORK, Aug. 28—Moon Motor Car Co. for the six months ended June 30, 1922, reports a net income of $236,655 after costs and expenses. For the year ended Dec. 31, 1921, the net income was $99,373 after cost, expenses and taxes.

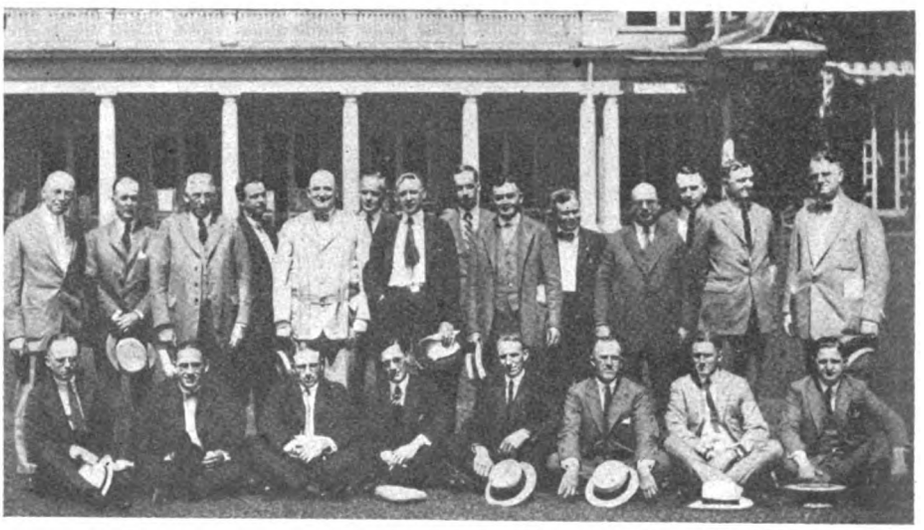
Ford Dealers Handle Own Trades

CHICAGO, Aug. 28—The used car department of the authorized Ford dealers of Chicago has been discontinued and hereafter each dealer will handle his own trades and used car transactions.

GOVERNMENT CHARGES BRING INDICTMENTS

Two Companies Involved—Officials Said to Have Made Misuse of Mails

CHICAGO, Aug. 24 — Indictments against officials of two firms for alleged frauds within the automotive industry have been voted by a United States grand jury here and made public by Assistant United States District Attorney Harry F. Hamlin. The firms are:



Dragon Motors, capitalized at $1,000,000; officers indicted, Herman Neidick, Joseph Stein and Hyman Edelman.

Caterpillar Manufacturing Co., Ltd.; officers indicted, Charles Weidman, W. C. C. Weidman, John A. Seibert, E. J. Anderson and M. E. Poehly.

In both cases misuse of the mails in the sale of stock or "territorial rights" is charged. It is charged that stock of the Dragon Motors was sold through the mails by the Neidick Financial Corp. on alleged fraudulent claims that the company was manufacturing one automobile a day, that it possessed assets of $592,772 and that orders were on file for $600,000 worth of taxicabs. It is charged that about 300 persons lost sums ranging from $100 to $5,000 through investment in the Dragon Motors.

The Caterpillar Manufacturing Co. is charged with having sold through the mails territorial rights for a "marvelous tire rejuvenation invention." Advertising claimed that the company was the possessor of a secret process for making new tires out of old casings.

Franklin District Sales Heads at Factory

Franklin district sales managers have been holding a four day conference at the factory in Syracuse with General District Manager W. H. Kemp presiding. In the back row at the extreme left is S. E. Ackerman, sales manager; F. A. Barton, secretary-treasurer, is the third man from the left and Louis Stellmann, chief engineer, fourth. The fifth is assistant sales manager Gaylord A. Hoyt and the tenth Ralph Murphy, assistant to vice-president. In the front row Advertising Manager H. H. Goodhart is the first man at the left. The picture was taken in front of the Bellevue Country Club, Syracuse, where a luncheon was tendered the visitors

NEW ENGLAND TO USE FAIRS EXTENSIVELY

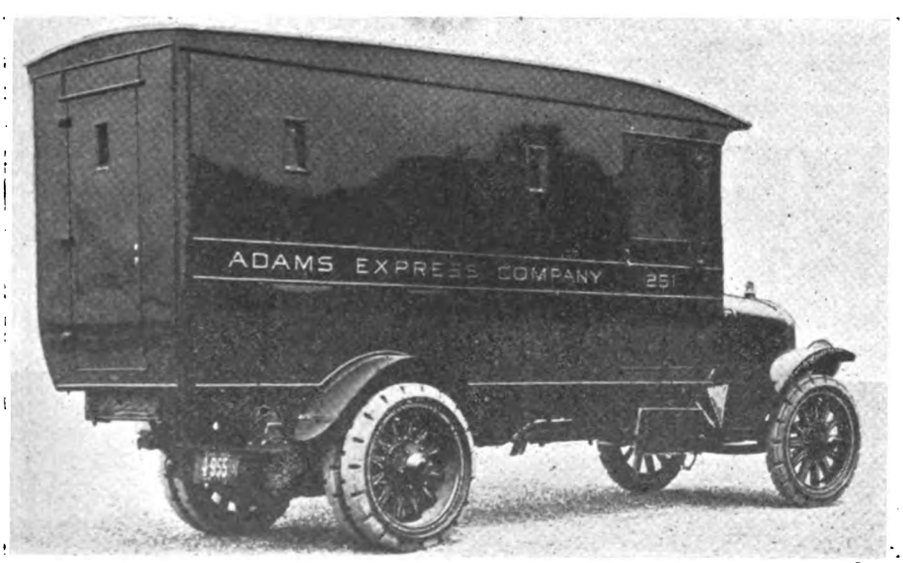
Dealers See Sales Possibilities They Offer—Distributors Co-operating

BOSTON, Aug. 28—With New England scheduled to hold 167 county and district fairs nearly all of them during September and October, Boston automobile distributors are giving attention to the possibilities of more intensive selling at these outdoor exhibitions.

In the past some of the larger distributors exhibited at a few large fairs like Brockton, Marshfield and at Presque Isle, Me. Outside of these very little attention was paid to others, leaving all that to the sub-dealers. Now some of the distributors in their intensive combing of the territory are writing dealers offering to co-operate with them in placing cars in the country fairs. Some may help defray part of the expenses.

The potential value in New England is large because the fair days are holidays of a kind all their own, made so by the people who insist on taking the time off to participate. If they were not a success the number would not be increasing year after year, and now at many of them special buildings have had to be constructed for automobile shows, notably at Bangor, Me., and Brockton.

Maine and Connecticut are rivals for the larger number of exhibitions, with Massachusetts third. Connecticut with 56 leads; Maine has 54 scheduled and Massachusetts 32. Vermont has 15 listed, New Hampshire seven and Rhode Island three. The dates start in September right after Labor Day and run continuously through the Fall.



Some fairs will be in November. A large number will be held for two days or three. But some will be longer, notably the Eastern States Exposition at Springfield, Mass., that covers the entire week of seven days beginning September 17; the Worcester fair that will run five days; Brockton, four days; Charter Oak, Hartford, four days; Rochester and Lancaster, in New Hampshire, four days each; Vermont State, White River Junction, four days; Maine State Agricultural, Lewiston, four days; Eastern Maine, Bangor, four days; and Presque Isle, four days.

PACKARD TO CONTINUE CAPACITY PRODUCTION

DETROIT, Aug. 26—Since the inception of quantity shipments on the single six model in May, this year, the Packard Motor Car Co. reports that earnings have increased to a point where they now are at an annual rate of about $6,000,000. This is reported equivalent, after all disbursements, to about $2.85 a share on the 1,188,510 shares of $10 par common stock outstanding, or about three times the annual 10 per cent dividend requirement. The cash balance is now about $16,000,000, an increase of $7,000,000 since Jan. 1.

Capacity operation is planned through the winter. Present production is reported to approximate 2,100 vehicles monthly, including single six, twin six and truck models. This production will be increased, the factory having capacity for 3,000 monthly.

Mack Presents an Armored Car

This looks like the ordinary delivery wagon but it is a specially built armored body on a Mack chassis. The entire interior is lined with bullet-proof steel and the windshield, windows and port holes are fitted with shatterless bullet-proof glass. The steps fold up when the door to the cab is closed and there are no handles or other projections which the thug might take hold of. A doorway to the interior of the body is placed next the driver's seat. Inside, the body has folding cushion seats, dome lamps, ventilators and exhaust heater. A brake is also installed here for use in case the driver meets with an accident. Rifles and revolvers are provided

TEXAS IS PLANNING EXHIBITS AT FAIRS

Biggest Display Will Be at Dallas—Houston Show of Importance

DALLAS, TEXAS, Aug. 28—With the dull days of the summer gone and the farmers marketing their crops, money is becoming more plentiful and the automobile men are turning their attention to fall campaigns which will net sales and at the same time serve to keep alive interest and business through the winter months.

Right now efforts are centered on fall automobile shows with the intention of making them the most impressive, appealing, complete and profitable ever held in the state. More than 100 fairs are scheduled in various parts of the state during the next three months and the automobile shows are going to be held in connection with these fairs. The duration will range from three days to three weeks.

The biggest display will be that of the Dallas dealers during the state fair Oct. 6 to 16, inclusive. The Dallas dealers will have their own show house open at that time and arrangements have been made for a complete exhibit of cars, trucks, accessories, parts and tires.

Another big show will be that of the Houston dealers in their own building Nov. 8 to 18, inclusive. It is expected that this will be the biggest ever staged in South Texas. Every dealer in Houston is lined up for an exhibit.

Fort Worth dealers will stage a show during the Fat Stock Show. This will last for one week. Beaumont will put on a week's show during the Southeast Texas fair. San Antonio will have a four day exhibit.

ATLANTA EXHIBITORS GREATER THIS YEAR

ATLANTA, Aug. 28—Officials of the Southeastern Fair to be held this fall in Atlanta advise that the tractor and power farming equipment shows to be held in connection with the fair will be the largest in its history.

About 25 per cent more exhibitors will have space and about 30 to 35 per cent more acreage will be devoted to the displays. There will also be automotive and accessory exhibits by individual dealers and manufacturers as has been the custom the past few years.

Electrical Show Oct. 7-14

NEW YORK, Aug. 28—The annual electrical and industrial exposition will be held at the Grand Central Palace, Oct. 7 to 14. As in former years electric trucks and passenger cars with their accessories will form an important department of the show. Incidental to the exposition a parade of electric trucks will be held on Oct. 10.

CHANGES IN THE TRADE

Fite-French Co., Nashville, Tenn., has added the "Jewett Six" to its line.

Simpson Motor Sales Co., Davenport, Ia., has added the Lexington and Gardner cars to its line.

J. F. Koch has been appointed service manager of the Franklin-Cincinnati Co., Cincinnati, succeeding **Clifford Leuders.**

E. A. Anthony has been appointed sales manager for **Brown Motors, Inc.**, distributors in Eastern Massachusetts for the Gray car.

Brunswick-Balke-Collender Co. of Chicago has appointed **Charles B. Dunbar** as district sales manager of Wisconsin with Milwaukee as headquarters.

John C. McCampbell, owner of the McCampbell Sales Co., an automobile agency at Maryville, Tenn., has been elected sheriff of Blount County, Tenn.

Fred N. Rose has been appointed factory representative in California for the **Murray Rubber Co.**, Trenton, N. J. Rose has opened an office in Los Angeles.

Templar Motors Co. has opened a new branch in Philadelphia. **Lewis F. Johnson**, at one time with the Packard Motor Car Co. of Philadelphia, is in charge as manager.

Adams-Odell Co. has been organized and incorporated in Atlanta, and plans the establishment of a new automobile agency. Display rooms have been leased providing 15,000 square feet.

Julien Motor Co. of East Dubuque, Ia., has opened its salesrooms with S A. Schley in charge. It handles Ford and Lincoln cars and the Fordson tractors. In addition a plant is maintained for repair work.

McCarthy Bros. & Wilson, Inc., Philadelphia, has purchased the **Walter E. Lanagan Ignition Co.** and will combine the two businesses in the company's new building with Lanagan in charge of the battery department.

Robert Bosch Magneto Co., Inc., has established a direct branch office at 1302 South Wabash Avenue, Chicago, Ill. with **Lee C. Carlton** as the executive head. This branch will take care of the business of the middle western section.

W. E. W. Motors Corp., Philadelphia, Durant distributor for that territory, has been appointed to establish the Philadelphia branch of the Star Motor Co. of Pennsylvania, which will have complete charge of marketing the Star line in that district.

H. B. Sexton, born and reared in Cincinnati but absent from his home town for a number of years, has become assistant to **Thomas W. Kent**, general manager of the **Lexington Automobile Co.**, Cincinnati, wholesale distributors of the Lexington for a number of states.

Brachey Battery Service recently appointed distributor for USL batteries has opened a store in Louisville, Ky. **W. A. Reisert** is president and **H. C. Brachey**, who has been identified with the automotive industry in that territory for many years, is the secretary and treasurer.

Robert Lurie of 125 West 49th Street, New York, has taken the greater New York and Connecticut representation for the Kelsey. Up to 1918 Lurie was distributor for Metz. He is planning an extensive campaign in the eastern territory and is to place in operation a wholesale distributing department.

J. Burke Riddick, Jr., and **George Abernathy** have organized a new sales agency at Memphis, Tenn., and will handle the Chevrolet and Stutz lines. The new firm will be known as the **Abernathy-Riddick Auto Co.** The firm is composed of Abernathy, president; Riddick, secretary, and **J. G. Bailey.**

A. C. Brock is manager of the **Spartanburg Cadillac**, Spartanburg, S. C., succeeding J. Thomas Arnold, Jr., who goes to New York to be associated in business with his father as resident buyer for drygoods stores. The Cadillac repair department is in charge of **H. H. Godwin**, formerly of the Cadillac factory.

Acorn Buggy Co., Cincinnati, has been appointed distributor of the new Mitchell in that territory. The business of the company was founded and incorporated in 1897. It built a single standard model buggy, which was widely sold in the United States and abroad. **Harry Pollock** is president of the company.

Staley's Garage, Baltimore, has taken over the premises occupied by the **Stewart Taxi Service**, 7-11 West Eager Street, that city, and in addition to carrying on a general garage business will have a used car department together with a repair and paint shop. **William B. Staley**, the proprietor, owned and operated a garage at Hagerstown, Md., for about seven years.

J. F. Hundt, formerly district manager for the Wainwright Engineering Co., has joined the staff of the Globe Machine & Stamping Co. of Cleveland and will represent it in a sales way in the West, while **W. F. Edwards**, the company's national sales representative will look after the East in selling the Globe Motoright steering wheel lock, tool and battery boxes and stop signals.

M. C. Auble Motor Co., Chicago, will organize a company to distribute the Star in that territory. The Auble company is the distributor for the Durant cars. The new company will have a distinct name, not yet decided upon, and will distribute the Star in northern Illinois, the Iowa counties adjacent to the Mississippi River, eight counties in Indiana and one county in Wisconsin.

James F. Boyd, formerly manager of the Willys-Overland branch at Spokane, Wash., has been appointed branch manager at Indianapolis to succeed **G. V. Orr**, who resigned to become associated with the Willys-Overland distributor in the state of Iowa. He has been with the Willys-Overland company for three years, first as sales manager of the Seattle branch and lately as branch manager at Spokane.

Martin A. O'Mara, for the past two years manager of the Kansas City branch of the White Co., has been made a vice-president of the company and a member of the sales committee with headquarters at the general offices in Cleveland. O'Mara entered the employ of the company about six years ago as a salesman in the St. Louis office, going to Kansas City as a salesman in 1917 and three years later becoming manager of the Kansas City territory. As a member of the sales committee at the general offices, O'Mara will have supervision of White truck sales in the territory covered by the following branches: Kansas City, Tulsa, St. Louis, Memphis, New Orleans, Dallas, El Paso and Houston.

Annual Automobile Show under the auspices of the New Jersey Automobile Exhibition Co., Claude E. Holgate, manager.

RACES

Kansas City.....Sept. 16
Opening Meet of New Kansas City Board Speedway.

ASSOCIATION ACTIVITIES

Code of Ethics in Texas

DALLAS, Aug. 28—The Texas Automobile Trade Association is enforcing a strict code of ethics now. The association has set out to impress upon the automobile buying public of Texas that when they deal with a member of the association they are assured of a square deal, according to W. A. Williamson, manager. Williamson declared that no firm which fails to live up to the ideals of the association will be continued as a member. He said the association intends to make this so apparent that no firm will countenance a shady transaction. Eventually the members of the association will have to make good claims made to customers when sales were concluded.

New York Dealers' Outing

NEW YORK, Aug. 28—The "Motor Booster's Outing," the annual Broadway picnic of the New York motor trade, which for the past 12 years has been held every September, will be staged for the twelfth consecutive time at Fred J. Wagner's 180 acre farm at Smithtown, L. I., on Sept. 7. Jim Nichols, the veteran Schebler carburetor distributor, is treasurer of this year's affair and is assisted by a committee composed of William A. Allen of the Allen Tire Case Co.; Joe Hall of the Marmon, Fred Philips of the Phillips Top Manufacturing Co., Otto Braunwarth, former Dunlop tire distributor, and "Doc" C. G. Percival of the Peerless.

Allen has charge of the athletic events and games, in which valuable prizes will be awarded to the winners. Breakfast will be served from sunrise until noon; the clambake, at which "Wag" and a score of helpers will labor for several days in advance, will be opened at 3.30 o'clock in the afternoon, and then the clams, lobsters, chickens, corn and watermelon will occupy the 700 "Boosters" until dusk. Last year over 600 motor tradesmen attended, and this year's affair promises to be even better, bigger and busier.

Houston Wants Slogan

HOUSTON, TEXAS, Aug. 28—The Houston Automotive Trades Association has started a campaign for a slogan The prizes offered for the best slogan applicable to all dealers is $20. So far thousands of short, catchy and pulling slogans for the members of the association have been submitted and still they come in.

The campaign ends in September and it is expected the winner of the prize will be announced the latter part of that month. With the announcement of the winner the members of the Houston association will have a new slogan which they will use in the advertising, on their office stationery and in the show windows.

In Houston practically every dealer has a slogan of his own. What is wanted now is one that every dealer can use From the great number of suggestions sent in it would seem certain that the word "service" will be found in the sentence or phrase finally adopted.

Rochester Tire Dealers Organize

ROCHESTER, N. Y., Aug. 25—A permanent organization of the Rochester Tire & Accessory Dealers' Association has been effected. Henry J. Rowerdink has been named as president; Frank W. Hahn, vice-president; Phil Hoffman, secretary, and Elmer Raither, treasurer. Directors are Harry Harrison Frank, Charles S. Owen, Louis Gibaud, James Rutherford, James J. Williams, J. Kraus, J. Scanlon, Forrest Peabody and Clarence Ager.

Syracuse Sets Show Dates

SYRACUSE, N. Y., Aug. 24—The Syracuse Automobile Dealers Association has selected Feb. 26-March 3 as dates for its next annual show, which, it is expected, will be held in the armory as usual. The association has in mind the promotion of a fall automobile week but has not made a final decision because of inability to get a hall large enough to enable the dealers to make a good showing of their product. Beginning in September, the association will hold semi-monthly dealers' luncheons which were discontinued during the hot weather.

Built for Service

Only three working parts

The above drawing shows a cross section of the end of the pedal. The ball, at the end of the control wire, swivels when the pedal is operated; thus keeping the control wire in true alignment, and insuring smooth action and even acceleration.

Another sales feature of the Williams Accelerator is that it is thoroughly practical—built for year-after-year of dependable service. Not one of the three simple working parts of the accelerator proper can get out of order.

(1) The slide marked "A" is of babbitt and will outwear the car. (2) The control wire, which runs from this slide to the pedal, is made of oil-tempered spring-steel, and is kept in alignment by the ball swivel shown at the left. (3) The coiled spring, which closes the throttle when pressure is removed from the pedal, is also of oil-tempered steel.

When you sell the Williams Accelerator you don't have to explain a lot of intricate parts. That is why Williams Accelerators sell so easily, move so rapidly.

DEALERS: Write us for a complete line of sales helps. Order your accelerators through your jobber.

NO-LEAK-O
Piston Rings

THE ONLY GROOVE THAT CANNOT CLOG

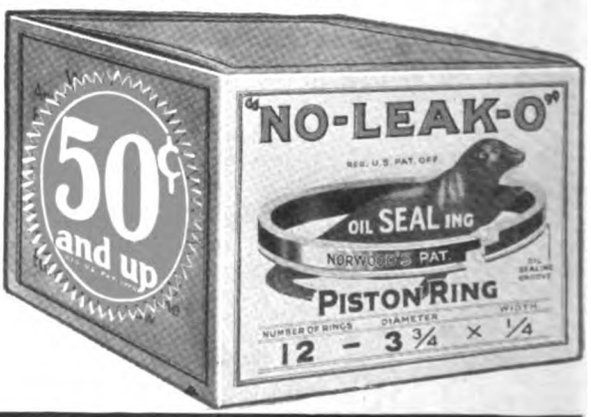
Customers Knocking At Your Door

Dealers who are taking advantage of No-Leak-O National Advertising are adding to their satisfied customer list every day. Millions of motorists are being told month in and month out to "hook up" with a garage that shows the No-Leak-O sign. The result is bound to be *SATISFACTION.*

Motorists know tnat No-Leak-O Piston Rings **'Won't leak because they're sealed with oil.'** The specially cut "oilSEALing" groove—found only in No-Leak-O prevents oil and gas **leakage and gives** *perfect oil control and compression in each individual ring.* **"Unburnt"** gas or kerosene can't leak *down* and **injure lubrication if** No-Leak-O rings are used.

No-Leak-O Piston Rings are made in one piece—**easy to install—of** finest material—most economical. Fully guaranteed. **Over 200** reliable jobbers carry No-Leak-O Piston Rings **in all sizes and *over* sizes. Prompt service *always*.**

For replacement jobs you need a dependable ring designed and made especially to give satisfaction on replacement jobs. No-Leak-O started as a replacement ring; they are still the leading replacement ring; they make good on every job.



Write for free booklet, "Know the Facts About Grooved Piston Rings." Also let us tell you about our liberal dealer proposition and how our National Advertising can increase your profits. Quick action on your part will mean bigger profits.

NO-LEAK-O PISTON RING COMPANY

Skilled labor is not necessary to operate the AUTO-HONE. Any mechanic's helper can handle it with ease.

15 Minutes to Grind a Cylinder Without Taking Down the Motor

Think of the time—labor—and expense saved by being able to re-size and hone cylinder walls to a state of precise roundness and with a fine, smooth finish, simply by removing cylinder head, and pistons from engine.

Slip the AUTO-HONE into the cylinder—connect its steel driving handle to your electric drill—turn on the power and the work is started.

In fifteen or twenty minutes the usual five to seven thousandths out-of-round or tapered cylinder is ground true and free from all traces of scoring, ring travel, and unevenness. The eight inch stones bridge the area of piston travel—grind down the unworn ends of the piston walls — and then hone the entire length of the cylinder.

The Cylinder AUTO-HONE is one of the most profitable tools ever constructed for the Garage and Service Station. When you consider the possibilities of this guaranteed and wonderfully efficient tool, which enables you to HONE cylinders perfectly for less than re-boring costs, then you begin to realize the profits that await you.

Get all the particulars you can about this easy to handle—fool-proof—guaranteed shop tool. Don't let money slip through your fingers. Send in the coupon today — it will bring you information you can turn into sure, quick profits.

In Stockton, Kansas—

"As an Oldsmobile dealer, I feel I should write you of the success of the Oldsmobile here in my territory, especially the new models. I have sold about an equal number of the Light Eight and new four cylinder models. They sure are a big success, having never caused a bit of trouble on any test they have ever been put to. ***My customers are satisfied customers.***"

THE WIZARD GARAGE
(STOCKTON, KANSAS)
George Beckley

When a dealer can say "My customers are satisfied customers" he is building his business on a bedrock foundation.

It means that the cars he sells are not simply "fair" or "medium" but are high grade in every particular and so recognized everywhere.

Oldsmobile cars are in demand because they dominate their class for sheer beauty and physical refinement, backed by chassis excellence representing the very finest workmanship and materials.

Satisfaction on the part of Oldsmobile owners is the reason for the success of Oldsmobile dealers.

Why not get into this class? Dealer connections are still available—perhaps there is such an opportunity right in your territory.

Act quickly, if you are interested. A letter, a wire, or a phone call will bring you the information you want.

Summer's Gone! Let's Jump Right Into Fall Business!

The Public Changes Its State of Mind As It Changes Its Clothes After Labor Day—Business Needs to Get Into Fall Togs, Too—Here Are Some Suggestions

By NEAL G. ADAIR

LOOK in the almanac and you will find that fall begins September 21. Ask the man on the street and he will tell you it's here already. Fall, for him and everybody in these United States of ours except the people who work in the Weather Bureau, begins when Labor Day writes "Finis" to the vacation season and men and women settle down for the ordinary, every-day work and play that prevail when families are at home and the big idea is business as usual.

From Now Until Snow—

In this ordinary, every-day work and play of a hundred million Americans there is business—business and the profits that go with it—for the automotive trade. This business goes on continuously, of course, but until spring rolls around again the best of it will be the business done between now and snowfall. And the automotive tradesman who is going to get his share of this business can't afford to lose a single day in getting after it.

For the real worker, in office, store or shop, there is no interval between the end of his vacation and the beginning of his after-vacation work. He doesn't slosh around three or four days wishing he was back at the old swimming hole and dreading to tackle the job ahead. *He goes right to work.* Jumps right into his job.

Men in the automotive trade haven't been enjoying a vacation. They have been working while others play because there is profit for the automotive trade in other folks' play. But the automotive trade can't do business with people at work with the same appeal that sold them merchandise and service while they were at play.

The public has put on fall buying clothes. The automotive trade must put on fall selling clothes.

In an Eastern city a dealer suspended his salesmen's meetings, all except the ten-minute conferences every morning, through June, July and August. He resumed the evening meetings—one every week at 6 o'clock—the second day after Labor Day. He has jumped right into the training system that is going to keep his men on their toes earning profits for him and commissions for themselves throughout the fall. He is going to exhibit in a closed car show the last week in September. In three evening sales meetings before then his men are going to perfect themselves on their closed cars and on quick closing. Pretty lively combination, isn't it? When the closed car show opens these salesmen will have their closed cars down pat AND they will be schooled in the art of bringing a prospect to a quick decision, the only kind of selling that will sell cars on a show floor. The dealer is a good closer and one of his salesmen is noted for fast work in getting signatures on the dotted line. These two men are going to talk at the three meetings preceding the show and what they have to say will be reinforced with experience stories of the other salesmen brought out in round table discussions. After the show this dealer's staff is going ahead with weekly meetings to study fall and winter selling methods until the approach of the mid-winter show prompts a series of special meetings for that particular sales event.

A Garageman's Fall Plan

A garageman in a Middle Western town, with repair and accessory departments, had a new business-getting campaign ready to work before Labor Day came. He began right after the holiday mailing a series of letters urging owners to bring their cars in to get them tuned up for the pleasant, near-at-home touring of the fall season. In one letter he suggested a carbureter adjustment, now that the extreme heat of mid-summer was over. In another he suggested a valve grinding job to put the car in fine fettle for care-free autumn driving after the motor's hard work on long summer trips. In still another he mentioned his facilities for repairing and redressing tops, getting them ready to resist autumn rains and winter snows. Later letters will talk about installation or repair of closed car heaters and other cold weather jobs. In his little accessory store he cleaned out all the manufacturers' summer-time advertising cards

Digitized by Google

and all the summer touring accessories. He put in a tire manufacturer's fall touring poster. A display of tires and a card suggested: "Don't let a blow-out spoil that drive into the country. Re-tire NOW." His next window will show a motor picnic kit with a background of early autumn leaves—just a simple setting-up of small maple twigs—with a suggestive array of standard accessories covering the rest of the window floor. Later on will come car heater windows, robe windows and other seasonal displays.

There's nothing impossible about this garageman's fall selling plan, even for a small town man. The business building point of it is that he is going after customers with ideas that fit in with their thoughts —fall ideas to jibe with fall thoughts. Why not jump right into something like that, as this garageman did?

Stimulant for a Jobber

Not far from the Atlantic seaboard a jobber watched sales lag and his salesmen's enthusiasm sag through August. There wasn't much prospect for improvement in September unless ——. That word "unless" started the jobber thinking. How could he give his men new life and a new start right after Labor Day, not a month afterward, when cooler weather would naturally set them stepping a little faster? He decided on a five weeks' sales contest. There's a money prize for the salesman turning in the largest volume of delivered orders in the five weeks. To add zest and mystery to the contest the jobber announced that the award would be more than $100 and less than $1,000. In addition there are prizes for all men reaching a certain volume and for the top man each week. Then there is a gift for the wife, sister, sweetheart or mother of each prize winner. Are they digging into the territory? Are they on their toes to forget summer heat and sluggishness and get fall business? Are they being encouraged by womenfolks anxious to share in prize money and gifts? We'll say they are.

The prize contest idea will fit just as well into the work of a wholesale or retail oranization selling cars, trucks or tractors. Why not jump right into it, like this jobber did?

Reviving a Prospect List

In a city down South a dealer had everything set, long before Labor Day, to "spring" immediately afterward a drive for sales of business cars—roadsters and coupes for salesmen, doctors, inspectors. construction men and the like. Business in that line had been stagnant through August and most of July with executives with buying power away on vacation or too exasperated with the mid-summer heat of the cotton belt to consider investments in personal transportation. The dealer launched an advertising campaign on his business cars. He used the newspapers, letters, circulars and special window and salesroom displays of cars for business purposes. He arranged for drivers to go on one and two-day trips with salesmen and other travelers who were using the railroads or trolley lines. He offered his salesmen a bonus on roadster and coupe sales—he was slightly overstocked on these models—and schooled them for demonstrations intended to show the time-saving, convenient features of the use of cars in business. He prepared charts of operating cost per mile and other charts showing typical salesmen's routes in his territory, indicating the difference between the calls possible per day by car and by train or trolley. The campaign will run for a month and the dealer expects to reduce his roadster and coupe stock and put new and lasting life into the business car sales activities of his staff.

Nothing involved about this plan, is there? Why not jump right into it, like this dealer did?

Another dealer set a girl at work before Labor Day checking his prospect list against the latest available list of registered car owners. When the day after Labor Day came he had a file of names for his salesmen with all the deadwood eliminated—no more useless calls on people who had bought other cars within the past few weeks. To get more "livewood" into the file he hired ten high school boys in the last two weeks of their vacations to scour the well-to-do residential sections for names of people without cars. Names turned in were checked against city directories and registration lists and paid for at a fixed rate per accepted name.

And in the Farm Country—

A Western dealer sent a man to the grain elevators in his town to get the names of farmers making especially large deliveries. He is going to keep the plan up through September. It will show what farmers are turning their harvest into cash—what farmers will have money to invest in trucks and tractors.

This dealer is going to sell tractors for the fall plowing, trucks for fall and winter work on the farm. He is taking farm buying power at the flood tide and turning it into sales. He is not going to wait until the farmers have all their crop money. He is talking with them while they are getting it and while they have still more in sight. He has jumped right into fall business. Why don't you?

Everywhere distributors, jobbers, dealers, repairmen, accessory men are cleaning house of mid-summer dry rot. They are dressing up, mentally and physically, for fall business. They are not waiting until September 15 or October 1 or any other time. They are jumping into fall business right now.

Everywhere there are county and town fairs, fall shows, livestock exhibitions and other fall events that automotive tradesmen can take advantage of, not only to promote sales of cars, but of trucks, tractors, automotive equipment and tires and even of repair work. But it's a short time from Labor Day to Thanksgiving Day, when the bulk of fall business must be done. Quick action is the only kind that will count.

There is no secret order of automotive tradesmen who are going to get business and make profits this fall. You would hardly say the doors are open, but they can be pushed open. A lot of energetic fellows are jumping to it—right now. Are you?

Digitized by Google

HARVEST days are here. The farmer is marketing his crops and getting paid for them. The soil is giving him back in profits the materials and labor he has been putting into it since early spring. The farmer is in the mood to buy things, and will be throughout the fall. And when the farmer buys things everything looks brighter and money is freer for the small town man who lives on service to the farmer. So the fall—right now—is the ideal time to show your products—cars, trucks or whatever they may be—to the farmer and the small town man. To an extent they can be induced to come to town to see what you have to sell. But some of them won't come and the car, truck and tractor dealer in particular ought to take his product to them. This story tells about a dealer who promoted sales both of cars and trucks in his country territory by loading a stripped chassis of the car he sells on to a truck of the make he sells and driving out into the small towns where he showed his products to the people, talked about them, listed a great many prospects and made some sales, all the while providing attractive but inexpensive entertainment which made the countryside warm up to his campaign. The dealer made this effort in the spring, to show to small town folks the chassis that big town people had seen at the city shows. But the plan would be just as effective in the fall. Perhaps you would like to try it.

Showing the Car and Truck to the Country Prospect

Put a Chassis on a Truck and Go to It Is the Suggestion of This Story That Tells How a Dealer Made 5,000 New Acquaintances—and Some Sales

LIKE the great majority of dealers and a good many people who are not dealers, Jud Joslyn goes to the automobile shows. Like other dealers and other folks who are not dealers, he finds educational and inspirational value in them. Joslyn, head of the Joslyn Automobile Co., Nash dealer in Rockford, Ill., went to the shows, national and local, last winter. After they were over he began to wonder if there was some way to take some of the show inspiration and education to the people—many hundreds of them out in his territory—who didn't go to the national shows, and in a good many cases even to the local show in Rockford.

Joslyn determined he would take the show, or at least that part of it pertaining to the Nash, to the people of his territory. Incidentally, he would promote the Nash truck along with the car. A stripped Nash chassis mounted on a Nash truck formed the kernel of the idea. This story tells how it grew into a sales promotion achievement.

The Joslyn Automobile Co. has the agency for three Illinois counties, Winnebago, Boone and Ogle. The largest city in this territory is Rockford, with approximately 80,000 people. There is some manufacturing but agriculture predominates. There are a relatively large number of small country towns. Perhaps half the people in the three counties live on the farms. This company has an especial desire to reach the small town and country trade. It is necessary if maximum sales possibilities are to be realized. Ten dealers are under contract. In addition there are many garages in this territory giving service on the Nash products.

It was desired to wage an educational campaign. Joslyn is a constant user of the ordinary forms of advertising. He wanted to do something different, something which would impress upon the public mind the fact that he sold Nash cars. He wanted to stimulate his own sales and service organization and to reach the small garage owner. He wanted personal contact and did not want to spend a large sum of money to get it. Above everything else, he wanted to do educational sales promotion, something which would make his prospects more discriminating buyers.

Automobile Education Needed

Joslyn believed that everyone in his territory, including his sales and service men, garagemen, owners, buyers and prospects, needed automobile education and he wanted them to have a good portion of Nash education.

The plan evolved was as follows: He secured from the factory a cut-out chassis exhibited at the national shows and mounted it on a Nash 2-ton truck. A phonograph with an amplifier and a telephone equipped with a loud speaker were installed on the truck. A service man drove the truck. A car which had been driven more than 30,000 miles was taken along and provision was made to have new cars on hand wherever stops were made, which was usually in towns where dealers were located. This outfit was then taken to various towns in the county for afternoon and evening stands. With one exception no advertising was done in advance of the arrival. This Mr. Joslyn now considers a mistake.

Early in the afternoon and again in the evening the population of the town being visited would be surprised to hear an announcement somewhat as follows: "Concert this afternoon and evening at Gables' Garage beginning at 1 o'clock and again at 8 o'clock. Cut-out chassis, which was exhibited at the National Automobile Shows, will be shown." By using the loud speaker, the announcement could be heard for two blocks. People would rush to the doors and windows to see the truck and chassis. If a crowd of any size gathered a brief lecture on the car or the company behind it would be given. Then the return to the garage would be made and at the appointed time the concert given with the phonograph and amplifier. This music could be heard for ten blocks. By this means it was not long before everyone in the vicinity knew that Joslyn was in town, and many of them had enough interest to find out what he was there for.

In the meanwhile the service man was busy inspecting every Nash car that he could get his hands on. An owner would drive up. Immediately the service man would approach him and say: "How is the car running?" No matter what the answer, the service man would say: "I am the service man with the Joslyn Automobile Co.,

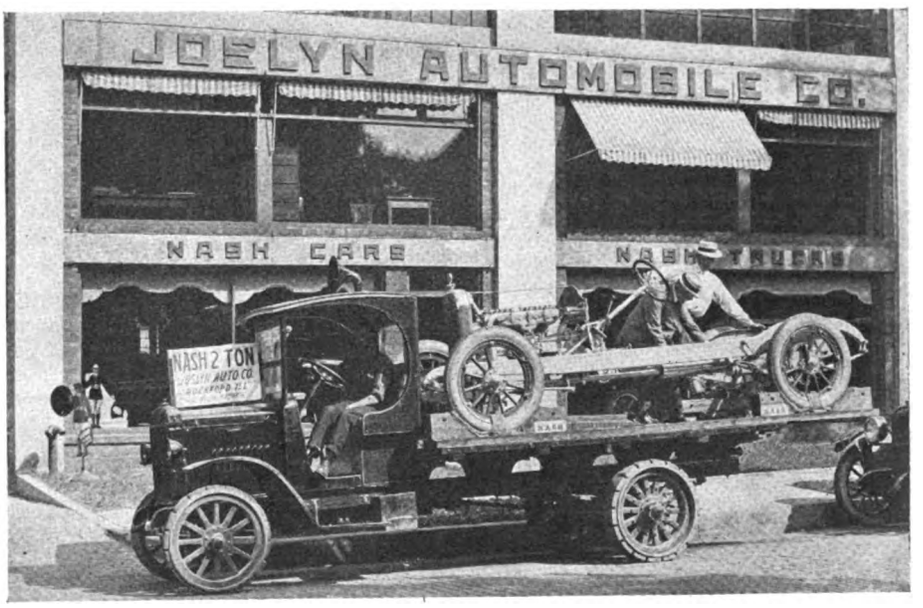
Digitized by Google

Rockford. Let's drive around the block once to see how things are working." Usually the expert was able to make some minor adjustments which improved the running of the car, and pains were taken to explain the reasons for these adjustments and to tell how they were made. If the desired number of cars did not come in, the dealer would call up the owners and suggest that cars be brought in for free inspection.

The concerts proved popular, many selections calling for encores. Usually the program opened with a stirring march, then followed some songs, dance music, band music, and closed with "The Stars and Stripes Forever." At the conclusion of the concert a short lecture was given on the chassis, history of the company, the place the automobile occupies in community life and other subjects of interest. Frequently announcements were made of coming community events.

All afternoon and until late in the evening when concerts and lectures were not being given the chassis construction was being explained to interested visitors. These visitors came by ones and twos, by dozens and in some towns by hundreds. A large percentage of these visitors showed keen interest in chassis construction and automobile operation. A regular chassis talk was given, starting at the radiator and going through to the rear axle. The question most often repeated by visitors was: "How does this form or detail of construction compare with that on other cars?" Practically none of the visitors had any definite knowledge of valves, ignition and other details of engine construction and operation. Gasoline consumption, tire mileage, life of the car, the difference between ball and roller bearings and brake location were subjects frequently brought up by visitors for discussion.

Now, what are the results of this campaign? The program was carried out in Rockford and in five outlying sections of the city. It is estimated that 8000 people in the city of Rockford have seen this chassis. Classes from both the high school and grade schools interested in physics, manual training or drawing came to go over the chassis and learn of automobile construction. Fourteen other towns in the three counties were visited. The combined attendance at these places is given as 10,000. A detailed explanation of the chassis was given to thousands. Joslyn would make no estimate of the exact number.



The plan took a small part of the National Show to the territory. The sales and service organizations of the Joslyn Co. were stimulated to greater efforts. Sales were made as a direct result. Service men in independent garages were educated in the care and repair of Nash cars. And last but not least, Joslyn's name and service are now known over the territory as never before. Joslyn believes that he has made 5000 new acquaintances.

There are some interesting sidelights on this program. For example, at Belvidere, the county seat of Boone County, Joslyn and his outfit happened to arrive in town on the day of the high school graduating exercises. This brought a crowd to town, and many of them took the time to look the chassis over. At Mount Morris there was a band concert. The lecture and phonograph concert were handled ahead of the main event, and while the band played many people came up and looked over the chassis. If handled in the right way a demonstration of this kind can be given in connection with other events to good advantage.

So successful has this venture been that other dealers are already putting in requests for the chassis, and the Joslyn Automobile Co. is planning to repeat the campaign on a more elaborate and better organized basis. The chassis will be mounted on the frame instead of the wheels and the working parts connected with a combination direct and alternating current motor. Two or three days will be spent in the larger towns. Advertising will be used and owners encouraged to bring their cars in for inspection. If some new stunts to attract the crowd can be devised they will be used, but the fundamental idea will remain. It is automobile education to advertise a company and a product.

Joslyn has some other unique promotion ideas worthy of attention. There is a piano in his waiting room, which is on a balcony over the showroom. This piano is one of the instruments in the Joslyn eleven-piece orchestra which gives concerts in town, at grange meetings and wherever the opportunity offers. On this balcony is a radio receiving outfit and the equipment for a sending outfit. As soon as a government license is received, Joslyn will have the only radio sending outfit in Rockford. He told about the plans for transmitting market reports, lectures, concerts and important announcements from this station. Undoubtedly among the "important announcements" will be something about the Joslyn Automobile Co., and the products which it sells.

Wandering Show Ready for the Road

This is the traveling exhibit of Joslyn of Rockford, Ill., just before starting on the tour of the countryside that told small town folks all about the Nash and cultivated business among them. By the way, there's Jud Joslyn in the picture—wearing a coat

Would Street Car Ads Help You Sell?

WARD BECKER, Ford dealer in Fort Wayne, is using street car cards quite heavily in pushing his sales. These cards carry his photo and his signature and a snappy sales phrase. The phrase which Mr. Becker has used most extensively in this campaign is this: "People who come to us to buy Fords tell us that they expect more. They have a perfect right to do so." Becker says that he is getting very good results from his car cards and at a low cost for advertising.

Sell Cars to Give Salesmen More Time With Prospects

Show Sales Managers How Automobiles Will Cut Down Travelers' Time on the Road and They Will Listen to the Story of Your Car

By RALPH BARSTOW

FORTY per cent of their time is spent in traveling! This is the report of a firm that has just finished an investigation of the working hours of its traveling salesmen.

In an eight-hour day, three hours and twelve minutes are consumed in traveling! Truly, he is well named, a "traveling salesman!"

Will automotive transportation reduce the percentage of time spent in traveling or increase the number of calls per working day? A good many sales managers feel that it will. If it will—and it will under many circumstances—dealers who can prove this practical, economical value can sell cars for salesmen.

Provided the distance between calls is not too great and the roads are good enough to make possible a low upkeep cost for the machine, the automobile represents a distinct saving in time and frequently in railroad fares over any other method of transportation.

A Typical Territory

The territory in the central part of New York State is typical of this situation. The roads are level and are in good condition, and the distances show distinct evidences of the utility of the automobile.

From Albany to Buffalo, the two cities that mark the eastern and western boundaries of central New York is a distance of 296 miles. There are five large centers which every salesman must cover: Albany, Utica, Syracuse, Rochester and Buffalo.

The following list will give an idea of the mileages which the salesman will be called on to cover:

	Miles
Albany to Utica	86
Utica to Syracuse	83
Utica to Rome	11
Syracuse to Rochester	81
Syracuse to Oswego	35
Syracuse to Watertown	62
Syracuse to Binghamton	83
Syracuse to Ithaca	59
Syracuse to Elmira	99
Syracuse to Auburn	26
Rochester to Buffalo	90
Buffalo to Jamestown	75
Jamestown to Olean	51
Elmira to Ithaca	46
Elmira to Binghamton	54

On non-stop runs, an average of 25 miles an hour coverage can be maintained with safety. The territory between the cities listed, however, is dotted with all kinds of prospects. Between Albany and Utica we have Troy, Cohoes, Schenectady, Amsterdam, Johnstown, Gloversville, Herkimer, Ilion and Little Falls; places that practically 75 per cent of the salesmen in New York need to make. If they depend on train and trolley service, they lose from 15 minutes to an hour in waits, which time can be used in driving if they are supplied with automobiles.

The cities listed can be covered once every two months by one man in an automobile, where two men, using the railroads and trolley, would be required to accomplish the same schedule.

"The Neglected Field of the Salesman's Car"

THAT is the way the author of this story, who has been a sales manager employing travelers, refers to the market for business automobiles, which he says manufacturers and dealers have not canvassed as they could. He presents some interesting figures on railroad and automobile travel schedules, showing the greater efficiency of the latter in calls per day. He suggests that dealers and salesmen, with figures such as these applying to the territories of manufacturing and mercantile firms, would find it easy to interest heads of these firms in putting their salesmen on wheels.

In many cities, such as Owego, Groton, Painted Post, Corning, Cortland in the lake district of New York, there may be but one or two customers, important to be seen, and in the old condition, a call of this kind means an all-day trip, because of the limited railroad facilities on branch lines. With a car at least two of these towns can be covered each day, thus saving 50 percent of a salesman's time. Here is a typical record of results. Salesman A and B were provided with automobiles. Salesman C was not.

	Sept.	Oct.	Nov.	Total
Salesman A calls	160	120	83	363
Salesman B calls	106	110	65	281
Salesman C calls	92	98	50	240

Salesman C's traveling expenses for September and October were $432.98, while Salesman B's were $392.00. But B made 216 calls to C's 190. The difference was largely due to transportation expense, for Salesman C spent $153.07 in railroad fares while Salesman B spent $190.90 for gasoline, storage and necessary repairs.

Speeding Up Calls

Here is another specific instance from the experience of a New Jersey salesman. Consider that New Jersey is exceptionally well supplied with good roads and that winter is not so severe as to render driving a car impossible.

This man lives in Jersey City. He wanted to cover New Brunswick, Perth Amboy and Plainfield in one day. The best train to New Brunswick left at 9:17 unless he got up at 6 to catch the 7:20. The 9:17 got him into New Brunswick at 9:52 and he got through his calls at 2:10 p. m. Then fifty minutes wait. For the trolley or the bus to either Perth Amboy or Plainfield did not leave until 3 and got him into the next place at 4 with a scant hour to work and three people to see. Actually, he saw one of them and had to double back on his trail the next day, adding to his overhead in the way of traveling expense as well as knocking the spots out of his time in the presence of his customer. With a car, he could have left the house at 8 a. m., been at work in Perth Amboy by 9:15

Digitized by Google

and in New Brunswick at 11:30 and Plainfield could have been covered that afternoon.

Try another one with a salesman living in Springfield, Mass. Here is a typical day with a car. He leaves Springfield at 8 a. m. and makes Stafford Springs, Conn., by 9:15 with one call. Then to Willimantic by 10—three calls. The next place, with one call before dinner, is Norwich and three calls after dinner, one of them causing some delay and a trip out to see a customer's customer! Leave Norwich at 2:30 and arrive at New London at 3:15, get in two calls there and one more over the river at Groton (a call that a man on foot would practically never make) and on the road again by 5 p. m. if you want to go on toward Providence for the night.

From a train and trolley point of view, that trip is an impossibility—but it is the most economical road to follow and the automobile makes it easy. Score eleven calls in one day.

Some Firms Big Buyers

A great many firms that have traveling salesmen, anywhere from five to 500—one manufacturer bought 100 cars at one crack. They are open to conviction as to putting their salesmen on wheels—just the consideration of a railroad strike is a big influence—and the same sales methods could be used as were adopted by the truck manufacturers, who made routes, time studies and roadmaps for the prospects to whom they sold fleets of trucks.

With an experience of seven years in one company and three in another, during which time he has handled salesmen, the writer does not recall ever receiving a single piece of direct mail matter from any automobile manufacturer or from any sales agency on the possible merits of automobiles for his salesman. He has never been canvassed by a salesman for any company on that subject, although it was well known that we bought eight cars in one batch, two and a half years ago for our salesmen and *paid cash for them.* No one has ever thought that we might want to replace those cars!

What Does It Cost?

Accounting nowadays in business is all inclusive. A fleet of salesmen's cars will be listed by the accounting department immediately on its arrival and complete and accurate records will be provided all concerned each month.

Before me lie our figures showing just what it costs in the aggregate and "per mile" to operate each salesman's car we own. The depreciation per month is figured out and included in the cost. The "trade-in" and present book value are shown; the number of tires used and the mileage per tire.

On a three year average, it has cost us 12 cents a mile to operate our cars for our salesmen. By the end of 1922, this average will have dropped to about ten cents. Then repairs will begin to push the average up so that it will be more economical for us to buy new cars. We do not include interest on our money invested but carry every other item charged against the account.

The Advertising Plan

Advertising and solicitation for the salesman's car should be a graphic exposition of the salesman's canvass The car salesman should open up with maps and routes and deadly parallel charts that any sales manager would simply have to stop and attend to. The car salesman should show that the only answer to increased selling efficiency is to make it possible for the salesman to spend a larger percentage of his time *in front of the possible buyer.* The car salesman should get data on the number of salesmen employed by the prospect, the routes they cover, the present expense per day both for traveling and for living, the average number of calls and then go away to return with a canvass that would convince. It would appeal to the reason, the emotions and the economy instinct of the prospect.

And It Happened on Broadway!

Broadway, Sept. 5.

THIS is the age of merchandising.

Having passed through the periods of mechanical development and production intensification, the automobile industry now has reached the blossom of its growth.

Nowhere, probably, has the industry flowered so gorgeously as on Broadway—the only Broadway—where rentals reach kings' ransoms, and super-salesmen swarm like bootleggers along the three-mile limit.

Have we provided sufficient atmosphere? Then let's to the story.

The scene is a palatial Broadway salesroom. Immaculate tile floors. Tapestried walls. Massively carved balcony overhanging back, where shadows deepen beyond the expanse of plate glass fronting on Broadway—the only Broadway.

Enters a young man. Purpose is unmistakable in his deliberate advance. Halfway down the floor he slackens his step and stops before a powerful, low-slung sport model.

A salesman on the balcony rises from his chair, walks to the balustrade, surveys the newcomer with a cold, calculative glance—and returns to his "Snappy Stories."

The young man tarries before the sport model; even drops to his haunches the better to view the spring suspension.

Then from behind a richly upholstered and scintillating limousine emerges an overall-bedecked porter, mop in hand.

"Does yo' want tuh see somebody?"

It's gospel truth—every word of it.

It happened to-day on Broadway—the only Broadway.

And—this is the age of merchandising.

THE MEN THIS STORY IS WRITTEN ABOUT—JOBBER SALES STAFF OF HYSLOP BROS., Ltd., TORONTO, CANADA.

THE man in the center of the picture, looking squarely at you, is A. M. Bottcher, author of the story and manager of the automotive equipment department of Hyslop Bros., Ltd. Looks like a fellow who gets things done, doesn't he? Read his story and form your own opinion. The story tells about a training plan for a jobber sales force. Much of it would apply to a car or truck sales organization or even to a service staff. What do you think of the weekly meeting idea, where the men learn from each other's experience? And what do you think of the talks of salesmen York and Hawes?—EDITOR.

Training a Jobber Sales Force

Weekly Meetings Help Men Learn from Each Other's Experiences and Foster Co-operation With Other Departments —A Fact Story About Two Kinds of Salesmen

By A. M. BOTTCHER

Manager, Automotive Equipment Department, Hyslop Bros., Ltd., Toronto

THE fundamental principles of salesmanship applying to travelers soliciting orders for automotive and garage equipment do not vary materially from any other line of industry. Practically all schools of salesmanship theoretically teach the successive stages, or evolution, from approaching a prospect to closing a sale and building an enduring business irrespective of the nature of the merchandise, approximately as follows:

1—Know your goods.
2—Awaken interest in the mind of your prospect.
3—Create desire on the part of the prospect.
4—Close the sale.
5—Render service, present and subsequent.
6—Build enduring connections by educating your customer to better business methods.

Hyslop Bros., Ltd., employ from 12 to 15 traveling representatives selling automobile accessories, supplies and garage equipment. These men are not graduates of any outside school for salesmen, correspondence or otherwise. They do, however, receive actual work, instruction and training in Hyslop's own establishment, where the six principles enumerated above are thoroughly absorbed by them in a practical manner. It is a pleasing commentary to note at this time that the embryonic salesmen during their period of apprenticeship evidently later on appreciate the training they receive as, with few exceptions, where they have qualified, they remain loyal to the firm and are not enticed away.

The method followed by our firm is to carefully select a man, either in the organization or outside, who has possibilities of developing into a worthy representative. He is first put to work in the stock room so as to know the goods thoroughly. After about six months of placing stock in the bins and filling orders for shipment, he

Digitized by Google

is placed behind the counter of the wholesale store. There he meets dealers, garagemen and their employees, requiring all kinds of equipment and repair supplies for automobiles. He is taught to maintain at all times a courteous and pleasing attitude when serving customers and, after supplying their requirements, call their attention to articles that may be of interest at the moment, or show them the working of some brand new invention that will appeal to their mechanical inclinations.

Specially Trained Salesmen

A year in the store, serving and becoming acquainted with customers, should enable the salesman to gain much information that will be useful and instructive to him when advanced to a traveling position. If he is of the right type, he has by this time quite unconsciously had inculcated in his training the seven cardinal points of salesmanship referred to. He is now ready to take up his portfolio and call on the trade. His first tryout is in the city, where he can be further coached and receive the benefit of daily instruction and assistance from the home office. Should any difficulty develop in closing a deal, the manager often accompanies the salesman and assists him.

When a vacancy occurs in an out-of-town territory, the city salesman is assigned to it.

It will thus be seen that Hyslop's salesmen are specially trained men. During the boom period of the war the demand for goods was in such volume that all rules of salesmanship were practically suspended and orders were literally forced upon salesmen, often beyond the capacity of the house to fill due to the scarcity of goods. With business conditions later completely reversed, the specially trained Hyslop salesmen were able to adjust themselves accordingly. Not so, however, with the few extra travelers hurriedly engaged during 1918-1920 when business was at its apex. True, during that time, their volume of sales often exceeded those of the specially trained men, but their order-taking proclivities availed nothing when it meant a fight to go out and get business under conditions which prevailed from the fall of 1920. They were unable to stand the gaff and were accordingly released.

Weekly Sales Meetings

With the turn of the tide from an orgy of buying on the part of the dealer to one of hard plugging to secure even a small order, Hyslop Bros. felt something should be done to keep up the morale and interest of the sales force. Prizes and competitions are good things in their respective spheres, but produce only temporary results. The company decided upon a plan which is meeting with great success. Every Saturday morning at 11 o'clock a meeting is held in the board room and is attended by the manager, salesmen, head of the order department, credit man and stockkeeper. A schedule is drawn up two months in advance, and each week one of the men has charge of the meeting and talks on a subject previously assigned to him. Here are a few examples of the subjects selected:

Salesmen's Talks

April 22—F. J. Rogan, Salesman. My Experience in Talking the A. E. A. "Ask 'Em to Buy" Campaign to Dealers in My Territory.

April 29—H. J. Munro, Order Department. Importance of Salesmen Mailing in Orders Daily, Making Out Weekly Reports and Route Sheets Promptly.

May 6—S. J. York, Salesman. My Method of Approaching Dealers, Closing Orders, Securing Large Volume Business and Retaining My Customers' Good Will and Confidence.

May 13—R. B. Rife, Credit Manager. General Talk on Credits. Helpful Assistance That Can Be Rendered by Salesmen to Facilitate Prompt Shipments.

May 20—C. Cummings, Salesman. How I Increased Sales in My Territory as Compared with 1921 Season.

May 27—George Davies, Stockkeeper. Shipments, and Methods Employed to Fill Orders Promptly, Keeping Stock Up to Maximum Requirements and Reducing Back-Orders to a Minimum.

June 3—J. A. Singer, Salesman. Methods by Which I Secure Big Business in Motor Oil.

June 10—W. Spencer, Salesman. Interesting the Dealer in Garage Equipment.

June 17—R. A. Galbraith, Salesman. Securing Volume Business from Large Car Distributors and Dealers in Toronto.

June 24—G. Hawes, Salesman. The Mistake Many Salesmen Make in "Passing Up" the Small Accounts. How I Secure a Good Volume of Business from the Small Dealer and Garageman.

Experience Stories

As will be observed, the subjects are diversified and are chosen with a view of bringing out any unusual qualities with which a salesman may be gifted. The interest in the meetings is strong. The experiences of the different salesmen bring vividly before the men many points in selling and service which they have either overlooked or allowed to become dormant, and they go out the following week resolved to benefit by the information received.

The salesmen also have lost their former antagonistic attitude toward the credit department after the trials and tribulations of the credit man are explained to them. They also know how to talk convincingly to a customer complaining about delays or mistakes in shipments after listening to a discourse from the stockkeeper. *The salesmen now know that all concerned are working for the mutual benefit of the house, which enables them to meet the trade with renewed vigor and in the full confidence that their efforts are being backed up to the limit.*

The entire sales force of Hyslop Bros. has consistently backed up the A. E. A. campaign of assisting the dealer to build up a better and more profitable business. They have personally devoted considerable time during evenings to helping make attractive window and showcase displays. The "Ask 'Em to Buy" motion picture has been shown throughout Ontario, and one of Hyslop's salesmen made it a point to be present and give assistance. In small communities where the dealer has not viewed the film, the story was told by a Hyslop salesman and interest created by practical demonstrations. The salesmen state that in their leisure time in the evening they talk to the dealer's customers, and even man the gasoline pump and emulate the example of the screen salesman by interesting people in the purchase of useful articles for their cars.

Ask 'em to Buy

At the weekly Saturday meeting of salesmen, after the scheduled address is concluded and which, by the way, is limited to a half hour, the meeting is thrown open for remarks or discussion, and almost invariably instances are related of how dealers have increased their profits through "Asking 'Em to Buy." At the last meeting, a salesman described how a dealer in his territory had returned for credit several sets of a well-known shock absorbing device, with the explanation that they would not sell and that payment was past due. This salesman personally took the dealer to see the "Ask 'Em to Buy" picture, and then told him if he had used the selling tactics depicted on the screen he would not have returned the shock absorbers. He finally induced the dealer to re-order one set, and now, after a period of only a few weeks, the

Digitized by Google

dealer by using a little sales effort has installed eleven sets of these shock absorbers, and before the season is over will have made several hundreds of dollars' extra profit out of this one item alone. This is only one incident of many that Hyslop's traveling men report to the house as exemplifying how they are assisting in helping the dealer to become a better merchant, a keener salesman and a factor for service in his community.

TWO typical talks by Hyslop salesmen at Saturday morning meetings are given below. They show how practical training is given the men by exchanges of experiences and reports of selling methods that have proved successful.

My Method of Approaching Dealers

Closing Orders, Securing Large Volume Business and Retaining My Customers' Good Will and Confidence

By S. J. YORK
Salesman, Hyslop Bros., Ltd., Toronto

AT the outset I want to say I have no trick cards to play, nor do I work by any set rule. What I have to say will be typical of many instances I have experienced in the past when calling on a new account. After a permanent connection is once established with a dealer on a mutual confidence basis, it should be a comparatively easy proposition to retain his business.

It has always been my custom to present a neat and clean appearance. My fellow travellers often "jolly" me because of my habit of rising early in the morning and devoting so much time to shaving and otherwise perfecting my toilet. However, it gives me a clean appearance and I feel better for it all day. In conjunction with this, I always advocate a good night's rest. (It may fittingly be interjected at this point, that York has no respect for the night-hawk, poker-playing, sporty type of salesman who dissipates his energies during the night and consequently goes about during the day in a dopey and listless manner.)

In approaching the customer be patient, don't argue, and make notes of any matters the customer considers requires adjustment, and then after a little while the dealer will listen to what you have to say and gradually forget any grievance or ill-feeling he may have entertained toward the firm you represent. The salesman now has the dealer's attention and it is "his turn at the bat." He commences by talking goods and service.

After some conversation, which should be adroitly led by the salesman, the dealer suddenly thinks of something and exclaims: "By Golly, I do need a bumper for that Ford sedan I am delivering this afternoon! But, if I order it now, you can't get it here before to-morrow and it will be too late." "Excuse me a moment," says the salesman. "I'll be right back." In a few minutes he returns with a new bumper. The dealer cannot help expressing his astonishment, "Where did you get that?" he inquires. "Oh, I just took it off my Ford coupé," replies the salesman. "Well, I'll be switched," exclaims the dealer. "What did you do that for?" "Oh, just my idea of rendering service to customers. The bumper was only put on my car yesterday, so it is brand new and will satisfy your customer; besides, I can get another when I drive into Toronto the end of this week." "Well, young man," says the dealer, "send me ten more bumpers of the same kind at once." "Thanks," says the salesman, opening his order book. "You will be able to realize a nice profit if you equip every car with a bumper before delivery. Your customer will be glad of the service and willingly pay the price of the bumper when taking delivery of his car, rather than spare the time to have it installed later. In fact, the chances are 1 to 25 that you will never sell him a bumper unless it goes out with the car as extra equipment. Then also, there are shock absorbers, visors, mirrors, Moto-Meters and various other items the car owner needs and will buy if his attention is called to them. How is the car owner to know about these different articles of equipment if the dealer does not bring them to his attention and explain their advantages?"

By this time the salesman has already turned over the freshly filled page of his order-book and has commenced writing down such items as spark plugs, brake lining, piston rings, etc., for the service department, and the transaction is eventually completed.

All I can say further on this subject is that any of you can do as well as I have. You have the same lines, same resale prices and the ability. Gain the friendship and good will of your customers so they will be calling you by your first name. Let them know you are there not merely to get an order but to assist them to become better merchandisers. Don't feel it is beneath your dignity to call around in the evening and help the dealer make a better display of goods or dress his window for him. Above all, be a gentleman always, remembering that according to your conduct so will the firm you represent be judged by your customers.

As you all know, I have been on my present territory for several years. All my customers call me by my first name. They often invite me to their homes. They have confidence in me and the house I represent. As an evidence of this I need only mention that during my recent illness I received several letters from my largest dealers expressing sympathy and the wish that I would soon recover and be able to call on them again. Didn't I appreciate that! Oh boy! I'll say I did. And when I resumed my travels they gave me nice, fat, juicy orders that they had been saving up for me.

How I Get a Good Volume of Business

The Mistake Salesmen Make in Passing Up the Small Accounts

By GEORGE HAWES
Salesman, Hyslop Bros., Ltd., Toronto

THE subject assigned to me deals with my experience in selling automobile accessories to small garages and repairshops.

Being desirous of locating permanently in Toronto, I approached the management for a transfer to a city position. It seems they had two men calling on the trade in Toronto, but a recapitulation of sales showed that business was only flowing in from car dealers and the larger garages. The smaller garages and back-alley repairshops were practically neglected.

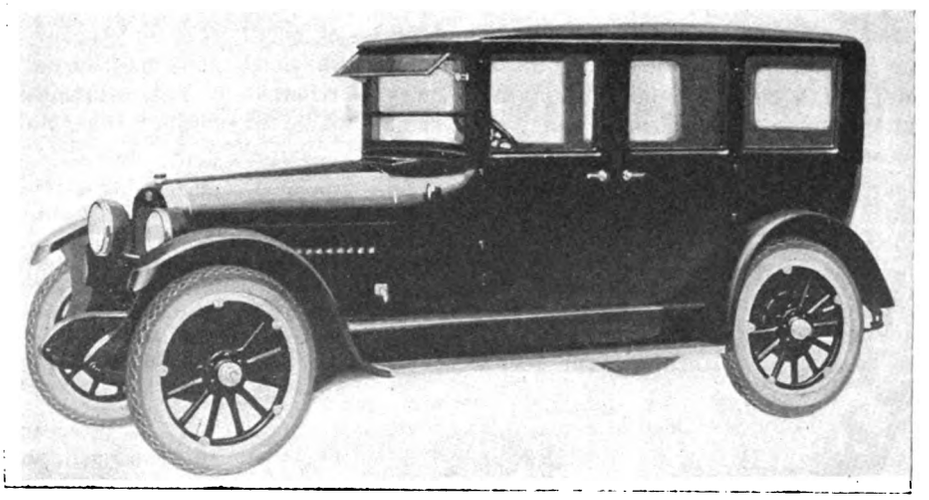
In order to secure the latter trade, a change was made whereby one man now works car dealers only in Toronto, and my field of endeavor is devoted to the other trade in the city.

It is not self-praise or egotism on my

Digitized by Google

part to say that inside of a month I secured more than 50 new accounts and many of these so-called small dealers repeated several times during that period. I am daily adding to that list. Some are not good for credit, nor do they ask for it. They are perfectly willing to accept the goods C.O.D. and are not so finicky in this respect as the large dealer who may have a good rating but is short of ready cash. My experience in the city bears out what I ascertained while out on the road, and that is, that many a salesman makes the mistake of "passing up" the small garage proprietor or repairman as being beneath his dignity and too picayune to waste his valuable (?) time upon.

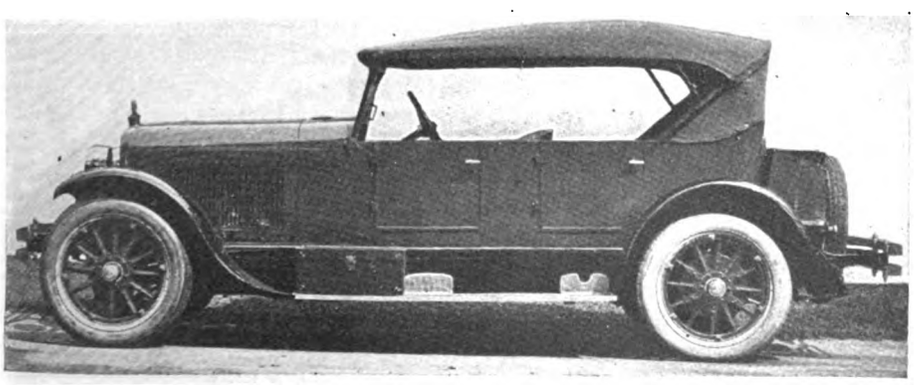
It was because of my specializing on the "smaller fry" while traveling Ontario that I was given my present position. My weekly summary of sales was largely made up of accounts that salesmen from competitive houses ignored.



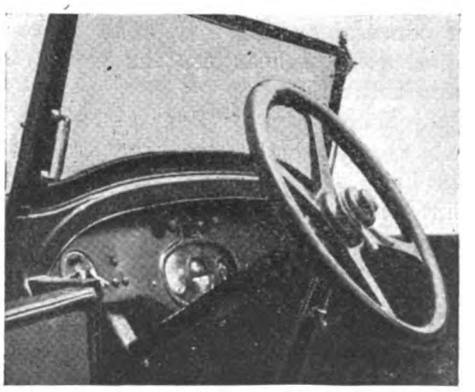
There are no particular methods I employ in going after the small garage and repair trade in Toronto. One thing I have observed, however, is that if the proprietor is not too busy the salesman is generally accorded a better reception than by the more prosperous car dealer or his purchasing agent. The fact that the salesman calls on the small garage or independent repairman appears to indicate to them that their status as business men is recognized in the trade. If the proprietor, however, is busy it will be necessary to use a little tact, and often a great amount of patience. He may be in the midst of an exacting operation like timing a motor or changing a commutator. Wait until he straightens up from his task and looks around before starting to talk accessories.

When I first began calling on my present trade in Toronto I was often told by the garage and repairmen that it did not pay to handle accessories. This did not discourage me. I personally spend considerable time, often in the evening, with such men and tell them about the kind of goods they could sell to advantage based upon my experience with similar businesses while out on the road. *I am careful to start them off with only fast selling articles of equipment, and then add to the line on subsequent visits.* At the same time, orders for brake lining, piston rings, spark plugs and other service lines can be picked up at practically each visit. Everything considered, therefore, my trade provides a good outlet for a steady and increasing volume of business. The individual orders may not bulk large, but with my car I can make many calls and the total of each day's work is satisfactory.

So, fellows, I suggest when driving your Ford coupe throughout your territory that you do not contemptuously sail past the small wayside garage or repair-shop intent only on getting to the next town as fast as possible. But stop, get acquainted with the proprietor, secure what business he has to offer, and then when you get to town just ferret out the little garage you formerly overlooked or the repairman doing business in a converted blacksmith shop, in addition to your regular trade. You will be surprised and delighted with the result.



A Jordan Blue Boy in Blue Devil Blue for $2150



THIS is a new four-passenger sport model now in production. The wheelbase has been lengthened on this model to 124½ in. for lowness and the cushions are right down on the floor. The general shape of the body is the same as the Play Boy back to the front seat. A slight curve has been added back of the front seat and the rear of the body is low and does not have the sweeping curve on the back panel that is found on the phaeton. The finish is in blue with dark blue Morocco leather upholstery without plaits and with rolls at the front to support the knees. The steering wheel has walnut spokes and the spark and throttle controls are mounted in a small space at the center of the steering wheel and without the customary aluminum center. The top is a Golde type with polished rust-proof frame and natural wood finished bows. Top, side curtains and slip cover are imported Burbank. The rear is fitted with a trunk rack and trunk and headlamps are barrel type, nickeled.

A New Nash Six Cylinder Sedan, $2040

This five-passenger car is fitted to the 121 in. wheelbase chassis and is a miniature of the seven-passenger sedan. The interior furnishings and upholstery are in mohair and there are four doors. Several years ago Nash built a five-passenger six sedan with a staggered door but this was discontinued. This recent addition gives Nash 13 models

The new Jordan Blue Boy, $2150. At the right is shown the steering wheel with new type spark and throttle controls eliminating the conventional quadrant

Editorial Notes

Something New

WE are rather inclined to take it for granted that automotive engineering has reached a point where it is so nearly perfect and conventionalized that there is not much further to be done. That this is not so is proved by a recent innovation in the design of overhead valve engines which will no doubt remove the one point of sales resistance that has always been raised against them, noisy operation.

Since the inception of the overhead valve engine it has been necessary to work with rather large clearances between the rocker arms and the tappets, due to the varying expansion under hot and cold conditions. This has led to more noise than seemed necessary and also required rather frequent adjustment. The new Buick cars have sought to overcome this trouble with a combination metal tappet rod of aluminum and steel, so proportioned that the tappet rod will have exactly the same expansion as the cylinder block with which it has to work. Now comes a new engine in Great Britain, the Vauxhall, with a duralumin tappet, which is designed for exactly the same purpose. These pioneers will doubtless have many followers and the success of the new design will mean much in lessening the selling resistance of the overhead valve engine, which, while it has many advantages, has also been beset with disadvantages, chief of which was noise.

Price

FROM a good many sections come reports that price is dominating business in the automotive field, particularly in the sale of automotive equipment. Motor car owners are doing more shopping around for price concessions than in any recent season, with the result that some dealers and garagemen, yielding to such an insistent price demand, are pressing their jobbers for concessions and they in turn are scrutinizing with almost painful keenness the price competition of the manufacturers.

A jobber writes: "Ever since the buyers' strike the consumer has had the garageman buffaloed so that all they hear is price, price, price. They have reached the point where we, in our own buying, are forced in some cases to put price ahead of quality. Let us hope this is only part of the business cycle and things will change for the better. Business is good in volume but business done on a price basis is pretty unsatisfactory when you make up your balance at the end of the month."

Newspapers and magazines are still talking about high prices which still prevail in a good many lines other than the automotive field, where reductions from the post-war level have been quite general. As long as this price agitation continues consumers will have prices prominent in their minds whenever they go into a store to buy, yet there are people, and always will be, who want quality goods with service and reputation behind them. The only way wholesalers and retailers in the automotive trade can combat the price demand is to advertise their merchandise as quality merchandise and their establishments as establishments which stand back of what they sell and are in a position to give buyers service as well as goods. Advertising of this kind, supported by merchandise on the quality and service basis, will bring to the wholesalers or retailers applying it at least a fair proportion of people with whom price is a secondary consideration when quality and service are shown to be part of the thing they are buying.

The automobile trade cannot expect to overcome in a minute the sales resistance that is based on price demand, but they must overcome it some time if business is to be done with any pleasure and profit, and it should be remembered that every effort along the line of merchandising quality and service will prove a step in the direction in which the trade wants to go.

Roads Sell Cars

IT is interesting news that comes from Alaska that the building of improved roads in the National Forest area has induced a sale on an average of approximately 90 cars for every ten miles of road. The National Forest Service has been making a study of motor vehicles in the Tongass and Chugach regions and has traced the purchase of additional cars directly to the provision of adequate road facilities. The Service estimates that the completion of 86 additional miles of road under construction will result in the sale of half a million dollars' worth of cars and trucks.

This story from Alaska carries a definite suggestion to dealers in states or sections of states where road facilities are poor. Volumes could be written about factors affecting sales, but there is no escaping the fact that cars and trucks run on roads, and without proper roads they cannot be sold in any great volume. Dealers anywhere will find it worth time and money to interest themselves in better highways projects. In doing this they do not only build their own business but they help their home communities, because it has been proven time and time again that good roads are a business asset to the territories they traverse.

The Alaska experience is just a hint. Are there any Alaskas in your territory?

With the Equity Agreement Plan Dealers Don't Trade—How It Works

A Reader Writes to Motor World to Tell About an Interesting Used Car Plan—Would It Help You?

EDITOR, Motor World: "We don't trade, but we do," is the watchword of our organization, which has been able to handle used cars on a new car transaction by selling them on commission instead of by purchasing them outright for resale from the used car owner.

Some dealers who work on this basis get as high as 10 per cent for disposing of a new car purchaser's used car, and others operate for approximately 6 per cent. Whatever commission is paid they do not at any time take title to the used car but merely put it on their salesroom floors for sale, in the meantime making the customer who brought the used car in an allowance in the nature of a loan, which is figured considerably below the estimated minimum resale value.

Let me describe the plan:

Suppose a new car prospect, Jones, comes in with a used car, which, when properly reconditioned, we can sell for about $1,000. We talk with Jones about facilities for selling used cars, which he generally concedes are at least better than his own, and we then proceed on this basis:

"Now, Mr. Jones, if we trade your car outright we must figure on our selling expense, any necessary repairs, overhead charges, and a profit on our investment, and can only allow you $800, although your car will readily sell for more money—but if we take your car in on sale you will not find it necessary to stand *all* of this expense. We will take it on sale at your own figure and deliver your new car at once, so that you need not be without a car. And to save you paying for it in full and have a full investment in two cars, we will make you a loan, or advance, of $600 against your car until it is sold—and we will only charge you the actual salesman's commission of 5 per cent in selling it, plus any expense necessary to make it salable."

"But how long will it take to sell it?" asks Mr. Jones.

"If the car is really worth our asking price, it should be sold within a month. If, however, at the end of a month you are not fully satisfied, you have the privilege of taking it out by returning the amount of the loan to us—or else we will buy it at that price, if you prefer, so you can see that we are not trying to get your car at that figure. We don't want the car at any price—and we are only selling it to accommodate you. And after we have disposed of the car, we will immediately refund you the difference between our loan and the selling price, minus the commission and any necessary expense."

Result—Mr. Jones is generally satisfied and signs his order for the new car together with the On Sale Agreement, which he never reads but which we explain to him. His old car is now a secondary consideration, and whatever amount he receives back is like money found because he has already paid for his new car and had accepted our advance price as the allowance on his used car.

Before he leaves our store, however, we say, "Mr. Jones, if we can't get quite $1,200 within the first couple of weeks, don't you think it might be advisable to drop the price a few dollars, say to $1,000?" Generally he does, and we have now obtained permission to sell it for less than his asking price and at a price at which we should move it.

If within a week or two we receive an offer somewhat close either to the asking price or the second price, we phone the owner, and in most cases he accepts—because he is now riding in his new car and wants to get the old one off his mind. Immediately upon receiving payment for the old car we remit the balance due to the owner, and in nine cases out of ten receive a letter of acknowledgment and thanking us for the courteous and prompt treatment we have accorded him. If, however, at the end of a month we have not disposed of the car at the second price or received a satisfactory offer, we have the privilege of selling the car at the advance price or else asking the owner to take it out—but we have only had this case come up but once in over two years. We do not necessarily hold a man to the 30-day clause, but use our own judgment, often times refunding money after this period is up.

It is true that we do not quite break even on this method, but we lose only our overhead and are well fortified to stand any break in the used car market. Likewise we sell our used cars faster.

But, best of all, we have educated the local public to the fact that we do not trade (very few exceptions made, less than 10 per cent), but that we offer a plan which is even better. Neither is the On Sale Plan a one-sale plan which prevents the customer from trying the same medicine twice. We have already had several repeat cases, and the general result is satisfaction; although we know in our own minds that we are taking those cars in to eventually sell at a figure at which the customer would never consider an outright trade.

Because the customer pays the 5 per cent to the used car salesman for selling the used car, we are enabled to pay the new car salesman 5 per cent on the full list price of the new car. Needless to say, the new car salesman won't stand for trading if he can get the used car in on sale. He wants the On Sale Plan, it nets him more money. The house wants the On Sale Plan, they haven't so much involved nor so much possibility for a loss on a sudden depreciation in used car values. Therefore, everyone prefers the On Sale Plan, with the possible exception of the customer, who must first be sold.

In summarizing, let me say that the general satisfaction derived by the house (because of smaller amount lost by the used car department, the smaller number of cars constantly in stock, the smaller amount of money involved and the ability to handle more cars in a faster way), the satisfaction of the salesman (because of larger commission), and the satisfaction of the customer (because he can purchase his new car with less controversy about his old one) has made us 100 per cent in favor of our On Sale Plan, and we do not intend any change in our method of handling used cars.—Eastern Dealer.

Milk Bottles as Oil Containers

Editor Motor World: In a recent issue of Motor World we noted a reader's suggestion for using milk bottles in serving stations for containing oil. Do you think this is practical, when in several states there is a law, with fine or imprisonment, or both, for placing anything but milk in milk bottles?

This is simply a matter of suggestion, for we believe that some readers may be misled by this suggestion. What is your opinion in this matter?—Morris Jones, Inc., Philadelphia.

Answer: Thanks for the suggestion. It is contrary to law to use milk bottles for other purposes than containing milk in New York, New Jersey and Pennsylvania. Such use is a misdemeanor. The garageman or oil station man wishing to serve oil in quart bottles should use unbranded bottles or buy branded ones from their owners. The best plan would be to use unbranded bottles, then there could be no claim that he was putting oil in bottles which might later be used as milk containers.

Is Price All There Is to Used Car Advertising?

Injudicious Publicity Policies, or Lack of Any Policies at All, Destroy Confidence and Discourage Buyers

By SHERMAN LEWIS SMITH
Advertising Manager, Linscott Motor Co., Reo, Boston, Mass.

A GREAT many suggestions have been offered with regard to the used car "problem" during the past year, and even more worrying has been done over it, and yet the real solution seems a long way off. The real solution is one that will relieve the used car congestion on the dealer's floor by increasing the market for these same used cars.

Obviously, with so many low priced cars in the field, as is the case to-day, it is impossible to find any considerable number of people who will purchase a used car solely on the basis of price. The price of almost any used car of the so-called "quality group" will buy a brand new car of some description; and it must be admitted that most people would rather own a cheap *new* car—while it is new—than buy a much better *used* car. I am not maintaining that there is logic in this attitude; but who will deny that it is a fact?

This attitude on the part of the automobile purchaser is due to two factors. Some people have bought used cars—where makes no difference—which were very *much* and not very *well* used and which did not give them, to say the least, very favorable satisfaction. These dissatisfied used car owners have been loquacious in their condemnation of all used cars under the sun, and this has tended to create in the minds of non-owners the impression that used cars are very uncertain, if not always undesirable, values.

The other factor is the shortsightedness of many automobile dealers in running advertising copy that creates in the public mind an unfavorable opinion of used cars in general. A study of the used car advertising in a large eastern city during the past 12 or 14 months shows that, in the spring and early summer, when business is good, the copy is inspiring and tends to build up an impression of desirability; but as winter approaches and dealers are faced with the possibility of having to carry large stocks of used cars through the quiet months the advertising takes on a panicky tone, stressing the extreme *un*desirability of used cars from the dealer's point of view. And it is only natural that the reader will think that what is undesirable for somebody is undesirable for somebody else.

Here are some actual extracts from used car advertising run during the past few months: "Gigantic Price Wrecking Sale," "We must reduce our stock," "Must be sold at once," "We simply must sell these cars at once," "Our tremendous new car business has loaded (!!!) us with these cars taken in trade," "We are determined to sell out all used cars between now and December 1st, REGARDLESS OF COST," "Every car to be sold at YOUR price," "No reasonable offer will be refused."

What is your own personal reaction to such statements as these? If you were looking for a "bargain" you might be tempted to patronize one of these firms; but the average American is learning that a "bargain" is not a bargain so far as automobiles go. The man who is willing to take a chance would probably buy on the strength—or weakness—of such advertising; but the man who has had a sad experience with used cars or has heard of someone who has (and who has not heard of many?) will become more firmly convinced than ever that a used car is a "cheap" proposition in the most odious sense of the term.

An advertisement of "bargain prices" may perhaps attract buyers without doing a great amount of harm; but to call a sale a "clearance sale" implies a desire to get rid of something, and few people want to put $800 to $2,000, more or less, into a car that somebody else wants to "clear out."

With the approach of spring and better buying prospects, used car advertising seems to take on a more dignified and confidence-inspiring tone and we find the copy featuring such statements as these. "New Car Quality at Used Car Cost," "Dependability," "Value," "Our Used Cars are Guaranteed," "For twenty-one years we have realized that *your* interests are *our* interests," "Used Cars of Known Value." And so forth.

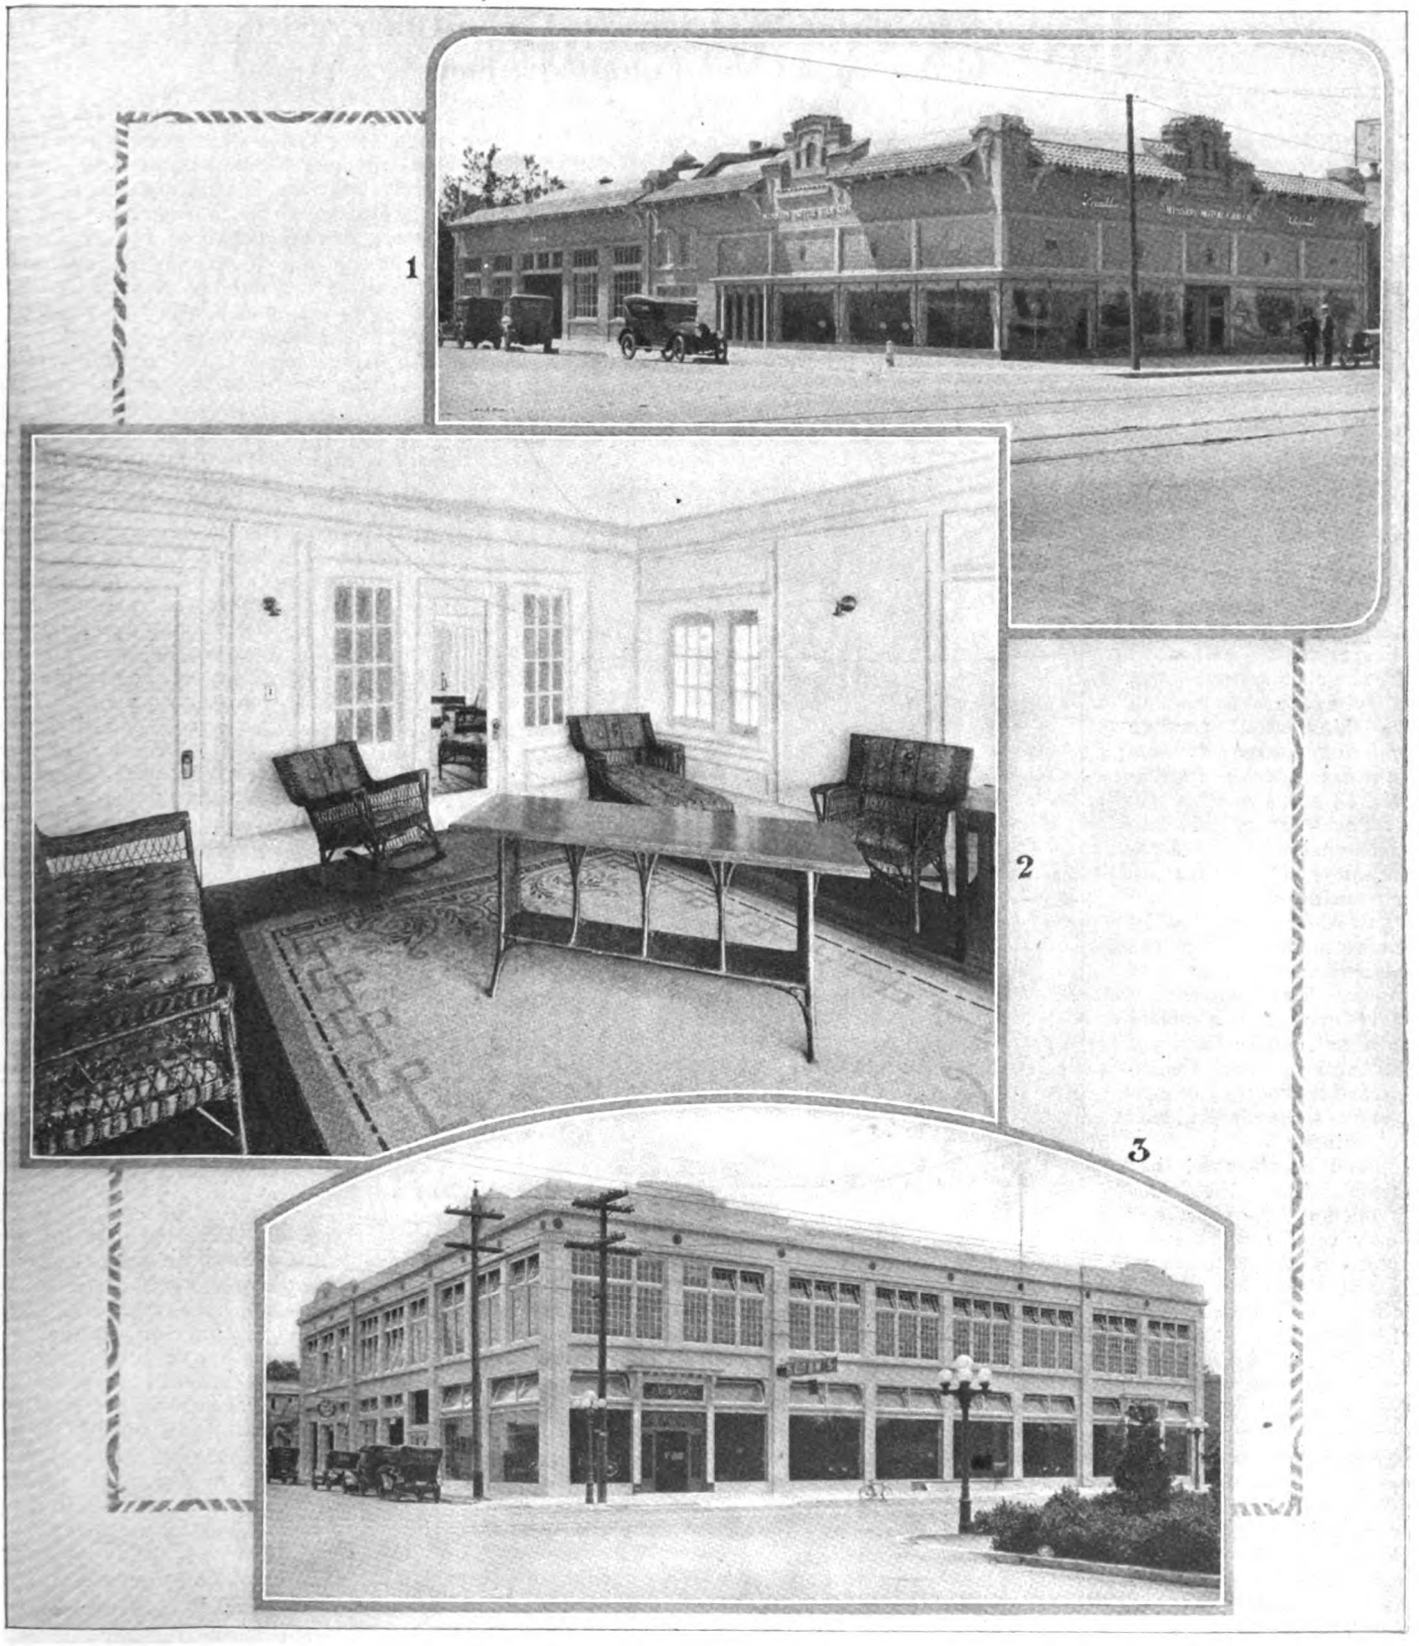
How much better is the impression created by such advertising! How much more likely is this impression to result in the purchase of a used car by the prospective buyer of a cheap *new* car than is that inspired by the former kind of copy!

Used car advertising must be kept on a high plane if an extensive used car market is to be developed; and without this market the field of the new car is going to continue to suffer. Hence everything possible must be done to prevent odium from being cast on the used proposition, either intentionally or otherwise. In this connection advertisers should insist that the newspapers run their copy in a good environment and not on the pages with mail order or patent medicine advertising, as has sometimes been the case.

And they should insist that they, as reputable and reliable dealers, should have preference over others who buy a lot of salvaged material, lacking considerable needed equipment, and advertise it in competition with the legitimate dealer as "never having turned a wheel." Literally, the claims made for such material may be true, but nothing is said about tire equipment, electrical equipment, and many other features which the purchaser expects to get from the reputable dealer and which are usually winked at by the bargain hunter. These "bargain" dealers are not usually consistent advertisers. The newspapers depend on the regular advertisers whose copy runs week in and week out. Thus it is only fair that the reputable dealer should get square treatment from the publishers and automobile editors.

The doctrine of better used car advertising should be preached by every regular dealer. Do not hesitate for fear that if your competitor improves the nature of his advertising you will benefit less from the improvement of your own. We must look beyond the limits of this week's or this season's sales. We must look to the upbuilding of the entire used car field; and this can be done only by bettering the impression generally held of used cars themselves. It is up to everybody to help.

Practical Suggestions for Used Car Advertising



THIS story, written by an experienced automobile advertising man, points out that the trade is approaching the danger time in used car advertising — the time when dealers who fear that winter will catch them with excessive used car stocks are inclined to talk in big, black type about bargains and price slashing.

This kind of advertising doesn't sell many cars, in the opinion of the writer, and it has a tendency to discourage used car buying, not only from the dealer advertising but from all dealers, by shaking public confidence in this class of merchandise.

Showcase "Plaything" Increases Sales

Experiment With Piston Ring Suggests Use of Other Articles in the Automotive Equipment Store

OBSERVE the yearning look in the eyes of customers who wait at the showcase.

Yearning for something to play with.

There is a six-inch piston ring on counters or showcases of some 150 accessory distributors and garages of Kansas City territory. It's not worth carrying away, because it won't fit anything.

It has resulted in increase of more than 200 per cent in sales of piston rings in a few months at some of these garages and sales rooms, and has very materially increased the sales of the manufacturer of this ring in the territory.

And there's no telling how much good it has done, in other ways. It has aroused the interest of the customers, so that they are awake enough to think about possible purchases—*and it has awakened the garagemen to the value of displays.*

The story of this six-inch piston ring reflects a human interest feature in business.

C. A. Grainger, district sales manager for the American Hammered Piston Ring Co., with a territory of five states around Kansas City, got to thinking about the instinctive tendency of customers to handle and look at things.

And he observed that people have the same tendency, wherever they may be. A workman coming into the office of an executive will cast his eyes about the room and over the desk; if there is anything handy for him to touch, he will touch it and examine it.

People going into any store will, while waiting—even while being waited on—glance about, pick up loose objects, inspect anything whatever that is visible. They will read the labels on the boxes and cans on the shelves back of the counter. They will droop over the showcase and peer through the glass, even if the glass is cloudy, down at the dusty and disguised and mysterious boxes that may be reposing there.

If, by any chance, there is an object in the case that is not boxed or canned and can be inspected, the visitor will study it with great attention, probably guessing at its uses if he is not familiar with it, and at any rate dreamily wondering what it might be.

When any objects are touchable on the showcase, these are "meat" for the customer who waits. For he will inspect them in minutest detail, trying to operate them, if they are operable, and expending his best casual thought on conjectures as to utility.

The average customer seems always in a restless, nervous state of mind while waiting to be served. They are all alike, whether in a dentist's office or a garage

—they have to have something to anchor their thoughts to.

Grainger, studying this condition, concluded that the garage or accessory dealer who gave the customer something to play with would be gratifying a real need of the customer. But the customer might thoughtlessly put the object in his pocket, as so many do in the ten cent stores.

It really is not necessary, however, for the garageman to display small items that may be pocketed unmissed; a large object that has some element of novelty about it, even a large object of familiar use, but capable of a little manipulation for the killing of time, would answer the purpose.

And then it was that Grainger conceived his notion of the piston ring to play with. He had the factory make up a lot of piston rings six inches in diameter, of a size to be useless for practical purposes. These were passed around to the company's distributors and to the service stations in this district.

Immediately the garagemen and accessory dealers began to report success for the idea. Nearly every customer, no matter how quickly served, or what he came for, picked up the ring and gave it a glance. Many of them toyed with it, figuring out its theory; many of them inquired as to the special feature.

In the accessory and parts distributing stores, dealers coming in to buy stocks paused to look at the ring; and being enlightened on its features, bought sets for their own cars. They had become interested primarily as users, and soon became interested as dealers. They put the sample ring on their own display cases and found that it operated on the car owners, as it had operated on themselves.

The idea of having something on the display cases to attract the attention of the waiting customer — something that he can look at, pick up and examine and "fuss" with while he is waiting—may be worked out in many ways.

For instance, a section of a large tire is a mighty interesting object to most motorists, and one or two such sections on the display cases in stores that sell tires and accessories would many times a day give the proprietor or clerk an opportunity of very effectively opening a tire selling talk, while a customer is "playing" with the section and waiting for change.

A few cut-away spark plugs, such as supplied by some makers to show the interior construction of the plugs, if left on a display case on a small felt pad would offer an opportunity for customers to closely examine the object and give the salesmen an opportunity to explain it and sell plugs of that particular make.

The same is true of many other articles that are on the shelves of most accessory stores and it is a merchandising idea worth considering for the dealer who is losing no opportunities to put his stock before his customers in the most effective way.

Is the idea worth a tryout in your store?

How I Make Shop Profits in Winter

Will You Tell the Trade How You Do It—in Motor World?
$50 for the Best Story, $25 for the Next, $10 for the Next, and $5 for All Stories Accepted

EXCEPT for a few fortunate folks who have rich relatives nobody gets much in this world without digging for it. It used to be the belief that automobile men might as well shut up shop in winter. Then some of them began digging for winter business. Digging got the business.

Some of these diggers are repairmen—garage operators and service station managers. Are you one of them? Are you making shop profits in winter? If you are Motor World would like to have your story.

How do YOU make shop profits in winter?

Will you tell the story in 500 words, or less, and send it in to Motor World?

The story will naturally divide itself into two parts:

1—What kind of work do you get to keep your shop and your men busy in cold weather?

2—How do you get the work?

Perhaps you specialize in winter overhaul jobs, or painting, or service to cars and trucks kept running in winter or attachment of cold weather accessories. Whatever you do to MAKE YOUR SHOP PAY IN WINTER, will you tell what it is and how you do it? You have an effective way of getting this work into your shop, possibly by advertising, possibly by canvassing, possibly by still another method. What is the method and how do you carry it out?

These must be FACT stories, with your name and the name of your company and town. Put the story in simple language and write it with a typewriter on one side of the paper.

Mail the story to Motor World not later than September 23 and earlier than that if you can. If yours is the best story—the most practical description of a practical method of making shop profits in winter—Motor World will send you a check for $50. For the second best story we will pay $25, for the third, $10, and for all stories good enough to print, $5. The editors of Motor World will be the judges.

Please remember—500 words or less. And if you are a car, truck or tractor dealer, a little bit out of touch with the intimate details of the shop, pass this offer on to your service manager and give him a chance to compete.

Selling Service Brings Buyers to This Dealer

Advertising, Owners' School and Loaning Motors, Chief Features of Merchandising Effort

PUBLICITY is regarded a great sales weapon by the J. M. Osborn Co., St. Paul. This is an authorized Ford sales agency.

Consistent newspaper advertising, an owners' school and free loan motor service are three forms of publicity that are being followed up closely by the Osborn organization.

Also in all correspondence advantage is taken of the opportunity to broadcast information about the Osborn "Service that satisfies."

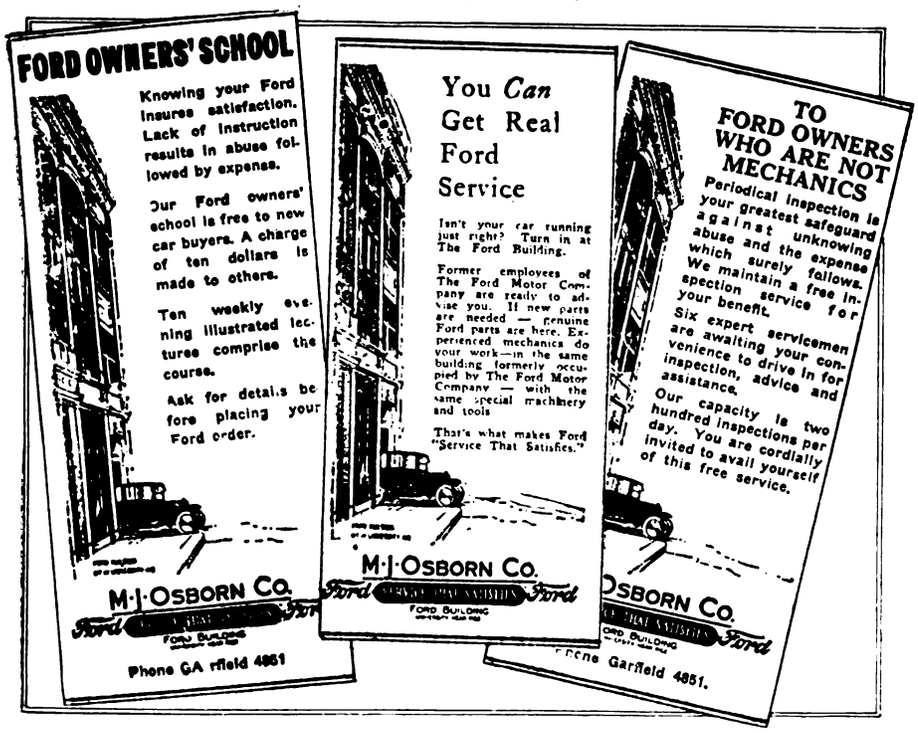
In all advertising and on the correspondence paper one motif is always employed, and that is a narrow view across the front of the big Osborn building on Capitol Hill.

The newspaper advertising is based on the theory that constant appearance gets results. The advertisements appear each Sunday in the first section of the largest newspaper. Each is a five inch-one column advertisement, carrying the cut of the building front with a short statement about some feature of the business. The advertisements make a perfect series.

For instance, one advertisement is addressed to Ford owners who are not mechanics bearing the suggestion that periodical inspection is the greatest safeguard against unknowing abuse and the expense which surely follows. Another discusses the Ford owners' school in 17 one-inch lines. In each instance at the bottom is the Osborn Co.'s trademark.

The free motor loan idea was devised to save Ford truck owners time when their engines require overhauling. The only expense to the truck owner is a labor charge of $7.50 and the loss of perhaps two hours while the change is underway. This will do away with the necessity of hiring substitute trucking while the motor is being repaired, or some $30 extra expense per day.

Information about this deal is stated in a few short paragraphs in a special letter sent to Ford truck owners with a suggestion at the bottom of the sheet that reads: "Will you please see that this letter reaches the man in charge of your cars."



The owners' school is a great success. It is free for new buyers and a charge is made of $10 for others. It doesn't make any difference whether the applicant drives a Ford or some other car. In fact the school is popular with other owners. It has been the custom to have two classes running for a term of 10 lectures each, and students are invited to attend either of the two nights, Monday or Thursday.

That every owner may have a fair idea of the whole of the motor car and its operation the lectures cover the entire range of academic knowledge, including ignition and the nine other important things the tyro should learn about the internal combustion engine. A competent graduate engineer is in charge of the school.

Some genius invented the correspondence form that is utilized in regular correspondence. The second, third and fourth pages are devoted entirely to printed publicity. The first page on which appears the same view of the building used in all publicity, is used for the merchandising message. The purpose is to acquaint every Ford owner with the details of the complete service offered by Osborn.

There are 16 departments and each gets a few lines of explanation. These paragraphs are reinforced with seven engraved cuts. Then on the back is the inevitable sales building front, the faces of the general service and shop superintendents, as a sort of introduction to them, and the Ford scale of car prices, cash and time payments.

Small Space Effectively Used

The advertising of the M. J. Osborn Co, Ford dealer in St. Paul, is another proof of the effectiveness with which small, frequently appearing advertisements may be used. These ads are one column, five inches deep, and have been remarkably successful in getting Osborn's name before the public and bringing business to his establishment. The picture of a slice of the dealer's building makes the copy distinctive, while the selling message is invariably interesting and forceful

Lent a Helping Hand. Result—Five Truck Sales

SOME times the other fellow's misfortune may uncover an opportunity to create good will if the dealer is on the lookout, as evidenced recently by the Atlanta truck branch of the International Harvester Co.

When the garage of the Southern-Dorris Co. was destroyed by fire in Atlanta some 100 automobiles and trucks, owned mainly by commission merchants along Produce Row, were destroyed.

The following morning Mercer Lee, manager of the International truck branch in Atlanta, sent every available truck he had to Produce Row and offered their use to the commission merchants free of charge.

Result—five trucks sold to merchants who had lost their own in the garage fire.

Making a Camera Help Sell Tires

Kansas City Dealer Finds It Profitable to Make Pictures of Local Installations for Selling Purposes

HERE'S a tip, that will help to interest prospects, and to clinch sales.

It can be used by almost any branch of the automotive industry.

It is especially useful for the tire dealer and service station; the source of it is a service station.

Buy a camera.

R. E. Robinson, president of the Osgood-Robinson Tire Co., Kansas City, bought a camera a few weeks ago that is paying him 100 per cent profit as an investment, every day or so.

Many firms, motor car, truck, accessory, tire dealers, use photographs in promoting sales, albums which salesmen carry or which are available in the office. In these albums can be shown the pictures of jobs which may give ideas to prospects. Usually the photographs supplied by manufacturers are of jobs in other cities than that where the salesman is trying to sell.

"A photograph of a job in some other city doesn't mean much to a prospect," said Robinson. "But a photograph of a tire equipment on trucks of a company locally known makes a deep impression."

The Osgood-Robinson Company has used the photograph album, containing pictures of tire equipment on trucks, for years. During the past year, the company has had many pictures taken by local photographers, showing equipment on trucks of the larger local companies which the firm serves. But it was difficult to get such photographs—and rather expensive, too. It was not always convenient to secure the services of the photographer when the equipment could be pictured.

Then Robinson bought his camera, and now a gallery is rapidly being accumulated. Every new equipment can be photographed as soon as the tires are installed. And the album can show dozens, scores of pictures of the trucks of well known companies on which are Goodyear tires installed by the Osgood-Robinson Company.

Another advantage of having a camera of your own is that you can have as many prints as you please, of any job, and get them quickly.

The salesman can leave a print with a prospect, whereby the latter may have before him the example of a well known company that uses these tires.

And here's an important use of the prints: The tire company mails prints of special subjects to lists of prospects. There may be half a dozen prospects on the point of buying a print of a new installation, on trucks in similar service to that required by these half dozen, is mailed to them.

The picture shows the truck bearing the name of the company owning it, often loaded with commodity easily recognized.

The camera is of the autographic record style. The date of taking the picture is shown on the print—and a notation as to the name of the company, etc.

The camera is often used with the portrait attachment, when a close-up of the wheel with its Goodyear tire is desired, or when the tire is to be shown under some special condition of road service, or when notation indicates the length of service.

Not only are truck tire installations shown in these kodak pictures, but also shop jobs.

Various classes of shop jobs may be pictured, to give exact reflection of the results in this station. Signs may be painted on large cards, and erected in the tire repaired, indicating the work done on it. The portrait attachment is especially useful in picturing the close-up views of the retreaded tires. These pictures of single tires are also used as mail literature to prospects.

The home made pictures, showing jobs done by this station for Kansas City firms, are used in the printed advertising of the Osgood-Robinson Company. Half tones are made of pictures, and cards or circulars printed to emphasize particular points, or to indicate the class of patrons of the company.

One such photograph taken by Robinson was of a truck of the Kansas City Star loaded with newspapers. Details as to the tire equipment, the length of service and extent of wear, were given in the text; and the suggestion was made, "If they'll save money for the Kansas City Star, don't you think they might also do the same for you?"

Robinson is not a professional photographer; he had never used a camera until he bought this one. But he quickly learned to use it, and is now quick to take any subject that might appeal to a tire user.

And when he bought a camera, he secured a good one, taking a picture about three by five and a half inches, and with an extra good lens, F 7.7.

The home made pictures are often used in connection with pictures or cuts from the factory. The factory pictures show the utility or special advantage of the tire—and the pictures taken in Kansas City show that local people have caught the idea, and are using this tire.

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer

Fitting, Renewing and Adjusting Engine Bearings

Service Stations and Equipment Manufacturers Have Developed Methods Which Are Quicker and Superior to Hand Fitting

By J. Howard Pile

Part II.

Better Mechanics

Article No. 256

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

BURNING in necessitates a machine which will firmly hold the crankcase and a connection to a power source to turn the crankshaft against bearings which are set so tight that they cannot be moved with a hand lever. Stock models are made for the Ford car and truck, Fordson tractor, Dodge, Chevrolet, Buick, etc.

It is desirable that the burning in machine be set up on a firm foundation to prevent vibration. The power required will be at least 10 hp. for small engines. The first pull is severe. It is recommended that a larger amount of power be available if possible to prevent slowing up of the machine when the clutch is thrown in. The machine should run at 250 r.p.m.

Burning in Bearings

1. Fit the main bearing caps to the shaft so that when they are held in place with the hand, the ends of the bearing caps where the bolts go through the holes will rock slightly. In other words, the bearing must be too tight to set down by hand against the shims. If the adjustment cannot be made very exact by shifting the shims around then the bearing cap should be taken down a little until the proper "rock" to the cap is obtained. The proper rock is between .004 and .006 in. A feeler gage should be used to determine the correct rock until the operator can judge it by feel. A thin visiting card will give about the right rock. The method of testing the rock is shown in Fig. 7.

2. In removing metal from bearing caps to get the correct rock, they should not be filed, but taken down on a piece of emery cloth tacked on a piece of board, as shown in Fig. 8.

3. The babbitt must be beveled to allow for the surplus metal which is burned off in the burning in process. This can be taken out with a file or a special scraper can be made from an ordinary painters' scraper with part of one ground off and a cutting edge formed on the 45 deg. angle side, as shown in Fig. 9.

Fig. 7—Testing the bearing cap rock with a feeler gage

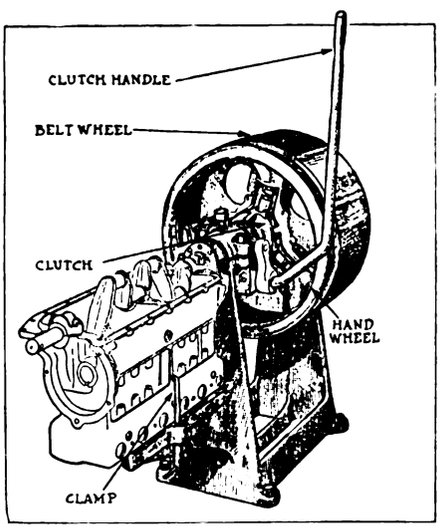

Fig. 6—Bearing burning-in machine

4. Place the block in the machine, engaging the lugs of the driving head in the holes in the flywheel flange.

5. Clamp the block firmly to the bed of the machine.

6. There is a handwheel between the clutch of the machine and the block, and it should not be possible to turn this by hand if the proper amount of rock has been given to the caps, and if they are set down tight with the bolts.

7. Throw in the clutch slowly. If the belts slip, throw the clutch in and out several times till things loosen up so the machinery will take the load.

8. Run the machine for about 30 seconds with the clutch in and then feel the bearing caps with the fingers. The caps should be smoking hot and should not bear the touch of the skin. If any caps are running cool, the caps are not tight enough and the machine should be stopped and the cap fitting be done over again. If cool caps are not caught immediately it will be necessary to do the entire operation over again.

9. The total time of burning in is about two minutes, but this will depend on a number of things. The job is completed when it is possible to turn the handwheel with one hand.

10. The burning in is followed by oiling the bearings well and running the machine for a few minutes.

11. The pistons are now installed in the block and the connecting rod bearings burned in in the same way, the main bearings being oiled to prevent further burning.

12. The same process is carried out for the connecting rods. After they are burned in the bearings are oiled and, with a good supply of oil to all bearings, the machine is run for about twenty minutes. This will give the bearings a high polish and will free them up.

Scraping the Bearings

If it is desired to fit the bearings by the slower method of hand scraping, the operations are as follows:

1. Remove part of the shims till the bearing is binding when the bolts are set up tight.

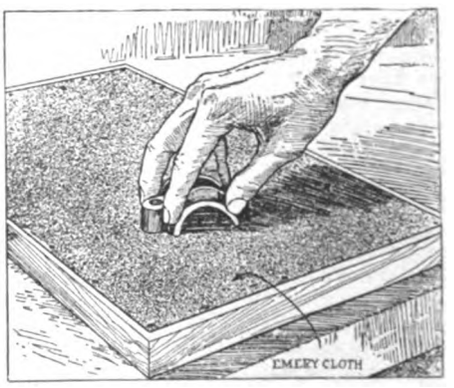

Fig. 8—Bearing caps are taken down on emery cloth tacked on a board

Digitized by Google

2. Scrape the connecting rod bearings first. A handy stand for holding the shaft is shown in Fig. 10.

3. Remove the caps and coat the bearing surface of the shaft very lightly with Prussian blue or lampblack and oil.

4. Put the connecting rod in place and bolt up the cap till the rod can just be moved.

5. Work the rod back and forth a few times.

6. When the bolts are loosened and the caps are removed it will be found that the high spots on the babbitt are marked with the blue or black marking compound. These are the high spots that are to be removed with the bearing scraper. When the bearing is first marked it will be found that the spots are widely separated by unmarked areas. The task is to get the high spots off until the bearing will mark all over.

7. If the bearing is only scraped on the exact places that are marked, the process of scraping will be a long and tedious one. Some judgment in reaching out a little with the scraper will bring the bearing to a fit much quicker. Fig. 11 shows how the markings progress. In practice it is not possible to get every white mark off the bearing and if some small white spots remain, say not over one-tenth the area of the bearing, the job is as nearly perfect as it is commercially possible to get it, and the few remaining high spots will soon run in when the machine is run a little.

8. When the scraping is completed the bolts should set down so that when the rod is in a horizontal position it will not drop of its own weight. When the scraping is finished the burnisher may be run over the whole surface.

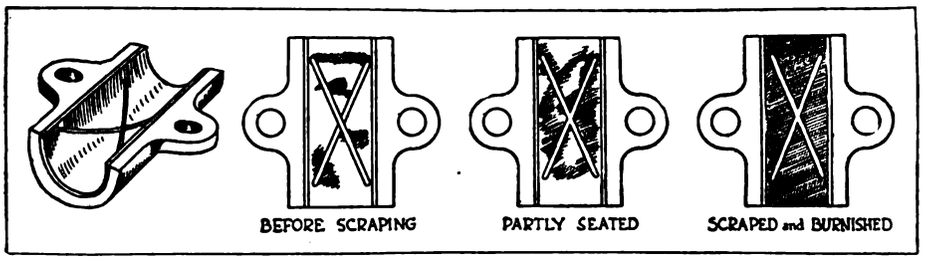

Fig. 11—Progressive stages of bearing scraping showing the markings as the scraping proceeds

9. The main bearings are finished next. Before scraping, each bearing should be tested for tightness. With the other bearings loose, each cap should set down so that the shaft can just be turned with a bar. The crankcase is placed upside down so that the upper bearings are underneath and the caps on top. All the upper bearings are finished first and the caps afterwards. If any bearing shows up high, the other bearings will have to be scraped down to it. If the bearings were line reamed there should be no trouble of this kind.

10. The upper bearings are marked and scraped without using the caps. The weight of the shaft is sufficient to mark them.

11. After finishing the upper bearings, the caps are scraped in the same way. When the scraping is finished and the cap bolts set down tight, the shaft should offer some resistance to turning with each individual bearing. If it turns too tight it will be necessary to add shim material.

12. A light rapping with a hammer around all the bearing caps will insure that no bits of metal or dirt are holding the caps off the shims.

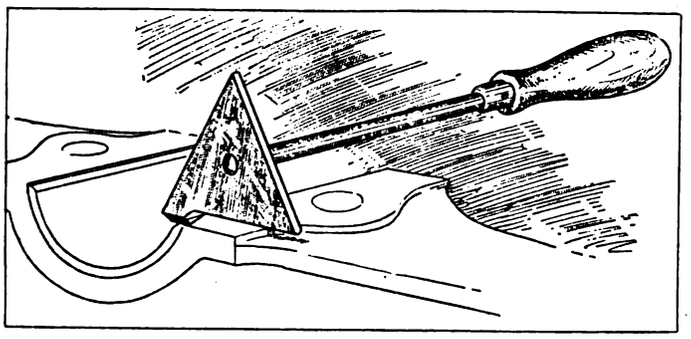

Fig. 9—Cutting a bevel on the babbitt

THE mechanical fitting of bearings is interesting service men handling all makes of cars and engines. Mechanical methods of producing good bearing surfaces are receiving the study of shop equipment manufacturers because it is realized more and more that time savers in the shop are money savers for car owners.

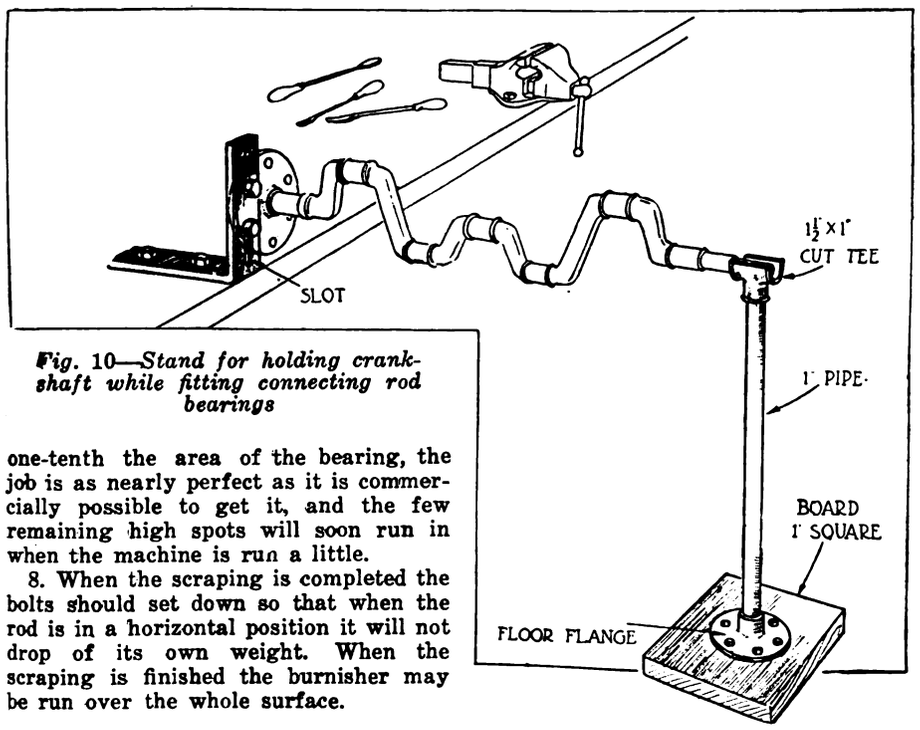

Fig. 10—Stand for holding crankshaft while fitting connecting rod bearings

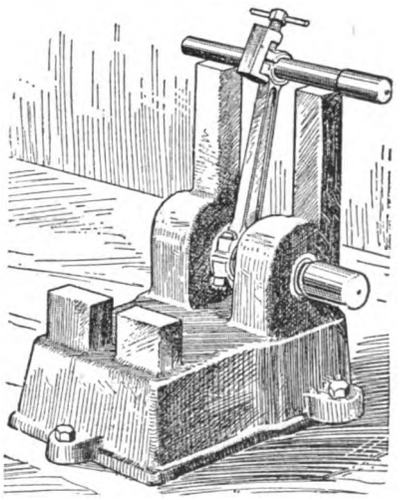

Fig. 12—Connecting rod alignment jig

Aligning the Connecting Rods

Whichever method of fitting bearings is employed it is necessary that the connecting rods be lined up so that the holes in the top and bottom are exactly parallel. If they are out of line it will be impossible to maintain a good bearing at the upper end and knocks will soon develop. A jig for testing the alignment is shown in Fig. 12. In the absence of such a jig a dial gage or surface gage can be used. If the rods are not in alignment, they are bent till they are in alignment with a forked tool.

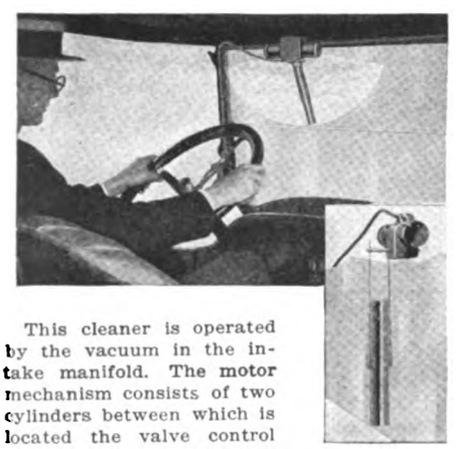
Equipment to Sell

New Devices for the Car and Truck

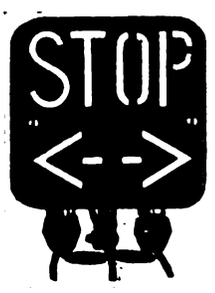
Lowell Timer for Fords



Lowell Equipment Mfg. Co., Lowell, Mass.
Price $3.95

The timer shaft drives a revolving disk which carries a pin on which a rocker oscillates. There is a constant pin on the leading arm of the rocker and an insulated cam wiper on the trailing arm. This wiper is pressed against the contact plate by a spring. When the wiper slips off the contact plate, the contact pin on the other end of the rocker is snapped away from the contact plate across which it is passing.

K-M Automatic Windshield Cleaner



K-M Manufacturing Co., Toledo, Ohio.
Price $6.50

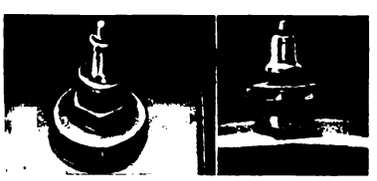
This cleaner is operated by the vacuum in the intake manifold. The motor mechanism consists of two cylinders between which is located the valve control mechanism. The device cleans both sides of the windshield. The housing is made of aluminum. The inside working parts are of steel and all exposed parts are made of brass and zinc.

Bosk Auto Signal

Bosk Auto Signal Co.,
39 Suburban Avenue, Stamford, Conn.
Price $7.50.

This device signals both to the front and the rear. The slow and stop signal is operated by the brake. The right and left signals are operated by hand. The signal is 4½ in. square and 2 in. thick. The price includes switches, lamps, cables, brackets and bolts.

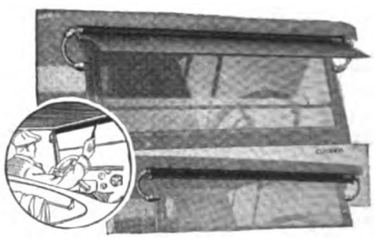
Lubri-Tector



Pierce Governor Co., Anderson, Ind.
Price $5

This device cuts off the supply of gasoline to the carbureter as soon as the oil pressure fails. It is installed in the main gasoline line close to the carbureter. The pressure of the oil operates against a diaphragm in the device and holds the valve in the gasoline line open. If the pressure fails due to a defective oil pump or to lack of oil, the pressure on the diaphragm is of course removed and the valve in the gasoline line closes thus stopping the engine. To make sure that the trouble is due to lack of lubrication, the driver can open the valve by hand and allow the carbureter to fill with gasoline. If the engine stops as soon as this supply of gasoline is consumed, lubrication trouble is indicated.

Lubin Gas and Steam Signal



Robert Marcus Co., 1755 Broadway,
New York City
Price $2

The signal is attached to the radiator cap by boring a 13/32 in. hole. It is held in position by a lock nut. If the temperature of the cooling water rises to a dangerous point the signal gives an audible warning. Another type of signal is made for attachment to the gas tank of any car using the vacuum fuel system. It gives an audible warning of low gasoline.

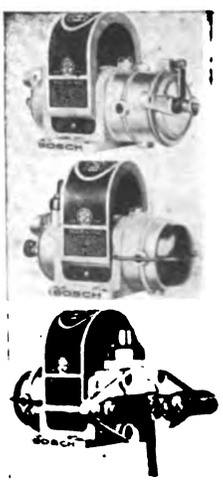
V. P. Automatic Sun Visor

V. P. Appliances, Inc., 4077 Park Avenue,
New York City.
Price $15.

This visor is controlled from the driver's seat. It has a metal roller in a metal casing. Automobile top material is used for the shade. It is attached with universal clamps that fit all makes of cars.

Ryd-E-Z Springs for Ford Truck

Ryd-E-Z Spring Co.,
Cleves, Hamilton Co., Ohio.



These springs give the Ford one-ton truck a platform spring suspension. The spring equipment consists of three 42-in. half-elliptic springs with seven leaves each.

Model F Bosch Magneto

American Bosch Magneto Corp.,
Springfield, Mass.

Prices, FB-1 $30, FO $28, FX-1 $28.

These magnetos are intended for one and two cylinder stationary engines. Model FO is of the oscillating type, Model FX of the rotating type with no provision for spark advance and Model FB-1 is also of the rotating type but is designed for variable timing.

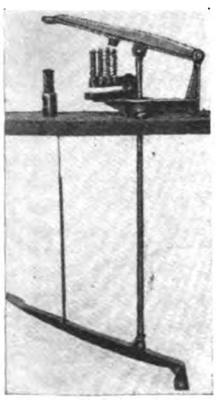
Digitized by Google

Equipment for the Shop

New Machinery and Tools

Spring Shackle Bolts and Cabinets

P. H. Webber Co., Hoopeston, Ill.



This company manufactures a complete line of spring shackle bolts. It also furnishes a cabinet containing 113 bolts in 24 sizes. These sizes will fit over 300 models of cars. A list of the contents is furnished with each cabinet. All bolts are tapped to accommodate any standard grease cup or pressure lubricating system.

Roberts Two-in-One Valve Spring Compressor

Roberts Manufacturing Co., Bend, Oregon

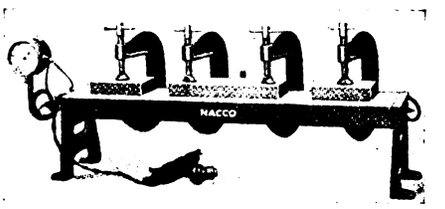
Price $15

This device will compress any overhead valve spring and will cut holes for shims in gasket in the following sizes ⅛ in., ⅜ in., ⅞ in. and ½ in. It is operated by foot pressure. It is easily installed on the work bench.

Gellman Adjustable End Wrench

Gellman Wrench Corp.,

Chamber of Commerce Bldg., Chicago.

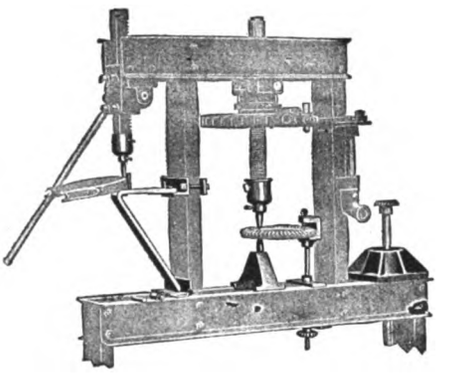


This wrench has an adjustable opening which adapts it to a wide range of nut sizes. It is made in 6, 9 and 12 in. sizes. It is a drop forging and is said to be light, strong and durable.

Nacco Automatic Electric Steam Vulcanizer

Newsom Automatic Controller Co.

5812 Easton Avenue, St. Louis, Mo.

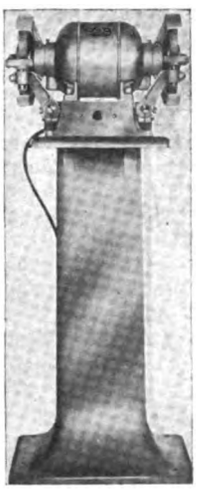


Price, 4 clamp, $50, 6 clamp, $62.50; Direct current attachment $3 extra

The steam used in this vulcanizer is generated by electric heat. It has an automatic controller which holds the steam pressure at 55 lbs. A safety plug is installed to prevent accident which might result if the controller failed to operate. The plate is constructed of one piece of steel boiler tube with machine steel ends welded in. The current consumption on the four clamp size is 300 watt and on the six clamp size 400 watts.

Attachments for Manley Press

Manley Mfg. Co., York, Pa.



Three new attachments have been provided for the Manley combination press. They are the brake band riveting and rivet cutting attachment, compression clutch attachment and ring gear riveting attachment. The prices of these attachments are $16, $17.50 and $15 respectively. The brake band riveting and rivet cutting attachment includes set of cutting dies, set of riveting dies, nose for holding dies, knife, and attachments to press. The compression clutch attachment may be used on any make of press having a 5 or 6 in. opening in the table. It is used for pressing gears or bushings on the end of a long shaft. It will grip shafts from ¾ to 2 in. in diameter. The ring gear riveting attachment consists of an adjustable leveling device, lower block and die, and upper nose and die.

Black & Decker 8-in. Electric Grinder

Black & Decker Mfg. Co.

Towson Heights, Baltimore, Md.

Price, 110 volts $90, 220 volts $94, Pedestal $18

This grinder comes complete with two 8 in. diameter wheels with ¾ in. face, wheel guards, toggle switch in base, and 5 ft. of electric cable with attaching plug. Motor is ½ hp. and its no load speed is 3600 r.p.m. It is furnished with either a D.C. or A.C. motor.

Moon Steel Jack

Moon Bros. Mfg. Co., St. Louis, Mo.

The No. 101 steel jack has a capacity of one ton. The lifting range is from 10 to 15½ in. The weight without handle is 3¼ lbs. The finish is baked black enamel.

Pelican Pliers

Thompson Mfg. Co., Meadville, Pa.

Price 50 cents.

A tool for removing corroded vertical, taper and straight terminal clamps. There is a wrench on the end of the handle for loosening the clamping nut on the terminal. The other handle has a screwdriver on its end which may be used for spreading the clamp.

What Is a Commercial Vehicle?

New York Court Holds That Use and Not Construction Determines Whether Car Should Be Licensed as Passenger or Commercial Vehicle

THAT a Ford "Suburban" or "Station Wagon" is not a commercial vehicle and need not be registered as such, unless actually used for commercial purposes, was the decision of Judge Dike of the New York Supreme Court in the recently decided case of Zabriskie vs. Law et al, 118 Misc. Rept. pg. 481.

The court said, "This is a 'Ford' case. The petitioners, owners of a Ford car known usually as a 'Suburban' or 'Station Wagon,' are seeking a peremptory mandamus order compelling the state tax commission to accept and file petitioner's application in the form annexed to the petition for the registration of their motor vehicle described therein and to accept payment of fee provided by subdivision 6 of section 282 of the Highway Law assigning to such motor vehicle a distinctive number and also issuing and delivering to petitioners a certificate of registration of said car for the year 1922, and in the event of a refusal of a peremptory mandamus order that an alternative order should be made.

"The car in question is a well known type and, as stated in the brief of the petitioners, 'it is in fact known by its acquaintances simply as a 'Ford' and has not even been endowed with any pet name or nickname such as facetious owners frequently bestow on their flivvers, except when it refused to function, when it is sometimes called by other names appropriate to the occasion.' The question presented is whether the petitioners are to pay the fee appropriate to a private car, which amounts to seven dollars and sixty-three cents or that for a light auto truck or delivery wagon, which is ten dollars. The question is of importance to the many owners of these cars in the State as well as a serious question to the tax commission. This is a test case.

"The defendants claim that, inasmuch as the car in question is so constructed as to be adaptable by the removal of the rear of its two seats, for general transportation of goods, it therefore falls within the classification of paragraph 6-A of section 282 of motor vehicles constructed or specially equipped for the transportation of goods, wares and merchandise, commonly known as light automobile trucks or light delivery cars, etc. Petitioners urge that the use, as before described of their car, is not that of an automobile truck or light delivery car, and that a car so used is not 'commonly known' as such. The attorney-general in 1919 rendered an opinion upon the section then in force in which he held that in order to require commercial registration: (1) a car must be one constructed especially or equipped for the transportation of goods, wares and merchandise; (2) or be used for such purposes, and (3) commonly known as an automobile truck. The opinion proceeded to illustrate the difference recognized in other parts of the statute between owner's personal use and a generally commercial use, saying that 'the householder who takes home a ham and a box of soap in his automobile for consumption in his house is not 'transporting goods, wares and merchandise' any more than a street car becomes a freight car by reason of the fact that it carries a school girl with a box of candy.

"But evidently the tax commissioners seek a further clarification to cover this criticism of the section in question, and in the next legislative session the act was amended in its present form by the omission of the phrase referring to the use (Laws 1920 chap. 687), and it is argued that this was a direct expression of legislative intent that the construction was to be the controlling factor, so that if a car was so constructed that it might be adapted to the transportation of goods, etc., it must pay the truck license. It is, of course, the rule that an amendment 'at the heels' of a judicial or administrative construction evidencing an intent to correct or override that construction is entitled to great weight. If so, it seems the amendment fell short of carrying out the purpose.

"It is a familiar sight in the summertime to observe in every town the matinal visit of the painstaking housekeeper to the provision shops and to the railroad depots, being conveyed to and fro by automobiles and motor trucks of various kinds. The vehicles are frequently filled to overflowing with packages, bundles, bags and occasionally trunks or handbags in transit to their residences. This use does not make these vehicles *commercial.* They are still being used as a convenience for their owners, not for hire. The objects have not the character of freight for which a tariff is presumed. It is a personal use, and the element of gain to the owner by reason of his service to, and the use of his motor vehicle by others is eliminated.

"The test of the character of the use of the vehicle is taken into consideration with the form of the car. A car such as is here discussed in the instant case and which was registered under the provisions of the Highway Law section 282, subdivision 6, if purchased from the owner by a tradesman and put to commercial use would then be required to be registered under subdivision 6-A, and for failure to secure that new registration upon its change from a private to a commercial use, the new owner would be liable to the penalty provided in the article, namely, for the commission of a misdemeanor. The question is an important one, both to owners and to the state authorities and should be most carefully considered from every angle. I, therefore grant the application for the peremptory mandamus order. Order accordingly."

Note:—The decision is the first of its kind which has come to the notice of this department. Apparently, however, the same question may arise in other States than New York, as some States require these types of cars to be registered as commercial vehicles also.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Dealer Held Not Responsible for Repairs

A MOTOR car dealer sold a minor a car on time payments. Before all the payments have been made, the buyer returned it to the dealer's garage in a damaged condition from negligent use. The buyer instructed an outside repairman to put the car in good condition. The dealer advised this repairman before he undertook the repairs that all the payments on the car had not been made and that the title to the car remained in his name and further that he would not be responsible for any charges incurred in repairing the car. The repairman reconditioned the car and endeavored to collect the charges for his work from the dealer. The court held that the dealer was not responsible for these charges.—Indiana Reports, June, 1922.

Repairshop Shortcuts

How Fast Will a Car Go and How Fast Will It Stop?

HAVE you ever heard the story of the instructor who was explaining the mysteries of the modern automobile to a man who had bought his first car? Well, here it is, anyhow.

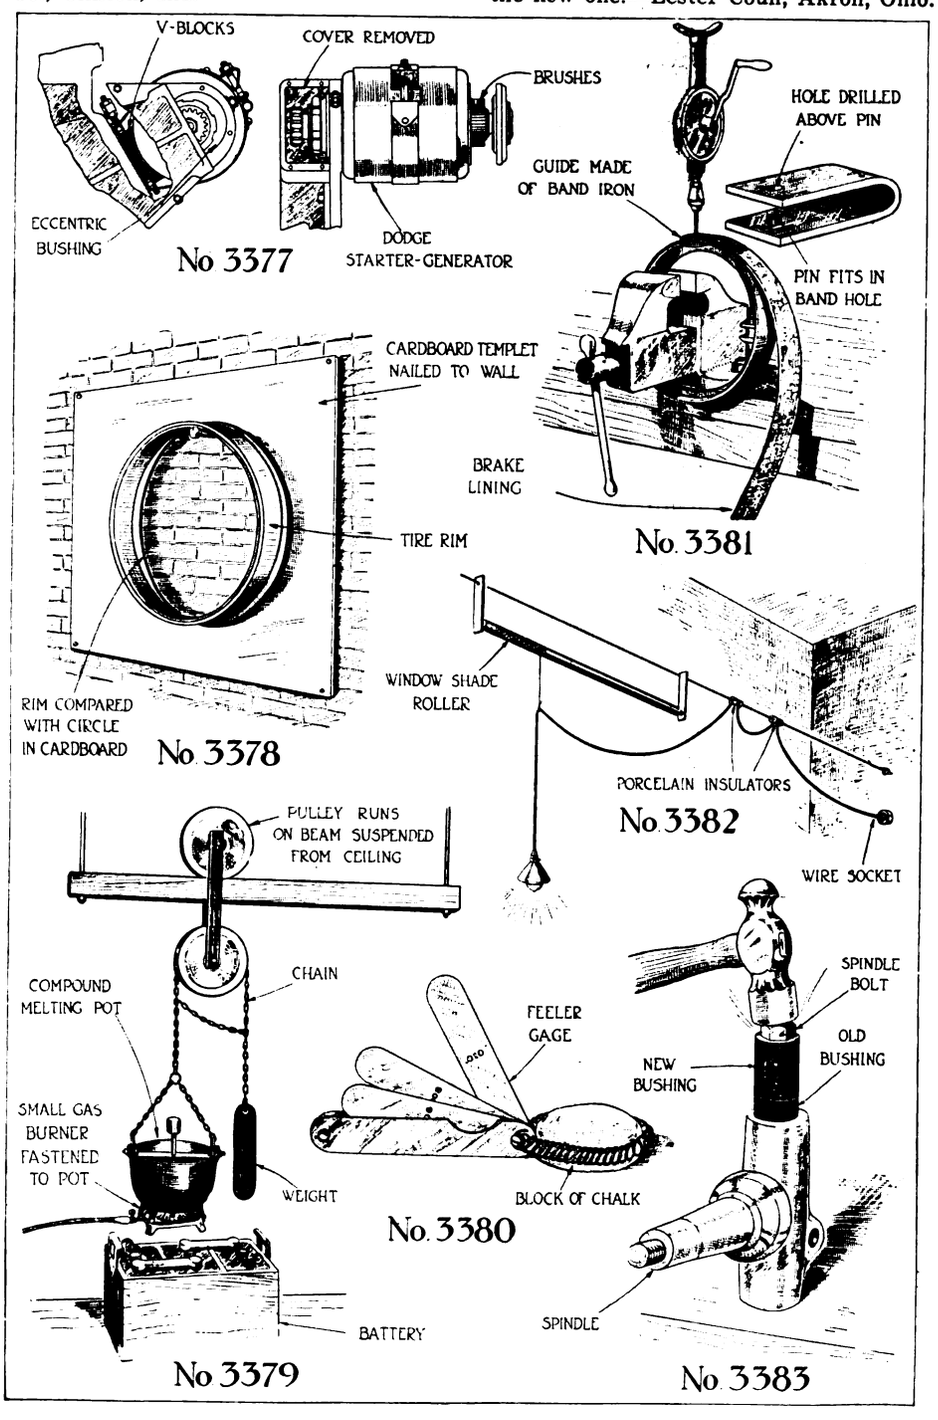
"This," said the instructor, pointing to a pedal, "is the brake. If you find a big tree across the road and want to stop, you push this pedal with your right foot."

"And this," he continued, "is the accelerator. If you would stop more quickly with the same tree on the road, you would step on this."

Still hoping that the new car owner did not find it necessary to "stop suddenly," we call attention to shortcut No. 3381 which shows a very clever method of finding the right place for the hole in the brake lining without the necessity of drilling from the band side which is a nuisance, especially on the internal brake.

No. 3377—Replacing Dodge Starter-Generator Brushes—The brushes are replaced in the Dodge starter-generator without necessitating its removal by taking off the starter chain adjusting cover, loosening the locknut and backing off the V-blocks, the unit may then be turned around inside the eccentric adjustment to a handy position.—Frank L. Markel, Hillsboro, Ill.

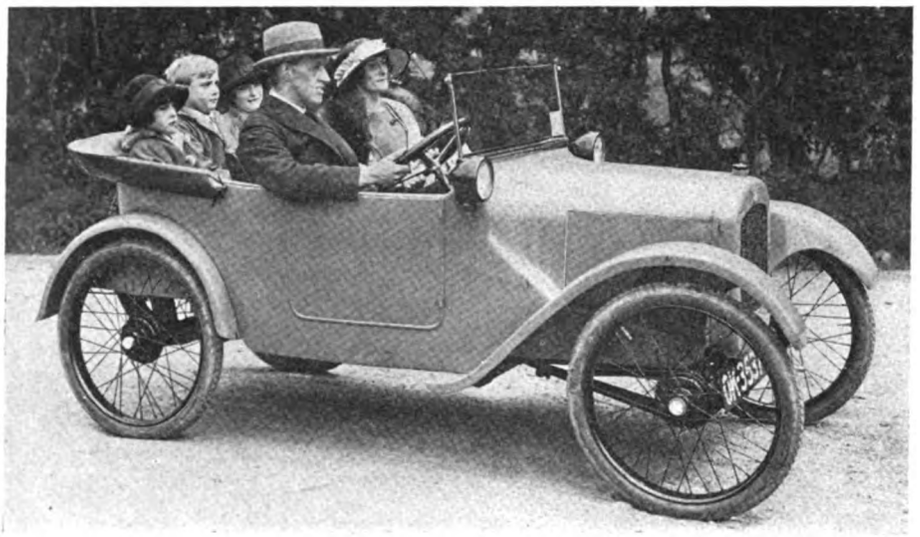
No. 3378—Truing a Tire Rim—Several cardboard templets of common rim sizes are nailed to the wall and rims hung over nails can be compared with the circles cut out of the cardboard to catch high places.—Donald McLean, Cleveland.



No. 3379—Handy Compound Melting Pot—An iron compound melting pot with a valve in its bottom is used. It is suspended as shown in the sketch and a gas heater attached to it. The compound can be poured onto the battery accurately as the suspension of the pot permits movement in all directions.—J. H. Hearnen, Trenton, N. J.

No. 3380—Marking Chalk on Feeler Gage—A piece of marking chalk is attached to a feeler gage with a spring to make it handy for marking tappets, bearings, brake bands, etc.—Donald McLean, Cleveland.

No. 3381—Jig for Holes in Brake Lining—Holes drilled from the lining side may be made to meet holes in the band by this jig which has a dowel in the lower flap which is directly under the hole which guides the drill. The dowel is placed in the band hole to locate the drill hole.—H. V. D. Sweet, Canajoharie, N. Y.



No. 3382—Adjustable Drop Light—A drop light is made adjustable along the bench and up and down by using a shade roller suspended on a wire. The string winds up on the roller and the whole roller can slide along the wire.—J. L. Horney, J. L. Horney-Roberts Battery Co., Clinton, Ind.

No. 3383—Installing a Dodge King Pin Bushing—Where a press is not available, a king pin bushing can be installed by slipping an old bushing over a king pin, followed by a new bushing. A hammer is used to drive the bushing home and the old bushing will prevent damage to the new one.—Lester Coun, Akron, Ohio.

Interesting Things Automotive

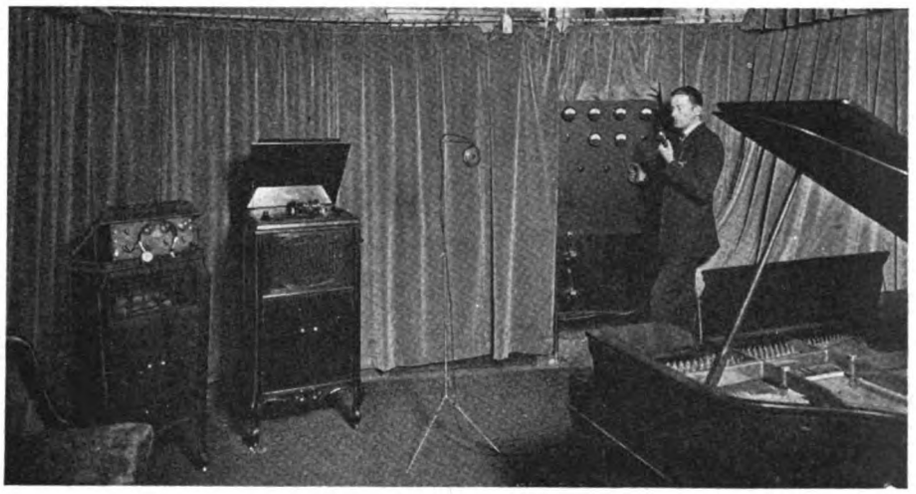
The New Austin, British Light Car

This light car with an overall length of 104 in. and width of 46 in. carries a guarantee of 42 miles to the gallon of gas. It is powered by a four-cylinder, water-cooled engine with piston displacement of 43 cu. in. Front wheel brakes are a feature. The car weighs 700 pounds. It sells in England for £225.

Portable Crane Uses Truck Chassis

A yard crane which is made portable by mounting it on a motor truck chassis is made by the Byers Machine Co., Ravenna, Ohio. When the crane is in actual use jack braces are run out at the sides to take the load off the truck springs and to prevent tipping.

A Utility Car



There's no railroad—hardly any dirt roads—where this car and its complement of newsies dash each morning before daylight. They meet a Texas & Pacific passenger train at Cisco, Texas, in the heart of the oil fields, and then start with a load of Fort Worth newspapers to the oil camps at Pioneer. That town is 25 miles from the nearest railroad and is reached by rough, oilfield trails but the car reaches the camps around Pioneer before dawn. The automobile is the only means of communication between Pioneer and the outside world.

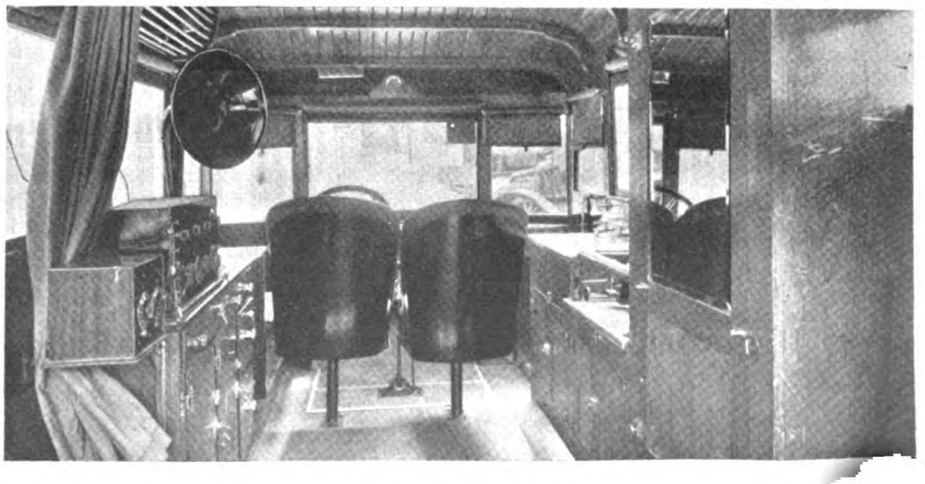
Caught by the Camera

Dealer a Radio Broadcaster

The pictures at the right and below show the interior and exterior equipment of the radio broadcasting station maintained by Earle C. Anthony, California distributor of Packard and Durant, with headquarters in Los Angeles. Anthony uses the radio for entertainments in co-operation with a local newspaper. Incidentally it advertises his automobile business and also the Motoradio, which he is manufacturing and selling.



The Motoradio, mentioned above is designed particularly for use on automobiles. All that is necessary is to set up an aerial on the top of the car or string it from the car to a tree or anything convenient, then plug into the dash socket on the car for current from the regular car battery. Thousands of automobiles in use for touring and camping in California, the occupants of which at times become detached entirely from news events and entertainment, led Anthony to believe a compact portable receiving set would have a very wide market. He obtained the best available talent he could to design and build such a set and having been successful in his initial efforts, now is opening a national market for his equipment under the name of Motoradio. The device can be used in the home as well as in the car.

Auto-Bungalow

The Auto-Bungalow developed by the Reo Motor Car Co. of California is a home on wheels. This model is fitted to the Speedwagon and has a road speed of 30 to 35 m. p. h. The interior equipment includes writing desk, combination buffet and ice chest, Ottoman bed of Pullman type, clothes closet, gas stove, white enameled sink with closet for cooking utensils, hot and cold circulating water, toilet, two revolving portable leather covered chairs, portable collapsible dining table, clock, rear view mirror, two dome lights, and opaque curtains and portieres (insuring privacy).

Programs Increased for September

PLENTY OF BUSINESS WARRANTS EXPANSION

Some Plants Announce Schedules 50 Per Cent Over Those of Past

DETROIT, Aug. 31—The industry will enter September on a generally increased production basis, some factories declaring an increase as high as 50 per cent over the totals which have been maintained since the early part of the year. The total increased production is for the most part a question of men and material, as there seems to be business enough to warrant all the output the factories can summon.

Ford, Dodge and Maxwell, in the lower-price lines, are building and selling just as many cars as can be built. Studebaker, Buick, Hudson in the middle-priced field are increasing output daily, and Hupp will make an important increase in output as new factory space is completed. Columbia Motor has just taken over the Saxon plant and is speeding up as material becomes available. Chalmers Motor will go into a large increase in production if the financing plans are approved.

Rickenbacker, Paige, Liberty, Reo and Earl are stepping up gradually. Chevrolet is prepared to go in for larger production than ever the first of the month. Oakland and Oldsmobile with new body models are increasing operations, and Gray and Durant are pushing factory additions to completion to meet the full demand of the fall season. In the high priced field all factories are at capacity and declare this will be maintained throughout the winter.

PARTS MAKERS SEE DEMAND CONTINUING

NEW YORK, Aug. 31—That automobile manufacturers are figuring on maintaining their record breaking production pace well into the fall is indicated by a survey of the parts and accessories field, which is a good barometer of the immediate future.

This survey shows that not only are the parts makers well booked with orders and specifications up to Jan. 1, and some of them beyond that, but that within the last two weeks some twelve or fifteen of the larger concerns have had their orders materially increased, which would indicate that their customers are not anticipating reduction of output.

The parts makers' orders indicate that the run right now is largely in closed cars in the medium price class, which is a seasonal reason why production should continue the way it is.

GOVERNOR FAVORS TAX ON GASOLINE

CHICAGO, Sept. 2—A state gasoline tax is proposed by Gov. Small to finance further good roads construction in Illinois. The State is now expending the proceeds of a $60,000,000 bond issue to build hard roads, and the Governor favors an additional bond issue with interest and sinking fund to be provided by a gasoline tax. The Governor said:

"I expect to recommend the law to the next session of the Legislature. The people want roads. I believe that the entire bond issue would be paid by automobiles. I believe that a truck should pay its proportion in relation to its earning capacity. A gasoline tax is the surest and fairest way of getting at a basis."

INCREASE IN AUGUST WILL EXCEED 20,000

NEW YORK, Aug. 31 — Estimates based on shipping reports for the first three weeks of this month received by the National Automobile Chamber of Commerce show that the July production of 244,444 will be exceeded by more than 20,000 by the month of August. Last year August production exceeded July by 4445, the figures being 176,340 in July and 180,785 in August, 1921. Thus July, 1922, exceeded the same month a year ago by 38 per cent, while August apparently will increase over August, 1921, by something like 50 per cent.

Production of cars and trucks for the entire industry during the first seven months of 1922 reached 1,395,066 compared with 1,668,550 for the entire year of 1921.

Big Fordson Exposition

ATLANTA, Sept. 4—The Southeastern Fordson Industrial Exposition, held here Aug. 29 to 31, proved to be the largest tractor and power farming equipment show ever held in the Southeast, attendance the first day of the show being estimated at more than 10,000.

The show opened Tuesday with a parade in which tractors, power equipment, farm implements and automotive accessories were featured, the principal idea being to display the tractor from the standpoint of its industrial uses.

RICKENBACKER PLAN HELPS RESALE VALUE

Company Will Maintain Prices and Values with That Idea Foremost

DETROIT, Sept. 4—Capt. E. V. Rickenbacker, vice-president in charge of sales for Rickenbacker Motor Car Co., said to-day that his company had determined upon a policy of maintaining prices and values, so that the Rickenbacker car would always have a high resale valuation. The resale value of a car is a most important sales point, he said, and is especially important to dealers in view of the general used car situation.

Business for the fall, winter and all of 1923 should continue at a high volume, Rickenbacker said. The industry has struck a gusher in the form of closed car business, and this with the regular run of business will keep business at peak. Rickenbacker looks for an increase in closed car demand until it will total close to 90 per cent of all car business. This growth in closed car business may come in three years, he said, in all classes.

Increase in wages in the steel industry will have the effect of stiffening car prices at present levels, he said. Possibility of more changes is remote in the face of an action of this kind, and the gradual tightening of the tension of the railroad strike. Bankers in the farm district have had their timidity in making loans to farmers overcome by the evident certainty of a return to better prices for farm produce.

ENGINE UNDERGOES CHANGE IN MAXWELL

DETROIT, Sept. 1—The Maxwell engine now has a three-bearing crankshaft instead of the two-bearing type. Beyond this change, the entire cars are exactly the same as before. The new type crankshaft has made some changes necessary in the design of the crankcase and bearing mountings, and on the new crankshaft an oil slinger is incorporated. The new shaft is unusually heavy and rigid. The lubricating system has been altered to a drilled crankshaft system with pressure instead of splash. A Stewart carbureter is the only change on the exterior of the engine, and a double row ball bearing in the rear of the gearset replaces the single row bearing.

Haynes Dealers to Meet

KOKOMO, IND., Aug. 31—The Haynes Automobile Co. will hold a business sales meeting for the entire Haynes distributor and dealer organization at the factory on Sept. 7.

Digitized by Google

Equipment Makers Discuss Service

SOME FAVOR DEALERS DOING ELECTRIC WORK

Special Shops Favored by Others in Talks at Summer Meeting of Association

OLD ORCHARD, ME., Sept. 1—Whether the car dealer or the special electric service shop will do the repairing on starting, lighting and ignition apparatus on motor vehicles was one of the main topics considered by the Automotive Electric Association, which is composed of the manufacturers of this apparatus, at a four-day annual convention just completed here.

The manufacturers of electrical equipment are not all agreed. Some of them favor the car dealer doing this work, providing he has satisfactory equipment to make electrical tests and, further, that he has at least one workman who can meet the requirements of the electric manufacturers in his knowledge of electricity and making electrical repairs.

Would Have Special Shops Do It

The other school thinks that electrical equipment will be best serviced by special electrical shops, of which there are many throughout the country and where these shops, in some cases, are the official service stations for a dozen or more different makers of starting, lighting and ignition equipment. These stations, before they can be officially designated as such, frequently have special electrical equipment to the value of $1,000 and, not infrequently, special tools to the value of $200 or more.

One large electrical manufacturer reported making an investigation of the motor car dealers in a territory and discovered that only 1 per cent of them were competent by way of equipment and experienced electrical workmen to do electrical work. Naturally, in such a territory, all the manufacturers of electrical apparatus are backing the exclusive electrical service house where there must be experienced help.

Difficulties In Small Town

The greatest difficulty with electric service, it was stated, is in the small town of a thousand population and perhaps up to 2500, where the exclusive electric shop has had difficulty existing. In such places the motor car dealer attempts to do the electric service work, particularly during seasons when motor car sales are slack. Not infrequently this car dealer turns the electric repair work over to the electric service station when he is busy selling motor cars.

A great difficulty with the electric repairshop in the small town is held to be that the man in charge is frequently not a good merchant. He is an expert electrician, has good machine tools and has a stock of parts, but he lacks the ability to get the car owners to bring their work to him. Making better merchants or business men out of these electric service people is one of the problems that the Automotive Electric Association has in mind.

Co-operate on Registration

One plan wherein the motor car dealers co-operate with the local service station is in using the registration plan. By this plan, when a car dealer sells a car, he gives the purchaser a card of introduction to the local electric service station, which is equivalent to telling the owner that he should take the electric service to that place.

The reason that the dealer turns the service over is that he does not care to put in the necessary machine equipment and engage an expert electrician as demanded by the maker of the electric equipment on the car he sells. Most of the motor car manufacturers do not guarantee the starting, lighting, ignition and battery in their 90-day warranty, and, consequently, the makers of this electric apparatus feel that the car dealer, when he does not stand back of this apparatus, should turn the service over to the electric repairshop, which is the official representative of the maker who guarantees the electrical product.

The twelve or more manufacturers of starting and lighting equipment are engaged on a comprehensive plan of standardization which should greatly reduce the number of models of generators and starting motors, so that the problem of servicing these and carrying adequate stocks of parts for them should, in the next few years, be materially simplified.

(*Continued on page* 43)

CARAVAN SHOWS CARS AND GIVES CONCERTS

ST. LOUIS, Sept. 4—A radio caravan consisting of Overland and Willys-Knight passenger cars and Overland commercial vehicles equipped with a radio receiving set has started from the Willys-Overland factory branch in St. Louis on a two months tour of the principal towns in the St. Louis territory giving radio concerts and demonstrations.

The daily program consists of music, baseball scores, market reports and late national news.

E. T. Windles, manager of the St. Louis Willys-Overland Branch, is sponsor for the caravan. During the past week concerts and demonstrations were given within a radius of ten miles of St. Louis.

SCHRADER CHANGES METHOD OF SELLING

Will Sell Products to Tire Makers, Jobbers or Through Consignees

NEW YORK, Sept. 2—A. Schrader's Son, Inc., manufacturer of valves, gages and other tire accessories, has changed its method of selling. Instead of marketing its products under a license agreement and certain price restrictions, it has adopted a system whereby Schrader goods will be sold direct to tire manufacturers and jobbers or through the Schrader company's consignees who will sell at the same price as the Schrader company.

Suit Preceded Policy

This new policy went into effect Sept. 1 and was preceded two days earlier by a suit for a permanent injunction which was filed in the United States District Court for Eastern New York by the Department of Justice. The complaint charged violations of the Sherman anti-trust law. The government found fault with the old policy, claiming the Schrader system attempted to fix prices and control resales, which, it is charged, violated the anti-trust law, in that the issuing of licenses to wholesalers, which were revokable at the will of the Schrader company, constituted a monopoly.

In a way it was regarded in the light of a friendly suit. Some time ago, when the Department of Justice pointed out to the Schrader company that it thought the old system conflicted with the Sherman law, the Schrader people determined to make a change. This new policy of marketing its goods direct was settled upon and Sept. 1 selected as the date for putting it into effect. The Department of Justice filed the suit, however, as a sort of a precautionary measure, according to Frank M. Avery, the Schrader attorney, to prevent a possible return to the old system. This Schrader has no intention of doing, the attorney contends.

Decree Approved

"We saw officials of the government and agreed upon a form of decree to the entry of which the Schrader company would consent, and it was arranged to have the bill filed on or before Aug. 31 while the old agreements were still in force so that the court would have jurisdiction," says Avery. "Immediately after Labor Day we will enter our consent to the decree, since the Schrader company cannot have any objection to the restraint of a sales agreement which it now has discarded."

ASSOCIATED MOTORS WILL PUSH TRAFFIC

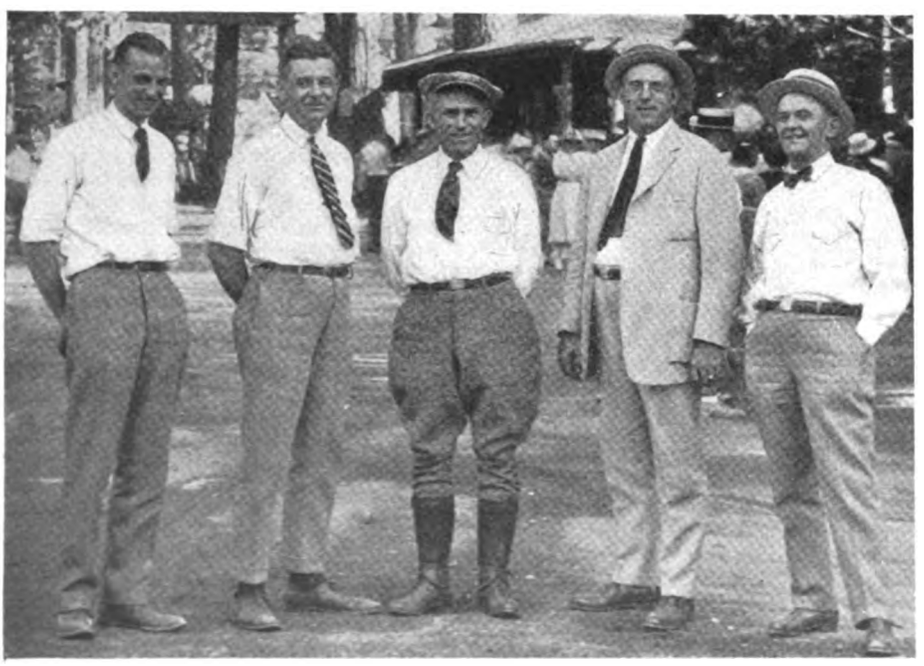
Plant in St. Louis May Also Be Placed in Use as Assembling Base

ST. LOUIS, Sept. 4—Will I. Ohmer, chairman of the board and Louis Ruthenburg, president of the Associated Motor Industries, made their initial visit last week to the Traffic Motor Truck Corp. since the local company was merged with the Associated Motor Industries.

Ohmer stated that the Traffic Truck will retain its name and individuality and the plant will be pushed to its full capacity of production and the prospects are that it will be greatly enlarged after the manufacturing program of Associated Motor Industries is under way.

In addition, the Traffic Truck plant may be the location of one of the five assembling plants of the Associated Motor Industries. This assembling plant will not only assemble Traffic Trucks but the other cars made by Associated Motor Industries.

On account of the central location of St. Louis and its great distribution facilities, the St. Louis assembling plant is expected to be one of the largest units of the Associated Motor Industries. Guy C. Wilson, president, and Ted C. Brandle, vice-president of the Traffic Motor Truck Corp., will remain in office and will act as directors of the Associated Industries. The Traffic Truck plant is expected to maintain its present organization with the advantage of having back of it all the financial resources of the parent body.



Traffic trucks will be assembled at the other assembling plants of the Associated Motor Industries as well as at St. Louis. It is the plan of operations to turn out as many as possible of the parts and to ship them in bulk to the various assembling units. These units to be at Boston, Indianapolis, Louisville and Oakland, California.

Associated Motor Industries, while putting forth its efforts to push Traffic trucks to leadership, will continue to manufacture the other trucks now made by member companies. The Jackson four-wheel drive truck and the Old Hickory truck made by the Kentucky Wagon Mfg. Co. will be continued. The passenger cars manufactured are the National, Jackson and Dixie Flyer.

DeBolt Succeeds Schillo

CHICAGO, Sept. 3—Following the death in an airplane accident recently of E. W. Schillo, president of the Schillo Motor Sales Co., Mercer and Templar distributors in Chicago, and Roy G. Keller, the company's mechanical superintendent, it is announced that the business will continue under the management of C. E. DeBolt, with Ed Jencks as mechanical superintendent.

Wouldn't You Smile If You Had a Chance to Motor Through the Yosemite Valley?

Everybody on the Pacific Coast knows these fellows, automotively speaking. There's "Bob" Williams, manager of Camp Curry, on the left; next to him Gordon Lee, chief of the automotive division of the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce. Lee traveled around the Coast States quite extensively, speaking at the Washington State Automotive Trade Association's convention. When this picture was taken he was hobnobbing with men in the California Automotive Trade Association, including, at the right of Lee, George Haberfelde, president of the association; next to him, B. L. Graves, manager of the Ford Los Angeles branch, and, at the right, Robert W. Martland, secretary of the California association

TARIFF BILL LIKELY TO PROTECT TRUCKS

House Conferees Urged to Accept Senate Amendment Imposing High Duty

WASHINGTON, Sept. 5—Every effort will be made by the automobile industry to have the House conferees accept the Senate amendment to the Tariff bill, providing for the imposition of a 90 per cent ad valorem duty on the re-importations of all motor vehicles sold to the American Expeditionary forces and the allied governments. The amendment will encompass the purposes of the so-called Graham Bill which has been pending in the Senate for several months and will give the much needed protection of automotive manufacturers and dealers.

Because of the activities of American and foreign speculators in re-importing the automotive equipment manufactured in this country and sold to allied governments, truck dealers on the Pacific coast and on the Atlantic seaboard were particularly hard hit. The equipment was sold by the American Expeditionary Forces as surplus property and the foreign governments disposed of it to speculators at ridiculously low prices.

Under the existing tariff laws it was possible for the speculators to bring these products into this country without the payment of duty and sell them at prices which defied competition by American producers. This practice has agitated the automobile industry since the close of the war, but efforts to obtain the necessary legislation to prohibit these unfair methods have heretofore failed.

Senate Provision

The paragraph in the Senate Tariff Bill relating to re-importation is section 322 which reads:

That all automobiles, automobile bodies, automobile chassis, and parts thereof, including tires, exported prior to Feb. 11, 1919, from the United States of America for the use of the American Expeditionary Forces or the governments associated with the government of the United States of America in the war with Germany and Austria, and which have been sold or delivered to any foreign government, individual, partnership, corporation, or association by the United States Liquidation Commission, or by any other agents or official of the United States of America, when reimported into the United States of America shall pay a duty of 90 per centum ad valorem, the value of such articles to be fixed on a basis equivalent to the original value of such articles in the United States, under rules and regulations to be prescribed by the Secretary of the Treasury.

Heads Inland Products Sales

ST. LOUIS, Sept. 2—B. G. Brennan has been appointed general sales manager of the Inland Products Co. He has had a wide experience in merchandising and advertising and will devote his time to the sales development of the full Inland line.

MAY PROTECT DEALER IN SEIZURE OF CARS

Court Decision Will Declare Whether Volstead Law or Revenue Act Rules

ST. LOUIS, Sept. 5—Dealers in various sections of the country who have been concerned over the seizure of motor vehicles detected in illicit transportation of intoxicating liquors will be interested in a decision which may be expected shortly in the Federal Courts involving the seizure of cars.

There is now before the Circuit Court of Appeals for the Fifth District, comprising several of the Southern States, a case on appeal from the District Court in which it is held that the National Prohibition Act (the Volstead law) supersedes a section of the Internal Revenue Act applying to confiscation of vehicles illegally carrying liquors.

Law Penalizes Dealer

The section of the Revenue Act in question provided that when a vehicle is detected carrying liquor in violation of law it would be automatically confiscated with no protection for a lien holder, regardless of his guilt or innocence in the case. Under this law, a dealer who had sold a car on time payments to a man who later used it for "bootlegging" would lose the money which the car owner still owed him. Section 26 of the Volstead law provides that when a car is seized for carrying liquors the car may be sold at judicial sale and the proceeds turned over to the United States Treasury after all bonafide liens are established. This would give a dealer protection for his mortgage on a car where he had no knowledge of the owner's wrongdoing. It has been interpreted to mean that he is entitled to the amount of his lien out of the proceeds realized from the sale of the car but not the return of the vehicle itself.

Despite the provision of the Volstead law, Federal authorities in several of the Southern States continued to confiscate cars without protection of dealers who had sold them on time. They are still operating under the original Revenue Act provision.

Lower Court Repealed Section

In the case now on appeal the District Court held that the Volstead law, insofar as it relates to liquor, provided a new system of law and repealed the section of the Revenue Act referred to. The United States attorney in the case appealed from the decision and the case is now before the Circuit Court of Appeals.

If the Circuit Court upholds the lower tribunal the case might be carried to the United States Supreme Court as a final test of the claim that the Volstead law supersedes the Revenue Act and so protects the interests of the mortgage holder who is innocent of crime.

If the case as finally adjudicated upholds the Volstead law provision, Federal authorities will have to cease confiscation of dealer rights in cars illegally operated by owners without the dealer's knowledge. If the final decision upholds the old Revenue Act provision, the National Automobile Dealers Association will resume its efforts to bring about passage of a bill introduced by Senator Dial, of South Carolina, clearing up the conflict in the statutes so as to protect the rights of innocent dealers.

FLINT PLANT OUTPUT WILL BE 550 DAILY

NEW YORK, Sept. 4—A $1,500,000 contract has been awarded by the Durant Motors Corp. for its proposed new plant at Flint, Mich., which will house the Flint car, the $1,180 member of the Durant family. Construction will start at once and it is expected the plant will be ready the first of the year. It will consist of five buildings of a floor space of 560,000 sq. ft. Its capacity will be 550 cars a day.

To Sell Empire Plant

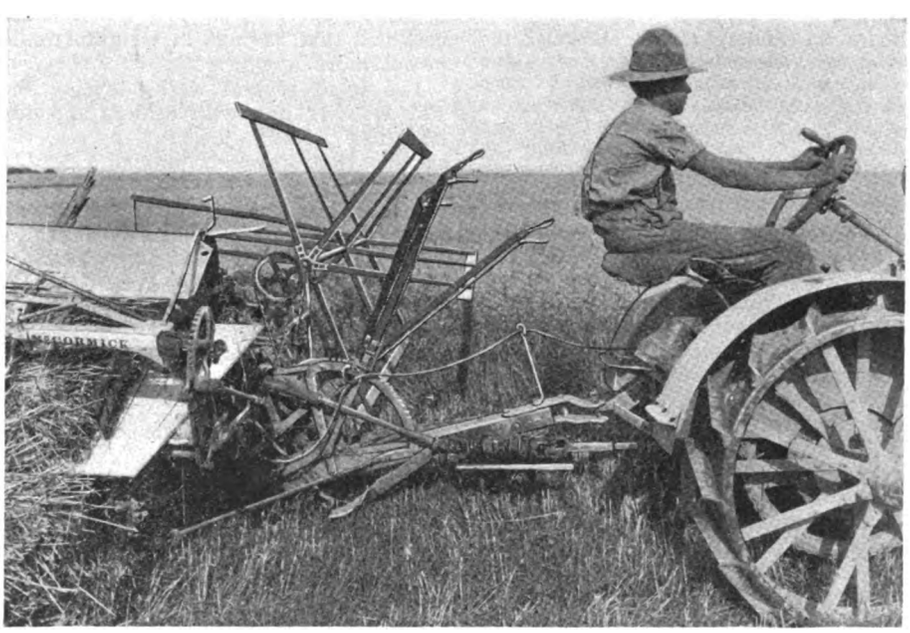
TRENTON, N. J., Sept. 1—By order of United States District Judge Bodine the real and personal property of the Empire Tire & Rubber Corp. will be offered for public sale by the receivers, Arthur H. Woods and C. E. Murray, Jr., Sept. 13.

The Empire company has been in a receivership since March 31, 1920, and has been a going concern all this time. The plant has been particularly busy since last October, and has operated 24 hours a day.

CLEVELAND TRACTOR TO BRING OUT TRUCK

Price Not Fixed—Ready for Distribution Some Time After October

CLEVELAND, Sept. 5—The Cleveland Tractor Co. will manufacture a ton and a quarter truck; the Zeder passenger car that was scheduled to be made in the plant will be manufactured elsewhere and Fred W. Ramsey, former president of the Cleveland Metal Products Co. one of the best known business men of the city and a power in local financial circles, has become chairman of the board of directors of the tractor company.



These important announcements have been made at the plant of the Cleveland Tractor Co. in this city.

The price of the new truck has not been fixed. Plans provide for the production of the truck in October and its distribution shortly after. An expansion of industry and a general revival in all lines of trade next fall and winter are regarded as certain by backers of the company and this was a factor that induced the company to get into truck manufacture.

The tractor that has been marketed by the company will be produced also.

Executives of the company state that the same engine which has been used in the tractor is adaptable to a truck and it will be used in the new product. This will enable the company to make greater use of the engine division of the plant.

New International Power Driven Binders

Power required to drive this binder is supplied directly from the tractor instead of through the intermediary of the binder main wheel. The unit consists of an 8-16 hp. tractor equipped with power take-off transmission and a 10-ft. McCormick binder. Power is transmitted from the tractor transmission to the binder of a shaft provided with universal joints to take up misalignment. The binder is equipped with two sets of control levers so that it may be operated from the seat of either the tractor or the binder

WEST COAST MAY USE CANAL TO SHIP CARS

Dealers Hope in This Way to Lower Rates from Eastern Factories

PORTLAND, ORE., Sept. 5—As a step to cut down the heavy freight rate charged by the railroads on automobiles into the Pacific Northwest, a rate which naturally brings the retail price on an automobile sold in Portland and elsewhere in this section to a higher figure than perhaps any other point in the United States, automobile dealers are considering securing automobiles by water through the Panama Canal, and this practice may be put into execution this fall by a considerable number of the dealers.

The Automobile Dealers Association of Portland, through its secretary, Ralph J. Staehli, has been securing data for the past month relative to water shipments of automobiles and has reached the conclusion that a substantial saving can be made in this manner, which can be passed on to the ultimate purchaser.

High Rates Charged

Staehli says:

Owing to the fact that the railroads coming into Oregon charge for a higher carload minimum than for California the Pacific northwest bears freight rates on automobiles in many instances considerably higher than California, and in fact the highest in the country. There being no prospect of freight reduction, and the railroad situation being altogether unfavorable on account of strikes, the Portland dealers have been investigating water shipment, and many of them are on the point of trying it out.

Under the railway freight schedules the cost of cars, particularly closed models, has been increased sometimes as much as 20 per cent. By shipping by water we believe that this can be considerably reduced. A saving of one-third of the freight charge would be possible, our investigations have disclosed.

The cars could be handled from the eastern and middle western factories to the Atlantic seaboard by rail or canal, it is stated, and then brought through the Panama Canal to the Pacific Coast. While such shipments would take a considerably longer time than by rail, this delay would not be such an undesirable factor during the fall, winter and early spring months, although dealers would no doubt resort to rail shipments during the spring and early summer rush of buying. Some of the smaller dealers and distributors may join together in shipments in order to have the cars come by water and secure the lower rate, it was stated.

Would Have Assembling Plants

WASHINGTON, Sept. 2—A close study of the problems affecting manufacturers' distribution methods has convinced Gordon Lee, chief of the automotive division of the Department of Commerce, that it would be of an advantage to establish partial assemblage plants in the West. He believes that these plants could be operated at low maintenance cost and that savings in freights would be enormous.

Lee spent several weeks touring the Far West talking with dealers and distributors. Many jobbers express the opinion that, through partial assembly and packing in box cars, automobiles and trucks could be laid down for $30, whereas the present freight in many instances approximates $200.

Lee made a study of the automotive industries through the West Coast States by journeying via automobile from San Diego to Seattle, with the exception of one short train journey. On this trip through the Yosemite Valley, he was accompanied by George Haberfield, president, and Robert W. Martland, secretary, of the California Automotive Trades Association, as well as by Byron L. Graves, manager of the Los Angeles branch of the Ford Motor Co.

Lee called the attention of manufacturers to the fact that western jobbers and manufacturers of automotive equipment as the result of educational work being carried on in behalf of jobber and dealer by the Automotive Equipment Association, are now making an earnest attempt to follow out better business practices and eliminate wastes from methods pursued in the past.

SEES NATIONAL PARKS AS GOOD SALES FIELD

WASHINGTON, Sept. 2—National parks offer fertile fields for business for those selling automobiles and accessories, in the opinion of Gordon Lee, chief of the automotive division of the Department of Commerce, who has just returned from an extensive trip through the West.

"National parks draw thousands of tourists monthly and this demands service requirements which are not to be found in the East at any point. I visited several of the national parks and found thousands of cars from practically every State in the union. One dealer pointed out that the minute these parks become so over-crowded that the tourists are turned away, there still will be many parks to be opened up, which means service stations and equipment to care for the tourists' cars.

"Here's one example of the possibilities of automotive business in the future: With the Columbia River basin project to be put forth in the State of Washington, 1,900,000 acres of fertile and irrigable land will be released and every owner of one of the 120 acre plots will be in a position within a year or two to purchase an automobile and accessories to go with it."

FORD REPORT SHOWS INCREASED SURPLUS

Cash and Debts Receivable Gained $61,000,000 in Year Ended April 30

BOSTON, Sept. 5—Ford Motor Co., incorporated under the laws of Delaware, has filed with the Massachusetts Commissioner of Corporations its financial statement covering the year ended April 30, 1922, showing $57,000,000 added to the Ford surplus, while there is a gain of $61,000,000 in cash and debts receivable.

The statement shows a profit and loss surplus of $240,478,736 on that date against $182,877,696 on April 30, 1921. Cash on hand and debts receivable totaled $148,615,334 against $86,995,165 last year, while inventories were valued at $45,208,094 against $63,848,157.

Accounts and notes payable were reduced from $48,886,141 at the close of the fiscal year ended April 30, 1921, to $33,089,894 on the same date this year.

Balance Sheet for Two Years

The detailed balance sheet as of April 30, 1922, with comparisons for two years, follows:

ASSETS

	April 30, 1922	April 30, 1921
Real estate	$81,026,633	$71,329,719
Machinery and equipment	49,401,132	46,459,046
Inventories	45,208,094	63,848,157
Cash and debts receivable	148,615,334	86,995,165
Patent rights	110,740	81,397
Securities	15,749,953	10,361,964
Furn. fixtures, autos.	39,221,860	44,779,634
Miscellaneous invest.	500,815	501,815
Good will	20,517,986	20,517,986
Deferred charges	196,399	265,674
Stock in subsidiary companies	.....	.....
Total	$400,548,946	$345,140,557

LIABILITIES

	April 30, 1922	April 30, 1921
Capital stock	$17,264 500	$17,264,500
Accounts and notes payable	33,089 894	48 896.141
Dept. reserve, etc.	*50,829,307	*43,493,394
Accrued expenses	.....	.....
Deferred charges	853,950	3,027,120
Reserve for federal and local taxes	58,032,559	49,591,706
Profit and loss surplus	240,478,736	182,877,696
Total	$400,548,946	$345,140,557

*Includes amortization reserve.

Wheel Contract to Hayes

DETROIT, Sept. 4—Hayes Wheel Co., of Jackson, Mich., has secured the contract for supplying wheels to the Durant Motors Corp. This order takes in the complete line, including the Durant fours and sixes, the Flint and Star. It is said to be the largest order for wheels ever secured by one wheel manufacturer.

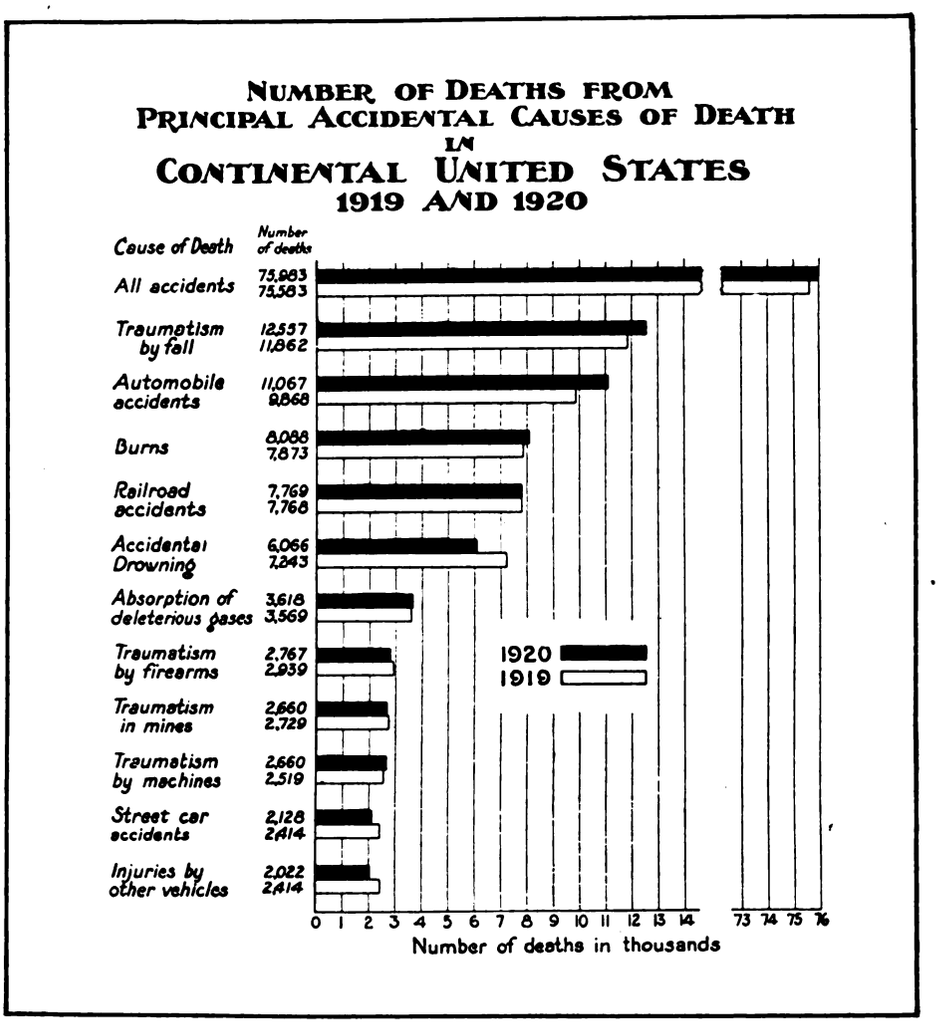
Digitized by Google

OFFER SUGGESTIONS IN SAFETY CAMPAIGN

Oct. 8-14 May Be Set Aside as Time for National Observance

WASHINGTON, Sept. 5—Invitations to 50 representatives from each of seven groups concerned in highway safety are bringing a deluge of suggestions to the Highway Education Board for incorporation in a national safety campaign planned to retard the accident and death toll of the country due to traffic mishaps.

Almost without exception, replies indicate an eagerness for such a campaign, stressing the timeliness and need for a national movement of this nature. Groups requested to offer suggestions include automobile dealers associations, automobile clubs, pupils, teachers, superintendents of schools, chambers of commerce, and police officials.



Outstanding suggestions received to date, it is said, include a national essay contest among all pupils doing class room work in the fifth to eighth grades, a national safety lesson contest among teachers, the observance of "Seven Days for Safety," and the distribution of "Pledges of Carefulness" among pedestrians and drivers alike. Oct. 8 to 14 seems the date most favorably agreed upon for the observance of "Seven Days for Safety," according to the general tenor of the letters received.

Several weeks ago the National Automobile Chamber of Commerce offered to set aside approximately $6,000 in prizes for the best safety essays and lessons if sufficient interest was indicated. If the date of Oct. 8 to 14 is definitely fixed for the observance of "Seven Days for Safety," or "National Safety Week," it is expected that those in charge of local campaigns will arrange their dates to conform, and their activities to include the salient features of the national movement.

NEW AIR COOLED CAR COMPLETED BY HOLMES

CANTON, OHIO, Sept. 2—Plans for reorganization and refinancing the Holmes Automobile Co. are being worked out by a committee consisting of Ed. Langenbach, chairman; Norman C. Raff, Charles A. Kolp, William T. Kuhns, R. V. Mitchell, I. M. Taggart and Raymond Loichot. A meeting of stockholders and others interested will be held preliminary to the stockholders' meeting to be held on Sept. 6 when final plans will be consumated.

In connection with the refinancing and re-organization plan, another announcement of special interest made during the past week was that the Holmes Company has completed a new four cylinder air cooled car which has been developed by the company during the past year under the direction of Thomas M. Kearney. It is expected that the car will sell for approximately $1,200.

76,000 ACCIDENTAL DEATHS IN 1920 ARE CHARGED AGAINST CARELESSNESS

DETROIT, Sept. 2—Seventy-six thousand accidental deaths is the astounding bill charged against Careless America during 1920, according to the report of the public accident statistics committee of the National Safety Council presented at the annual safety congress.

While the 1920 toll from all public and industrial accidents is a decrease of 3,300 over 1911, the beginning of the decade, there is only a balance of 400 on the credit side of the ledger over the 1919 total. This record is viewed with concern by the nation's leaders of organized accident prevention since the yearly downward tendency of accidental deaths in the United States during the past decade, constant up to 1919 came to a halt in 1920.

Automobile accidents are held to be in part responsible for the unfavorable experience of 1920; in that year there were 1,200 more deaths from that cause than occurred in 1919. The chief reason for this, it is pointed out, was the large increase in the number of automobile users. The automobile fatality frequency for 1920 was 30 deaths a day, a total for the year of 11,000. The 1921 estimate of automobile deaths, based on figures now available from 50 of the largest cities, indicates a considerable increase over 1920.

Over twice as many men died accidentally in 1920 as did women, the figures showing in round numbers 55,000 male fatalities as compared with 21,000 women. The latter, however, suffered greatly from domestic hazards, 6,000 having died from falls and 4,800 from burns; 2,756 died from injuries received in automobile accidents. Automobile accidents were responsible for 8,300 deaths among men while railroad mishaps caused 6,930 fatalities. One third of all automobile deaths occur among children under 15 years of age.

People died from falling accidents of all kinds at the rate of 34 a day, a higher rate than even automobiles. Burns claimed 22 lives a day, a total for the year of 8 088 and an increase of 215 over 1919. Other major causes of accidental deaths are listed in order of importance as follows: Railroad accidents, 7,769; drownings, 6,066; deaths from gassing, 3,618; firearms, 2,767; mine accidents, 2,660; machinery, 2,660; street cars, 2,128; other vehicles, 2,022; conflagrations, 1,277.

DETROIT EDISON HAS TWO WEEKS' BUNKERS

Most Plants Rely on Company to Supply Them with Manufacturing Power

DETROIT, Sept. 4—Curtailment of power to the automotive plants in this district will be necessary if conditions do not improve within two weeks. The Detroit Edison Co. has sufficient on hand for this length of time, according to Alex. Dow, president, and will have to curtail if coal shipments are not speeded up. All plants in this city with the exception of Ford are furnished with all or the major portion of their power by this concern.

According to all authorities the question of getting coal into the Detroit district is not one of mining the coal, but of moving what has already been mined. Even this condition is not general but is confined to the so-called coal belt railroads which operate south and east of the Ohio River. These are notably the L. & N., C. & O., N. & W. and the branches of the B. & O. operating through West Virginia. The northern roads can and are handling the coal turned over to them rapidly.

All of the plants have supplies for 30 to 60 days as far as heat and special power requirements, such as hammer rooms, etc., are concerned. C. S. Mott of General Motors Corp. states that the average for the G. M. C. units in this district was better than 30 days for coal on hand. All of these concerns in the Detroit zone, however, are directly affected by what happens to the Detroit Edison Company, as they are not equipped to manufacture all of their own power, but simply to take care of their heating, compressed air and similar needs.

There is no thought of changing over to the use of fuel oil in Detroit, although the Ford Motor Co. has some temporary installations in their power plant in Highland Park which are working out very well. The same problems which affect the movement of coal also affect the movement of fuel oil as the oil would have to come in by rail, since Detroit has no pipe line.

TO USE STEEL FIRST IN NEW MARTIN CAR

SPRINGFIELD, MASS., Sept. 4—Preparations are complete for the manufacture of the Martin two-passenger car to sell for $250. Revised plans call for steel instead of aluminum construction at first, though it is hoped conditions will make it practicable to bring out the lighter car later within the desired cost limits.

C. H. Martin, president of the Martin Motor & Trailer Corp., says that the car has met all preliminary tests and it is purposed to put it in production this fall.

CHEVROLET FLAT RATES

A complete schedule of timed flat operations on the Chevrolet will be published in the next issue of Motor World. The schedules cover several hundred operations, major and minor, on both the Supreme (490) and FB models. This will be the eleventh flat rate schedule published in Motor World. The schedule has a somewhat unusual arrangement of major and minor operations to facilitate writing up repair orders.

JULY SALES FELL OFF THROUGH NEW JERSEY

NEW YORK, Sept. 6—July registrations of new automobiles and commercial cars in 21 counties of New Jersey showed a decline from the previous three months, during which there had been a consistent gain. Sherlock & Arnold, hitherto confining its sales analysis to counties in and around New York, has branched out into New Jersey and is publishing the New Jersey Automobile Sales Analysis, starting its compilation with April of this year. July sales aggregated 5672 automobiles as against 7450 in June. The recapitulation for the four months gives a total of 26,310 new cars and 5437 commercial cars.

In April there were five cars registering over the 600 mark with the rest running some distance behind. The following month saw four over the 500 mark, some distance setting apart the last in that group from the next highest. The same ratio obtained in June but in July there were only two cars exceeding that figure.

The registration figures follow:

	Automobiles	Commercial Cars
April	6,535	1,257
May	6,653	1,478
June	7,450	1,517
July	5,672	1,185
Total	26,310	5,437

Buick Expands in Detroit

DETROIT, Sept. 4—Four new sales and service stations and one authorized service station has been added to the Buick retail organization in Detroit as part of an authorized service program initiated by J. A. Coy, manager of the Detroit branch, which will establish stations in every part of the city. With the new stations there are now 10 authorized stations which include eight sales agencies.

Harper Sees Record Year

WATERLOO, IOWA, Sept. 5—Harry B. Harper, general sales manager of the Studebaker Corp., making an extended tour through the agricultural section of the country for a survey of territorial conditions and requirements, predicts that 1923 will be the biggest year in the history of the country.

CLEVELAND BOUGHT COAL FOR ALL YEAR

Had It Delivered, Too, Before Transportation Difficulties Set In

CLEVELAND, Sept. 1 — Cleveland automobile manufacturers and parts makers regard the coal situation at the present time as most serious to the industry of the city, but none interviewed is in immediate danger of shutting down on account of lack of fuel.

In many instances purchasing agents took their cues last spring and went into the market and purchased supplies for the entire year and had it delivered before transportation became a problem.

Others have purchased electric power from the Cleveland Electric Illuminating Co. as a means for avoiding trouble that comes periodically through labor troubles in the coal mining industry and in transportation. The illuminating company says only a most serious situation would cause it to curtail the amount of power for plants. Still others laid in big supplies of fuel oil and have burners installed ready for use.

Need Coal for Heating

In the plants that have electric power and fuel oil burners the only trouble possible to come from the coal situation is failure to obtain sufficient coal to heat plants, but that is considered generally a remote possibility.

The situation thus outlined applies to those manufacturers who are big and strong financially and were able to buy coal early and to change over to other sources of fuel. There are smaller concerns that have limited supplies of coal, from two weeks to a month on hand that will be forced to shut down unless relief comes.

NEW OAKLAND MODELS HAVE BODY CHANGES

DETROIT, Sept. 1 — The 1923 Oakland models show many changes in the bodies, a few minor changes in the chassis and equipment and no change in the price. The bodies are deeper with crowned fenders wider and heavier than before and the runningboards are lowered 1½ in. All models are now fitted with drum type headlamps and the closed models have heaters and rear view mirrors. The sport model is more completely equipped and better upholstered.

The chassis changes are slight. A new type Marvel carbureter is used and the exhaust heated manifold has a temperature control operated by a throttle. A new Remy distributor with semi-automatic advance is enclosed in the breaker box instead of the moving distributor head. The gearshift levers are longer and the throttle and spark controls are mounted on top of the steering column with short levers, eliminating the conventional quadrant.

MAKERS OF EQUIPMENT TALK OVER SERVICING

Some Favor Dealers Doing Electric Work—Others Prefer Special Shops

(*Continued from page* 37)

Their plan of standardization of electric generators is this: They hope to have perhaps six different sizes of generators, to be known as Nos. 1, 2, 3, 4, 5 and 6. It is hoped that each manufacturer will confine his manufacturing efforts to practically these six sizes. No 1 would be for the small four-cylinder cars with high-speed engines. No. 2 might be for the medium-priced six-cylinder cars. No. 3 would be for the higher grade of cars. No. 4 would be for the highest-priced cars. No. 5 would serve for motor buses and No. 6 would serve for aircraft and railroad gasoline cars.

Would Be Fewer Motors

Similarly, the number of starting motors would be greatly reduced and the different manufacturers would build to these sizes.

When the number of sizes would thus be reduced, the problem of standardization would be carried further so that, probably, brushes in the different generators would be interchangeable among different makes. Bearings might be made interchangeable, as well as lubricating devices, etc. The whole plan would be not only to simplify service but greatly reduce the number of different parts.

Doubts Ford Will Close

NEW YORK, Sept. 1—Wall Street apparently believes that Henry Ford will not close his plants on Sept. 16 as he has announced he will do. To support this belief, it reported in the banking districts that one concern that supplies Ford with headlights is said to have been requested to ship immediately for delivery Sept. 12 all specifications ordered for September, while this same order is said to have been given a wheel manufacturer.

Rickenbacker to Wed

SAN FRANCISCO, Sept. 2—Edward V. Rickenbacker, former automobile racer and American overseas aviator and now vice-president of the Rickenbacker Motor Co. of Detroit, which he organized, will be married in New York on Sept. 14 to Mrs. Adelaide Durant, former wife of R. C. Durant. They expect to sail for Europe on Sept. 16 on the Majestic to spend their honeymoon. Major Rickenbacker was the premier American ace in the World War.

Piston Company Promotes Jacobs

BALTIMORE, Sept. 4—The American Hammered Piston Ring Co. announces the appointment of Joseph S. Jacobs as secretary and assistant treasurer. Jacobs joined the company in sales promotion work in 1919, when it was purchased by the Bartlett Hayward Co. and moved to Baltimore.

Later he became manager of the sales promotion department, and a year later was appointed advertising manager. C. B. Cook, former assistant, succeeds Jacobs as advertising manager. He came to the company two years ago from the staff of the Baltimore *Sun*. C. A. Grainger has been made assistant general sales manager to succeed Thomas B. Blakiston, who now is general sales manager. For the past year and a half, Grainger has been district sales manager for the company in the Gulf States district.

Charles A. Singer, Jr., Dies

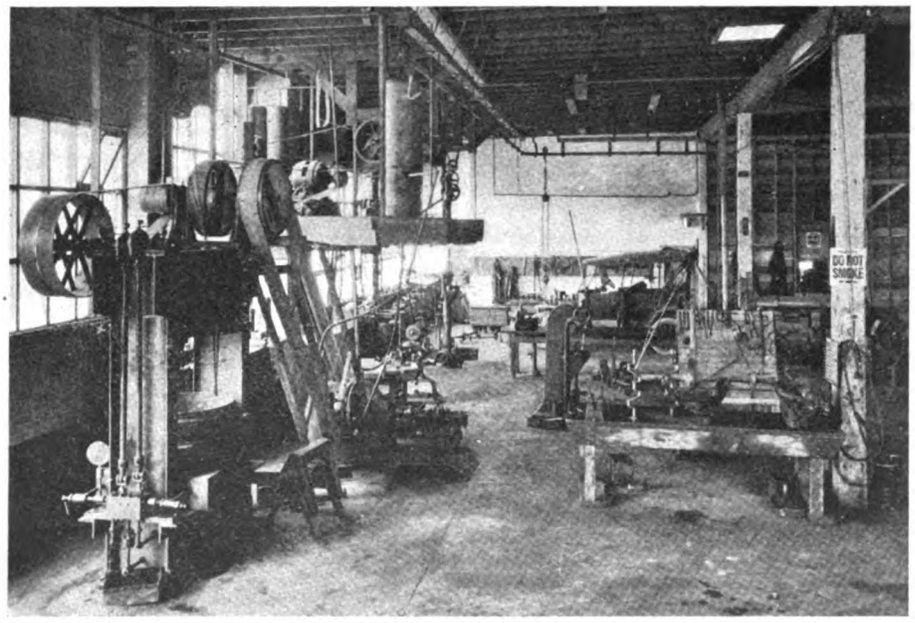
NEW YORK, Sept. 1—Charles A. Singer, Jr., died suddenly in a New York hospital yesterday. For several years he was prominently identified with the company manufacturing the Palmer-Singer cars, his father being president of the concern. The company passed out of the automobile industry six years ago and since the end of the war Charles A. Singer, Jr., has been a member of the firm of Partridge, Singer & Baldwin, which is an exporter, specializing in the sale abroad of American cars.

Moon Exceeds All 1921

ST. LOUIS, Aug. 31—The Moon Motor Car Co. announces that its sales for the first seven months of this year exceed sales for the entire year of 1921 and also for the year of 1920. Sales for July were 29 per cent greater than the sales for June, which was the previous high month.

Slowing up of the demand in a few sections of the country is noted, but the company states that unfilled orders on hand Aug. 1 were sufficient to keep the factory running at capacity until October. Present output is 50 cars a day.

INDIANAPOLIS PLANTS HAVE 90 DAYS' SUPPLY



Mines, Moreover, Are Close at Hand—Situation Not Regarded Serious

INDIANAPOLIS, Sept. 4—Automotive manufacturers of Indianapolis have coal and power supplies that will last at least ninety days with coal on the way to factories and the power companies which supply most of the manufacturers with electric power.

Both the Merchants Heat & Light Co. and the Indianapolis Light & Heat Co. have adequate supplies of coal on hand and on the way to run the plants at normal for nearly three months. The Merchants Heat & Light Co. has a sixty day supply on hand. It owns a coal mine and has other shipments on the way to the city. The Indianapolis company has a ninety day supply and sees no reason to fear a fuel shortage that will necessitate any curtailment of power for manufacturing purposes.

Both concerns expect no shortage unless some turn of the rail situation brings about unexpected conditions that will stop delivery of coal now on the way or soon to be en route to the city. One of these companies felt so sure of its position a week ago that it loaned one of the automotive manufacturing companies of the city a supply of coal to tide it over a temporary shortage, which has since been turned into a surplus. The fact that Indianapolis is within sixty miles of coal mines seem to assure that there will be supplies for public utilities and power companies who even now have surplus stock.

A Profit-Making Shop

This well-equipped shop is in the Willett Bros. Garage, Ford dealer in Colville, Wash. The large amount of machinery that it contains is evidence that shop equipment will make profits for the small town dealer as well as for the city service station

CHANGES IN THE TRADE

Mack-International Motor Truck Corp. has been appointed to handle the Mack truck in Richmond, Va.

Franklin-Bender Motor Co., Memphis, Tenn., has recently been appointed distributor for the Columbia.

Cornell Sales Co. has been appointed distributor for the I. J. Cooper battery and battery parts at Cleveland.

John B. Lyerly is acting as distributor for the Gray in Pittsfield, Mass. Lyerly also handles the Rickenbacker.

Morse Chain Co. has moved its Philadelphia office to the Franklin Trust Building. **J. A. Meaney** is district manager.

Lee Tire & Rubber Co. has opened a branch at Richmond, Va. **Frank G. Fickling** has been appointed manager.

Lifsey-Smith-Hill Co., Atlanta, has been appointed distributor throughout Georgia for the Peerless Motor Car Co.

Jack Rose Motor Service, Pittsfield, Mass., has been appointed distributor of the Stromberg carburetor in Berkshire county.

H. L. Bonnell is now in charge of the used car department of the **Pfaff Motor Car Co.,** Cincinnati distributors of the Peerless.

Farm Power Co., Springfield, Ill., has become distributor for the Allis-Chalmers tractor in the Sangamon county territory.

Wienold Motor Sales Co., Springfield, Ill., has been appointed distributor for the Mitchell car in Sangamon county territory.

O. L. Huntting Co. has taken the agency for the Rickenbacker in Springfield, Mass., operating as a branch of **Clarke & Stevens,** Boston.

Constant & Groves, Springfield, Ill., has been appointed distributor for the Hupmobile in Sangamon, Menard, Cass and Christian counties.

Inland Products Co. has opened a service station in St. Louis in charge of **Kirk M. Roberts,** district sales manager, assisted by **A. G. Haberle** and **Horace Foote.**

Lefler Motor Car Co. has been organized and incorporated at Concord, N. C., to establish an automobile agency, by **S. W. Lefler, H. C. Ridenhour** and **S. K. Patterson.** Capital is $50,000.

A. P. Becker has assumed the sales managership of the **Fuller Automobile Co.,** Cincinnati Hupmobile distributors. **A. P. Longley** is now handing Hupmobile sales in Becker's former territory.

W. G. Miller and **W. A. Thompson,** Springfield, Ill., have formed a partnership and organized the Standard Motor Service Co. The firm will distribute the Oldsmobile line in Sangamon county territory.

Harold G. Pederson, for two years factory superintendent of the Kelsey Wheel Co., Windsor plant, has resigned to join the factory staff of the Franklin Automobile Co. as assistant to the master mechanic.

Tioga Automobile Co., Philadelphia, has opened corner of Broad and Tioga Streets, to handle Overland and Willys-Overland cars. **George G. Brownlee** is secretary and treasurer of the company and **George B. Albrecht** is manager.

Monmouth Auto & Tire Co. of Newport, Ky., and **Harry Lampert** of Xenia, Ohio, have been appointed dealers for the Haynes in their respective territories. Both companies are operating under the **Jennings Motor Car Co.,** Haynes distributors at Cincinnati.

C. C. Welsong, formerly sales manager for Joseph G. Blount, Maxwell and Chalmers distributors of Atlanta, has been appointed manager of the retail sales branch of the Hanson Motor Co., manufacturers of the Hanson line, for the Atlanta territory.

F. C. Daubs and **H. F. Vishniski,** both of Chicago, have formed a partnership and organized the **Daubs-Vishniski Motor Car Co.,** with headquarters in Danville, Ill. The company has been appointed distributer of the Buick car in the Vermilion county territory.

Columbia-Westcott Co. has been organized in Charlotte, N. C. The company will distribute Columbia and Westcott cars in both North and South Carolina. **J. A. Cave** is president; **R. F. Willeford,** vice-president; **H. F. Rush,** sales manager; **C. A. Crater,** treasurer.

Buchanan Motors Corp. has recently opened in Louisville, Ky. It will distribute the Moon in this territory, with **J. A. Kauffmann** in active charge of the organization. Kauffmann was formerly superintendent of the Cumberland & Manchester Railroad at Barbourville, Ky.

Stewart-Warner Products Service Station, Inc., has been organized to distribute Stewart products in Richmond, Va. The officers of the concern are **Marvin Swithey,** president; **Thos. S. Curtis,** vice-president and general manager, and **Russel D. Council,** secretary and treasurer.

R. D. Heman Co., composed of **R. D. (Dick) Heman** and **Gerald Baker,** has opened a tire salesroom and service station in Louisville, Ky., to handle Firestone tires. Both members of the firm have been connected with the tire business in Louisville for several years.

Sharp Sales and Service Co., Springfield, Ohio, has been incorporated by **Charles F. Sharp, George Sharp** and others with a capital stock of $25,000 to sell Reo cars and speed trucks in Clark, Champaign and Logan counties. The company will be under the management of Charles Sharp.

Oak Park Franklin Motors Co., Oak Park, Ill., has been organized. Capital stock has been fixed at $10,000. The incorporators include **Charles Renfer, W. F. Schmucker** and **E. T. Marquardt.** The company will distribute the Franklin car and also do a general repair and service business.

Cecil C. Robertson, for some time manager of the Savannah branch of the **Blun-Dimmitt Co.,** and for the past two years general manager of the **G. M. Robinson Motor Co.,** Jacksonville, Fla., has been appointed sales manager of **Joseph G. Blount,** Georia distributor of Chalmers and the Maxwell.

James Joyner has been named manager for the new branch opened recently in Atlanta by the Templar Motor Sales Co., of Cleveland. He advises that it is the company's plan to conduct an extensive sales campaign over the Southeast to line up dealers organizations for the Templar.

George H. Hunt, formerly manager of **Stromberg Motor Devices,** and for the past three years sales manager of the Disteel Wheel Corp., is now in charge of Rayfield Carburetor sales to manufacturers of passenger cars and trucks. Hunt has offices at 1401-7 David-Whitney Building, Chicago.

George Abernathy announces the new firm of **Abernathy-Riddick Auto Co.** to handle the Chevrolet and Stutz line in Memphis, Tenn. The officers of the company are: **George Abernathy,** president; **J. Burke Riddick,** secretary and treasurer, who together with **J. G. Bailey** make up the directorate.

Manhattan Electrical Supply Co., Inc., announces that the executive offices are now located at 125 Church Street, New York City. **J. J. Raferty,** formerly of the Western Electric Co. has been appointed manager of the New York branch, of which **Howard N. Croop** is sales manager and **C. H. Boehler,** city sales manager.

Jerome H. Chopiska, J. V. Nigro and **Frank Chopiska,** formerly with the Chopa Piston Ring Co., Auburn, Ind., have established a new industry in La Crosse, Wis., under the name of **Lacrosse Motors Equipment Co.** It is specializing in the manufacture of a new design of piston ring, known as the LaCrosse Triple Seal.

Reliable Service Co., Eau Claire, Wis., has been appointed Haynes dealer. The partners are **Willard Enge** and **George Amentorp.**

Whitlock-McDonald Motor Co., Birmingham, Ala., Durant distributor, has been appointed factory representative by the Star Motors, Inc., with full charge of marketing the Star line of cars in its territory.

Oldsmobile Sales and Service Co. has been organized in Raleigh, N. C. to distribute Oldsmobiles in the Raleigh territory. The company will take over the Norwood garage and in addition to the distribution of Oldsmobiles will continue the Norwood storage and service. **C. E. Hanbury** and **R. E. Winstead** compose the new firm.

Frank Talbott, who was formerly general manager of **The Victor Rubber Co.,** has been appointed general manager of **The Virginia Rubber Co.,** with headquarters at Charleston, W. Va. Since leaving the Victor, Talbott has been directing the manufacture and sales end of a new tire he has invented. It is announced that the tire will be manufactured at the Virginia plant instead of at Cleveland.

R. B. Tracy, for many years with Michelin, has been appointed director of sales for the **Paul Rubber Co.,** Salisbury, N. C., which recently opened a new plant, equipped with modern machinery for the manufacture of casings and tubes. In addition, the Paul company has taken over a factory at Charleston, W. Va., where will be manufactured the Tirometer valve which shows the pressure at all times.

J. A. Clark, general manager of the Van Cortlandt Vehicle Corp., the New York distributor for the Peerless, announces the appointment of **W. R. Chandler** as retail sales manager of the New York factory branch. Chandler has been connected with the automobile industry for the past 12 years, having formerly been manager of the old Flanders Electric Co., vice-president and general manager of the Holt-Chandler Co., New York agent for the Maxwell and Pope-Hartford and general manager for the Hayes-Diefenderfer Co.

Chidester-Frint, Inc., Milwaukee, distributor of the Durant in Wisconsin and Upper Michigan, has been designated as distributor in the same territory of the new Star car. **John G. Wollaeger Co.,** Milwaukee, distributor of the Studebaker in Wisconsin, has opened a retail branch sales and service station in Milwaukee, under the management of **Charles H. Jackson.** The Wollaeger Co. will move about Nov. 1 to its new $150,000 headquarters building, on the west side of Milwaukee, where it will also maintain a retail division besides its distributing house.

Clark Osterheld, assistant general superintendent of the Stoughton (Wis.) Wagon Co., in charge of the motor truck department, resigned Aug. 15 to become president of the Stoughton Mfg. Corp., recently organized to manufacture electric water heaters and other electrical devices designed and patented by him. When the wagon concern engaged in the manufacture of trucks, several years ago, Osterheld took an important part in the work of designing and placing in production the Stoughton freight car.

PROTEST PROPAGANDA AGAINST TRUCK USE

Disapproval Is Voiced to Methods Being Employed by Electric Railways

WASHINGTON, Sept. 4—It is expected that the Bureau of Public Roads will call upon the various state highway commissions and good road organizations throughout the country to combat the insidious propaganda against motor truck transportation. Both manufacturers and owners of motor vehicles, especially trucks, are making vigorous protests against the methods adopted by electric railways to secure freight traffic which is now transported over the highways.

The tone of the letters filed with government officials indicates that the motor transport people are willing to take their chances in competing against trolley lines for business, when the competition is conducted on legitimate lines. However, objection is made to the derogatory statements as to the destruction of highways by trucks and cost to the tax payers which has no foundation in fact.

The display of large advertisements in traction cars in Ohio, Michigan and New York is calculated to arouse public sentiment against motor truck operators and owners. Farmers and other tax payers are now wondering whether the cost of building good roads is worth while. The transportation officials point out that the majority of American tax payers are now cognizant of the fact that highways are a good investment. The reaction of this propaganda is regarded as being decidedly harmful to the good roads movement.

For instance, copies of the advertisement received by federal officials show that the traction companies are deliberately misrepresenting facts to the reading public. One advertisement reads "PROBLEM IN ECONOMICS—SHIP BY TRACTION AND SAVE THE HIGHWAYS. If a heavy truck earns 50 cents per mile and damages the Public Highways to the extent of one dollar ($1.00) per mile and the shipper of freight saves nothing and the truck owner keeps the 50 cents and the TAXPAYER pays the dollar, WHERE DOES THE TAXPAYER GET OFF?"

It is believed that the various automotive trade associations will take an active part in assisting the federal government to set the public right on the highway situation.

JUDGES ARE SELECTED IN ROADS ESSAY TEST

WASHINGTON, Sept. 2 — Names of judges appointed to award the four years' university scholarship offered in connection with the national good roads essay contest on "How Good Roads Are Developing My Community" were announced here to-day by the Highway Education Board.

The judges are Henry C. Wallace, Secretary of Agriculture; George Horace Lorimer, editor of the *Saturday Evening Post*, and Dr. John Grier Hibben, president of Princeton University. The judges have been supplied with verbatim copies of 54 essays, representing each State, as well as the District of Columbia, the Canal Zone, the Philippines, Porto Rico, Hawaii and Alaska. It is estimated by officials of the board that at least 250,000 pupils of high school grade participated in the contest, and these 54 manuscripts, therefore, represent the cream of all papers presented.

The scholarship offered is given by H. S. Firestone, Akron, a member of the Highway Education Board. It is intended to defray tuition and all reasonable expenses of the student in college and is valued at not less than $4000.

FORD SPECIAL WINS PIKE'S PEAK CLIMB

Car with Less Than 183 Cu. In. Displacement Covers Ground in 19 Min. 50 4/5 Sec.

DENVER, COL., Sept. 4—The winning of the Penrose trophy for the fastest time in the fourth annual Pike's Peak hill climb to-day was a surprise to the 5000 spectators when it went to a Ford special in the less than 183 cu. in. displacement class. The driver was Noel E. Bullock and the time was 19 min. 50 4/5 sec. for the 12 2/5 mile course of 7 to 10½ per cent grades and 60 curves.

Glen Schultz in an Essex and Roy W. Beavers in a Chevrolet took second and third in this small car event in 20 min., 41 sec. and 23 min. 3 2/5 sec. respectively.

The first three places in event No. 2 for up to 300 cu. in. displacement went to Harold Brinker in a Wills Sainte Claire, H. L. Chapin in a Dodge and Sam Marcus in a Haynes, in 20 min. 46 sec., 23 min. 25 4/5 sec. and 24 min. 18 4/5 sec.

Hudson Winner in Other Class

A Hudson driven by King Rhiley, winner of the trophy last year, won first prize to-day in the event for cars above 300 cu. in. in 20 min. 5 sec., with a Packard driven by P. B. Abbott only two seconds behind, a Mercer piloted by W. S. Haines captured third place in this large car event in 20 min. 31 sec.

Eighteen cars started and 15 finished, three being forced out by slight breakages, but there were no serious accidents.

Bullock and Rhiley are both Nebraskans, Haines hails from the Mercer factory, while most of the other contestants are from Colorado Springs, Denver and other Colorado points.

RACES

Kansas City.....Sept. 16
Opening Meet of New Kansas City Board Speedway.

Fresno, Cal.....Sept. 30
Los Angeles.....Nov. 30
San Diego.....January

ASSOCIATION ACTIVITIES

Has Legal Department

CHICAGO, Sept. 2—The Chicago Automobile Trade Association has installed a legal department, the services of which are free to all members. An attorney is on duty at the association headquarters and gives advice on urgent questions by telephone.

Atlanta to Resume Meetings

ATLANTA, Sept. 4—Following a recess of two months during the summer the Atlanta Automobile Association will resume its regular meetings again the latter part of this month, according to Lon Credelle, president. Membership now includes approximately 90 per cent of all accessory and automobile dealers in Atlanta.

New St. Louis Directors

ST. LOUIS, Sept. 2—The board of directors of the St. Louis Automobile Dealers Association, at a meeting held recently, elected two new directors to fill the vacancies caused by the resignations of Webster Colburn, formerly of the Doris Motor Car Co., and C. A. Cole, formerly of the F. C. Meyer Motor Co.

G. W. D. Donnelly, president of the Supreme Motor Co., was elected to succeed Colburn and Fred H. Squires, branch manager for The White Co., was chosen to succeed Cole and represent the truck interest of the association.

Secretary Robert E. Lee, who has been at home ill for nearly two months, has recovered sufficiently to be at his office again.

The regular meetings and general activities of the association will be resumed in September. First of these activities will be a meeting of demonstrators and instructors who will hear lectures by representatives of the Safety Council, including W. L. Patterson, safety engineer, on the proper method of teaching new owners of automobiles how to drive safely.

Buys Reliance Plant

APPLETON, WIS., Sept. 4—Dr. D. S. Runnels, who is understood to be representing stockholders working on reorganization plans, bid in the entire property of the Reliance Motor Truck Co. of Appleton, defunct, at trustee's sale. Stockholders of the concern have made good headway in reorganization plans and believe they will be able to rehabilitate the industry quickly.

MAY GET DUTY PLANT AT ELGIN, AFTER ALL

ELGIN, ILL., Sept. 2—Persuaded to reconsider their offer to absorb the Duty Motor Truck Co. of Elgin, the American Steam Truck Co. of Chicago, will, it seems likely, shortly be in possession, the stockholders of the former company, following a bitter controversy, voting to sell out to the Chicago concern. The action of the stockholders followed several weeks of argument in which an influential minority sought to prevent it.

The Duty Company stockholders elected a new set of officers before adjournment, E. A. Bell being named president; A. J. Force, vice-president, and Marshall Newman, secretary-treasurer. These men also serve as directors and were empowered to handle the negotiations with the American Company.

Metz in Bankruptcy

BOSTON, Sept. 4—The Metz Co. of Waltham, Mass., maker of the Metz Master Six, has been petitioned into bankruptcy here by three creditors. Two of the creditors brought the proceedings as a result of judgments received against the company last June, and a third has an assigned claim.

THE NEW IMPROVED FIVE PASSENGER

HAYNES 75 BROUGHAM

Upholding all those fine traditions of style and distinction which grew around the aristocratic broughams of other days, the new, improved Haynes 75 Brougham is an accurate reflection of social and business position.

There is satisfaction in such fashionable touches as the three-quarter length running boards which leave the front fenders individual, while the lounge-like cushioned and upholstered interior is reminiscent more of the drawing room than of the automobile. And yet there is a substantial character, and an absolute dependability in the performance of the famous, quiet-running Haynes-built 75 motor. With the coming of winter, the motorist can appreciate the snug coach work and perfect enclosure, bringing protection from harshest weather, and allowing the car to give the maximum degree of comfort.

The Haynes 75 Brougham and its companion cars of the 55 and 75 series appeal to one of the widest markets ever open to dealers.

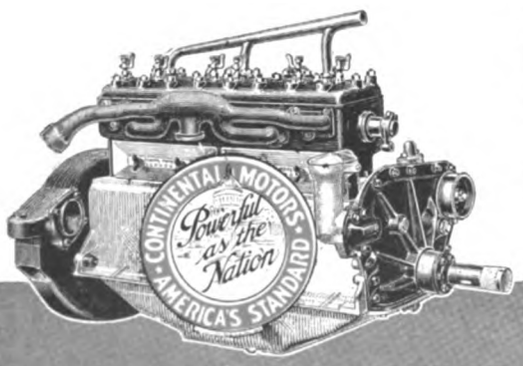
S. S. MAJESTIC—the world's largest ship. 956 feet long. 100 feet wide. 9 decks. 48 boilers. 240 furnaces. Quadruple screws. 100,000 horsepower. Capacity 4,100 passengers.

The *S. S. Majestic* is the achievement of literally thousands of engineering firms, contractors and sub-contractors each a specialist in a particular line.



What the SPECIALIZED car actually gives the purchaser

Travelers upon the *S. S. Majestic* are conscious of a feeling of absolute reliance born of the knowledge that each vital part of the great ship is the product of a highly specialized marine, mechanical or electrical engineering force—each fitted to solve *one* problem *well.*

The purchasers of genuine SPECIALIZED cars are conscious of a similar feeling of absolute reliance, born of the knowledge that each performing unit of their car—motor, transmission, universal joints, axles, clutch, etc.—is the product of **the infinite skill of a specialized unit manufacturer fitted to make *one* unit *well.***

Identify your organization with a SPECIALIZED vehicle because it is the car the public trusts. It is the car they buy. It is the car that gives the most that money can buy in the automotive industry. It is the car whose uninterrupted performance is assured by convenient parts-distributing stations throughout the world.

Remember this:—the certain identification of *motor* specialization is—the Continental Red Seal.

The Universal Joint that Needs no Lubrication

The hard-to-get-at metal universal joints are rarely lubricated. But eventually they yield to neglect with jolting starts, motor, transmission and rear axle trouble—sometimes a broken propeller shaft.

GOODRICH FLEXIBLE DISC UNIVERSAL JOINTS need no lubrication. Shafts bolted permanently to discs of flexible fabric and rubber, there is nothing to lubricate, nothing to create friction. No housings are required to protect them. Sand, water and oil cannot injure them. Of enormous strength and durability, they will last for many thousands of miles—often for the life of a car. *And no such costly consequences of neglected lubrication such as axle, shaft, transmission and motor trouble follow.*

There is a big opportunity here for the garage and parts dealer. Flexible discs are not an experiment. They have been tried and proven, and now are standard equipment on many of the finest cars and trucks. Write for our booklet, "The Goodrich Flexible Disc," and read the full story.

ROLLS-ROYCE

All parts having a nickel finish are either of solid nickel or are "close plated." We do not nickel-plate by electrolysis. Depositing electrically gives about one-tenth of the thickness of close plating, is liable to flake off, does not keep its color, and soon wears through. Close plating consists in soldering a sheet of nickel about .006" thick on to the parts. This type of plating is the only one which has an indefinite life, keeps its color permanently, and is worthy of the Rolls-Royce car.

Making the Sales Manager Job a Real Help to Salesmen

A System That Leads, Inspires and Assists Salesmen Without Driving Them—Some of the Things Wilson Does to Help His Men Get Results

By DONALD D. BLANCHARD

THE sales manager's job is to help his salesmen sell more automobiles.

This describes the view W. O. Wilson has of his position as retail sales manager of the Cleveland Automobile Sales Corp., Cleveland Six dealer in New York City. His attitude toward his sales force is always "How can I help them sell more cars?" rather than "How can I make them sell more cars?"

This spirit of helpfulness is evidenced by the assistance he gives his salesmen in closing tough prospects. For this purpose, he has a man on his staff who does nothing but work with the salesmen on the prospects with whom they are having difficulty. This "closing" man is an expert salesman with a large background of successful automobile selling experience. He knows how to uncover the hidden element of sales resistance. He can answer the objections which have stumped the salesmen.

This man is paid a straight salary plus a commission on each car which he assists in selling. His commission and salary do not affect the salesmen's compensation. He is there to help the salesmen sell more cars which means more money for them and, because he does help them in their work, his services are used freely. The salesmen get their 5 per cent on all sales whether they are made with his assistance or not.

SIX out of ten orders are obtained with the assistance of the closing man. Each morning the salesmen turn in lists of prospects on whom they desire his assistance. The closing man calls on these prospects with the salesmen. He makes no calls except at the request of a salesman. All the prospects he visits have received at least one previous call from a salesman. None of his time is wasted on prospects who are not in the immediate market for cars. To facilitate his work, the company provides a car and driver for his exclusive use.

The salesmen are learning salesmanship from this closing man. Inasmuch as he is always accompanied by a salesman, the salesmen have an opportunity to observe how this specialist handles different types of prospects and how objections are overcome.

In many organizations the work done by this closing man is handled by the sales manager. Up to the time this man was added to the sales staff, Wilson had been handling as much of this work as he could. However, his position as sales manager is essentially an executive one and he feels that all his time and effort should be devoted to the direction of the sales work. He could not give the salesmen as much assistance with their tough prospects as he thought they ought to have. So he hired the closing man to take over this portion of the work.

W. O. WILSON

Retail Sales Manager, Cleveland Automobile Sales Corp., New York City

The salesmen work on a monthly quota. Wilson assigns the quota for the month on the basis of the previous records of the individual salesmen and on the anticipated demand for cars during the month. The salesmen are notified of their quotas by personal letters from Wilson. These letters always contain some message that shows the sales manager's interest. Sometimes it is a compliment on the results obtained during the previous month. In other cases, the letter will contain a word of advice or some encouragement.

The following letter was written to a salesman who was working so hard that his health was suffering:

Dear Mr. Jones:

Your quota for the month is fifteen (15) sales.

Don't work yourself to death. Life is too short. You know you have May, June and July. What we want to do is to strike a happy medium.

Don't try to sell twenty cars, but sell 12 or 15 in April. No use to put yourself out of business physically by the middle of the summer. It does not pay in the long run.

Such a letter is evidence of the close relationship between Wilson and his sales force, and of his interest in the welfare of the salesmen.

A second letter written to a sales-

Digitized by Google

man who was not producing the results that he should, does not criticize the salesman for his past record but instead points out how he can improve it.

Dear Mr. Brown:

I have set a quota of ten sales for you for the month of March. This may seem that I am asking a good deal, but I don't believe so.

You have seen what the car will do. You saw what it could do on that short hill under extreme, unreasonable conditions. I should never have asked that motor to go up that hill at high gear, but still it did it.

I wonder if you have any fear in your heart about the success of your work? Honestly, why should there be? I know that you feel convinced that the car is O. K., and I know that you think the price is right. You know that a great many people need new cars—must have them, in fact.

What if there is competition? We can easily hold our own in any unbiased comparison and under any fair test. What we must do is demand that we have this unbiased comparison and secure a fair test. If we do, we shall win.

You have absolutely nothing to fear. You are selling the customer the best automobile he can buy for the price. You are doing him an absolute favor by bringing the CLEVELAND SIX to his attention, and after he has had months of good service from it, he will thank you for selling him the car.

A salesman's responsibility is a big one. He is something like a doctor. I know one salesman in Wall Street who sells bonds, and his clientele leave him thousands of dollars to invest because of their confidence in him. We are not asking a favor of a customer when we ask him to buy. We are doing him a service.

Do you doubt this? If you do, you ought not to try to sell Cleveland cars at all. You ought to stop this moment and look elsewhere for a job. But you don't doubt it, for you can't.

Now remember, I know the car. I know our competition, and I know the background of the character of almost every car on the market and I know you. I know that you can sell the CLEVELAND SIX. I have told you this many times, or I should have never employed you, so that you need have no fear of the outcome.

I want you to do this every morning before starting out. Spend a half hour selling yourself. Take up every objection that you can think of that could be raised and meet it fairly, fully and enthusiastically until you know in your own heart that this objection has not a foot to stand on.

When you have done this, go straight to the hardest prospect you have. Carry to him the conviction and enthusiasm that you feel. Remember that you are his friend. Yours is entirely a friendly mission—you are there to do him good. He will give you a hearing, and after that you know it is simply a matter of accepting his order.

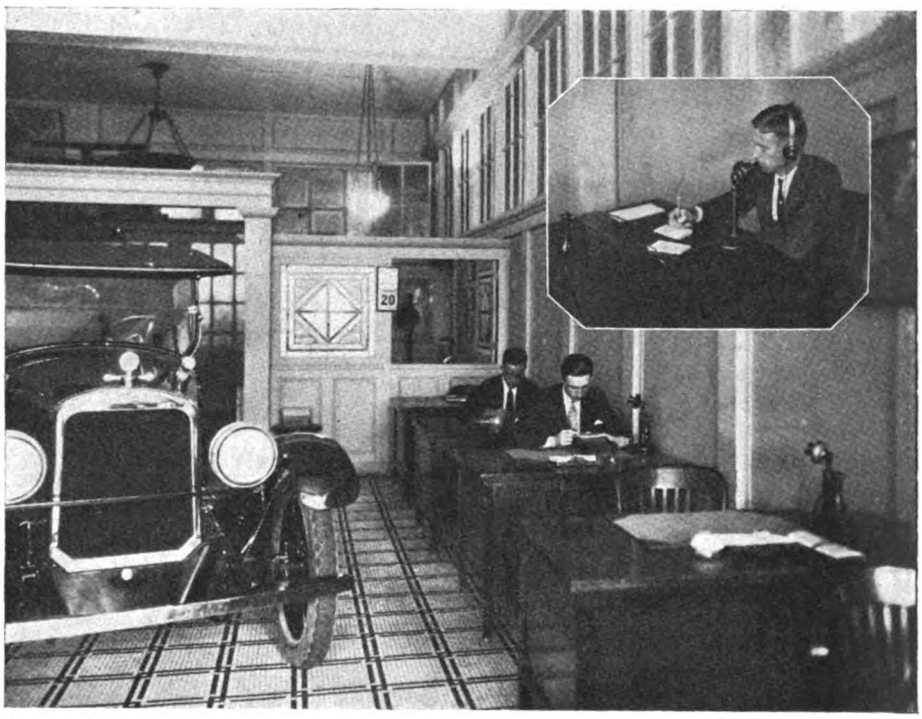
When you are through with him and aglow with your success, sail right into the next man on your list. He will be easy enough then.

I tell you, Brown, you have it in you to do this and more.

Now go to it.

The very best of luck to you.

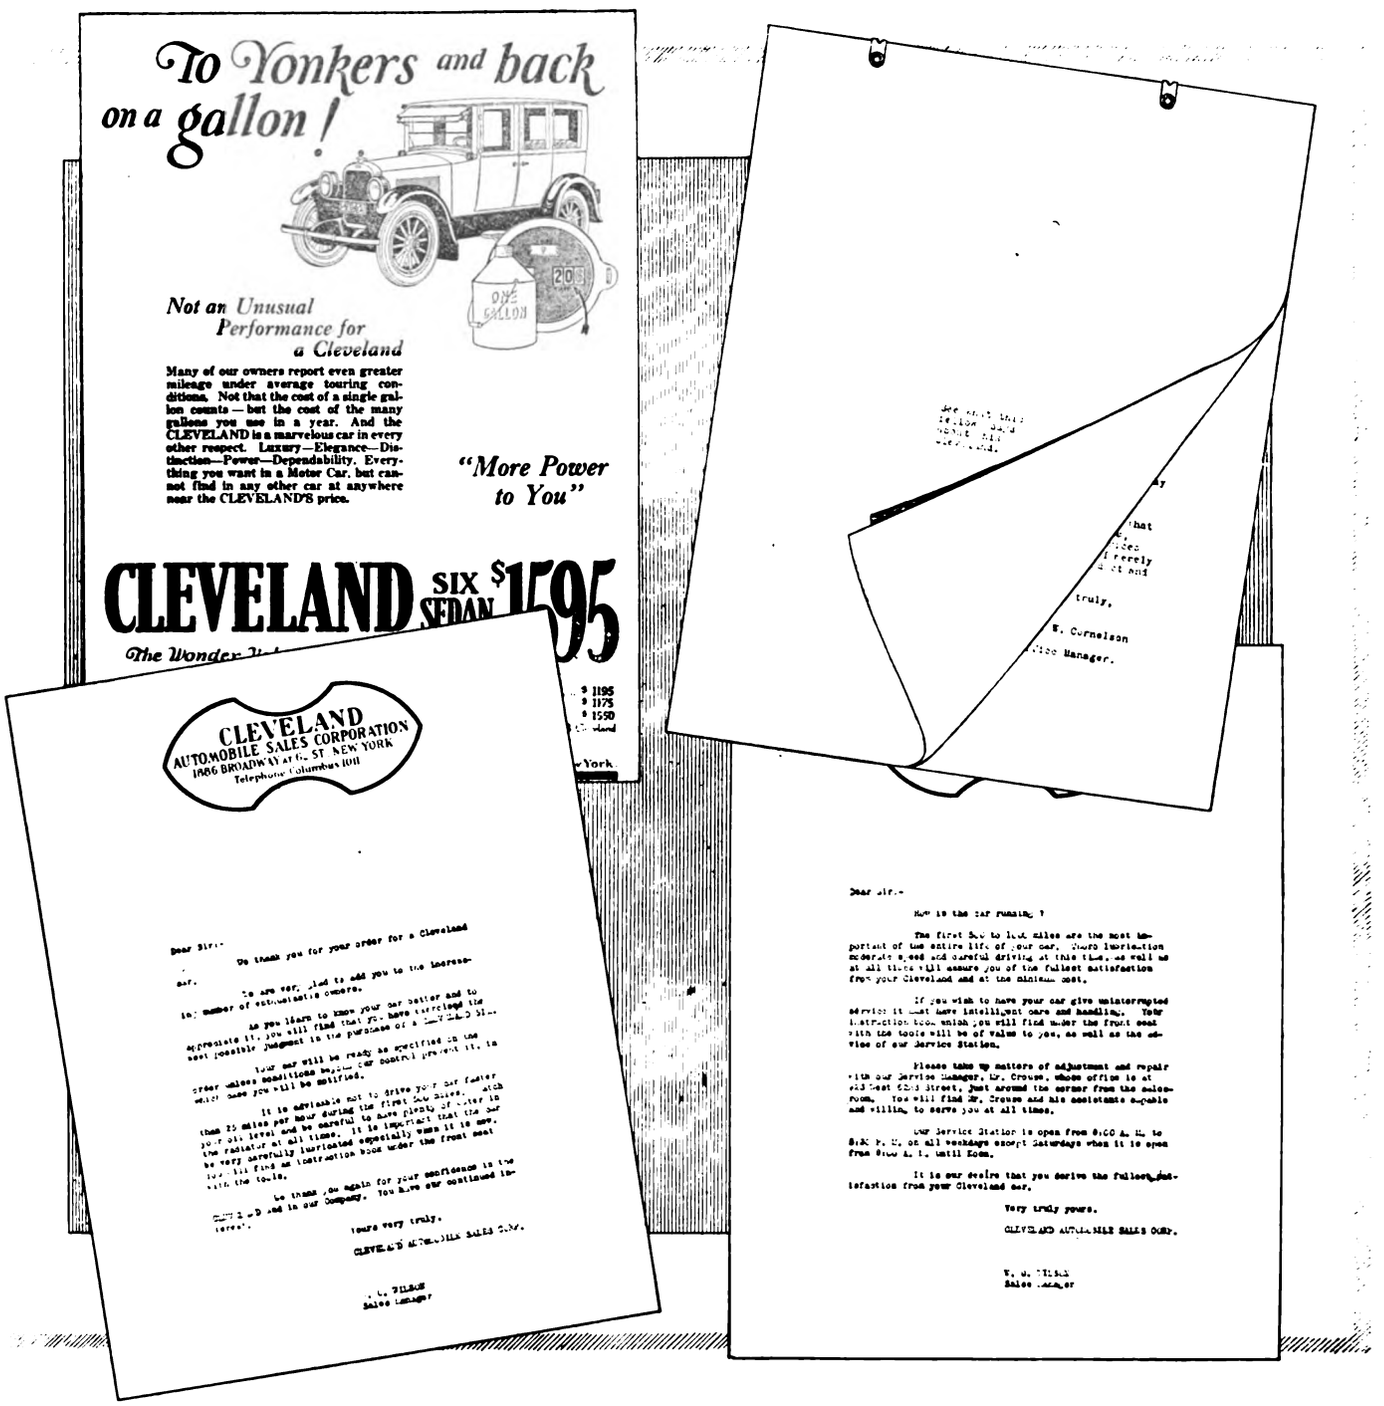
The quotas are in numbers of cars, no distinction being made between the different body models. A cash bonus is paid to every salesman that makes or exceeds his quota. At the present time a special commission of $25 is paid on each coupe or roadster sold. This is likely to be discontinued shortly as the demand for these models is improving.



Sales meetings are held periodically. In these meetings the salesmen are quizzed on the specifications and construction of the Cleveland and competitive makes of cars. Difficult points that the salesmen have encountered in their work are also discussed. As part of the educational work, Wilson had his salesmen read the "How I Sold My Toughest Prospect" stories, which were published in Motor World of April 26, 1922.

As soon as a salesman turns in an order Wilson writes the buyer a letter of thanks. A second letter is mailed after the car has been delivered. This letter shows the new owner that the Cleveland company's interest in him continues. It makes some suggestions on how the car should be operated. It also tells the owner about the service station that is maintained for his use.

Salesmen on the floor operate on the "turn" system—that is, if there are two men on duty, the first person to enter the salesroom is handled by one, the second by the other salesman, the third by the first salesman and so on. This avoids arguments as to the ownership of prospects. In fact, the best of feeling exists between the salesmen at all times. Wilson insists on their acting fairly with each other and will not countenance any discord.



Wilson has arranged his office so that it commands a view of the entrance to the salesroom. It is at the rear of the display space. A portion of the wall surrounding it, is constructed so that it may be swung back, leaving an opening through which Wilson can see the entrance without leaving his chair. The purpose of this opening is not to enable him to watch the salesmen on duty, but to make it possible for him to see that every person entering the salesroom receives prompt attention. If the salesmen on the floor are busy Wilson goes out to meet the newcomer himself.

Arranged to Help Salesmen Sell

This is the view the prospect gets on entering the Cleveland salesroom in New York. The sales manager can be seen through the opening in the wall of his office at the rear. From this point, he commands a view of the entrance to the salesroom. The insert shows the telephone man at work getting prospects

Some Effective Newspaper and Direct Mail Advertising

The advertisement in the upper left hand corner has a local appeal that puts it across. "To Yonkers and back on a gallon" gives a New Yorker a definite idea of the gasoline consumption. How Wilson sends out testimonial letters is shown at the upper right. Below, the letter on the left goes to the customer on receipt of his order and the one on the right is mailed after delivery of the car

Prospects for salesmen to work on are secured largely from owners and through newspaper advertising. Salesmen keep in close touch with their customers by telephone and personal visits. Factory and local copy is used in the newspapers. One of the advertisements written for Wilson is reproduced. "To Yonkers and back on a gallon!" is the heading on this ad. That headline tells a New Yorker a lot more about the gasoline economy of the Cleveland than a statement of the gasoline mileage would.

The sales department helps the salesmen with direct-by-mail advertising to their prospects. The material used for this purpose consists of catalogs, folders and testimonial letters. Each salesman is furnished with a complete set of this material together with an index showing what the set contains. Each item is designated by a letter or number. In asking the clerical force to send a piece of advertising material to one of his prospects, the salesman refers to it by its symbol.

In addition to the factory catalog, this company has one of its own. The text is multigraphed and the pages are bound in a stiff paper cover. It gives a detailed mechanical description of the car and features the points that the sales de-

Digitized by Google

partment wishes particularly to bring to the attention of the prospect.

A novel stunt is used to get the prospect to read testimonial letters that come to him through the mail. The original testimonial letter is copied on a sheet of plain white paper. Another sheet of paper is clipped to the front of it. This sheet bears nothing but the following short sentence: "See what this fellow says about his Cleveland."

Wilson is conducting an experiment to determine the usefulness of the telephone as a means of securing prospects for further solicitation by salesmen. He employs a man at a small salary to make the telephone canvass. This man is provided with a telephone which is connected directly with the central station instead of going through the private exchange as do the other phones in the office. The telephone company details a special operator to look after his calls. The telephone is provided with a head piece so that the man's hands will be free.

This canvass will cover telephone subscribers on Manhattan Island. The names, addresses and telephone numbers of the people to be called are taken from the telephone directory and transferred to 3 x 5-in. cards. The telephone man calls these numbers in order and makes notations of the results of the calls on the cards. If he gets a "Busy" or a "Doesn't answer" he goes on to the next name.

The telephone man has been provided with several stock questions. After these have been answered he uses his own ingenuity in securing further information. If he can not get either the man called or his wife the conversation usually ends.

Let us assume that he is calling Mr. Jones at Morningside 1817.

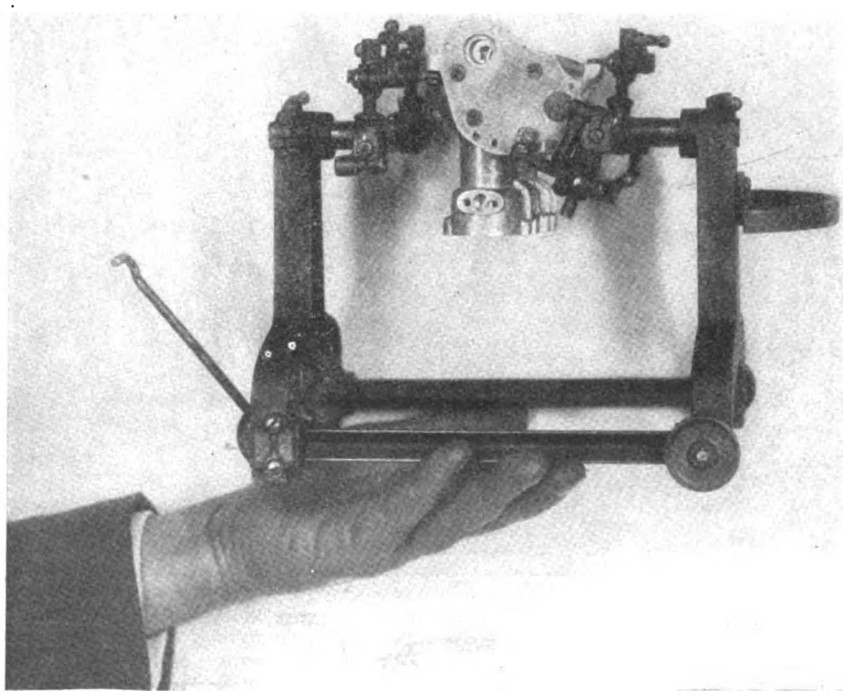
He gives the operator the number and as soon as the connection is made he says: "Is this Mr. Jones?" or, if a woman answers "Is this Mrs. Jones?" If the answer is "No," the central office operator, who is listening in, breaks the connection. If the answer is "Yes," the telephone man says: "This is the Cleveland Automobile Sales Corp. Are you going to buy a new car this year?" If the answer is "No," he says "Thank you" and the operator breaks the connection.

However, if the answer is "Yes," the telephone man asks "How soon?" and "What type of car are you interested in?"

All this information is listed on Mr. Jones' card. If he says he wants a car now, he is listed as an immediate prospect. If he will be in the market some months hence, he is put down as a future prospect.

In a six-week period the telephone man made 4792 calls. He reached the party called in 1826 instances. From these contacts he secured 125 immediate prospects and 26 future prospects. This does not seem like a very large percentage of results, but it should be remembered that the telephone directory and not a selected list of names was used as the basis of the canvass.

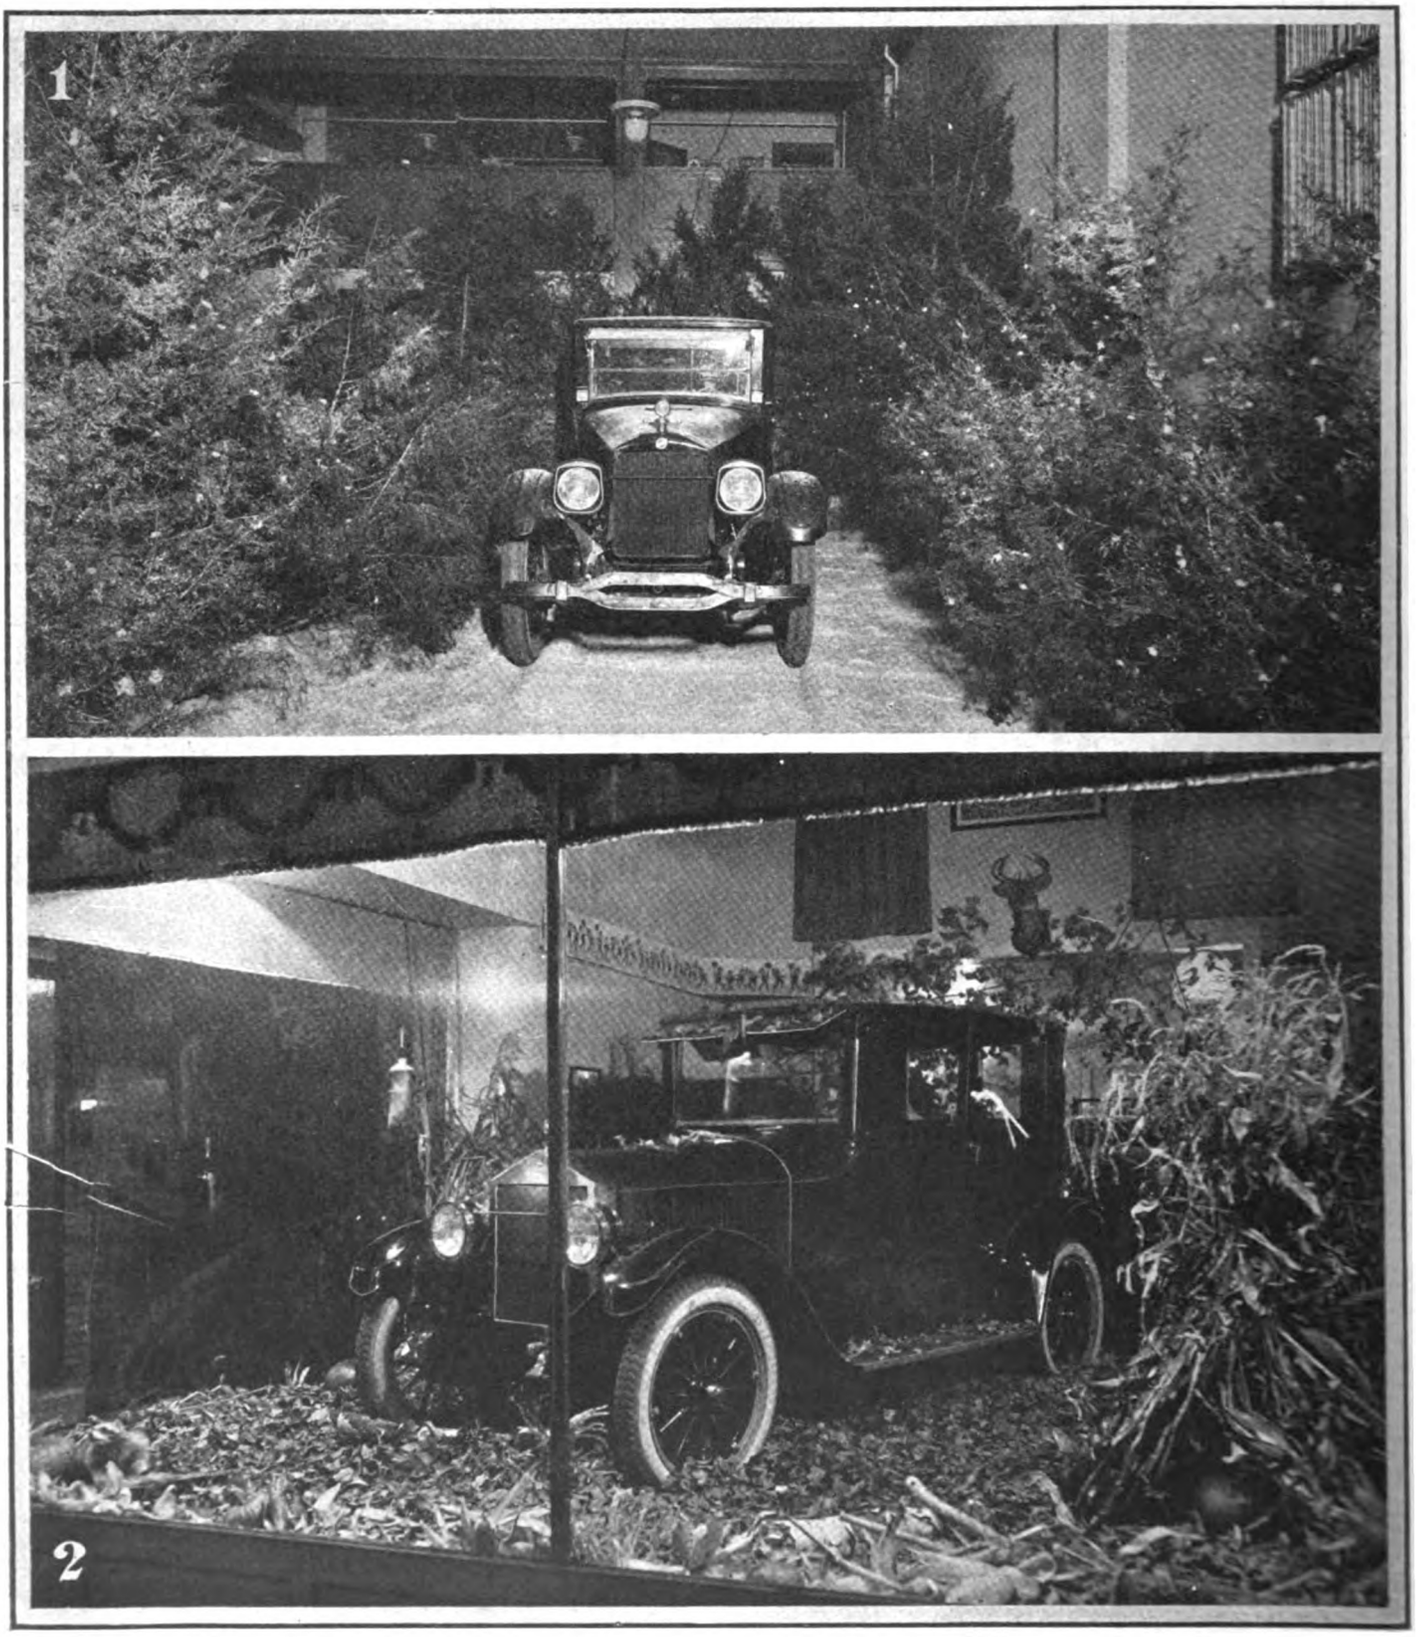
Using Models to Sell Shop Equipment



Miniatures of Machines Too Large to Be Taken to Customers More Effective Than Catalogs in This Instance

SELLING shop equipment of the heavier kind presents many difficulties in the way of demonstration. It is very difficult to illustrate the points of a machine from a photograph, and it is not always possible, or convenient, to carry the machine around to demonstrate its purposes.

The Canedy-Otto Mfg. Co., Chicago Heights, Ill., has solved the problem of demonstration by making small models of the machines. The salesmen carry these models with them and as the models are exact replicas of the large machines, the model can be set on the desk and the different parts and levers operated to show just what it will do.



W. F. Wendel, Eastern sales manager, is using the model idea on several of the units which the company now manufactures.

The engine stand, which is illustrated, weighs only a few pounds and is about 9 inches in overall length. A tiny engine cylinder casting has been made to go in this, and it is possible for the salesman to demonstrate exactly how the stand will handle an engine under all conditions.

Putting Autumn Atmosphere Into

IT is always good merchandising to present the motor car in surroundings that reflect dominant thoughts of the times. This fall will offer an opportunity to display the car in a way that blends it into such thoughts as harvests, hunting, etc. It will provide a refreshing change to present the car right after Labor Day in surroundings that carry the suggestion of enjoying an automobile in the cool, crisp autumn days that are coming. Here are

Cooperative Service Advertising Brings Business in Brooklyn

Newspaper Campaign Increases Business During Dull Season and Gives Prestige to Participants and Organization Which Promoted It

BROOKLYN service stations succeeded last winter in taking most of the "sag" out of business and brought into the shops enough winter overhaul and repair work to keep them operating at a profit through the usually "lean" months.

The Brooklyn plan is particularly interesting at this time because in a few weeks the winter slackening of repair work will begin to evidence itself in the service stations unless something is done to sell the public on the advisability of having overhaul work done during the winter months instead of when the usual spring rush begins.

IN the fall the members of the Automotive Service Association of Brooklyn decided on a campaign of publicity to bring work into the shops during the late fall and winter. They foresaw that unless something were done the winter would be the leanest the service stations had had in many years. They wanted first of all to get more business and make more profits. Secondly, they wanted to keep their mechanical organizations together and unless there was work to be done this would be impossible because the men would have to be laid off and would drift around and would not be available when the spring business started up again.

Accordingly a campaign of publicity was laid out and the interest of the dealers secured. The campaign consisted of a number of insertions of quarter page size in Brooklyn daily newspapers, these to be signed by the association, a direct mail campaign by the members and various other methods of keeping the campaign before the public.

Educational Copy

The newspaper advertising was in the nature of educational copy to tell car owners of the real value of service and the benefits they could get from having their repair work done early in the fall and winter. Such subjects as depreciation, the greater sales value of overhauled cars and the opportunity to have careful painstaking work done during the dull season were taken up one by one.

Backing up this newspaper campaign was a folder campaign. One thousand or more copies were supplied to each firm in the plan and these were mailed out by the firms, the leaflets bearing the imprint of the firm. As the participants in the plan consisted not only of car dealers but of battery firms, equipment firms, radiator repair firms and others along these lines, each car owner in the territory received one or more of the leaflets, these bearing different imprints and so the car owner could not fail to have his attention called to the campaign in some way or other.

In addition to these two principal methods, some of the firms in the plan wrote circular letters and all members were supplied with blue stickers printed in gold, these being used on invoices, letters, etc. Blue enameled signs and window transparencies were also used.

The financing of the campaign was by subscription of $75 per firm. For this money, the firm received its supply of leaflets, stickers, etc., without any extra charge. Larger quantities were charged extra. Approximately $3,000 was subscribed to the fund and not quite all of it was spent, the balance was returned to the subscribers.

In addition to the regular campaign, some of the firms devoted a larger proportion of their individual advertising to service and did other promotion work for themselves which not only backed the campaign up but also took the fullest possible advantage of the other forms of publicity.

Business Was Increased

The actual increase of business over the previous winter was marked and considering the fact that it would have fallen very much below the previous winter without any campaign of the kind, the subscribers feel that the campaign has been a real money maker for them and that they made a very profitable investment.

The prestige of the Automotive Service Association has been greatly increased and the name has become known to the car owners of Brooklyn. As a consequence of this, the members of the association have gained because the fact that they are identified with the organization has made a good impression on the minds of the car owners.

One fact which has been a feature in the campaign is that service has never been properly advertised or given a great deal of space. The placing of the copy in the hands of competent advertising men has resulted in copy with a real appeal and a punch. Automobile sections of the papers have given a good deal of space to the winter service idea and the service organization had an exhibit at the automobile show.

Aside from the actual mechanical part of the advertising copy, no outside help was employed on the campaign. The subscriptions were secured by members of the organization and the officers and members did all the work necessary to get the movement going and to keep it going. The expenses were practically nothing except for the actual space used in the papers and the printing expense for the other advertising features.

Keeping the Shops Busy in Winter

IF some of this work only had come in last January and February!

How many dealers, service managers and repair shop proprietors have made that observation in late April and May when the rush of spring business taxed the capacity of their shops and caused profitable work to be turned away because of inability to handle it in the time allowed by customers.

To remedy this condition service stations in some cities, among them Brooklyn, have gone to the public early in the winter with an educational publicity campaign designed to sell the idea of having repair and overhaul work done during the winter months when the service stations are best situated to handle it satisfactorily.

Read how Brooklyn ran its winter service work campaign last year. Think and talk about a similar campaign in your city this fall and winter.

How Brooklyn Sold the Winter Overhaul Idea

How to Increase the Resale Value of Your Car

THERE is every reason why the car owner should take the very best care of his investment at all times. But there are two reasons in particular why every car owner should make an extra effort to fight depreciation; the pleasure and satisfaction of driving a car that is in first class condition and its increased value from a resale standpoint.

The Service Stations and Repair Shops of Brooklyn maintain the necessary facilities in machine equipment, shop space, and mechanical aid to furnish prompt and efficient service to overhaul your car and make repairs and adjustments.

Membership in the Automotive Service Association of Brooklyn carries with it the assurance of

—accurate workmanship

—speedy service

—mechanical precision

Do not wait until all repair organizations are running to capacity under the pressure of rush work. Take or send your car today,—it will enable them to serve you better.

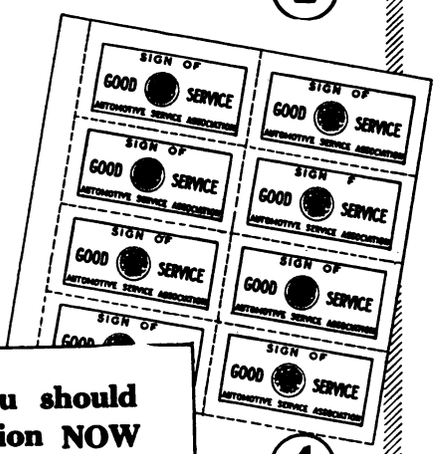
AUTOMOTIVE SERVICE ASSOCIATION
OF BROOKLYN

1

Are you trying to get power from a leaky motor?

THE average motor car is a fearful waster of power, because most of the useful energy released by the combustion and expansion of fuel and air in the cylinders, is lost through leakage and only a very small proportion is ever applied to the wheels. Power losses in a car are due to many causes, but some of the main reasons, are:

Carbon in cylinders	*Leaky valves*
Leaky spark plugs	*Worn cylinders*
Loose piston rings	*Leaky gaskets*
Faulty lubrication	*Slipping clutch*



Improper adjustment of carburetor, chassis parts, etc.

Go to a service station or repair shop today, and have them give your car a thorough inspection. Now is the time to have it overhauled so that the motor will run smoothly, gears work perfectly, knocks be eliminated, and all bolts be tight.

ACCURATE WORKMANSHIP SPEEDY SERVICE MECHANICAL PRECISION

2

4

Here are THREE BIG REASONS why you should have your car put in good operating condition NOW

1

SAVES TIME

Service stations and repair shops are equipped now to handle all adjustments and repairs which your car may require before putting it to the heavy strains and stresses caused by winter conditions.

Members of the Automotive Service Association have shops which are equipped with up-to-date labor-saving devices and can save you time.

Bring your car in to-day and avoid delays during the spring rush.

2

FUTURE BILLS REDUCED

A regular inspection of your car assures you that all adjustments can be taken care of before they develop into large repairs.

By having your service man look over your car at regular intervals, you will be saved the annoyance and inconvenience of so-called roadside repairs.

3

CAR'S LIFE INCREASED

Regular inspection of your motor will prolong the life of your car. It is one sure way of avoiding those unfortunate mishaps that so often mar the pleasure of driving. Minor adjustments and repairs taken care of as they are needed tend to keep the entire car in good condition and increases its resale value.

The life of the car is lengthened and greater satisfaction derived by the owner if he will follow our few suggestions.

The Foundation of Shop Profits

By J. HOWARD PILE

STORY No. 1.—The dealer or repairman CAN MAKE SHOP PROFITS. The automotive repair business is a good business if properly conducted. This and three succeeding stories will suggest fundamentals of profit making in the repair business.

The plan and detail illustrations on this and the opposite page have been worked out for a repairshop 25 x 50 ft. The rest of the building is not shown. This would allow all of the equipment shown here and leave room for three cars in the repair department alone. The shop would be separated from the rest of the building by sliding doors. The plan has been worked out with the idea of getting the most necessary equip-

2—Arrangement *4—Getting the Business*

ment into an average sized shop. The stockroom, the source of a great many leaks and losses, has been fitted up to hold parts and tools and jigs and can also serve as an office for a stock clerk or for the foreman. As most city fire laws require a blacksmith and welding shop to be walled off, this has been done. The bench arrangement along the wall allows for engine work at the left, axle and general work at the center and tire and electrical work at the right. The grinding wheel is convenient to the tire man and the machinist. The overhead trolley can run from the garage proper through the sliding doors and into the shop.

NEXT WEEK—Arrangement of Tools and Parts.

Do You Sell Accessories With Every Car Purchased?

Here's a Merchandising Plan That Presents Equipment and Parts to the Car Buyer As Necessities—It Sold $65,000 Worth Last Year

BUILDING an accessory business with a volume of more than $65,000 a year as a mere adjunct to its plan of marketing Ford cars in Indianapolis is one of the achievements of the Wangelin-Sharp Co., one of the largest Ford dealers in Indiana in point of output. Here is an "Ask-'Em-To-Buy" campaign that was flourishing even before the well known A. E. A. slogan and propaganda was started. A few specific plans and selling policies have helped bring about such a result for this firm which was not established until 1917. The one thing, however, that stands out in its success in many lines is the thoroughgoing organization, the sound policies and a veteran staff trained so that they have become part of the policies themselves. Whether Harry Sharp or Harry Wangelin are about the establishment or not, the place operates like a smooth running machine. It never seems to need the boss on the job to keep the engine from stalling. This leaves Wangelin and Sharp free to devise improvements that will make the business engine even more efficient. From such conditions arose policies and ideas that assured the success of an "Ask-'Em-To-Buy" accessories campaign.

Each phase of the sale of a new or used car, the accessory end, the service and parts side of the business, is so dovetailed into the general merchandising policies that govern the establishment that it is difficult to pick out this or that detail and place upon it responsibility for success in any one division of sales. In the accessory end, for instance, the mere fact that fifty per cent of all new car sales and a very much larger per cent of used car sales are on the part payment plan necessitates some sort of anti-theft control for the car. Here enters the locking steering wheel, the big leader in each month's accessory sales. It is considered necessary to include such equipment on the part payment car. The salesmen are trained to see it, and it is so logically shown to the prospect that sales are made as a matter of course. Another insurance device that is a popular seller is the loud horn, whose warning will be heard above the roar of city traffic. It commands respect and lessens danger of collision. These two devices are found to be included in a surprising number of sales. Dash light and speedometers are other accessories that insure safe driving of the part payment car. They are especially useful to the new and untrained driver who forms a large class of purchasers of Fords. Especially where they buy on the installment plan these are logical devices to sell. Keen witted salesmen trained to give "personal service" to buyers and owners of this class help boost the accessory records every month. It goes without saying that extra tires are sold in quantities.

By and large the records show that somewhere near $30 worth of accessories are sold with each new car that leaves the establishment. The men are trained toward this because they understand the policies of the concern, and because they see the urgency of certain type of protective devices. Beyond this the few salesmen still on a commission basis are given the same commission for accessories that they receive on car sales. Accessory contests with prizes, open to all who equal or surpass five sales per month, also keep the ball rolling. Particularly for these on straight salary basis is this an incentive. Some months the leaders in such contests achieve records of fifty dollars worth of accessories with each new car. Since they must sell five to become contenders for one of several prizes that means in excess of $200 in accessory sales a month from each man so successful.

Continuity and the same general policies have ruled in the service end. None but Ford expert mechanics were admitted to membership at the start. Now the approximately thirty men have a total of 129 years of Ford experience—a little more than four years each. There never has been an attempt to drum up trade for the shop. There is always plenty to do and it is done, as the record of 47 pay jobs a day on an average will show. The shop pays for itself, and does more than $4,000 of labor repairs a month. Here comes in the "Genuine Ford Parts" campaign, of which the establishment has always made a specialty in its general advertising and window dressing. See how it keys in with "personal service" the dominant idea around which the business has been developed. The one window devoted to display of material, parts and accessories is dressed now for parts and now for accessories. Each dressing lasts for some time and is made very attractive.

The service end of the business is tied up with every sale. At the end of ten days after delivery of a car the salesman making the sale is given a slip with the customer's name and address and is expected to call upon him at once. His first object is to find whether or not the car is giving satisfaction. He is then supposed to aid in any way possible toward better use of the car, have it taken to the service station if there is the least trouble, and to find from the new owner the names of friends who may be interested in a Ford. Here is the source of prospects that the organization always seems to have in abundance. Incidentally, the salesman follows this first visit up every month. The car is expected at the service station for inspection once a month, and these salesmens' visits make the following out of this practice by the customer difficult to dodge. In this manner the good will of every owner is won, his car is kept in fine condition, and the man or woman who can resist telling friends of such "personal service" is difficult to find. Then *the salesman is told of these friends who hope to own cars and like the Wangelin-Sharp Co. type of "personal service."* All of which adds to sales, to the accessory account and to service work.

How a Car Dealer Sells Accessories

EVERY day in the year there's an accessory or a parts display in one of the windows of the Wangelin-Sharp Co., Ford dealer in Indianapolis. The sale of accessories is EXPECTED to accompany the sale of every car—locking devices and other safety anti-theft items being pushed particularly as necessities, especially on cars bought on the time basis. This plan, which presents accessories as necessities averages $30 to every car sold and is instrumental in building up an accessory business of $65,000 a year.

Canada Optimistic as National Show Closes in Toronto

Bumper Crops and Brighter Outlook in Western Provinces Indicate Good Fall Business

Transportation Building which was devoted exclusively to car exhibits at Canada's Only National Motor Show held in conjunction with the Canadian National Exhibition, August 26th to September 11th

Toronto, Sept. 8.

THE temper of Canada's only national motor show this year as revealed by the trade and industry present was in striking contrast with that of the past two years and has never been more salutarily optimistic. Current business as well as prospects are generally described as from good to excellent.

While Ontario and, to a less degree, Quebec have been the best automotive markets in the Dominion during the past two years, the record-breaking improvements in Ontario and Quebec are spreading, and much better business is confidently looked for in the West. Even the banks are now forecasting that the West will this year garner the best crops since the bumper harvest of 1915. That means the liquidation of much capital frozen in credit to the advantage of the whole country. By and large, crops throughout the Dominion are excellent and general business is rapidly recuperating. Building is booming. The output of gold from the Ontario mines alone exceeds that of the Yukon by much—indeed outreaches the combined output of the mines of the United States. Everywhere a wholesome confidence in continued improvement with an era of development and prosperity ahead is manifest.

While a decided improvement in business was looked for this year by the trade and industry, none anticipated what has been realized by many of the leading Ontario distributors — sales eclipsing all records. How the Canadian automotive industry fared is perhaps best indicated by the fact that R. S. McLaughlin, president of the Automotive Industries of Canada (the N. A. C. C. of the Dominion) and of General Motors of Canada, Limited, recently estimated the car production for the current year at 100,000, which eclipses the peak year of 1920.

During the week just elapsed the attendance at the National Motor Show has established a new record, and it is predicted that when the show closes approximately 750,000 people will have viewed the new season models.

Only three English makes of cars are shown: A. C., Rolls-Royce and Vauxhall. All sixteen Canadian makes are displayed. The balance are of United States manufacture. Of all only one is radical in design, the three cylinder, four cycle air cooled Glen car of Toronto.

The automotive equipment exhibits are much more attractive, numerous and better accommodated than ever before. Located with the trucks in the huge west wing of the new exhibition coliseum, they have enjoyed the attention of many times the number of people who saw them in former years. The tractors are under canvas in the so-called tented city, and the motorboats and motorcycles are located in the Sports Building. The feeling is general that the exhibits of the various ramifications of the industry should be under one roof, and negotiations are under way looking to the erection of the long wanted automotive palace, where all can be shown without congestion. Should these efforts prove abortive, it has been suggested that the coliseum be given over in entirety to the 1923 Canadian National Motor Show.

That Canada's automotive investment exceeds $600,000,000; that motor vehicles carry at least five times the number of passengers transported by all the railroads combined in Canada, and that the Canadian automotive industry will produce approximately 100,000 cars this year and export from forty to fifty thousand (a percentage not even remotely approached by any other country), that Canada with over half a million cars and trucks ranks second only to the United States in motorization; that every unit entering Canadian made cars will be made in the Dominion in the near future, and that the country's motor population will double and triple within a few years, are some of the high lights of the very interesting and at times witty address by R. S. (Sam) McLaughlin, president of the Automotive Industries of Canada, delivered at the Directors' Luncheon of the Canadian National Exhibition, Automotive Day (August 26), at which were foregathered as guests the leaders in the consumer trade and industrial activities of the Dominion's automotivedom.

The address was broadcasted by radio, thousands of Exhibition visitors hearing it at the magnavox stations.

The Hon. F. C. Biggs, Minister of Public Highways of Ontario, in the course of his address won a very hearty applause when he declared that the Province proposed to build adequate roads despite adverse criticism.

Dr. P. E. Doolittle, president of the Canadian Automobile Association, congratulated the Minister on the progress made in road work.

After dealing with the need for more accommodation for Canada's National Automobile Show, so that all models of all makes could be suitably displayed, and suggesting that the huge new Coliseum be given over to automotive industry displays next year, and that thus the various products of the different branches of the industry—cars, trucks, tractors, airplanes, automotive equipment, motorcycles, motorboats, etc.—would, as they should, be displayed under one roof, and then briefly touching on the need for good roads, President McLaughlin dealt with the Canadian automotive industries' great and growing importance in the Dominion's "scheme of things entire," bringing out the points mentioned at the beginning of this article.

Editorial Notes

How to Buy

AN Eastern jobber who found himself a few weeks ago with $30,000 worth of obsolete and slow-moving stock on his shelves made an investigation of stocks in the hands of 100 typical dealers in his territory and found they had enough stagnant merchandise on hand to finance their wholesale purchases of automotive equipment for 60 days if the stocks could have been turned into cash.

This is a striking single example of a condition which is widespread and which is proving a serious obstacle in the way of profits in the wholesaling and retailing of automotive equipment.

It is not likely that it will ever be possible for a merchant in any line of business to avoid losses on unsalable goods, but it is possible by careful buying to keep these losses down and to keep stocks in a fluid condition which will simplify the task of providing working capital for the business.

One of the outstanding reasons why some jobbers find themselves periodically overstocked on certain lines of goods is that they are prone to listen too readily to the glib talk of some manufacturers' sales representatives who go around the country selling large orders on the basis of special discounts. The same sort of offers from salesmen of some jobbers tempt dealers and garagemen here and there to load up their shelves with orders too large to be turned over readily, and in some cases inferior quality in the goods themselves, which the retailer has overlooked in his scramble for a lower price, is an additional factor of sales resistance.

There are a great many honest jobbers who, while watching quantity as well as quality in their own purchases, do their best to assist retailers in acquiring only readily moveable stocks. These are the kind of jobbers dealers and garagemen should buy from. The fact that turnover is the basis of profit in merchandising is much more widely recognized to-day than it was a few years ago, but there is still much to be learned, and it appears that both wholesalers and retailers in the automotive equipment field have much studying to do.

Accidents and Automobile Sales

THE National Safety Council has prepared an analysis of fatal accidents in 1920, the most recent year for which complete figures are available, and motor vehicles are charged with responsibility for 11,000 deaths. Out of a total of 76,000 this is a figure which will prompt serious thought in the industry, both from a humanitarian and an economic viewpoint.

There is no one in the industry who would not like to see this motor vehicle death rate cut down, for the sole reason that a life is a life and every one saved is an achievement for the good of the community. This reason alone should impel automotive men to take an active interest in improvement of traffic conditions, with the object of reducing the accident toll. However, the industry has an additional interest in the thought that accidents create fear of motor vehicle transportation and so set up a definite sales resistance factor.

It is to the credit of thousands of workers for better and safer traffic that traffic accidents in 1921 will show something like a 5 per cent decrease as compared with 1920, according to incomplete figures now at hand. However, the total of fatalities due to automobiles is expected to be larger than in 1920 because of the large increase in the number of vehicles on the highways.

Taken all in all, the accident statistics suggest the need of continued and even more extensive study of accident causes and consequent action to eliminate them. For several months Motor World has been presenting information on traffic control. This policy will be continued because Motor World believes that automotive men must be in the foreground in urging, planning and carrying out traffic reforms which will not only reduce the accident toll but make the use of automobiles and trucks on the highways safer, pleasanter and more convenient, thus stimulating expansion of the business.

Another Record

BY building more than a million automobiles in four months—May, June, July and August—the industry has established another production record. As June was the greatest single month in the history of the industry, so these four months, in the aggregate, stand at the head of the production list for any four months' period. The year 1922 may prove to be the biggest year, though a Ford shutdown and a possible extensive curtailment of railroad freight service may prevent this outcome.

While the general public stands by wondering how the automotive industry can go forward with such tremendous strides when other industries are recovering only gradually, though steadily, from conditions of a year and two years ago, the men in the industry, particularly the men who sell cars, know the reason for the big business that is being done. The people want cars. They are buying them about as fast as the factories are building them. There are no excessive stocks in factory or dealer warehouses. The great business of 1922 is a going business. And it is a going business because the automobile, whether used for business or recreation, is a utility.

The production and sales records so far this year give promise of continued prosperity for the rest of 1922 for the men in the trade. The promise is emphasized by the unmistakable evidence of a growing demand for closed cars, which naturally will become more active as the cold months approach.

Must Possess Car to Attach Lien in New York

Garageman Who Allowed Car to Go to Paint Shop Gave Up Right to Lien—A Case to Remember

By DONALD D. BLANCHARD

EDITOR Motor World:—As a subscriber of your magazine I would appreciate a little information regarding an account with which I seem unable to cope.

The debtor, who is out of the city, owes me for storage, including the labor of washing and polishing the car, gasoline, oil, tires, tubes, etc.

His car at the present time is in the hands of a painter who is awaiting his removal of the car, it having been painted by him and as yet not paid for.

What can I do to protect myself in the way of filing a lien against the car? Were I to take the matter up in an attempt to serve a summons on him I would have to await his return to the city. This I am afraid of for I fear he will return and remove his car from the paint shop and after that will take the same out of the State without my knowledge.

I would appreciate very much any suggestions you may make. C. N. G., Forest Hills, N. Y.

Answer:—Unfortunately when you gave up the possession of the car you gave up any right to lien that you had. The only way your right to a lien for storage, repairs, etc., can be revived is by the owner voluntarily bringing the car into your garage again. That is the law of New York State. In New Jersey they have a different law providing that a garageman may repossess himself of a car in whatever part of the State he may find it.

What you say about service of a summons is true unless you can show that the car owner left with intent to defraud his creditors, etc., which is a difficult thing to show in any case.

The paint shop proprietor can hold the car until his bill is paid. Why not arrange to have him notify you when he learns of the owner's return. If you have any real reason to believe he will take the car out of the State you can attach it but in any event you will need the services of an attorney.

Car Must Be Adapted to Purpose for Which Sold

EDITOR Motor World:—I have read your articles in the Motor World, of which I am a subscriber, but did not think that I would ever have to refer to you for advice. I would appreciate it very much if you would give me your opinion regarding the following:

On July 29 I bought a —— car from the —— Co., of Baltimore, the local —— dealer. They gave me an allowance on my old —— car, which I turned in to them two or three days prior to my taking delivery on the new car. On Aug. 3 I took the car from their showroom and went about one block when I heard a severe knock in the motor. I took the car back and told the general manager about it. He sent me to their service station where the car was examined by their mechanics and shop foreman, who diagnosed the knock as caused by the main bearings. I then had a mechanic that I know, and who has been working on ——— cars for a very long time, examine the car and he said that there was no doubt about the car knocking, but that he could not say whether it was caused by the main bearings or connecting bearings unless the car was torn down.

I then went back to the —— Co. and took the manager out in the car. He claimed that it was only a gas knock. I have been driving a car for twelve years and a —— for the past three years and I think I ought to know something about a car.

I consented to try the car out that night, Aug. 3. On Friday, Aug. 4, I went back to them and told them that the car was knocking worse than ever. I left the car with them asking them to either give me a new car, return my money, or give me a written guarantee that unless the knock would disappear after going 500 miles, they would install a new motor in the car. I gave them an option of doing one of the three, which they refused. I think the car is a lemon and always will be and I don't think I am compelled to take it legally.

As it is absolutely necessary that I have a car in my business and as they refused to loan me one, I am hiring a car at their expense.

Any data that you can give me regarding any similar cases that you may know of, will be greatly appreciated.

P. S.—I wrote to the —— factory regarding this controversy and they refused to do anything for me, telling me that their local agent was perfectly competent of taking care of me, which they have refused to do.—A Reader, Baltimore, Md.

Answer:—In the absence of any knowledge of just what your contract contained in the way of warranties and guarantees it is rather difficult to give you much help in this matter. If there is no guarantee in the contract the courts, and you will undoubtedly have to apply to the courts for redress, will imply a warranty on the part of the manufacturer or his agent that the car is reasonably adapted to the purpose for which it was made and sold.

You had better take your contract to a local attorney at once, let him examine it and advise you if he thinks it well to rescind the contract and sue for the return of the purchase money.

You might call his attention to the case of Franklin Motor Car Co. vs. Ratliff decided just a short while ago and reported in 92 Southern Reporter at page 450, wherein it was held that even though the contract contained the so-called usual "standard warranty" and provided "The only guarantee under which this car is sold is the regular standard automobile manufacturers' guarantee," the court might nevertheless assume there was an implied warranty that the car was reasonably adapted for the purpose for which it was made and sold.

If the car was sold to you in a defective condition, my opinion is your local attorney will be able to help you.

If the standard guarantee is contained in your agreement, it will not help you any, as under it the manufacturer would only be obliged to replace parts becoming defective after delivery to you with other parts shipped to them at your expense and after you yourself have had the car taken down to get the defective parts out.

Owner Loses Rights

That the owner of an automobile who allows the party from whom he receives title to retain possession of the car and use it personally is precluded by his conduct from denying the authority of the person from whom he bought it, and whom he allowed to retain it, to sell it was the decision of the court in the lately decided case of Hier vs. Wightman, 233 N. Y., pg. 144.

Practical Questions of

Business Law

A Flat Rate Schedule for Chevrolet Cars

Both Supreme (490) and FB Models Covered in List of Timed Labor Operations Developed by the Factory

A SCHEDULE of flat rate operations containing ninety-seven major operations for the Supreme (490) Model and ninety-one major operations for the FB model has been worked out by the Chevrolet Motor Co. This arrangement of this schedule is somewhat new and is calculated to shorten the time of estimating and to prevent mistakes of time duplication where two or more specific repair operations require the dismantling of the same units.

In using the schedule for estimating, the specific repair to be made is looked for under the head of its major operation. The time given for the major operation then has added to it the time for the necessary minor operations which in the schedule are given by letter. The major operations are numbered.

This is an example of how the list is used: Inspection shows that the connecting rods are loose, valves need to be reground and reseated and that No. 3 cylinder has a loose piston pin.

First—Determine which of these repairs will necessitate the removal of the greatest number of parts. Reference to the schedule shows that replacing the No. 3 piston pin requires the removal of the cylinder head, underpan and oil pan and all repairs which require the removal of these parts are listed as minor operations known by letter, including grind and reseat valves, tighten connecting rod bearings and replace piston pin. So the repair order would be made up as follows:

	Hours
Operation No. 9—Remove cylinder head, underpan and oil pan	2.2
(a) Grind and reseat valves	1.5
(c) Tighten connecting rod bearing	1.0
(e) Replace No. 3 piston pin	.5
Total	5.2

In the event that more than one piston pin had to be replaced, the total price would include operation (e) times the number of piston pins to be replaced.

Flat Rates for Supreme (490) Model

Front Axle

	Labor Hours
1. Remove and Install 1 Front Wheel, pack with grease and adjust	.5
(a)—Replace Inner Bearing. (Ball Type) 1—Inner Stationary Cone 1—Inner Bearing Complete 1—Felt Retainer Complete Or	.2
(a)—Replace Inner Bearing. (Roller Type) 1—Inner Bearing Cup 1—Inner Bearing Cone 1—Felt Retainer Complete	.2
(b)—Replace Outer Bearing. (Ball Type) 1—Adjusting Cone 1—Outer Bearing Complete Or	.2
(b)—Replace Outer Bearing. (Roller Type) 1—Outer Bearing Cup 1—Outer Bearing Cone	.2
(c)—Replace Steering Knuckle	.3
(d)—Rebush Steering Knuckle	.4
(e)—Replace Steering Knuckle King Bolt	.3
(f)—Replace Front Wheel Hub	.5
2. Remove Front Axle from under car, dismantle "I"-beam, rebuild and install under car	1.2
(a)—Straighten Front Axle "I"-Beam.	1.6
3. Remove and Install Steering Tie Rod	.4
(a)—Straighten Tie Rod	.2
(b)—Replace Tie Rod Bolts	.2
(c)—Replace Plain Arm	.2
(d)—Rebush Both Plain Arms	.2
4. Tram Front Wheels	.5

Engine

	Labor Hours
5. Remove and Install Cylinder Head	1.0
2—Carbureter Gaskets 1—Cylinder Head Gasket 1—Water Outlet Gasket	
(a)—Grind and Re-seat Valves	1.5
2—Valves 1—Valve Spring	
6. Remove and Install Rocker Shaft Assembly	.2
(a)—Replace Rocker Arm	.2
(b)—Rebush one Rocker Arm	.3
(c)—Replace one Valve Lifter	.1
1—Valve Lifter 1—Valve Lifter Lock	
7. Adjust Push Rods	.5
8. Remove Underpan, Oil Pan and replace	1.0
5—Qts. Cylinder Oil 2—Oil Pan Gaskets	
(a)—Tighten Crank Shaft Bearings	1.5
(b)—Tighten Conecting Rod Bearings.	1.0
(c)—Flush Oil Pan and Clean Oil Lines	.2
9. Remove Cylinder Head, Underpan, Oil Pan and replace	2.2
2—Carbureter Gaskets 1—Cylinder Head Gasket 1—Water Outlet Gasket 2—Oil Pan Gasket 5—Qts. Cylinder Oil	
(a)—Grind and Re-seat Valves	1.5
2—Valves 1—Valve Spring	
(b)—Tighten Crank Shaft Bearings	1.5
(c)—Tighten Connecting Rod Bearings	1.0
(d)—Replace one Connecting Rod Bearing	1.5
6—Connecting Rod Shims 1—Connecting Rod Bolt 1—Standard Connecting Rod Bolt Nut 1—Upper Connecting Rod Bearing 1—Lower Connecting Rod Bearing	
(e)—Replace one Piston Pin	.5
(f)—Replace three Piston Rings	.5
(g)—Replace one Piston	1.2
(h)—Ream one Cylinder and fit oversize Piston	1.5
1—Piston 3—Piston Rings 1—Piston Pin	
(k)—Replace Connecting Rod	.5
(l)—Flush Oil Pan and Clean Oil lines	.2
10. Remove Engine from Chassis. Completely dismantle and re-assemble and re-install	12.0
2—Carbureter Gaskets 1—Cylinder Head Gasket 1—Water Outlet Gasket 2—Oil Pan Gaskets 5—Qts. Cylinder Oil	
(a)—Grind and Re-seat Valves	1.5
2—Valves 1—Valve Spring	
(b)—Replace one Connecting Rod Bearing	1.5
6—Connecting Rod Shims 1—Connecting Rod Bolt 1—Standard Connecting Rod Bolt Nut 1—Upper Connecting Rod Bearing 1—Lower Connecting Rod Bearing	
(c)—Replace one Connecting Rod	.5
(d)—Replace one Piston Pin	.5
(e)—Ream one Cylinder and fit oversize Piston	1.5
1—Piston 1—Piston Ring 1—Piston Pin	
(f)—Replace Center Crankshaft Bearing	1.5
(g)—Replace Rear Crankshaft Bearing	1.5
(h)—Replace Front Crankshaft Bearing	1.5
(k)—Replace Cylinder Block	2.0
(l)—Replace Crankshaft	1.5
18—Connecting Rod Shims 18—Crankshaft Bearing Shims 1—Crankshaft	
(m)—Replace Flywheel	.5
1—Flywheel 1—Thrust Ball Race 1—Tension Rod 7—Standard Balls	
(n)—Replace Camshaft	1.0
1—Camshaft Thrust Bearing 1—Camshaft	
(o)—Adjust Camshaft for End Play	.3
(p)—Replace Camshaft Gear	.6
(r)—Replace Crankshaft Gear	.2
(s)—Replace Clutch Cone	.4
(t)—Replace Clutch Leather	.6
(u)—Replace Clutch Thrust Bearing	.6
1—Clutch Tension Rod 1—Clutch Ball Race 7—Standard Balls	
11. Remove Engine from Chassis and reinstall	3.0
12. Remove and Reinstall Radiator	.6
(a)—Replace Radiator Shell	.4
(b)—Replace Fan Drive Pulley	.2
(c)—Replace Water Pump and Fanshaft	.4
1—Water Pump and Fanshaft 2—Standard Woodruff Key No. 6 1—Packing Nut 2—Gaskets	
(d)—Replace Water Pump Bushing	.5
(e)—Replace Water Pump Body	.4
1—Water Pump Body 2—Water Pump Gaskets 1—Standard Woodruff Key No. 6	
(f)—Replace Fan	.4
(g)—Replace Water Pump Rotor	.3
(h)—Replace Water Pump Packing Nut	.3
13. Remove and Reinstall Timing Gear Cover (includes removing and installing Radiator)	1.5
(a)—Replace Camshaft	.5
1—Camshaft Thrust Bearing 1—Camshaft	
(b)—Adjust Camshaft for end play	.5
(c)—Replace Camshaft Gear	.5
(d)—Replace Crankshaft Gear	.2
(e)—Replace Camshaft Thrust Bearing	.4
14. Replace Fan Belt (Radiator in Place)	.3
15. Replace Fan Drive Pulley (Radiator in place)	.3

Oil Pump

	Labor Hours
16. Remove and Reinstall Oil Pump	.3
(a)—Replace Oil Pump Drive Gear	.3
(b)—Replace Oil Pump Drive and Idler Gears	.3
(c)—Replace Oil Pump Body	.3
(d)—Replace Oil Pump Drive Shaft	.2
17. Replace Oil Pressure Gage	.2

Clutch

	Labor Hours
18. Eliminate Grabbing Clutch by adjusting expanders	.6
19. Eliminate Slipping Clutch by adjusting expanders	.6
20. Replace Clutch Collar	.8
21. Clean and lubricate Clutch Facing	.4
22. Remove and Reinstall Clutch Spring (includes removal of Gearset)	2.7
23. Remove and Install Clutch Cone (includes removal of Gearset)	3.5
(a)—Replace Clutch Cone Leather	.3
(b)—Replace Clutch Hub	.3

Digitized by Google

Gearset

Labor Hours

24. Remove Gearset from Chassis and re-install 2.5
(a)—Replace High and Intermediate Sliding Gear 6
(b)—Replace Lower and Reverse Slidind Gear 6
(c)—Replace Idler Gears..... 1.0
(d)—Replace Idler Gear Bushings..... .4
(e)—Replace Spline Shaft..... .7
(f)—Replace Spline Shaft Bearing.... .6
(g)—Replace Countershaft..... 1.0
(h)—Replace Countershaft Bushings.. .4
(k)—Replace Idler Gear Shaft..... .4
(l)—Replace Main Drive Gear..... .4
(m)—Replace Main Drive Gear Bushing .6
(n)—Replace Main Drive Gear Bearing .6
25. Remove Gears from Countershaft and re-install 4
26. Remove and Reinstall Gear Case Cover 4
(a)—Replace Either Shifter Shaft..... .4
(b)—Replace Either Shifter Fork..... .4
(c)—Replace Gear Case Cover..... .8
27. Align Gearset with Engine..... 1.0
28. Remove Flywheel and Reinstall (Engine in Chassis) 3.2
(a)—Replace Flywheel .....
1—Flywheel
1—Clutch Tension Rod
1—Clutch Ball Race
7—Standard Balls
(b)—Replace Clutch Thrust Bearing.. .2
1—Clutch Tension Rod
1—Clutch Ball Race
7—Standard Balls
29. Replace one Gearset Support..... 1.0

Rear Axle

30. Remove Rear Axle Unit from Under Car, Completely Disassemble, Inspect All Parts and Rebuild—Re-install Under Car 4.0
(a)—Replace Pinion Gear
(b)—Replace Ring Gear
(c)—Replace Thrust Bearing
(d)—Replace One Axle Shaft
(e)—Replace Differential Case (Plain Half)
(f)—Replace Differential Case (Bevel Ring Half)
(g)—Replace One Side Pinion Gear
(h)—Replace One Main Shaft Inner Bearing
(k)—Replace One Main Shaft Inner Bearing Sleeve
(l)—Replace one Differential Spider
(m)—Replace one Differential Spider Gear
(n)—Make change over from Straight tooth Gear Type to Spiral Bevel Gear Type
(o)—Replace Propeller Shaft
(p)—Replace Propeller Shaft Hyatt Bearings
(q)—Replace Propeller Shaft Bearing—Rear
(r)—Replace Propeller Shaft Bearing—Front
(s)—Replace Propeller Shaft Key
(t)—Replace Rear Axle Housing
(u)—Replace Fibre Thrust Washers
(v)—Replace Propeller Shaft Housing
(w)—Replace Universal Joint
(x)—Replace Universal Joint Housing
(y)—Replace Speedometer Gears
(z)—Replace Propeller Shaft Housing Bushing
31. Remove and Reinstall Rear Axle Assembly 1.5
(a)—Replace Universal Joint..... .5
(b)—Replace Universal Joint Housing .2
(c)—Replace Speedometer Gears..... .6
32. Remove and Reinstall one Rear Wheel .3
(a)—Reline Service Brake..... 1.0
(b)—Replace Rear Axle Truss Rod... .2
(c)—Reline Emergency Brake..... 1.0
(d)—Clean Brakes, Wheels and Replace Felt Washers 1.0
(e)—Replace Wheel Hub 5
(f)—Replace Hub Roller Bearing..... .4
(g)—Replace Hub Roller Bearing Outer Race 3
(h)—Replace Brake Operating Cam 5
1—Inside Boss
1—Brake Operating Cam
(k)—Loosen Frozen Brake Operating Cam 7
33. Install Hand Brake Lever Assembly. 1.0

Body

34. Replace Front Fender..... 1.0
35. Replace Rear Fender 9
36. Replace Runningboard 8
37. Replace Runningboard Apron..... 1.0
38. Replace Radiator Splash Guard..... .3
39. Replace Door..... .4

Labor Hours

40. Replace Top 2.0
41. Replace Windshield 4
42. Replace Lower Windshield Glass.... .6
43. Replace Upper Windshield Glass.... .6
44. Fit Doors by Shimming Body..... 1.0
45. Replace One Door Lock..... 1.4
46. Take Rattles Out of Sedan Doors.... 1.5
47. Install One Complete Bumper 1.0
48. Replace One Door Hinge..... 1.0
49. Tighten Body Bolts..... .5
50. Replace Under Pan..... .5
51. Replace Hood 4
52. Replace One Head Lamp Complete (Black Enameled Rim, 1916-1920) Single Contact 2
53. Replace One Head Lamp Complete (Nickel Plated Rim, 1916-17-18)..... .2
54. Replace One Head Lamp Complete (Black Enameled Rim Single Contact 1919-20) 2
55. Replace One Head Lamp Complete Adjustable (Single Contact) (1920-21-22) 2
56. Replace Tail Lamp (On License Plate) 2
57. Replace Tail Lamp (On Tire Carrier) .2
58. Replace Tire Carrier, Touring, Roadster, Coupe, Sedan, and Light Delivery 5
59. Replace One Hood Fastener..... .1
60. Replace Lamp Bracket, All Types... .2

Chassis

61. Remove and Reinstall One Front Spring 1.0
(a)—Replace Front Spring Bracket.... 2.0
62. Remove and Reinstall One Rear Spring 1.5
(a)—Replace Rear Spring Bracket..... 2.5
63. Remove One Front Spring, Disassemble for Replacing Leaves, Assemble and Reinstall 1.5
64. Remove One Rear Spring, Disassemble for Replacing Leaves, Assemble and Re-install 2.0
65. Rivet Spring Bracket to Frame (when loose) 1.0
66. Replace Front Motor Arm 2.6
67. Replace Spring Center Bolt, (Front). .3
68. Replace Spring Center Bolt, (Rear).. 1.0
69. Tighten All Spring Bolts 5

Steering Gear

70. Remove and Reinstall Complete Steering Gear 1.5
(a)—Replace Steering Gear Case..... 1.0
(b)—Replace Steering Main Shaft Assembly 1.0
(c)—Replace Steering Gear Sector Gear .4
(d)—Replace Steering Gear Countershaft Gear 4
71. Remove and Reinstall Steering Wheel 2
(a)—Replace Mast Jacket Bushings 2
(b)—Replace Mast Jacket..... .6

Generator

72. Remove and Reinstall Generator..... .8
(a)—Replace Generator Gear..... .4
(b)—Replace Generator Brushes..... .5
(c)—Turn Down Eccentric Commutator 1.0
(d)—Lower Mica between Segments.. .6
(e)—Replace Generator Radial Bearing (Drive End) 6
(f)—Replace Armature 5
(g)—Replace Generator Radial Bearing (Commutator End) 4
73. Remove and Reinstall Igniter Assembly (Check Timing and Reset)... .8
(a)—Eliminate Lost Motion in Breaker Plate 4
(b)—Replace Generator Head..... .5
(c)—Replace Igniter Gear..... .4
(d)—Replace Igniter Housing..... .5
(e)—Replace Igniter Shaft 5

Starting Motor

74. Remove and Reinstall Starting Motor .5
(a)—Replace Bearing Adapters 8
(b)—Replace Brushes 5
(c)—Replace Armature 5
(d)—Replace Bendix Drive Gear..... .4
(e)—Replace Bendix Drive Shaft..... .6
(f)—Replace Bendix Drive Spring..... .3
(g)—Replace Bendix Drive Assembly Complete 6
75. Align Starting Motor with Flywheel. .5

Carbureter

76. Remove Carbureter, Disassemble, Clean and Inspect All Parts, Reassemble and Install 1.0
(a)—Repair Carbureter for Leak..... .3
1—Needle Valve
1—Needle Valve Seat
77. Remove and Reinstall Carbureter.... .5
78. Disassemble Vacuum Tank, Clean and Reassemble, Including Cleaning Line to Carbureter and Carbureter Screen 5
(a)—Install New Float in Vacuum Tank 4
(b)—Repair Vacuum Tank Float..... .5
79. Clean Gasoline Tank and Carbureter. 1.0
80. Remove and Reinstall Gasoline Tank .6
(a)—Clean Gasoline Tank 2

Electrical Group

81. Remove and Reinstall Wiring Harness 1.6
82. Remove and Reinstall Lighting and Ignition Switch 5
83. Remove and Reinstall Starting Switch 5
84. Replace Ammeter 3
85. Locate and Repair Short Circuit in Wiring 1.2
86. Remove and Reinstall Starting Cable (Battery to Switch) 4
87. Remove and Reinstall Battery Cable (Battery to Engine) 4
88. Replace Coil 3
89. Replace Battery Box 5

General Lubrication

90. Change Oil in Engine 2
91. Lubricate Gearset 2
92. Lubricate Rear Axle 2
93. Lubricate Clutch Throw-Out Collar .2
94. Refill All Chassis Grease Cups and Oil Cups, Including the Packing and Adjusting of Front Wheel Bearings..... 1.4
95. Graphite All Spring Leaves (Spread Leaves Only) 1.0
96. Oil All Springs to Take Out Squeaks. .2
97. Take Out All Squeaks and Rattles.. 2.0

Flat Rates for Model "FB"

1. Remove and Install 1 Front Wheel, Pack with Grease and Adjust..... .5
(a)—Replace Inner Ball Bearing..... .2
1—Inner Cone
1—Inner Ball Cup
1—Ball Retainer Assembly
1—Felt Retainer
1—Ball Cup Felt
(b)—Replace Outer Ball Bearing..... .2
1—Outer Ball Race
1—Outer Cone
1—Ball Retainer Assembly
(c)—Replace Steering Knuckle..... .3
(d)—Rebush Steering Knuckle..... .4
(e)—Replace Steering Knuckle King Bolt 3
(f)—Replace Front Wheel Hub..... .5
2. Remove Front Axle from Under Car, Dismantle "I"-Beam, Rebuild and Install Under Car 1.7
(a)—Straighten Front Axle "I"-Beam. 1.6
3. Remove and Install Steering Tie Rod .4
(a)—Straighten Tie Rod 2
(b)—Replace Plain Arm 2
(c)—Rebush Both Plain Arms..... .2
(d)—Replace Steering and Third Arm with Bushing and Ball 4
4. Tram Front Wheels 5

Engine

5. Remove and Install Cylinder Head.. 1.5
1—Carbureter Gasket
1—Water Outlet Gasket
1—Cylinder Head Gasket
(a)—Grind and Re-seat Valves 1.5
1—Valve Spring
2—Valves
(b)—Replace Single Port Cylinder Head with 3-port Exhaust Type..... .5
6. Remove and Install Rocker Shaft Assembly 3
(a)—Replace Rocker Arm 2
(b)—Rebush One Rocker Arm..... .3
(c)—Replace One Valve Lifter..... .2
1—Valve Lifter
1—Valve Lifter Lock
7. Adjust Push Rods 5
8. Remove Lower Oil Pan and Connecting Rod Troughs and Replace..... .5
1—Oil Pan Gasket
6—Qts. Cylinder Oil
(a)—Tighten Connecting Rod Bearings 1.5
(b)—Flush Oil Pan and Clean Oil Lines .2
9. Remove Lower Oil Pan, Lower Crank Case and Replace 1.0
6—Qts. Cylinder Oil
1—Oil Pan Gasket
1—Lower Crankcase Casket
(a)—Tighten Crankshaft Bearings.... 2.0
(b)—Flush Oil Pan Lower Crankcase and Clean Oil Lines 2
10. Remove Cylinder Head, Lower Oil Pan, Lower Crankcase, Baffle Plates and Replace (Same as Operations No. 5 and No. 9)..... 2.5
(a)—Grind and Re-seat Valves 1.5
2—Valves
1—Valve Spring
(b)—Replace Cylinder Head, three-port Exhaust Type 5

Digitized by Google

Labor Hours

(c)—Tighten Crankshaft Bearings..... 2.0
(d)—Tighten Connecting Rod Bearings 1.5
(e)—Replace One Connecting Rod Bearing 1.5
2—Connecting Rod Bearing, Upper and Lower
(f)—Replace One Piston Pin..... .5
(g)—Replace Three Piston Rings..... .5
(h)—Replace One Piston..... 1.2
(k)—Ream One Cylinder and fit oversize Piston 1.5
1—Piston
3—Piston Rings
1—428 Piston Pin
(l)—Replace Connecting Rod..... .5
(m)—Flush Oil Pan and Clean Oil Lines .2
11. Remove Engine from Chassis, Completely Dismantle, Re-assemble and Reinstall 15.0
(a)—Grind and Re-seat Valves..... 1.5
2—Valves
1—Valve Spring
(b)—Replace Single Port Cylinder Head with three Port Exhaust Type.. .5
(c)—Replace One Connecting Rod Bearing 1.5
2—Connecting Rod Bearing, Lower and Upper
(d)—Replace One Connecting Rod..... .5
(e)—Replace One Piston Pin..... .5
(f)—Ream One Cylinder and fit Oversize Piston..... 1.5
1—Piston
3—Piston Rings
1—Piston Pin
(g)—Replace Center Crankshaft Bearing 2.0
(h)—Replace Rear Crankshaft Bearing 2.0
(k)—Replace Front Crankshaft Bearing 2.0
(l)—Replace Cylinder Block..... 2.0
(m)—Replace Crankshaft 1.0
(n)—Replace Flywheel 2
(o)—Replace Camshaft 4
(p)—Adjust Camshaft for end play.... .3
(r)—Replace Camshaft Gear 6
(s)—Replace Crankshaft Gear 3
(t)—Replace Clutch Cone..... .4
(u)—Replace Clutch Leather..... .6
(v)—Replace Clutch Thrust Bearing... .3
12. Remove Engine from Chassis and Reinstall 4.0
5—Qts. Cylinder Oil
13. Remove and Reinstall Radiator 6
(a)—Replace Radiator Shell 4
(b)—Replace Fan Drive Pulley..... .2
(c)—Replace Fan Belt 3
(d)—Replace Water Pump and Fanshaft 4
1—Water Pump and Fanshaft
2—Standard Woodruff Key No. 6
1—Packing Nut
2—Gaskets
(e)—Replace Water Pump Bushing.... .5
(f)—Replace Water Pump Body..... .5
1—Water Pump Body
1—Standard Woodruff Key
2—Water Pump Gasket
(g)—Replace Fan 4
(h)—Replace Water Pump Rotor..... .3
(k)—Replace Water Pump Packing Nut .3
14. Remove and Reinstall Timing Gear Cover (Includes Removing and Installing Radiator) 1.5
(a)—Replace Camshaft 5
1—Camshaft Thrust Bearing
1—Camshaft
(b)—Adjust Camshaft for end play.... .5
(c)—Replace Camshaft Gear..... .4
(d)—Replace Crankshaft Gear 3
(e)—Replace Fan Belt 3
(f)—Replace Camshaft Thrust Bearing .2
15. Replace Fan Belt (Radiator in Place) .4
16. Replace Fan Drive Pulley (Radiator in Place) 3

Oil Pump

17. Remove and Reinstall Oil Pump..... .3
(a)—Replace Oil Pump Drive Gear..... .3
(b)—Replace Oil Pump Drive and Idler Gears 3
(c)—Replace Oil Pump Body..... .3
(d)—Replace Oil Pump Drive Shaft.... .2
18. Replace Oil Pressure Gage..... .2

Clutch

19. Eliminate Grabbing Clutch by Adjusting Expanders 8
20. Eliminate Slipping Clutch by Adjusting Expanders 8
21. Replace Clutch Insert 1.0
22. Clean and Lubricate Clutch Facing.. .6
23. Remove and Reinstall Clutch Spring (Includes removal of Gearset)..... 2.7
(a)—Replace Clutch Thrust Bearing.... .8
24. Replace Clutch Collar and Insert (Includes removal and Reinstalling of Transmission) 2.8
25. Remove and Install Clutch Cone (Includes removal and Reinstalling of Transmission) 3.0
(a)—Replace Clutch Cone..... .3
(b)—Replace Clutch Cone Leather 5
(c)—Replace Clutch Hub 5
(d)—Replace Flywheel 5

Gearset

Labor Hours

26. Remove Gearset from Chassis and Reinstall 1.5
(a)—Replace High and Intermediate Sliding Gear 1.2
(b)—Replace Low and Reverse Sliding Gear 1.2
(c)—Replace Idler Gear 6
(d)—Replace Idler Gear Bushing..... .8
(e)—Replace Spline Shaft..... 1.0
(f)—Replace Spline Shaft Bearing..... 1.0
(g)—Replace Countershaft 1.0
(h)—Replace Countershaft Bushing.... 1.2
(k)—Replace Idler Gear Shaft..... .6
(l)—Replace Main Drive Gear..... .6
(m)—Replace Main Drive Gear Bushing .8
(n)—Replace Main Drive Gear Bearing. .6
27. Remove Gears from Countershaft Sleeve and Reinstall..... .6
28. Remove and Reinstall Transmission Gear Case Cover..... .4
(a)—Replace either Shifter Shaft..... .4
(b)—Replace either Shifter Fork..... .4
(c)—Replace Gear Case Cover..... .8
29. Replace Flywheel (Engine in Chassis) 3.2

Rear Axle

30. Remove Rear Axle Unit from under car, completely Disassemble, Inspect all parts and Rebuild. Reinstall under car 5.0
(a)—Replace Pinion Gear
(b)—Replace Ring Gear
(c)—Replace Thrust Bearing
(d)—Replace One Axle Shaft
(e)—Replace Differential Case (Plain Half)
(f)—Replace Differential Case (Bevel Ring Half)
(g)—Replace One Side Pinion Gear
(h)—Replace One Main Shaft Inner Bearing
(k)—Replace One Main Shaft Inner Bearing Sleeve
(l)—Replace One Differential Spider
(m)—Replace One Differential Spider Gear
(n)—Replace Propeller Shaft
(o)—Replace Propeller Shaft Bushing
(p)—Replace Propeller Shaft Bearing, Rear
(q)—Replace Propeller Shaft Bearing, Front
(r)—Replace Propeller Shaft Adjusting Sleeve
(s)—Replace Propeller Shaft Key
(t)—Replace Rear Axle Housing
(u)—Replace Propeller Shaft Housing
31. Remove and Reinstall Rear Axle Assembly 1.5
(a)—Replace Universal Joint 5
(b)—Replace Universal Joint Housing .2
(c)—Replace Speedometer Gears 6
32. Remove and Reinstall One Rear Wheel 3
(a)—Reline Service Brake 1.0
(b)—Replace Rear Axle Truss Rod.... .3
(c)—Reline Emergency Brake 1.0
(d)—Clean Brakes, Wheels and Replace Felt Washers 1.1
(e)—Replace Wheel Hub 5
(f)—Replace Hub Roller Bearing 2
(g)—Replace Hub Roller Bearing Outer Race 5
(h)—Replace Brake Operating Cam.... .5
(k)—Loosen Frozen Brake Operating Cam 1.0

Body

33. Replace Front Fender 1.0
34. Replace Rear Fender 1.0
35. Replace Runningboard 8
36. Replace Runningboard Apron 1.0
37. Replace Radiator Splash Guard..... .3
38. Replace Door 4
39. Replace Top 2.0
40. Replace Windshield 4
41. Replace Lower Windshield Glass..... .6
42. Replace Upper Windshield Glass 6
43. Fit Doors by Shimming Body..... 1.0
44. Replace One Door Lock..... 1.4
45. Take Rattle Out of Sedan Doors..... 1.5
46. Install One Complete Bumper..... 1.0
47. Replace One Door Hinge..... 1.0
48. Tighten Body Bolts 6
49. Replace Hood 4
50. Replace One Head Lamp Complete... .2
51. Replace Tail Lamp 2
52. Replace One Hood Fastener (either type) 1
53. Replace Lamp Bracket..... .2
54. Replace Tire Carrier—All Models.... .5
55. Replace Tire Carrier Bar Assembly.. .5
56. Replace Tire Carrier Tie Bar (Part No. 47,372)..... .5

Chassis

57. Remove and Install One Front Spring 1.0
(a)—Replace One Front Spring Bracket 2.0
58. Remove and Install One Rear Spring. 1.0
(a)—Replace One Rear Spring Bracket.. 2.0

Labor Hours

59. Remove One Front Spring, Disassemble for Replacing Leaves, Assemble and Reinstall 1.5
60. Remove One Rear Spring, Disassemble for Replacing Leaves, Assemble and Reinstall 2.0
61. Rivet Spring Bracket to Frame, (when loose) 1.0
62. Replace Rear Spring U Bolt..... 1.0
63. Replace Spring Center Bolt—Rear... .8
64. Tighten All Spring Bolts..... .5

Steering Gear

65. Remove Complete Steering Gear and Reinstall in Car 2.0
(a)—Replace Steering Gear Housing... .5
(b)—Replace Steering Gear Main Tube .5
(c)—Replace Steering Gear Worm Wheel 6
(d)—Replace Stering Gear Worm Wheel Shaft Bushing 1.0
(e)—Take up Lost Motion in Steering Gear 5
2—Ball Thrust
2—Worm Ball Race
(f)—Replace Steering Wheel..... .5
66. Take up Lost Motion in Steering Connecting Rod and Front End Steering Mechanism 1.0

Generator

67. Remove and Reinstall Generator..... .8
(a)—Replace Generator Gear..... .4
(b)—Replace Generator Brushes..... .5
(c)—Turn Down Eccentric Commutator 1.0
(d)—Lower Mica between segments.... .6
(e)—Replace Generator Radial Bearing (Drive End) 6
(f)—Replace Armature 5
(g)—Replace Generator Radial Bearing (Commutator End) 4
68. Remove and Reinstall Igniter Assembly, Check Timing and Reset..... .8
(a)—Eliminate lost motion in Breaker Plate 4
(b)—Replace Generator Head..... .5
(c)—Replace Igniter Gear 4
(d)—Replace Igniter Housing..... .5
(e)—Replace Igniter Shaft 5

Starting Motor

69. Remove and Reinstall Starting Motor..5
(a)—Replace Bearing Adapters 8
(b)—Replace Brushes 5
(c)—Replace Armature 5
(d)—Replace Bendix Drive Gear 4
(e)—Replace Bendix Drive Shaft 6
(f)—Replace Bendix Drive Spring..... .3
(g)—Replace Bendix Drive Assembly Complete 6
70. Align Starting Motor with Flywheel. .5

Carbureter

Oakland 1923 Series Has New Line of Bodies

Elimination of Spark and Throttle Control Quadrant and Introduction of Exhaust Heated Intake Manifold Controlled by Throttle Are New Chassis Features

The upper views show, from left to right, the sport phaeton, roadster, phaeton and coupe. The lower left view shows the new spark and throttle controls on the steering wheel together with the headlight dimmer. A section of the mechanism is shown at the center. At the lower right is shown the new intake heater controlled by the throttle opening

THE 1923 series Oakland cars are featured by an entirely new line of bodies with deeper lines accentuated by heavier and more fully crowned fenders and by a runningboard which is 1½ in. lower than formerly. While the change in exterior appearance is striking, the cars for 1923 are not radically different from the previous model in mechanical detail. Probably the most important change is in the introduction of the new exhaust heated intake manifold in which the exhaust temperature is controlled by the throttle.

The damper is interconnected with the throttle in such a way that the heat is decreased as the throttle is opened thus giving the desired effect for easy starting without affecting the output of the engine at higher speeds by unduly expanding the mixture. The new Marvel carbureter has also been adopted and it is claimed that this also is a material factor in improving starting and general carburetion.

A number of detail refinements from the standpoint of comfort will be found throughout the entire car. There is now a lever on the steering column for dimming the headlights. Another innovation is the new hand control for the spark and throttle instead of the usual quadrant. The gearshift lever has been lengthened and the new steering wheels are considerably more dished.

Another mechanical change is the adoption of the new type Remy distributor head in which the advance is taken care of inside of the breaker box instead of by moving the whole head as formerly. The cars have drum lamps and nickel plated radiator and other parts. The rear windows and windshield are now of bevel glass and in the closed cars a heater, rear view mirror, windshield wiper and snubbers are standard equipment. No changes have been made in the prices.

Every Job Geared to Increase Sales

Co-operation in Los Angeles Service Station Produces Increasing Business in Accessories and Parts

MUCH business is lost by automobile dealers and operators of service stations because of lack of co-operation between the various departments. The repair department probably will make the repairs on a car that are called for on the work order and let it go at that, without any thought to developing business for the accessory department or being on the alert for new car prospects. The clerk in the accessory department may turn a deaf ear to opportunities to encourage trade for the repair department, or for other departments.

Establishments that have organized their forces along the lines of absolute co-operation have found greatly increased business in their various departments, but there is still tremendous room for development in that direction in the retail trade as a whole.

The Shepherd Campbell Co., which operates a complete automotive service station in Los Angeles, has developed a system for driving hard for business that has brought results beyond all expectations during the last few months. The big idea behind the scheme is co-operation. The man whose job it is to oil and grease cars on the racks has been given to know that he is expected to be constantly on the lookout for business for the battery department, the tire department, the upholstery repair department, accessory department, etc. Likewise, the employees in the other departments must swing all business possible to the oil and grease racks.

In order to obtain a close-up view as to how the system of the Shepherd Campbell Co. works out, let us follow a car through as it is driven in. Mr. ———, Los Angeles, comes along and tells the foreman he wants work done as follows: Motor and transmission cleaned; crank case drained and flushed out; oil transmission cleaned and filled. The foreman informs Mr. ——— just what the bill will be and the owner then authorizes the work done by signing the work order with his name and address. If Mr. —— is in a hurry for the car, the company absolutely guarantees that it will be ready for him at the time stipulated. Unless the foreman is certain that delivery can be made at the hour requested, he will not accept the job, as it is a firm policy of the company to keep all promises.

Mr. ——— says that he wants his car at 6 p. m. The foreman consults his work schedule for the racks and finds that he can accommodate the owner.

The work order goes to the oil racks and is turned over to employee Moore.

When Moore has finished the job as called for on the work order he checks off the list of items and then proceeds to look for "facts" that will interest other departments. On the reverse side of his work order he writes:

"No wind deflectors."

"No rear bumper."

"Will need new front tire in about three weeks."

"Rip in upholstery in rear."

In order to encourage repeat business for the oil racks, employee Moore places a small sticker at some prominent spot under the hood which contains the following information: Speedometer reading when crank case was drained; what the speedometer should read when it should be drained again. The name of the Shepherd Campbell Co. and its address, of course, also appear on the sticker.

Employee Moore turns in the work order to the general office at the conclusion of the job and follows the same procedure with the next job.

It is the duty of one clerk in the office to write or circularize car owners on the basis of the information appearing on the reverse side of all work orders turned in by the various departments. In three weeks she will probably write a special letter to Mr. ——— calling his attention to the condition of his right front tire and inviting inspection of the company's tire stock. She may also suggest in the same letter that the rip in the upholstery be repaired.

The fact that Mr. ———s' car is not equipped with wind deflectors or a rear bumper is noted on separate cards. There is a "bumper prospect" file and a "wind deflector prospect" file. The lists of owners appearing in these files are circularized when special selling campaigns are launched to promote the sale of these articles. If two or more circular letters do not bring the prospect in and a sale is made, the cards of these particular owners are removed from the files and destroyed. In other words, it is the intention of the Shepherd Campbell Co. to keep their files filled with actual, live prospects, and in furtherance of this intention they have been eminently successful.

In order to develop new trade, the company has scheduled various special jobs which are advertised through circular letters. Typical of these circular letters is the following:

Perhaps we never told you that for $3.00 we thoroughly clean touring cars, inside and out, take all the grease off the springs, axles and running gears and re-enamel underneath the fender pans, axles and springs—stopping the rust and making the car like new underneath. Vacuum cleaners are used on your cushions, and all the nickel on the car is polished and the top cleaned off.

We would be glad to give you a demonstration, or take care of your car if it needs it. Then, too, we clean the motor and transmission for a small extra charge, and call and get your car and deliver same at no additional expense.

We just thought we would drop you a line and let you know about this part of our service.

As a result of the vigorous program of co-operation and hard-hitting merchandising, the Shepherd Campbell Co. has more than doubled its business during the past four months.

Road Service Charge Increases Sales

Dealer Gives Coupon Good for One Dollar in Trade in Exchange for One Dollar Fee for Emergency Work

GOOD-BYE, free service to non-patrons of tire and battery stations!

Kansas City, Kansas, has taken the step.

In the past six months the Jennings Brothers, pioneer tire and battery service firm, have taken in $5,000 on their charges of a dollar for tire and battery road service to non-customers.

Better than that, their sales of tubes alone have increased more than 100 per cent. The increase seems due very largely to their method of handling the charge of a dollar for road service, the dollar entitling payer to credit for that amount on tubes, casings or batteries.

Better than that, a new tire dealer in Kansas City, Kansas, the Osgood-Robinson Tire Company, Goodyear exclusive agents, has generously admitted the wisdom of the Jennings plan, and has adopted it from the first day of its service in Kansas City, Kansas.

Even better, other tire and battery service stations are making charges for service in Kansas City, Kansas, and the plan may be extended to Kansas City, Mo.

"'Free service' has been a menace to the business and the cause of downfall of some of the best tire men in the country," said Harry Jennings, of Jennings Brothers.

"Our plan of a dollar charge for a service call has made our road service a dividend payer instead of a liability. It's building business for us. And the public likes it—the public is willing to pay, especially since the customer gets a coupon redeemable in merchandise."

The Jennings Service instituted this plan six months ago. Whenever a service call on tires or batteries did not involve a sale of merchandise, the person served was charged a dollar. In return for the dollar, besides the service, the "customer" received a coupon, good for a dollar on a purchase of casings, tubes or batteries if used within a year. If the person calling for road service bought a tube, casing or battery at the time, the dollar charge was not made.

The coupon used is on "Safety" paper; it is always signed by Harry Jennings or the brother Frank, signed in ink. The coupon is dated when given to the "customer."

Some of the people used to kick when, having called on Jennings for "free" service, they found they had to pay for having the service man take a tire from their cars that they had bought elsewhere and put it on a wheel. But most of them appreciated that they had been getting service unjustly from this (and other) companies, who received no compensation in business.

Service Charge Receipt and Coupon

This is the form of the receipt and coupon used by Kansas City tire and battery dealers to eliminate free road service. A charge of a dollar is made for road service and the customer is handed this receipt-coupon which entitles the customer to a dollar's trade when used in purchasing merchandise at the dealer's store. The lower illustration shows the face and the upper the back of the service charge receipt

One experience in paying the dollar was enough to convince the "customer" that the charge was not in fact a real charge for service, because he could get the dollar back in value.

And many callers for service who pay the dollar and get a coupon seem worried until they exchange the coupon as part payment on something. The coupon burns their pockets. So that, especially in the first months of the system, the coupons came back into the store quickly—and the sales of merchandise jumped accordingly.

Now customers do not hurry so fast to "cash" the coupons. Some wait until they have collected four or five, for they are as good as cash.

The plan could not have been so markedly successful had not the Jennings Brothers so extensive a reputation for road service in the community. The brothers were the first tire and battery men in the city twenty years ago; they have advertised very aggressively in all those years, and everybody knows them. They actually give real service — they maintain 14 service cars.

"We'd rather have three men sitting around idle, than have a motorist wait ten minutes for service," said Mr. Jennings. And they attain a record of always getting to a call in five minutes after the call comes, in reasonable distance.

The station is open twenty-four hours a day.

The Osgood-Robinson Tire Co., exclusively tire sales and service, has adopted the dollar charge and the coupon redeemable in merchandise. The dollar is charged, except to regular customers, whether any merchandise is bought at the time of the road service or not.

The Care and Adjustment of Ball Bearings

Smooth Running Parts Depend on the Careful Adjustment and Proper Lubrication of the Parts—Common Shop Methods That Destroy Bearings

THERE are three general types of ball bearings used on automobiles, radial, thrust and combined radial and thrust. Radial bearings are intended to take only loads at right angles to the shaft on which they are mounted. Thrust bearings are intended to take only loads parallel with the shaft, and combined bearings take loads in both directions. As a rule the repairman will have little to worry about in the installation of the various kinds of bearings, because the designer of the car or of the part will have taken care of that.

Trouble with ball bearings is usually caused by improper adjustment or improper mounting, although sometimes the cause of the trouble is insufficient or improper lubrication.

A radial ball bearing is constructed with a certain amount of clearance which is necessary to its proper working. This type of bearing is non-adjustable. A new bearing of this type would show a side clearance which at first thought might be considered excessive, but when the angle of the race is considered, it will be found that the end clearance or shake is only a very slight fraction of the side shake. Some of this clearance will be taken up when the bearing is mounted. The inner race or cone will be slightly expanded when it is driven on the shaft, and the outer race or cup will be slightly contracted when driven in the housing. The balance of the clearance is necessary to allow for expansion due to heat, slight misalignment and lubricant.

Bearings kept in stock should be kept in the oiled paper in which they were wrapped at the factory, and this paper should be left undisturbed until it is necessary to use the bearing. Removal of the paper allows dust and dirt to get into the bearing and also permits finger-marks or moisture to get at the bearings which results in rust, a very destructive agent to anti-friction bearings of any kind.

Washing the Bearings

In overhauling the ball bearings or parts fitted with ball bearings, a thorough cleaning is necessary. It is not sufficient to slosh the bearings around in dirty kerosene which may be filled with metal particles. The correct method of washing is to use a hot alkali solution followed by a bath in clean kerosene or gasoline. If the bearing is to remain out of the car for any length of time it should be dipped in a mixture of melted vaseline and kerosene. Before this dipping, however, it should be inspected, and if in bad condition, rejected. If O.K., it can then be dipped and laid away. It should also be wrapped in oiled paper.

Grit is one of the greatest enemies of ball bearings. This is particularly true when the car has been taken down on account of breakage, as the fragments of the broken parts may get into the bearings when they are replaced and quickly ruin them.

Another source of trouble is from the flaking of aluminum gear cases. Whenever such a casing is taken down for overhauling, it should be thoroughly cleaned and then shellacked which will prevent further flaking.

The lubricant used in the bearing depends largely on the size of the bearing and the load on the bearing. Very small bearings, such as those used on magnetos, use a very light spindle oil, while gearset and rear axle bearings require a heavy lubricant like 600-W or non-fluid oils. This lubricant should be free of acids and alkali.

Better Mechanics

Article No. 257

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

Removing Ball Bearings

More damage is done in removing and installing ball bearings than in probably any other way. The surfaces of the races and the balls themselves are very carefully made, ground and inspected and are true to within very close limits. A bearing which is true concentrically to within a fraction of a thousandth of an inch can very easily be thrown several hundredths out of line by careless removal or installation. Pounding the races, even with the aid of brass on soft metal is liable to do considerable damage. Ball bearings should always be pulled with a puller which will distribute the force or strain equally around the bearing. This applies only to cases where the inner race or cone is to be pulled. The entire bearing should never be pulled by applying pressure to the free race. This is liable to chip the balls or damage the races. In cases where it is necessary to pull the whole bearing, a split clamp is used, this being placed behind the bearing in such a way that the pressure of the puller will be exerted on the bearing which is sticking and not on the free one. If the outer bearing is sticking, a short piece of steel or iron with a hole in the middle can be used with a bolt and nut.

Whenever possible, the bearing should be taken apart for inspection and examination. This is done after the washing process. The balls and races can be examined for pits, rust and wear. Any sign of pitting either in the balls or races renders a complete replacement of the entire assembly advisable. Satisfaction in a ball bearing depends on the accuracy of the finished surfaces beyond the ability of the eye to detect. Hence, if the defect is visible on any part, it is evident that there will be defects on the adjacent parts, even if these defects cannot be seen with the naked eye. Therefore, a new bearing should be substituted.

Ball Replacement

Where one or more balls are damaged or broken, an entire new set should be substituted. Ball bearings in the smaller sizes are ground to within one or two ten-thousands of an inch of the same diameter, and if a new ball is put in with a number of old balls that may be worn as much as one or two thousandths, the new balls will have to carry the entire load, and this will result either in rapid wear or in the breaking of the new balls. In emergency repairs it is sometimes necessary to temporarily replace one or two balls, and although the practice is not recommended, the balls can be measured with a micrometer to get balls nearest of a size.

Where two ball bearings work together, the destruction of one frequently affects the other, although the defect may not be apparent. It is best, therefore, to make careful tests of the apparently unaffected bearing before putting the assembly back in the car. If the bearing is a small one, it would pay to replace it anyway, as the labor cost of replacing it later may be more than the cost of the new bearing.

Ball Bearing Replacement

The mounting of many ball bearings is such that the inner race has a light drive fit on the shaft, and the outer bearing is a push fit in its housing. In forcing the inner race on the shaft, the pressure must be applied evenly all around the face of the race. A number of pieces of pipe of different diameters and about 10 in. long serve very well for this purpose. The larger sizes may have a piece of steel shafting welded into them so that the hammer can hit in the center of the race driver. In any case the inner diameter of the pipe should be a little larger than the shaft

Digitized by Google

diameter and smaller than the outside diameter of the race. In some cases it is the outer race that is a drive fit, and in that case the force is applied to the outer race in very much the same way.

The fit of the race is very important. If the race drives too hard, there is something the matter, and inspection made and the difficulty remedied. If the cone drives on the shaft too hard, it will be expanded slightly and the metal will be put under a tension that will make breakage easy. If the cup is too tight a fit it will be contracted. The contraction of the cup and the expansion of the cone, through too tight fitting, will close up the clearance for the balls. Nicks or dents in the housing or on the shaft will also throw the bearing out of line.

Adjusting Ball Bearings

Ball bearings of the radial type cannot be adjusted, and when worn have to be replaced. Only bearings of the cone and cup type can be adjusted. The bearing must be neither too loose nor too tight. The following rules apply to adjustment:

1—Pack the bearing with lubricant.

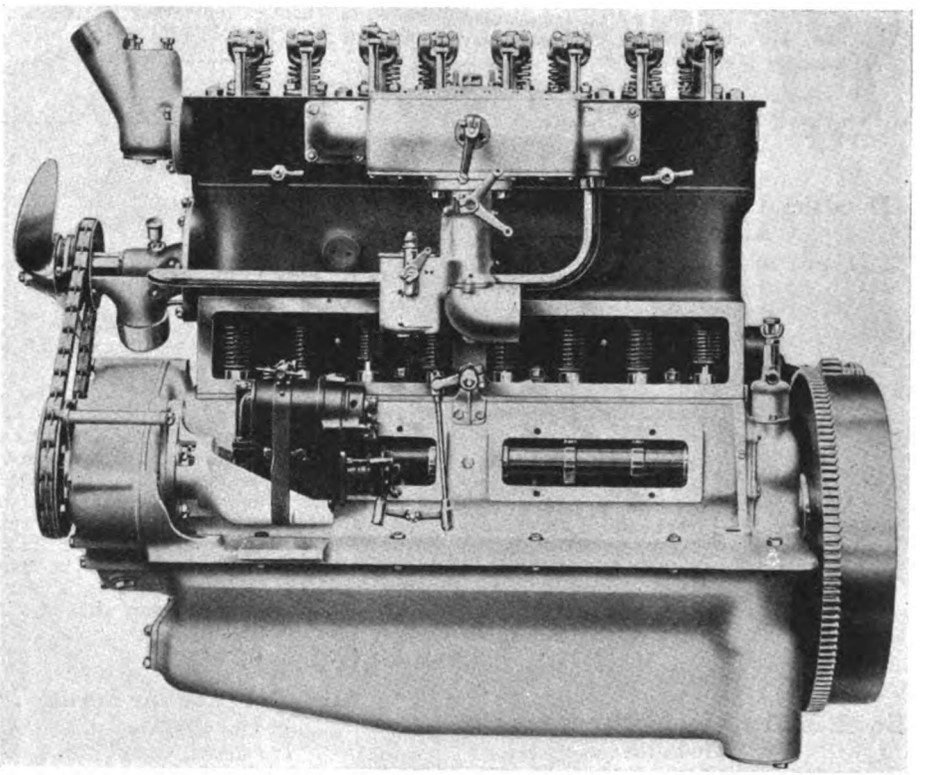
2—Bring the adjusting nut up tight. This will assure the seating of all parts of the bearing. The nut must not be drawn so tight that it will injure the bearings.

3—Back off the nut slightly.

4—Spin the wheel. After a start the wheel should turn freely and come to a stop after several part swings each side, the heaviest part of the wheel stopping at the bottom. This will be the tire valve.

5—Test the bearing for end play and looseness.

6—Lock the adjusting nut by whatever locking means is provided.

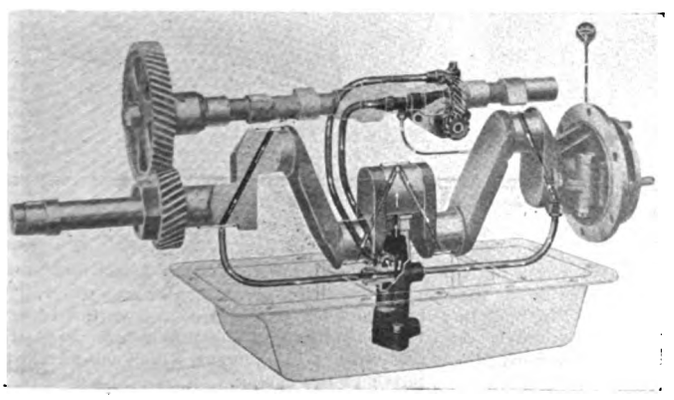


7—Check the adjustment again after locking.

Cole Has Changes in Frame, Intake Manifold and Spring Suspension

THE new model Cole 890, which is now ready for delivery has several changes in the chassis and power plant and changes in the design of the body. The new bodies have been called "Etruscan" and have a three-quarter running board with individual type fenders.

Six wheels are standard on all models, the two extras being mounted in the space between the front end of the running board and the front fender. An option of wire, disk or wood wheels is to be had. A cowl ventilator has been added, and with this addition the lower part of the windshield has been made stationary as the ventilator performs the same function. A trunk rack and body bars have also been added to the equipment.



The manifolding system has been changed to a type called the "Envelope." In this the intake manifold is entirely inside the exhaust manifold, from the carbureter to the blocks. The suspension has been changed. The springs are the same design as before, but the material in the leaves is different, and Lovejoy hydraulic shock absorbers have been added. A new type M Gemmer steering gear is used, and the wheel has a laminated walnut rim with finger grips on the inside and hand grips on the outside. The spider is also of walnut. A new type Johnson Model R carbureter is used.

British Vauxhall Engine Now Has Overhead Valves

A new model Vauxhall car, just brought out, has a rather unusual engine. It has four cylinders with overhead valves and is claimed to have the smooth running qualities of a six due to the Lanchester harmonic balancer or vibration damper. Aside from the new engine the car is much the same as the model that it supersedes. The new job is called the 23-60 *hp. and develops* 15 *hp. at* 500 *r.p.m. The cylinder dimensions are* 3¾ *x* 5½ *in. The price is* £1150, *or about* $5130 *at current exchange rates*

New Maxwell Engine Oiling

The new engines of the Maxwell cars, details of which were given in the Sept. 6 issue of MOTOR WORLD, *have the lubrication system considerably changed. The phantom view shows the oiling circuit*

Franklin Series 10-A Has a New Victoria Coupe

IN addition to the changes in the engine and chassis, which were fully described in the Aug. 30 issue of Motor World, the new Franklin models show the addition of an entirely new body, the Victoria Coupe, which is a three-passenger job. The price is $2,750. Most noticeable among the other minor changes is the location of the front license plate bracket which is a forging extending over in front of the left front wheel, so as to remove any interference of air supply to the cooling system. Watson stabilizers are also standard equipment on all models.

Digitized by Google

Equipment to Sell

New Devices for the Car and Truck

Helmet Parking Lamp

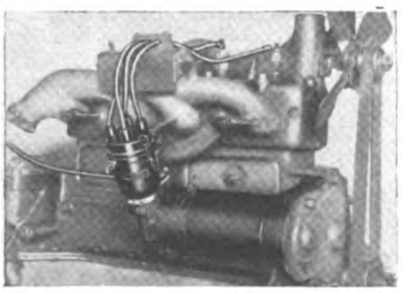
Williamson Mfg. Co.,
Baltimore, Md.

Price $2.50.

The shell of this lamp is made of polished aluminum and the lenses are secured by spinning the metal over the edges of the glasses. The weight of the lamp is 4 oz. Price does not include switch and bulb.

Doc-Hick-Ee Automatic Electric Air Regulator

Detroit Motor Casting Co., Detroit.



The device is claimed to increase engine efficiency, flexibility and economy. It is attached to the intake manifold and connected with the ground wire leading from the generator. It operates similarly to the generator cut-out switch. It governs the mixture of gas and air at all engine speeds. The quantity of air is reduced when the engine is throttled down and increased when the throttle is opened.

Bosch Battery Ignition System for Overlands

American Bosch Magneto Corp.,
Springfield, Mass.

Price, $24.50.

The Bosch battery ignition system consists of a timer-distributor, coil, and mounting accessories. It replaces the regular coil and distributor head. The timer-distributor is attached to the rear of the generator in place of the standard fitting and connected with the spark control wire from the dash. A governor makes the advancing of the spark automatic but the hand advance can be used to advance or retard the whole range of spark time. The governor is designed for the particular engine and is so constructed that it times the spark correctly at every point of throttle opening.

King Quality Piston Pins

King Sewing Machine Co., Buffalo, N. Y.

These piston pins are made in all types and sizes, and several over-sizes are carried in stock. They are packed in sets of four, six or eight pins in clearly marked boxes. They are also furnished in the semi-finished state for dealers operating a regrinding business.

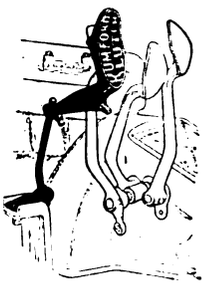
Pelton Piston Ring

Pelton Piston Ring Co.,
5432 West Grand River Avenue, Detroit.

A two-piece piston ring. The lowered part is beveled and fits into a similar bevel on the inside of the upper part. The outside of the upper part is cylindrical. The lower portion is fitted with spring expanders. These rings fit in grooves .032 in. overwidth and cylinders .040 in. oversize. They are made in diameters from 2 to 6⅛ in., and in 3/16, ¼ and 5/16 in. widths. Prices range from $1.25 to $2.25.

Atlas Radiator for Fords

Steidle Mfg. Co.,
Cincinnati, Ohio.



A heavy steel member which is integral with the bracket supports adds strength to this radiator. The brass core is of the honeycomb type. The shell is finished in black japan and the core in gray enamel. A nickel-silver bar cap is furnished with the radiator.

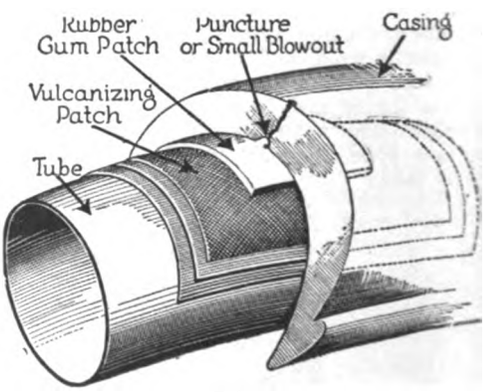
Kumfort Klutch

E. G. Overly, Greenburg, Pa.

Price $3.50

This device holds the clutch pedal on the Ford in low gear or neutral. It is operated entirely with the foot. It is useful when climbing long hills in low gear or when coasting down hill in neutral.

Helmet Traffic Signal



Williamson Mfg. Co.,
Baltimore, Md.

This signal shows "stop" and right and left arrows. The "stop" signal is operated by a switch on the brake pedal. The arrows are operated by button switches which are located on the floor for foot operation or on the steering column. The shell of the signal is pressed steel, black enamelled and nickel trimmed. The switch on the brake pedal is mounted so that the brake may be applied without lighting the "stop" signal.

Va-Car Inside Tire Plaster Patch

Virginia-Carolina Rubber Co., Inc.,
Richmond, Va.

Prices

No. 0 for nail holes.....25 cents
No. 1 for cuts to ½ in.....50 cents
No. 2 for blowouts to 1 in.....60 cents
No. 3 for blowouts to 1½ in.....70 cents
No. 4 for blowouts to 2 in.....80 cents

The patches are for patching the inside of the casing after a puncture or blowout to prevent the entry of sand, dirt and water. The center of the patch is coated with a layer of tread rubber and the patch is covered with self-vulcanizing cement which vulcanizes the patch to the casing.

Digitized by Google

Repairshop Shortcuts

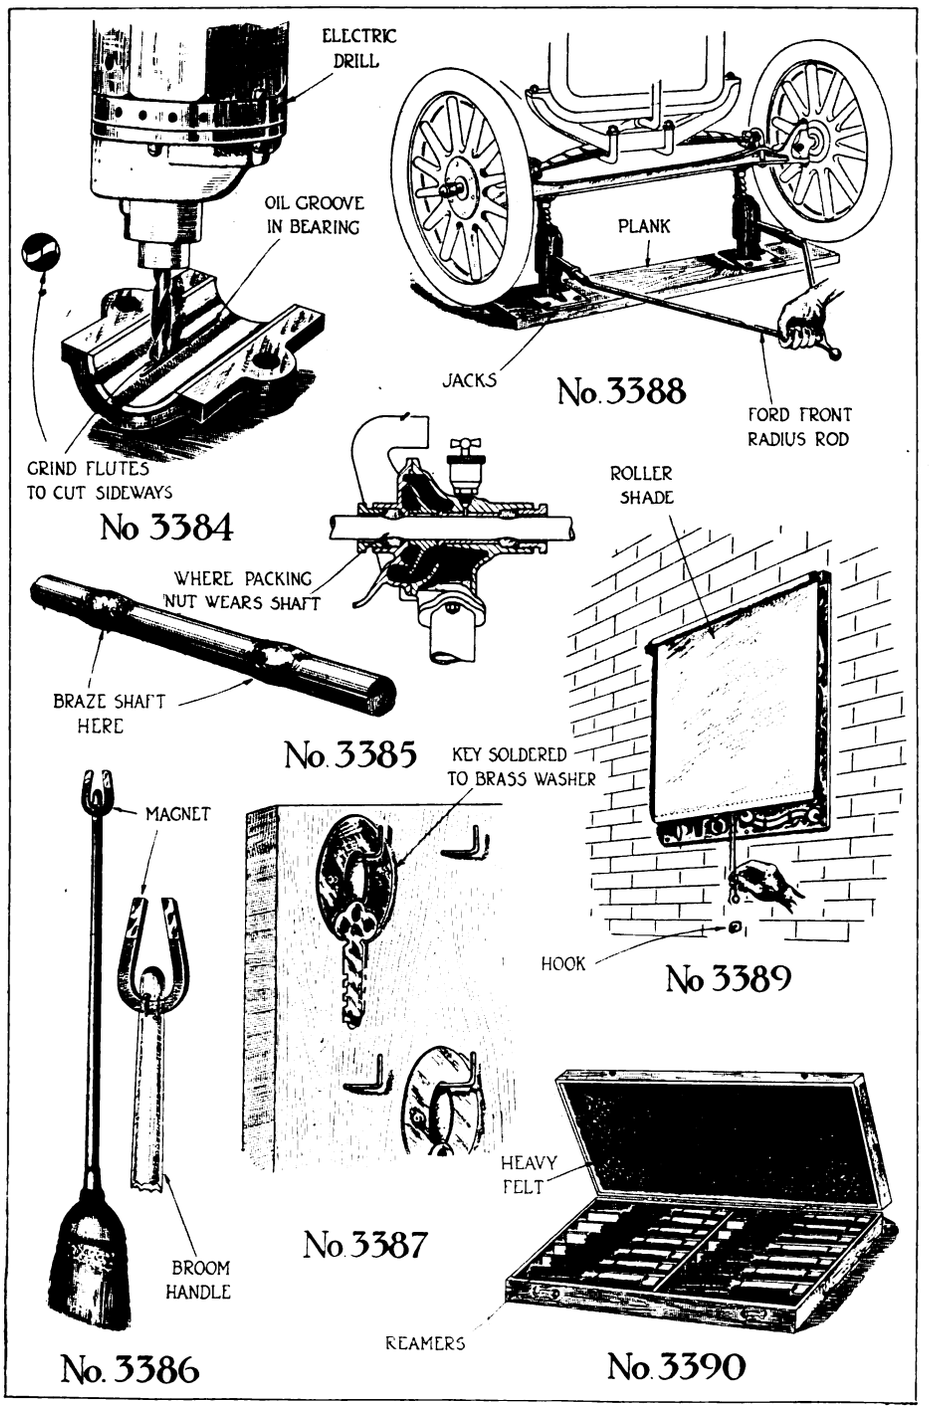
Here's Something to Think Over

IN spite of the fact that Motor World has published almost 3400 repairshop shortcuts, there must be thousands more in use that have not yet been sent in. Here are some subjects that would be acceptable: 1—*Best and quickest method of washing wire wheels.* 2—*How to remove road tar from the body without harming the varnish.* 3—*How to take the squeak out of a wooden wheel.* 4—*How to true up a wire wheel.* 5—*How to CORRECTLY pack a water pump.* 6—*Quickest method of replacing clincher tires.*

These are simply a few ideas selected at random which have not been satisfactorily covered in this department. If the suggestions will help, shoot in your ideas and experiences. Shortcuts which are accepted will be paid for at the rate of $1 each or $6 for half a dozen.

No. 3384—Cleaning Out Oil Grooves.—Oil grooves in bearings can be cleaned out or deepened with a portable electric drill using a drill that has been ground to scrape instead of cut. This is the same character of grinding as is used for drilling brass.—H. V. D. Sweet, Canajoharie, N. Y.

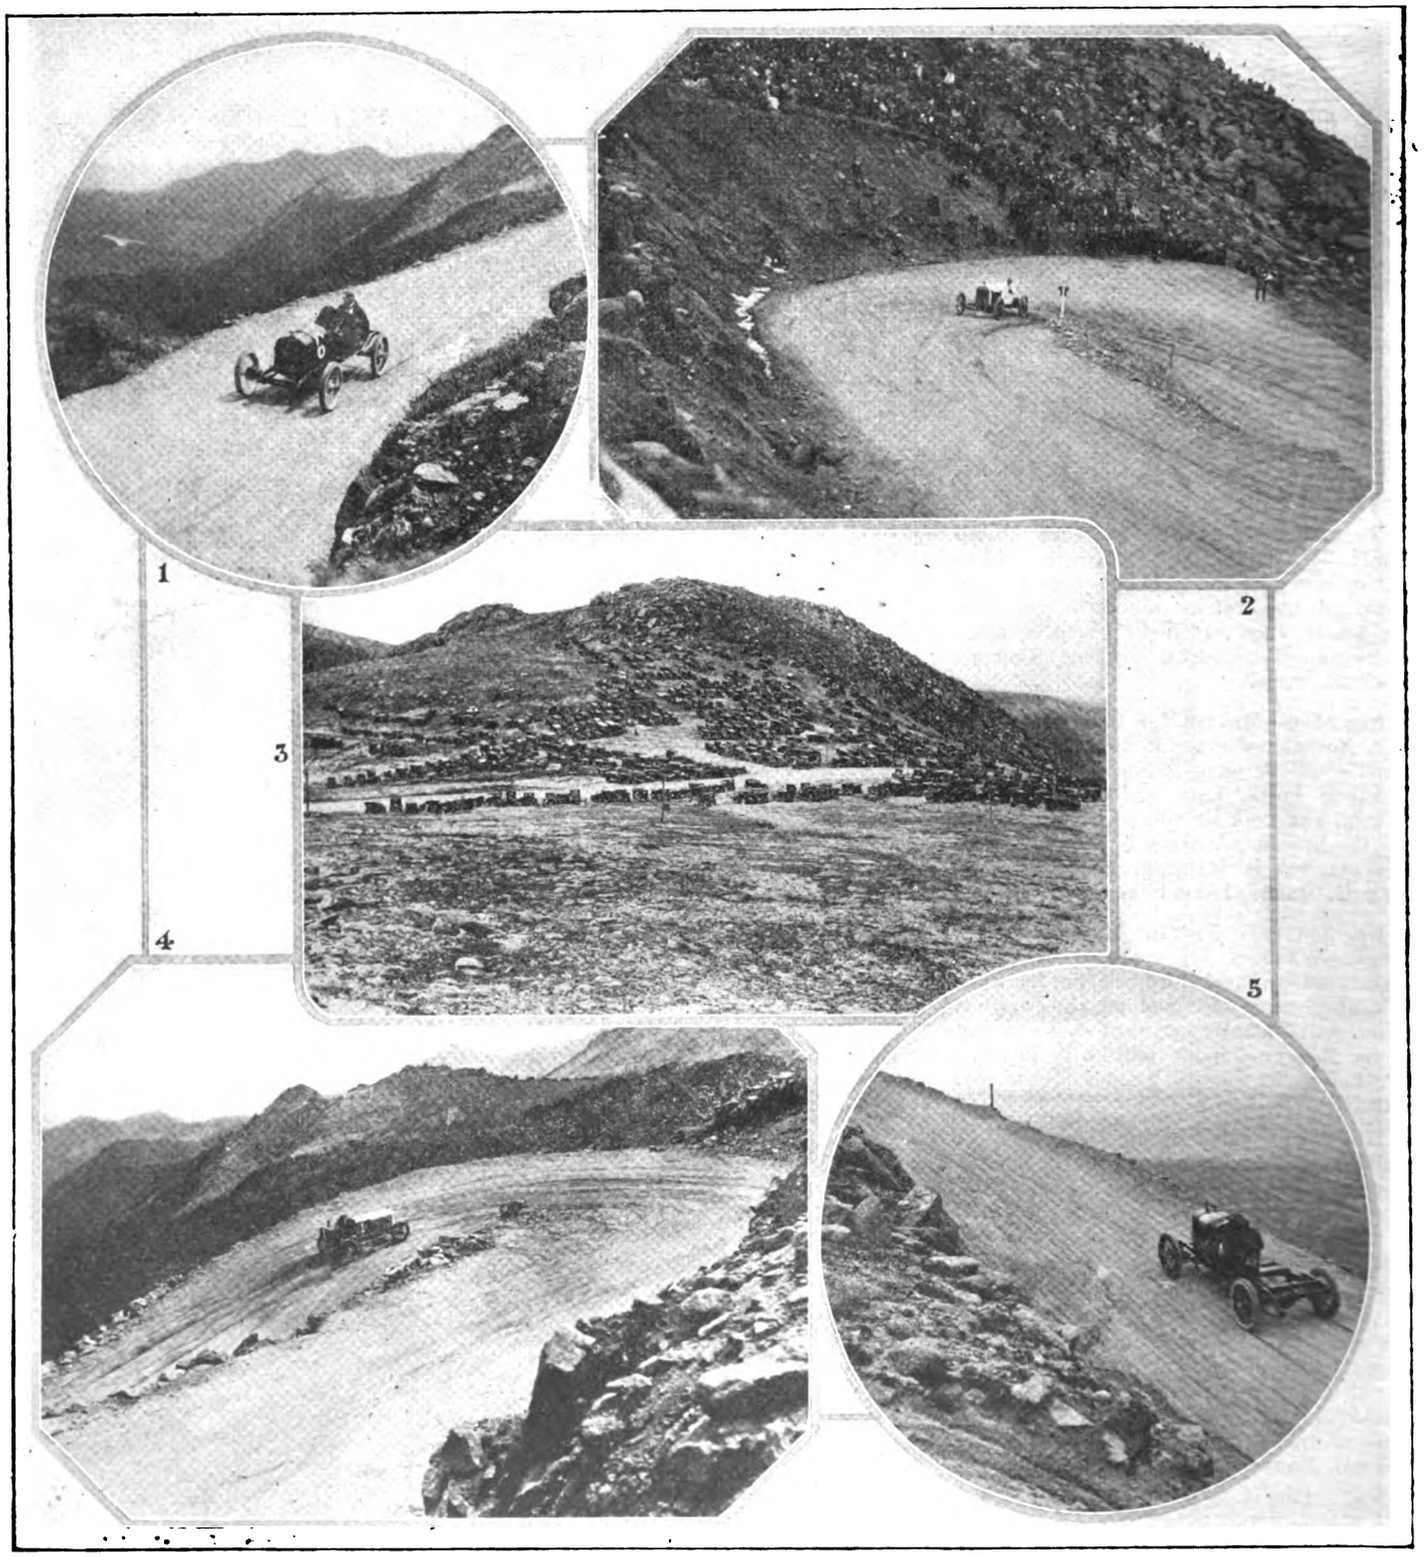
No. 3385—Repairing a Worn Pump Shaft.—A pump shaft which has been cut or worn at the packing point can be repaired by brazing metal to build up the shaft, then turning it down to size.—Joseph T. Walter, Apache Garage, Phoenix, Ariz.



No. 3386—Magnet for Bolts and Nuts.—A horseshoe magnet mounted on the handle of the shop broom saves time in locating bolts, nuts and washers that fall on the floor or roll under the bench. As the broom is always in a handy place the magnet is instantly available.—Arthur G. Raabe, Long Island City, N. Y.

No. 3387—To Prevent Loss of Switch Keys.—Washers are soldered to switch keys used by mechanics and the mechanic's number is stamped on the washer. This will usually prevent keys being taken by customers and will identify the key.—Joe Lasser, Lasser Motor Co., Elizabeth, N. J.

No. 3388—Quick-Acting Jack Set.—A quick-acting jack set is made by mounting two jacks on a board and using a Ford front radius rod for the handle as it will operate both jacks at once.—Arthur G. Raabe, Long Island City, N. Y.



No. 3389—Cover for Wall Tool Rack.—Where tools are hung on the wall or on a rack on the wall, they can be covered at night by mounting a window shade over the rack. The shade can be pulled down to protect them from dust and to make the place look tidy.—Arthur G. Raabe, Long Island City, N. Y.

No. 3390—Rust Preventative for Reamer and Tap Sets.—Reamer, tap and die sets are prevented from becoming rusty by fastening a piece of heavy felt to the lid of the case and keeping this felt well oiled. The oil will creep in a film over the tools and keep them in good condition.—C. M. Jenkins, Dodge City, Kan.

Dealers Report Trade Excellent

FALL BUYING STARTS EARLY IN CLEVELAND

Good Conditions Exist in Birmingham, Philadelphia, Los Angeles and Milwaukee

NEW YORK, Sept. 11—Conditions generally are excellent in the automobile trade as indicated by reports received from various and widely separated sections of the country.

Cleveland

In Cleveland August was a better month for retail sales than was July. There are evidences that the fall buying season has opened at least two or three weeks earlier than usual. The fact that some dealers are oversold and that the public knows it, is assigned as one reason for the early start. Records in the office of the county clerk show that transfers during August numbered 9000, or approximately 500 more than in the previous month. This includes a number of declarations of ownership by dealers who received their cars from local factories, but the bulk represents sales of used and new cars.

Birmingham

Birmingham reports that shipment of automobiles are being received more promptly, and that just as quickly as cars are delivered to the dealers they can be sold. The recent announcement of the United States Steel Corp. of an increase in the wages of common labor followed by similar announcements of coal operators in Alabama and independent iron and furnace concerns has affected about 50,000 men in Birmingham directly and caused the entire city to put on "boom" optimism.

Philadelphia

Automobile dealers in Philadelphia report a good demand for all classes of cars, the trend being toward closed models, as was expected. According to the Bureau of Building Inspection, garage construction was better during August than in any month in the history of the bureau, the total reaching $362,915 for 164 operations.

Los Angeles

August showed very little diminution in the demand for motor vehicles in Los Angeles. Sales ran somewhat behind those of July, but this is customary during August. Several dealers were unable to make deliveries and that was another reason for the falling off in sales. Dealers claim they can get no encouragement from the factories, and at least two firms claim to be from thirty to sixty days behind their orders.

Unless every indication fails, this year will prove the biggest on record in Southern California. Dealers in the surrounding small towns again are active, and there is a marked demand for representation, especially among the better known lines of passenger cars.

Through the organization of finance companies, dealers in that section are finding it easier to get their time paper handled. The banks are showing no particular desire to lend their money, but it is a known fact that the very banks which have refused to accommodate the dealers have organized and financed funding companies which serve the purpose but absolve the banks direct from the risk and are able to charge a higher rate of interest.

Milwaukee

Milwaukee reports show that the past week was one of the best this year regarding both distributors' and dealers' business. This was due to the genuine stimulation of the big motor show in conjunction with the annual Wisconsin State fair, held in West Allis, a suburb. Hundreds of dealers from all parts of Wisconsin and Upper Michigan, the Milwaukee distributing territory, came to the city, many of them bringing pros-

(*Continued on page* 40)

OWNERS ENTERTAINED BY DEALERS ON COAST

SAN FRANCISCO, Sept. 12—Two of the cleverest and most profitable automotive advertising stunts put over in Northern California in years were the motor trip and barbecue given to more than 800 owners of Hupmobiles by the Greer-Robbins Co., distributor of that car, and the barbecue and picnic given to the owners and drivers of Reo Speed Wagons by the Reo Motor Car Co. of California, attended by more than 300. Both events were preceded by parades through the main streets of San Francisco, followed by short drives to the scenes of the picnics and barbecues.

The two events had nothing to do with each other, and were arranged and carried out by each company at different locations, but the management of both organizations consider the day's outing one of the best and most effective pieces of advertising they ever have undertaken.

FAIR GIVES MESSAGE TO 359,000 IOWANS

Some Actual Business Done at Show—Farmer Returning as Buying Factor

DES MOINES, Sept. 8—The annual Des Moines early fall show, held last week in connection with the Iowa State fair, demonstrated the fact that, while the Iowa farmer is still a long ways removed from being the buying factor that he was before the financial bubble burst, he is on the way back.

Attendance at the show was the biggest in its history, and interest was entirely to the satisfaction of the dealers and distributors who had space.

The State fair show is more than a Des Moines show, for more than 200,000 Iowans from outside of Polk county made their annual pilgrimage to the State fair, the total attendance for the fair being 359,000, which is approximately 60,000 above that of last year.

The fair show is controlled directly by the State fair association and is housed in Machinery Hall, a big, semi-open brick and concrete structure. For several years the Des Moines dealers have given it wholehearted support.

Machinery Hall is located directly in the path of the main traffic through the fair grounds, and as a result practically every person takes a look over the motor show, which is open throughout the entire day.

Made a Business Show

No attempt is made to make it a decorative or entertaining exposition.

This year there were thirty-four lines of passenger cars shown, nine truck lines and thirty-four lines of accessories and automotive equipment. All three Des Moines tire factories had large exhibits.

Some actual business was done, sales bearing out the opinions expressed by conservative Des Moines distributors that there is a growing tendency toward buying cars at a price above that which has been the most popular in Iowa for several years. During the past sixty days there has been a noticeable increase in the amount of registrations by cars other than Ford, which up to that time occupied an overwhelming percentage.

With but few exceptions August was a banner business month for Des Moines distributors and dealers, keeping well up with July. During the last week of the month, however, there was an appreciable slowing-up in retail business, and some dealers are beginning to catch up with orders. Leaders in the trade look for a gradual seasonal letting down of

Jobbers Narrow Distribution Lines

EASTERN CONVENTION SHOWS GAIN IN TREND

Reports Indicate That Business on Seaboard Is Running Ahead of Last Year

ATLANTIC CITY, Sept. 10—Automotive equipment business along the Atlantic seaboard is running ahead of last year, according to informal reports made by jobbers attending the fall meeting of the Eastern Automotive Equipment Association. New England jobbers reported the biggest increase in business, in some cases running as high as 30 per cent over last year in dollars and cents. The Pennsylvania and New Jersey districts also reported good sales. In the New York City territory jobbers have had little, if any, improvement over the business in 1921 and competition, particularly on a price basis, has been keener than previously.

Stranahan and Sherman Speak

The meeting, presided over by Wallace G. Page of the American Motor Equipment Co. of Boston, president of the association, was addressed informally by Robert A. Stranahan, chairman of the merchandising committee of the Automotive Equipment Association, and Ray W. Sherman, merchandising director of the same organization.

Stranahan urged constant campaigning by jobbers to assist dealers in getting more rapid turn-over of goods as the most important requirement in the process of building up business. "Help dealers become better merchants and they become better credit risks," he said. He put emphasis upon development of retail selling plans for the use of the dealer as the biggest task of jobbers to-day.

Sherman talked with the jobbers about local and district arrangements for presentation of the "Ask 'em to Buy" and "Shop Profits" films and about holding sales promotion meetings.

It developed that jobbers in the New England territory co-operatively have a sales promotion campaign well under way in connection with the Automotive Equipment Association movement. Plans are being developed in Pennsylvania, New Jersey and some of the other eastern territories.

The meeting showed a steady gain in the trend toward narrowing distribution lines. Several jobbers reported that they had cut down the number of competing makes of articles they are handling in various lines and had increased rather than lost business as a result. They reported also that quite a number of manufacturers were leaning toward reduction of the number of jobbers handling their lines in given territories, with the result that competing makes of numerous lines of merchandise are now being pushed by competing jobbers instead of all jobbers handling virtually all makes and giving no particularly aggressive attention to any. It was the general opinion of the meeting that this standardization of lines will continue and will benefit both manufacturers and jobbers.

The association's next meeting will be held in New York during the New York show.

How Do YOU Do It?

HOW do YOU make shop profits in winter?

Will you tell the story in 500 words, or less, and send it in to Motor World?

The story will naturally divide itself into two parts:

1—What kind of work do you get to keep your shop and your men busy in cold weather?

2—How do you get the work?

These must be FACT stories, with your name and the name of your company and town. Put the story in simple language and write it with a typewriter on one side of the paper.

Mail the story to Motor World not later than September 23 and earlier than that if you can. If yours is the best story—the most practical description of a practical method of making shop profits in winter—Motor World will send you a check for $50. For the second best story we will pay $25, for the third $10, and for all stories good enough to print, $5. The editors of Motor World will be the judges.

Please remember—500 words or less. And if you are a car, truck or tractor dealer, a little bit out of touch with the intimate details of the shop, pass this offer on to your service manager and give him a chance to compete.

Stars Being Delivered

NEW YORK, Sept. 9—Actual deliveries of Star cars to purchasers are now being made. The Star is in production at three plants now—Lansing, Leaside and Long Island City.

AMPLE FUEL SUPPLY NOW ASSURED FORD

May Not Close—Price Paid for Coal Thought to Be Less Than $4.50 Ton

DETROIT, Sept. 9—Announcement in Detroit to-day of an agreement entered into between the Ford Motor Co. and the American Export & Inland Coal Co., Cincinnati, by which the Ford company is assured of ample fuel for power purposes, makes it evident that if the contemplated closing of the plants is put through on Sept. 16, it will not be because of fuel shortage.

No intimation has been given by executives of the company as to the course of action now that fuel has been eliminated as a cause for closing. It is confidently expected in the city that Henry Ford will revoke the closing order, as the reason given for closing, inability to get coal at reasonable prices, has been removed.

Plenty of Coal at $4.50

There has been no statement made as to the price stipulated in the agreement, but from the buying head of one of the largest companies in the industry it has been learned that plenty of coal is now obtainable at $4.50 a ton, the price which Ford set as a reasonable figure. With the tremendous buying power of the Ford company and the amount of the tonnage involved in the agreement, about 4,000,000 tons, it is certain that the $4.50 figure was not exceeded.

Under the agreement the Ford company will begin the receipt of from 250 to 300 cars daily. Orders have been given by Ford executives to rush shipments forward as rapidly as cars can be loaded.

Earl Turner Elected

OLD ORCHARD, ME., Sept. 8—Earl Turner, assistant secretary of the Automotive Electric Association, has been made manager, this being one of the final acts of the four-day summer meeting of the association, held here. The association offices are at 5363 Hamilton Avenue, N.E., Cleveland, Ohio.

Truck Official Optimistic

MARION, IND., Sept. 11—John A. Rhue, treasurer of the Indiana Truck Corp., has returned from an extended trip through Missouri, Kansas, Oklahoma and Texas. Rhue reports that he was impressed with the improvement in business and states that he anticipates a good fall and winter.

NEW YORK WILL UNITE ON LEGISLATIVE WORK

Conference Called by Automobile Merchants Association for September 25

NEW YORK Sept. 12—Representatives of automotive trade associations in New York State have been invited to a conference arranged for Sept. 25 by the Automobile Merchants Association of New York to discuss plans for united action on legislative problems during the coming sessions of the State Senate and Assembly.

Arrangements for the meeting are being made by Thomas F. Moore, executive secretary of the New York Association. It is planned to take up various suggestions for proposed legislation and decide upon a program which would protect the interests of the industry while promoting those of the public, and then to seek co-operation with a central authority representing the automobile clubs, when the legislature convenes.

FORD FILES FINANCIAL STATEMENT TO JUNE 30

LANSING, MICH., Sept. 8—The annual financial statement of the Ford Motor Co. has been filed with the secretary of state. The statement is of June 30, 1922, when the company's surplus was $289,935,296, and its holdings in the State of Michigan were valued at $215,415,662. These figures show a decrease of $49,456,560 from the surplus given in the company's statement filed in Massachusetts as of April 30, 1922.

The Michigan statement gives Ford's cash on hand and in the bank, $145,885,669; plant, land improvements, buildings, fixtures and structures, $81,626,015; machinery, tools and equipment, $39,531,079, and good will, $20,517 985.

Included in the Ford statements are the returns from the Dearborn Publishing Co. and the Lincoln Motors Co. The assets of the former are listed at $124,961, while a single item of $250,000 cash is shown as the total asset of Lincoln Motors.

MERCER DIRECTORS CHOOSE SMITH HEAD

NEW YORK, Sept. 7—At a meeting of the board of directors of the Mercer Motors Co., Trenton, N. J., George P. Smith, of Smith & Gallatin, brokers of New York City, was elected president to fill a vacancy which has existed since the company severed relations with Hares Motors.

R. W. Barnum was chosen vice-president in charge of production and finance to succeed H. E. Barthel, resigned. Barnum was formerly vice-president and general manager of the Barnum-Richardson Co., iron manufacturers of Lime Rock and East Canaan, Conn., and for the last three years has served as general manager of the body department of Mercer Motors in New Haven.

PARK SITES GIVEN AS DODGE MEMORIAL

DETROIT, Sept. 8 — Dodge Brothers, Inc., has donated 11 tracts of forest and lake sites to the State of Michigan for motorist, picnic and camping parks. The parks total 627 acres of natural woods and lakes. All the sites are within 50 miles of Detroit.

The purpose of the donation is to provide a memorial to the late John F. and Horace E. Dodge and to "give motorists places where they may have their picnics, games and bathing without being constantly driven from pillar to pillar by indignant owners of private property." Ten of the eleven parks have large lakes or river frontage and the other is a rugged, almost mountainous parcel noted for its natural scenery.

The parks will be known as Dodge Brothers State Parks Nos. 1, 2, etc. The presentation was made in a formal letter to Governor Alex. J. Grosbeck by Chairman Howard E. Bloomer of the Board of Directors of Dodge Brothers.

W. A. Smith was elected vice-president in charge of sales and service. He has been connected with the company in various capacities for the last twelve years, and for the last year and a half has served as general sales manager.

DAVIS MODELS HAVE ADDED REFINEMENTS

RICHMOND, IND., Sept. 11—Added refinements and extra equipment, which will be standard for the Davis model 71 phaeton and model 74 sedan in the future have been announced by the George W. Davis Motor Car Co. of this city. There will be no increase in the price of these models.

The phaeton is finished in either midnight blue or royal blue, at the option of the buyer, and equipped with either aluminum military steps and skirt fenders, or with regular runningboards. Snubbers, both front and rear, polished aluminum luggage rods on the rear body panel, front bumper and brown Spanish leather upholstery are now standard on this model.

The sedan is now equipped with snubbers, front and rear, and front bumper.

Lincoln Receiver Report

DETROIT, Sept. 11—The report of the receiver for the old Lincoln Motor Co. has been filed, covering operations from Nov. 4, 1921, to Feb. 4, 1922. In that period the operating loss was $76,584. Cash on hand Aug. 1 was $5,176,119; filed claims, $8,737,272; verified claims, $5,835,717; claims reduced, $1 385,217, and claims still to be adjudicated, $1,516,337. The Liberty motor tax account with the Government remains unsettled.

AUGUST PRODUCTION AGGREGATED 272,000

Second Biggest Month in History of Industry—12 Per Cent Over July Output

NEW YORK, Sept. 12—With reports 99 per cent complete August production of motor vehicles totaled 272,000, according to the National Automobile Chamber of Commerce. This total gives August, 1922, the honor of being the second greatest production month in the history of the industry and 12 per cent over July, 1922, which had ranked second in June, 1922, the record holder.

This sensational report makes the fourth consecutive month that the production record has been smashed and is remarkable from the fact that May, June, July and August, 1922, now occupy positions of honor at the top of the record list. June heads the list with 289,000; August is second with 272,000; May is third with 256,000, and July fourth with 246,000. The total production for the four months is 1,073,000, more cars and trucks than the industry ever manufactured in any one year up until 1916, when the million mark first was reached.

Compared with August, 1921, the latter month looks like a pygmy, for this year's August is 53 per cent greater than the one 12 months ago.

RICKENBACKER FORMS FINANCING COMPANY

DETROIT, Sept. 8—Rickenbacker Co., Inc., has been formed as a financing company for the Rickenbacker Motor Car Co. and will handle all financing business of the manufacturing company. This according to B. F. Everitt, president of the manufacturing company, applies to the handling of sales and such other business as may arise from time to time.

The capital stock of the financing company is $100,000 at $10 a share; paid in cash. Stockholders are E. V. Rickenbacker, 260 shares; B. F. Everitt, 260 shares; R. M. Chambers, 160 shares; R. H. Hood, 160 shares, and H. L. Cunningham, 160 shares.

Cadillac to Have Closed Car Week

DETROIT, Sept. 12—A national closed car week has been arranged for by Cadillac distributors and dealers in many cities in the United States and Canada for Sept. 17-23.

Robbins Joins Bearings Co.

DETROIT, Sept. 11—A. W. Robbins, formerly of the Standard Roller Bearing Co. and the Bearings Service Co., now is associated with the Bearings Co. of America.

Petition Against Master Trucks

CHICAGO, Sept. 8—A petition in bankruptcy has been filed against the Master Trucks, Inc., by the Maremont Mfg. Co., Up-to-Date Machine Co. and the Auto Body Co., all of Chicago.

JOBBERS AND DEALERS IN DETROIT TO MEET

Program to Stimulate Winter Sales Will Be Outlined at Proposed Dinner

DETROIT, Sept. 9—Plans are under way in this city for the staging of a large accessory dealer dinner early in October at which a program for stimulating winter sales would be outlined. V. E. Vining, sales manager of the Kales Stamping Co., talked to a meeting of jobbers and dealers this week, and a later meeting will be held when it is expected the plans for the dinner will be completed.

The movement will be directed entirely to stimulating sales in the Detroit district as only dealers in this section will be in attendance. Specific merchandising ideas will be unfolded which dealers will be urged to adopt in going after business which the winter season will open. All jobbers in the district will be asked to bring in a number of dealers in proportion to the number of their salesmen.

New Cincinnati Garage

CINCINNATI, Sept. 12—The Federal Garage is Cincinnati's newest automobile and truck storehouse of importance. Built on the site of the former Interurban Terminal Station, it has the largest ground floor garage space in the city, measuring 110 by 236 feet, and having a capacity of 500 cars.

The Federal, which was opened for business Sept. 1, has a ramp from the first floor to the mezzanine, and two large elevators from the basement to all floors.

ANDERSON LIST CUT FROM $155 to $455

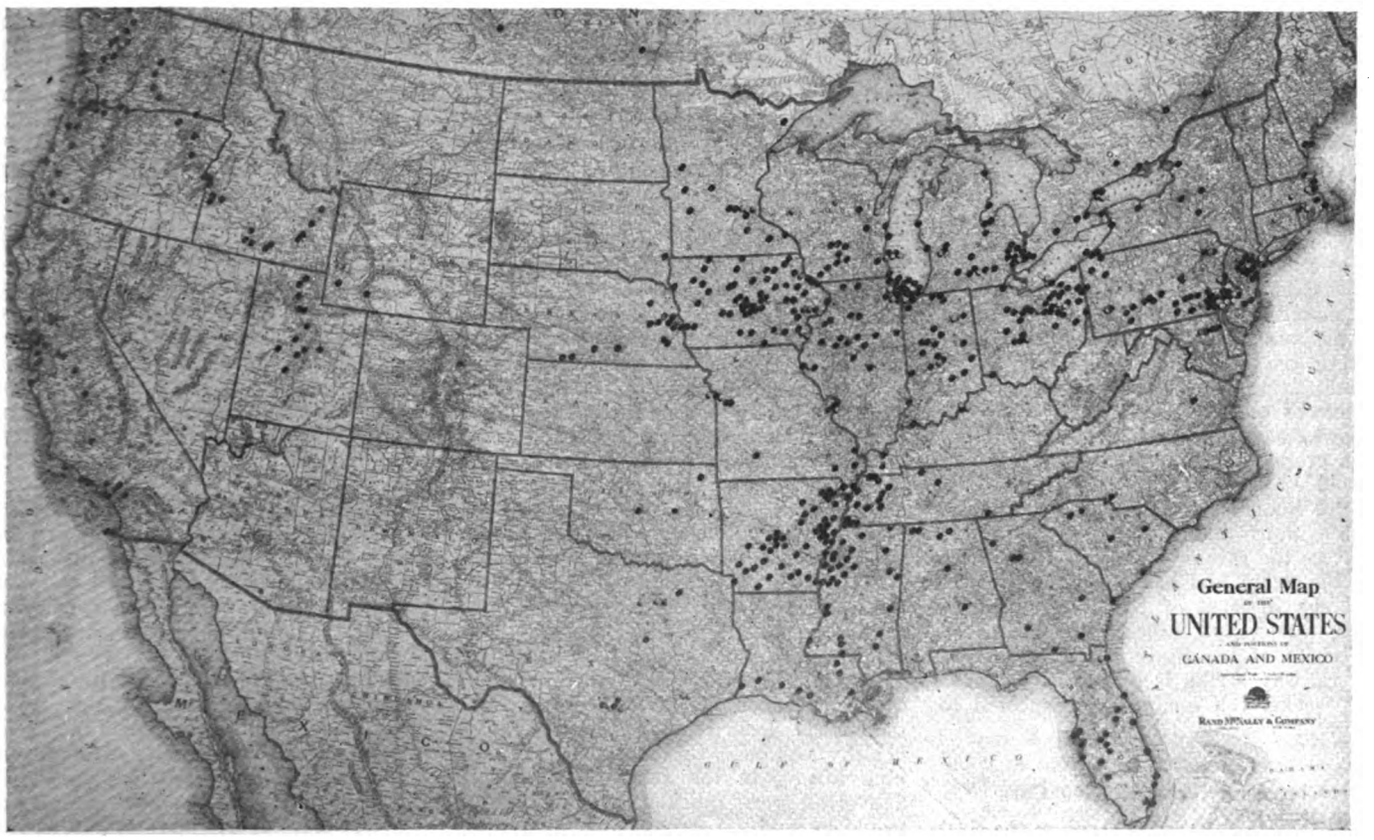
ROCK HILL, S. C., Sept. 10—Lower prices are announced by the Anderson Motor Co., the reductions ranging from $155 up to $455. The new list is as follows:

Series 40	Old Price	New Price
5-pass. phaeton	$1,650	$1,495
Convertible roadster	1,650	1,495
7-pass. phaeton	1,795	1,595
4-pass. sport	1,750	1,595
2-pass. speedster	2,195	1,785
4-pass. ultra sport	2,395	1,945
4-pass. coupe	2,450	1,995
5-pass. sedan	2,550	1,995

Durant Carload Leaves Oakland

OAKLAND, CAL., Sept. 12—The first carload of automobiles built at the new plant of the Durant Motor Co. in Oakland was shipped to Seattle late in August, to W. S. Dulmage, distributor of the Durant car in the State of Washington. Officials of the Durant company were present at the loading of the first car. Following the first shipment, sixteen more carloads of Durants were shipped to Dulmage for distribution in his territory.

50,000 MEN HEARD A. E. A. SALES STORY



That Is Record Made Since Merchandising Campaign Opened Aug. 1, 1921

CHICAGO, Sept. 10—Fifty thousand men in the trade have heard the sales promotion story of the Automotive Equipment Association and have seen the films which visualize it, according to a summary of the work since its inception, Aug. 1, 1921. Seven hundred meetings have been held. Sometimes there were five in the audience, once there were 1700, several times there were 500, and the average was about 70.

The campaign, conducted by Ray W. Sherman, merchandising director of the association, has covered many sections of the United States and Canada, as a glance at the accompanying map will show. It is hoped that the campaign eventually can be carried into all selling territories and the association is anxious that dealers desiring to have sales promotion meetings in their town ask their jobbers to arrange them. Application may also be made direct to the association at 1818 City Hall Square Building, Chicago.

During the second year of the work, the "Ask 'em to Buy" motion picture story of Dan Morgan's rise to financial success is being supplemented by another picture, which is entitled "Shop Profits."

Where A. E. A. Sales Promotion Meetings Have Been Held

Each pin on the map indicates a place where one or more of the "Ask 'em to Buy" and "Shop Profits" meetings have been held

NEW BUSINESS SEDAN ANNOUNCED BY DODGE

Will Sell for $1,195—Steel Used for Entire Body Construction

DETROIT, Sept. 8—A new all-steel business sedan is just announced by Dodge Brothers. It will sell for $1,195, or $250 under the price of the previous sedan model.

The feature of the new body model is the use of steel for the entire body construction with the exception of the roof which is of fabric construction not subject to rumble. The finish is baked enamel instead of the 18 hand-rubbing and painting operations formerly used and this makes it possible to mature the jobs in five days instead of ten. The upholstery is leather.

The rear seat cushion, rear side and back cushions are separate units, converting the entire rear section of the car into a spacious compartment. The front seat tilts forward, affording clearance through the rear doors. This gives a door opening large enough to admit a trunk or parcel 22 in. wide by 48 in. high. The plate glass window in the rear is unusually large, being 16 by 28 in. The rear quarter windows are 20 by 23 in., while the rear doors have a window opening of approximately 19 by 21 in. The front doors have an opening of 19 by 20 in. The car is fitted with artillery wheels, cord tires, window regulators, windshield cleaner, dome light, heater, Yale door locks and the usual closed car equipment. The Yale lock operates with a thumb turn on the inside and a key on the outside.

FAIR GIVES MESSAGE TO 359,000 IOWANS

(*Continued from page* 36)

city trade. They expect, however, that there will be a good demand from the farmer and small town buyer for cars during the month of September which should bring that month's business far in excess of last September.

Iowa, as usual, is expecting bumper corn crops, and the small grain already moved is beginning to make itself felt in the financial conditions. No considerable improvement is looked for, however, as the farmer is taking a low price for his grain and has obligations which will absorb most of the money secured from this year's crops. Conditions in the cities of the State are good, and if the railway strike is solved in the next few weeks, fall business is expected to be brisk in general lines.

Cleveland Shipped 6600 Cars

CLEVELAND, Sept. 11—For the first seven months of the year the Cleveland Automobile Co. shipped about 6600 cars and for August and so far in September shipments have been at the rate of 275 a week. It is expected that the total production for the year will total 10,000 cars.

After inventory adjustments and other charges were deducted, net profits for the first seven months are reported to be in excess of $1,000,000.

LONDON MAKERS HOLD "INSPECTION RALLIES"

LONDON, Aug. 28 (*By Mail*)—The makers of Arrol-Johnston cars this year have instituted a series of area "inspection rallies," publicly inviting all owners of their cars, especially those in the district, to attend at an announced avenue, take refreshment as the maker's guests and allow their cars to be inspected and tried individually by a staff of testers on the spot.

Actual repairs are not done at these rallies, but a written report is furnished as to the "tune" of each car with recommendations as to what should be done to it if anything amiss is noticed. The object is, of course, to render an additional type of service to owners and at the same time to secure publicity in an unusual form.

DEALERS REPORTING TRADE IS EXCELLENT

(*Continued from page* 36)

pects who desired to see the new models before placing orders.

Motor truck business, likewise, was, helped along by the comprehensive display of commercial vehicles, which again took the form of a little village, called "Trucktown," as for the last two years. The results of this year's State fair show were eminently satisfactory, especially as it appears that the farmers are again becoming a buying factor, both in passenger and commercial cars. Exhibitors of farm machinery said that tractors and power operating equipment aroused more interest than in 1920 or 1921, and some actual sales were made on the ground.

Upstate dealers said that there was a slowing up in demand in cities, but rural districts were producing some good business, in passenger cars especially. April, May and June of this year represent probably the biggest and best selling period on record. July showed a falling off which was relieved to some extent in August by price reductions and the appearance of 1923 models. September is looked upon to produce a healthy volume. Closed types are running strong in the sales ratio, and if deliveries were quicker, probably more would be sold. A great many buyers do not want to wait anywhere from 30 to 90 days before the car is placed in their hands.

HAYNES BODY MODELS SHOWN TO DEALERS

Advertising Policy and Crop Situation Discussed at Factory Meeting

KOKOMO, IND., Sept. 7—The new Haynes body models were exhibited for the first time here to-day at the first dealers' meeting held by this company in recent years. Dealer meetings are announced as a part of the policy of G. U. Radoye, who recently was placed in charge of both sales and advertising for the Haynes Automobile Co.

There were two topics for the meeting, the morning session being devoted to the national advertising policy behind the Haynes cars. On this subject C. C. Parlin of the Curtis Publishing Co. and H. A. Groth of the Rankin advertising agency were the chief speakers. Opportunities for connecting local sales situations with the national advertising were discussed at considerable length. Groth called attention to an analysis of the United States by counties recently prepared by his agency and subject to call for any Haynes dealer or distributor who wished to make an intensive campaign of his territory.

Parlin discussed the economics of the present national crop and manufacturing situation, and his conclusion was that as a result of the third bumper crop in successive years and the recent rise in prices, the money is in the country and the dealers should be able to continue the present high rate of sales with less than the usual seasonal drops.

Radoye then presented a series of charts showing the strong sales points of the Haynes cars.

The afternoon session was given over largely to engineers who explained certain parts of the cars.

FOUR SPORT MODELS IN HAYNES NEW LINE

KOKOMO, IND., Sept. 10—Four new sport models have been added to the Haynes line for 1923. These consist of a five passenger sport phaeton, two passenger sport roadster, three passenger sport coupe and five passenger sport sedan.

The cars are finished in maroon and have de luxe equipment, including six disk wheels, polished protection bars on the back of the body, front and rear bumpers, nickel plated radiator, ornamental radiator cap and headlamps, Motometer, windshield wings on open models, sunshade, etc. These sport bodies are mounted on the 121 in. wheelbase, Model 55 chassis. Individual steps are standard equipment. The fenders are crowned higher than before.

The list prices of the new models are: 5 passenger sport phaeton, $1,895; 7 passenger sport roadster, $1,895; 3 passenger sport coupelet, $2,195; 5 passenger sport sedan, $2,695.

FREIGHT RATES CUT ON BODY SHIPMENTS

Reductions Affecting All Parts of Country Range from 20 to 67 Per Cent

NEW YORK, Sept. 11—A substantial reduction in freight rates on automobile bodies, ranging from 20 to 67 per cent, is announced by the Consolidated Freight Classification, which represents all of the railroads of the country. The new rates are effective about Nov. 15.

These reductions are the result of 18 months' effort on the part of the Motor and Accessory Manufacturers Association, the National Automobile Chamber of Commerce and the Automobile Body Builders Association to convince the railroads that automobile bodies should take the same ratings as horse drawn vehicles. Representing the traffic department of the Motor and Accessories Manufacturers Association, Herman Deuster appeared before the classification committee four times before the contention of the automotive industry was approved.

Dealers Benefited

Automobile dealers who sell chassis and fit special bodies will be financially affected by the new rates, for they will mean a considerable saving. For instance, a San Francisco dealer selling a Ford chassis and ordering a sport body from a body factory at Owensboro, Ky., would have to pay $96.20 freight under the present classification. Under the new rates the charge would be $32.10, which would mean a saving of $64.10. In the case of special bodies, there would be no saving unless the dealer filled the car.

There are three divisions of railroad territory represented in the rate classification. "Official" represents all of the carriers east of the Mississippi and north of the Ohio river and the Mason and Dixon line. "Southern" is everything east of the Mississippi and south of "official," while "Western" is everything west of the Mississippi.

New Classification

The following table shows the percentage of reductions in the various classifications:

	Official	Southern	Western
In boxes or crates, see Note: Packages exceeding 54 in. in height, actual weight, but not less than 1,000 lbs. each, L. C. L.	*	*	20%
Packages exceeding 44 in. but not exceeding 54 in. in height, actual weight, but not less than 1,000 lbs. each, L. C. L.	25%	33⅓%	33⅓%
Packages exceeding 36 in. but not exceeding 44 in. in height, L. C. L.	50%	50%	50%
Packages exceeding 34 in. but not exceeding 36 in. in height, L. C. L.	33⅓%	50%	50%
Packages not exceeding 34 in. in height, L. C. L.	50%	66.7%	66.7%
Loose or in packages, C.L., min. wt. 10,000 lbs., subject to Rule 34	†20%	†20%	†20%

NOTE: The height measurement of the package, or of the body if shipped loose, is to be taken with the body in its natural upright position.

*No change.
†Estimate.

VANCOUVER SETS UP PARK FOR MOTORISTS

VANCOUVER, B. C., Sept. 10—A new automobile tourist camp has been prepared in this city for visiting motorists and is already being extensively patronized.

One hundred and sixty acres have been set aside for this purpose, for the accommodation of two hundred automobiles and tents, all parking spaces being under the shelter of trees.

Cooking and dining shelters, each with a large cook stove and dining tables, have been built in different parts of the ground, with shower baths, laundry facilities and every other convenience.

LOCOMOBILE TO ADD TO DEALER FORCES

BRIDGEPORT, CONN., Sept. 10—The reorganized Locomobile Co. of America, now headed by W. C. Durant, has issued a statement to its branches and dealers outlining its plans under the new leadership. No radical changes are contemplated either in policy or design of the product, it is stated. The Locomobile as now known, with its 48 h.p. low-speed six-cylinder engine and four-speed transmission, will be continued.

"In a market of unsettled prices for motor cars, it is interesting to note that the company states there is no price reduction in view, but that on the contrary an increase in price is not an improbability," says the statement. "As to the marketing of the car, the familiar policy of the company in handling its product through its own branches will be continued. This system of branch houses will be amplified by direct dealers for territory not covered by branches."

ROLLS-ROYCE FACTORY TO KEEP AT CAPACITY

SPRINGFIELD, MASS., Sept. 12—A circular to preferred stockholders of Rolls-Royce of America, Inc., states that since the reduction in the price of the chassis in March sales have increased so fast that at present the company's unfilled orders are such as to tax the capacity of the plant for the remainder of the year.

With the present equipment the company can turn out 10 cars a week, and with a comparatively insignificant capital expenditure for equipment the output can be raised to 750 cars a year.

PRICE QUOTATIONS ANNOY LOS ANGELES

Public Wants Advertisements to Show Cost of Cars When Delivered

LOS ANGELES, Sept. 10—The public has begun to protest against the practice of Los Angeles motor car dealers advertising factory prices only. Letters have been printed in newspapers signed by motorists calling attention to the misleading information derived from the advertising.

The freight differential between factory and local prices is quite high. In many instances it is more than $200. This means that when a prospective buyer reads an advertisement and learns the advertised price is $1,495, he is told later that it means the price in Cleveland, Detroit or some other eastern manufacturing center, but in Los Angeles the car costs $1,735 or some such figure. Many of the dealers use very large display type setting up the price and below it type of very inconspicuous size, stating "Freight and war tax extra" or "F.O.B. Detroit."

Hold Factories to Blame

When asked why they advertised in this way, some dealers said it was because the factories will not permit them to change the prices to correspond to the actual cost delivered in Los Angeles. They admit they are caused a lot of grief by this kind of advertising, but owing to the fact that the factory usually pays a percentage of the cost of advertising they are not privileged to make the change.

Other dealers are frank enough to say they advertise factory prices because they are so much lower than delivery prices, and if they can get a prospect to look at the car and take a ride in it, they don't have much difficulty in selling the freight charge, when, if they advertised actual delivery prices, the prospect might not come into the place.

GEORGE FRITZ CHOSEN ASSOCIATION MANAGER

CHICAGO, Sept. 7—George Fritz, formerly manager of the Research Club, an organization of automotive jobbers, has been appointed business manager of the Association of Automotive Equipment Manufacturers.

This association will establish headquarters immediately in Chicago's Loop district and will conduct an active campaign to extend its membership throughout the United States. It was organized about a year ago, and its membership now includes about 80 manufacturers of automotive equipment in Chicago, St. Louis, Milwaukee and a number of other cities.

W. E. Green, who has been secretary of the association since its organization, will continue in that capacity.

BEARINGS SERVICE WILL BE DISSOLVED

Separate Companies to Take Over Work—Organization Formed in 1916

DETROIT, Sept. 9—The Bearings Service Co., as an active organization, will be dissolved Dec. 31, 1922, according to Alfred K. Hebner, president and general manager.

The company was incorporated June 26, 1916, and has been the concern acting through 32 direct branches and approximately 1000 distributors as the service department of the Timken Roller Bearing Co., the Hyatt Roller Bearing Co. and the New Departure Manufacturing Co. for the service distribution of Timken, Hyatt and New Departure bearings.

Hebner issued the following statement:

Although the same mutually friendly attitude exists among the manufacturing principals through whose efforts the Bearings Service Co. was brought into existence, with automotive service activities and policies becoming more and more important in the industry as they have during the past several years, there has been a growing mutual realization between the Timken Roller Bearing Co. and the General Motors Corp., whose interests have been represented in the Bearings Service Co., that the best ultimate goal would be secured by each through a separation of their bearings service program.

New Companies Formed

To this end on and after Oct. 1, 1922, the servicing of Hyatt and New Departure bearings, the manufacturers of which are units of the General Motors Corp., will be handled by the United Motors Service, Inc., and a new company to be known as the Timken Roller Bearing Sales & Service Co. will care for the servicing of Timken bearings.

Until Jan. 1, 1923, when the Timken Roller Bearing Sales & Service Co. will be in operation, the Bearings Service Co. will continue the servicing of Timken bearings as heretofore at all its 32 direct branches located in the following cities: Atlanta, Boston, Chicago, Detroit, Los Angeles, Minneapolis, New York, San Francisco, Seattle, Kansas City, Dallas, Cleveland, Denver, Indianapolis, Birmingham, Richmond, Philadelphia, St. Louis, New Orleans, Pittsburgh, Omaha, Portland, Toronto, Winnipeg, Brooklyn, Fresno, Milwaukee, Salt Lake City, Baltimore, Buffalo, Newark, Oklahoma City.

In addition, in any of these cities where the United Motors Service, Inc., does not have branches the Bearings Service Co.'s branches up to Jan. 1, 1923, will sell for service Hyatt and New Departure bearings.

To indicate the continued mutually friendly attitude in service affairs between the manufacturers of Timken, Hyatt and New Departure bearings, the United Motors Service, Inc., will appoint as service distributors of Hyatt and New Departure bearings the direct branches of the Timken Roller Bearing Sales & Service Co. in cities where the United Motors Service, Inc., has no direct branches, and, conversely, the Timken Roller Bearing Sales & Service Co. will appoint direct branches of the United Motors Service, Inc., as its service distributors for Timken bearings in such cases.

These arrangements will result in the public obtaining just as good, if not better, service on all these three bearing lines, Hyatt, Timken and New Departure, than has been available in the past through the Bearings Service Co.

NEW YORK DEALERS SELECT SHOW SPACE

NEW YORK, Sept. 11—Fifty different makes will be represented in the closed car show of the Automobile Merchants' Association which will be held in Grand Central Palace Sept. 23-30. The spaces were auctioned off and there was lively bidding for preferred positions, participated in by nearly all of New York's dealers.

This will be the third annual show run by the dealers themselves and the second annual closed car show.

The admission fee will be 75 cents and it is hoped to break last year's attendance figures of 150,000.

Mayor Hylan is expected to make the opening address on Saturday night, Sept. 23.

Farmers Lead Toronto Buyers

TORONTO, ONT., Sept. 11—An analysis of car registrations in the Province of Ontario for the year 1921 shows farmers to be far in the lead as owners of passenger cars, with tradesmen running them a poor second. In the aggregate, farmers lead all classes as owners of self-propelled vehicles, as they possess 65,904 of the passenger and commercial cars registered in the province.

WEST WILL CONSIDER UNIFORM VEHICLE LAW

Conference of Officials of Seven States Will Probably Be Held This Month

PORTLAND, ORE., Sept. 8—Discussion of appropriate legislation dealing with regulation of motor vehicle traffic on the highways, with a particular view to uniformity throughout the Pacific coast, is the subject of a proposed conference of officials of the seven western States and British Columbia which probably will be held in Portland late this month.

Letters suggesting the conference were sent out this week by Sam A. Kozer, secretary of State of Oregon and in charge of motor vehicle control, following an exchange of ideas with L. D. McArdle, director of efficiency, and Fred J. Dibble, director of the bureau of licenses, of the State of Washington.

Officials to whom invitations have been sent by Kozer and who probably will be in attendance at the conference are: Charles J. Chenu, superintendent of the motor vehicle department of California; Robert O. Jones, secretary of state of Idaho; Charles T. Stewart, secretary of state of Montana; George Brodigan, secretary of state of Nevada; H. E. Crockett, secretary of state of Utah.

PRODUCTION STARTED ON "COURIER" MODELS

SANDUSKY, OHIO, Sept. 10—The Courier Motors Co., which is the Arrow Motors Co., acquiring the assets of the former Maibohm Co., reports that production is under way on six-cylinder models of the "Courier," which are custom built and painted. It is stated that enough orders are on hand to keep the plants at capacity for several months.

The officers of the company are: President, A. C. Burch, former vice-president and director of sales of the Clydesdale Motor Truck Co.; vice-president, O. O. Brace, president of the Sandusky Nut Co.; treasurer, E. E. Ernst, and secretary and general counsel, J. G. Pyle.

New York Dealers at the Boosters'

The annual boosters' outing of the Automobile Merchants' Association was held at Fred J. Wagner's farm at Smith- weather conditions, a representative crowd attended. The sports, handled by W. A. Allen, were unique, consisting the car parked nearest to a secret stake, while the owner of the best looking car was suitably rewarded. Among warth, W. G. Goldman, A. V. Hines, C. A. Opel and J. A. Clarke. The committee in charge

BORDINO WINS RACE ON MILAN SPEEDWAY

Captures Italian Grand Prix, Covering 500 Mi. in 5 Hr., 43 Min., 13 Sec.

MILAN, ITALY, Sept. 10 (*By Cable*)—Bordino in a Fiat won the Italian Grand Prix on the Monza speedway to-day. The distance was 500 miles and the winning time was 5 hr. 43 min. 13 sec. F. Nazzaro, winner of the French Grand Prix, also driving a Fiat was second, two laps behind. The race was for 122 cu. in. cars, with prizes totaling 300,000 liras.

Opens Speedway

MILAN, ITALY, Sept. 10 (*By Cable*)—The opening meet on Italy's first automobile speedway was a complete success. The new track, which is 6.2 miles to the lap, is located within six miles of Milan and was built by the Automobile Club of Milan so that Italy's automobile industry might have a suitable course on which to try out cars and also promote sporting events of an international caliber.

This was the first of two races scheduled for September, the other being the Italian 500 mm. Grand Prix for cars of 122 cu. in. piston displacement for which are entered thirty-eight cars, representing France, Italy, Germany, Austria and England.

The race was for 91 cu. in. cars, the winner being Bordino, who competed in several California races in the United States last winter. He drove his Fiat to victory over the 373 miles in 4:28:38. Lampiano, Fiat, was second, in 4:34:12 3/5; Salamano, Fiat, third in 4:35:48; Ramassotto, Chiribiri, Pocher and Haiden in Austro-Daimlers were still running when the race was called off. Nine cars started.

Oldsmobile Has New Home

NEW YORK, Sept. 11—The Cutting Larson Co., Inc., eastern distributor for the Oldsmobile, has moved into its new eight-story Oldsmobile building, at 311-323 West Sixty-sixth Street, near West End Avenue. It is eight stories high, of reinforced concrete, making it 100 per cent fireproof, and giving a total floor space of about 110,000 sq. ft., 120 feet front on West Sixty-sixth Street. The building and land represent an investment of about a half a million.

In going into the new Oldsmobile home, the Cutting Larson Co. will have ample room for its executive offices, salesroom, displaying new cars and trucks, parts, service and delivery departments, and in addition to this it will maintain its own paint and trim shops, also blacksmith and machine shops.

MILLER BUILDS RACER 27 INCHES IN WIDTH

LOS ANGELES, Sept. 8—Harry Miller, veteran builder of racing cars, has announced that he now has under construction at his plant here the first of two 122-cubic inch displacement engines which he expects to enter in the 1923 race at Indianapolis. The new engines will have eight cylinders all in line.

The chassis that will carry the Miller engines will be 104-in. in wheelbase, but will have a narrower frame and the body will be only 27-in. wide, accommodating a driver only. The bore of the cylinders will be 2 11/32-in. with a stroke of approximately 3½-in Although the parts will be smaller, the motor will be similar in design to that which Jimmy Murphy has used in his car this season.

The entire car will weigh about 1400 lbs., and the power plant is expected to develop from 90 to 95 horsepower. With the exception of the wheels, tires and electric units, the cars will be built complete in Miller's shop.

C. A. Shaler on Full Time

WAUPUN, WIS., Sept. 12—The C. A. Shaler Co., manufacturer of tire repair tools, equipment, vulcanizers, etc., and headlight lenses, is now operating full time in its new factory, and to handle the overflow of orders is erecting a shop addition and an office building.

The original plant was destroyed by fire in March, and the industry has been entirely rebuilt at an investment of more than $350,000. The main building is 150 x 300 ft. and is employing 150 persons, the largest number in the history of the company.

ASSOCIATED MOTORS ASSETS, $9,564,555

Current Liabilities Total $1,210,060; Cash Is Stated to Be $1,365,939

CHICAGO, Sept. 11—A condensed balance sheet of the Associated Motors Industries as of July, 15, 1922, shows this holding company to have current assets of $9,564,555 as compared with current liabilities of $1,210,060. Cash is given at $1,365,939.

The Associated Motor Industries was formed to effect the consolidation of approximately 20 companies active in the automotive or associated industries. These companies have been divided into three groups. The first group is made up of eight companies—National Motor Car & Vehicle Corp., Indianapolis; Traffic Motor Truck Corp., St. Louis; Recording and Computing Machines Co., Dayton; Covert Gear Co., Lockport, N. Y.; Kentucky Wagon Manufacturing Co., Louisville; Jackson Motors Corp., Jackson; Saginaw Sheet Metal Works, Saginaw, and M & T Corp., Atlantic, Mass.

The identity of the companies included in the other two groups will be announced later. When all conveyances are completed, the Associated Motor Industries states that the combined assets will aggregate approximately $80,000,000.

The aggregate depreciated value of the fixed assets derived from appraisal is given at $10,135,378.

OHIO FAIR FURNISHES LIVE PROSPECT LIST

COLUMBUS, Sept. 8—Success marked the annual fall show under the auspices of the Columbus Automobile Show Co., held at the Ohio state fair grounds. A display of passenger cars was much larger than in former fall shows, and one large building 100 by 400 feet was taken up with the display Only passenger cars were in the building, as space elsewhere was provided for trucks.

Business at the Fair was better than last year, according to the dealers and manufacturers in charge of the various exhibits.

Outing, Wagner's Farm, Sept. 7

town, L. I., Sept. 7, the feature being a clambake which followed an afternoon of field sports. Despite adverse of balloon races, arrow chases, nail driving, obstruction rice, card sailing, archery and golf. A prize was given for those who won prizes were: Sam Marks, George Rich. Walter Allen, W. M. Whelan, A. N. Mathews, Otto Braunwas: Otto Braunwarth, J. C. Nichols, J. Hall, Fred Phillips, C. G. Percival and W. A. Allen

CHANGES IN THE TRADE

W. H. Wortmann, Kewanee, Ill., has taken the agency of the Traffic truck.

Weldon Garage has been designated as distributor for the Star in Greenfield, Mass.

Olivier Bros. has been appointed dealer for the Ford and Lincoln cars in Holyoke, Mass.

Tri-State Tire Co., Memphis, Tenn., has been appointed distributor for the Ajax tires. Russell Blair is president of the company.

R. L. O'Bryan has bought an interest in the **Curtis Co.**, Houston, Texas. The company will carry a complete line of tires, tubes and accessories.

C H. Burke has been appointed manager of the Redner Automobile Co., Milwaukee, Wis., distributor of the Peerless. Burke is a Chicago man.

Bishop Motor Car Co., Cincinnati distributor of the Jordan and the Liberty, has opened a branch in Dayton, Ohio. E. D. Hensley is sales manager.

Earl Motors, Inc., is establishing a sales branch in Birmingham, which is to have as its territory the entire state of Alabama. Tunstall Bryars is manager.

Edward J. Tallant has been appointed sales manager for Ford and Lincoln passenger cars, Ford trucks and Fordson tractors by the **Koelle-Greenwood Motor Co.**, Germantown, Philadelphia.

Paul Rubber Co. of Charlotte, N. C. has appointed A. K. Buxton as district manager of North and South Carolina. Buxton has recently been general manager of the A. & P. Tire Stores Association.

Tampa Cadillac Co. has been organized at Tampa, Fla., and established a distributing agency there for the Cadillac. G. Henry Davis is president; W. R. Rogers, vice-president, and D. Bryon Logan, secretary.

Gorman Motor Sales Co., of which **W. A. Gorman** is president, has purchased the **H. & S. Overland plant**, Moline, Ill., and in addition to the Overland and Willys-Knight lines will show a complete Studebaker line.

Edwards Motor Co. of Milwaukee has been incorporated with a capital stock of $200,000 by Frank J. Edwards, head of the present **Edwards Motor Car Co.**, Dodge Brothers distributor and dealer. A new sales and service building costing $125,000 is being erected.

Posner-Ormand Tire Co. has been incorporated to be a strictly tire business in Birmingham, Ala. The incorporators and officers are Banks Ormond, president; F. O. Denson, vice-president and N. L. Posner, secretary and treasurer.

Stutz Wisconsin Co., Milwaukee, has been organized by **William M. Maxwell. Herbert A. Stolte** has been appointed manager of retail sales, and **James Hutton**, service manager. The local dealership will be operated as the **William M. Maxwell Co.**

Patton & Gay, Inc., has established a new retail tire store in Atlanta, handling several well-known makes but specializing in the Kelly-Springfield line. Edward S. Gay, Thomas V. Patton and Vance Hunter are the owners of the new company.

William R. Grundman has severed his connection as service and general manager of Walter S. Halliwell, Inc., handling Mercer and Moon cars and the Winther truck in East Hartford, Conn., to become associated with the Road Test Department of Mercer Motors Co., Trenton, N. J.

Waukesha Auto Sales Co., Waukesha, Wis., Buick and Chevrolet dealer, has divided its business. The present sales and service building will be maintained as an exclusively Chevrolet station, while the Buick will be handled and serviced under the name of **Andrews-Buick Co. William Steinemann** is manager of the Buick division.

Earl B. Stone, for the last three and a half years with the Cleveland Tractor Co. as road salesman, assistant advertising manager, district sales manager and advertising manager, has joined the staff of Hoyt's Service, Inc., advertising agency, at its Cleveland office.

Star Motor Co. of Alabama, Birmingham, a branch of the Whitlock-McDonald Motor Co., Durant distributor, announces several new agents in Alabama. The **Mattox Auto Co. of Fayette** has been awarded the territory of Fayette, Lamar, Marion and Winston counties. The **Creel Motor Co.** of Jasper will handle the sales of the new Star in Walker county.

L. Frank Saddlery Co., San Antonio, Tex., announces the change of its name to the **Straus-Frank Co.**, which better defines its status as automotive equipment jobber as well as manufacturer of saddlery and harness. There will be no change in the personnel of the company or its policies. **D. J. Straus** is president and treasurer and **S. Wallach**, secretary and assistant treasurer.

Walter F. Wright Co. will succeed the Willys-Overland distributing branch in Cleveland. The company has taken a five-year lease at approximately $69,000 on the plant formerly occupied by the F. Carris Franklin Co. at 3622 Prospect Avenue. The plant at 6604 Euclid Avenue, which had been occupied by the Willys-Overland distributing branch, was sold last week to a real estate broker here.

Walter B. Zimmerman has purchased all the stock of the **Standard Motor Car Co.**, Columbus, central Ohio agents for the Hudson and Essex lines. The Standard company was established about twelve years ago by the late Harry J. Schwartz. Zimmerman was formerly associated with his father and brother in the Dodge Brothers agency. The **Walter B. Zimmerman Co.** has been chartered to take over the business and the Standard company has been dissolved.

Fred Van Demark, Buick dealer in Schenectady, N. Y., has started the erection of a new home at State Street and Waldorf Place, that city, due to an expansion in business. When completed it will be one of the largest salesrooms and service stations in the city. It will be two stories high in one part and the main floor will have a capacity of 130 cars. The construction of the sides on both frontages will be of tapestry brick. The second floor will be used as stock and store rooms.

Cadillac Makes More Closed Cars

DETROIT, Sept. 11—Statistics made public by the Cadillac Motor Car Co. show that in the last eight years Cadillac production of closed cars has increased from 7 per cent of the total to more than 54 per cent of the total.

The increase has been a steady one, averaging a gain of nearly 8 per cent each year. It covers the last six series produced by Cadillac. The greatest per cent gain in closed bodies was from the period of July, 1916, through June, 1917, showing a gain of 14 per cent.

CHANGES ARE MADE IN COAST SECTION

Trade in San Francisco and Vicinity Has Shifts in Its Personnel

SAN FRANCISCO, Sept. 9—T. P. Heehan has been appointed wholesale manager of the Victory Motor Sales Co., Paige and Jewett dealers, Oakland. Heehan formerly was in charge of the advertising and publicity for the Omara Green Co., Ford and Lincoln dealers in Denver.

E. L. Bee, for five years manager of the Keaton Tire & Rubber Co., and C. A. Holman, who was identified with Keaton also for five years, have purchased the Keaton branch on the east side of San Francisco Bay, and are operating it as the Oakland Rim & Tire Co., distributing Keaton tires in Eastbay cities.

F. E. Granger has been appointed distributor and direct factory dealer, for the Kissel in Santa Clara County.

The Pioneer Motor Co. of San Francisco, whose stock was acquired by R. H. Collins, when he purchased the Peerless plant, has been reorganized by A. K. McLuney, named for the job by Collins. McLuney becomes president of the reorganized Pioneer; E. J. Gilbert, secretary and treasurer; J. P. McNaughton, cashier; W. B. Doan, retail sales manager; F. L. Kimball, wholesale manager, and H. R. Schmidlapp, service manager.

Other Changes

The Haynes Auto Sales Co. has opened a branch in Oakland in charge of M. S. Bury, who has been selling Haynes cars for seven years.

Cy Russell and C. R. Wilcox have been appointed Wills Sainte Claire dealers in Alameda and Contra Costa counties.

Lloyd Brothers, owner of the Oakland Garage, Inc., in Oakland, has introduced the Auburn and the Dorris cars to the mainland side of San Francisco Bay, as agent for these two lines.

N. J. Garibaldi, who has been connected with the sales force of Don Neher, Ford dealer in Oakland, since Jan. 1, has been made sales manager of the organization.

Norman Whichello has been appointed sales manager of the truck division of L. M. Field, Inc., Northern California distributor of Selden trucks.

Marcus D. Skaggs has been appointed special representative of the B. F. Goodrich Co. at San Francisco.

H. M. Chambers has been appointed district manager of the Traffic Motor Truck Co. of San Francisco.

New Stutz Advertising Head

INDIANAPOLIS, Sept. 10—Herbert R. Hyman has been appointed advertising manager of the Stutz Motor Car Co. of America, now under control of Charles M. Schwab.

Digitized by Google

ASSOCIATION ACTIVITIES

Planning Ohio Convention

COLUMBUS, Sept. 10—The sixth annual convention of the Ohio Automotive Trade Association will be held in Toledo Dec. 6 to 8. Delegates' headquarters will be at the Hotel Secor, while the sessions will be held in the assembly rooms of the La Salle-Koch Co.

In place of the automotive equipment exhibit heretofore held, educational exhibits will be made in the stores of the local jobbers. This is in charge of a special committee which will establish uniformity, agree upon decorations and prevent duplication in products being shown. The idea will be to make it possible for visiting automotive merchants to view the latest and best garage equipment as well as inspect the accessories.

Questionnaires will be sent to all the members for suggestions of subjects to be discussed in the convention sessions. Speakers and leaders in discussions will be selected to carry out these suggestions.

The Toledo Automotive Trades Association will be the host and E. J. Shover, secretary-manager of the State association, will be active in the convention management.

Alameda Elects Officers

BERKELEY, CAL., Sept. 11 — Nelson Scotchler, Ford dealer in Berkeley, was elected head of the Alameda County Automobile Trade Association at the annual election and dinner of this branch of the California Automobile Trade Association. William Mackay of Mackay & Austin and Jack Bowers of Brask Brothers & Bowers, both Oakland firms, are the new vice-presidents. Charles Hebrank of Hebrank, Hunter, Peacock & Co., also of Oakland, continues as treasurer of the county organization. Robert W. Martland, secretary-manager of the county association—which position he also holds with the State association—was unanimously re-elected, as he probably will be for the next hundred years or so.

David Jones, retiring president of the Alameda County association, was presented with a memorial gift by the members, and his services as head of the organization given well-earned praise in several speeches. Martland read his annual report summarizing the activities of the allied crafts for the year and outlining the plans to be followed at the next session of the State Legislature at Sacramento.

Houston Maps Out Program

HOUSTON, TEX., Sept. 10—One of the most rousing meetings of the automotive men here was held this week by the Houston Automotive Trades Association. President C. W. Manford issued a special appeal for every man engaged in any line of the automobile business in Houston to attend, and most of them were out.

The big points in the program discussed was getting behind a $6,000,000 bond issue for roads about Houston; giving moral and financial support to probe of thefts and prosecutions of persons stealing cars, tires or parts; inaugurating a credit department with a card index showing the record of every customer in the county as to ability and inclination to pay debts, and naming a committee to fight unfavorable legislation, city, national or state.

Memphis Secretary to Resign

MEMPHIS, TENN., Sept. 8—Henry W. Osinach, secretary of the Memphis Automobile Dealers Association, has been appointed general agent for a life insurance company at Memphis and will establish an office in the U. and P. Bank Building. He will continue with the dealers' association until after the Automobile Show at the Tri-State Fair, Sept. 23-30.

Arranging Michigan Circuit

DETROIT, Sept. 8—M. L. Garlock, president of the Michigan Automotive Trade Association, has arranged a conference of the representatives of dealer organizations in 21 State cities, on Sept. 20, to consider dates and plans for the 1923 automobile show circuit.

The meeting will be held in the offices of the M. A. T. A. in the Hotel Addison. Luncheon will be served at 1 p. m. in the D. A. D. A. clubrooms and the meeting convened at 2 o'clock. A meeting of the board of directors of the M. A. T. A. will follow the show conference.

The following cities have been invited to send representatives: Ann Arbor, Ypsilanti, Jackson, Kalamazoo, Battle Creek, Benton Harbor, Muskegon, Grand Rapids, Lansing, Pontiac, Flint, Saginaw, Bay City, Cadillac, Traverse City, Port Huron, Mt. Clemens, Cheboygan, Alpena, Mount Pleasant and Owosso.

Los Angeles to Hold Show

LOS ANGELES, Sept. 9—The Motor Car Dealers Association will hold a show Nov. 11 to 19. This will be the first show in this city for two years. Announcement of the location has not been made, owing to the difficulty in obtaining a building of sufficient size. The new Shrine Temple may be sufficiently near completion by that time to accommodate the show. Otherwise it is probable tents will have to be used.

Clam Bake for New York

NEW YORK, Sept. 11—The Automotive Service Association of New York will hold its third annual clambake and outing at Glenwood-on-the-Sound on Sept. 24. It is expected that nearly 200 members and guests will be present. The clambakers will drive down from New York as a caravan, and, aside from the delights of the luscious clam, there will be ball games, athletic events for men, women and children and aquatic sports.

New York Association Moves

NEW YORK, Sept. 10—The rooms and offices of the Automobile Merchants Association have been moved from 1845 Broadway to the Hotel Embassy, 2030 Broadway, at Seventieth Street.

Picnic in Victoria, B. C.

VICTORIA, B. C., Sept. 12—The automotive dealers of Victoria held a monster picnic recently when more than 800 people attended. Every automotive dealer in the city was represented.

Annual Automobile Show under the auspices of the New Jersey Automobile Exhibition Co., Claude E. Holgate, manager.

RACES

Kansas City.....Sept. 16
Opening Meet of New Kansas City Board Speedway.

Fresno, Cal.....Sept. 30

Los Angeles.....Nov. 30

San Diego.....January

DODGE WILL INCREASE MANUFACTURING ROOM

DETROIT, MICH., Sept. 7—Dodge Brothers will begin at once the construction of a factory addition which will give the company an increased capacity of about 350 cars daily, making a total daily plant capacity of about 1000 cars.

The building is expected to be completed by Jan. 1. It will be eight stories in height and will cost about $1,500,000.

Total sales of Dodge cars in 1922 will reach about 160,000 as compared with a previous high yearly total of 141,000.

Vice-president A. T. Waterfall, in a statement accompanying the announcement of the new building plans, said that the new building is made necessary by the increased business of the recent past and is an evidence of the confidence of Dodge executives in its continuance.

Record Franklin Driveaway

SYRACUSE, N. Y., Sept. 8—Following a visit to the factory of more than 200 dealers from 24 States and Canada, there was a record driveaway of Franklin cars of the new series just announced. Representing a retail value of nearly $7,000,000, 250 cars took part in the parade through the city that marked the start of the driveaway, the largest single day's movement of cars out of the Franklin plant.

From now on all cars shipped from the Franklin factory will be of the series 10 type. Franklin officials announce that the production schedule for the new car is the largest ever set by the company.

AUGUST WAS BIGGEST IN OVERLAND HISTORY

TOLEDO, Sept. 12—Willys-Overland reports the biggest August in its history, shipments of 14,007 Overlands and Willys-Knights being recorded as against the previous best August of 11,718 in 1917. August, 1922, deliveries were greater than in any single month since June, 1920, when 14,033 were delivered.

August profits are reported to have been $1,500,000, while the three months since the company's May 31 statement are said to have averaged $1,000,000 a month. It is expected that the company's $16,000,000 debt will be wiped out without interfering with current profits through the formation of a real estate company to take over the branches worth around $16,000,000.

Warner Buys Gear Plant

SYRACUSE, N. Y., Sept. 7—T. W. Warner, president of the Warner Corp. of Muncie, Ind., and Toledo, Ohio, has bought the New Process Gear division of the Willys Corp. at court sale. He was the only bidder and the price paid was $1,904,000, which was $4,000 more than the court's upset price.

BUICK MAKES SHIFTS IN SALES DEPARTMENT

FLINT, MICH., Sept. 8—Promotions in the Buick sales department have been announced by E. T. Strong, general sales manager. Those who have been advanced are J. A. Coy, who has been made district sales manager for Michigan; James Dickson, Jr., Detroit branch manager in charge of wholesale distribution of cars outside Detroit, and E. M. Steger, sales manager in charge of all sales in the city of Detroit.

Coy has been with Buick eleven years, four and one-half of which he served as branch manager in Buffalo and five years as branch manager of Detroit. The Michigan district over which he will have charge comprises the Detroit and Battle Creek branch territories and the Saginaw distributor territory. Coy's headquarters will remain in Detroit.

Dickson has been with the International Harvester Co. for 16 years. He was sent to Detroit from Toledo, where he was assistant manager of the Harvester company's branch. His headquarters will be in Detroit.

Steger has been with Buick two years. In his new position he will have charge not only of retail sales at the Detroit branch, but also of sales for the six Buick city dealers. Steger will be located at the Detroit sales office in the General Motors Building.

MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

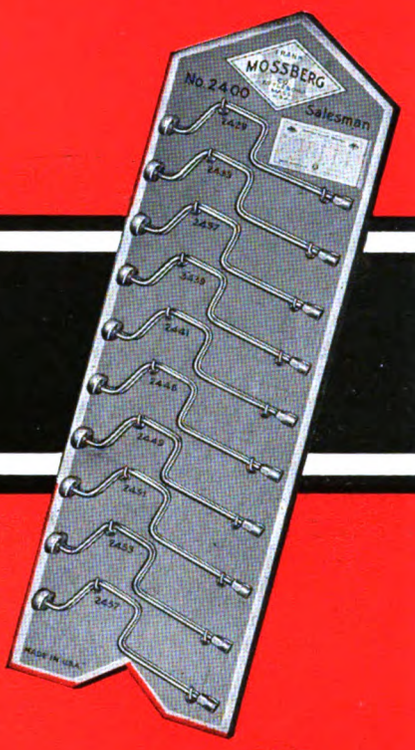
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board assortment contains 70 Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

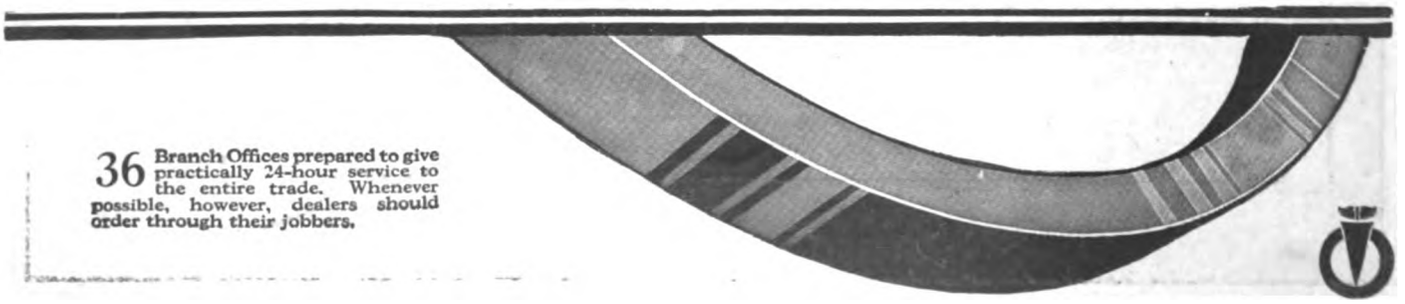
Gill One-piece Piston Rings

prevent loss of power



Identify **the Gill One-piece Piston Ring by the joint, but do not measure its merit by the joint *alone*.**

BECAUSE: **they press so snugly and firmly against the cylinder walls at *all* points that gas cannot waste past them. All of the fuel is compressed into power. And they do this satisfactorily through thousands of miles of service because they are cast *individually* from a special gray iron that retains its elasticity and tension under the stress and strain of the hardest usage. They prevent carbon accumulation too, and thus remove another cause of power loss.**

The home of the Boyce Moto-Meter—the only factory in the world devoted exclusively to the manufacture of motor heat-indicators.

"Ask 'em to buy"—

Breaking all records for sales and profits

Boyce Moto-Meter sales are breaking all records. Our factory is turning out 10,000 instruments a day to keep step with the constantly increasing demand. Boyce Moto-Meter dealers everywhere are finding a ready market offering extremely liberal profits.

Every dealer who has in stock, and who sells Boyce Moto-Meters, is certain of good profits and quick turnover, for the Boyce Moto-Meter is in *universal demand.* Its utility has won for it a reputation of being "the most necessary instrument on the car." Its market is *assured.*

No accessory gives better service for less money than the Boyce Moto-Meter. Nor, does any accessory on the market return as much profit or create as much good-will for the dealer, as the Boyce Moto-Meter.

A *Stewart* SAFETY COMBINATION

Model 183

Model 170

Stop Sign Model 184-A

offering a driver protection from the car behind. Eliminates the needless risks incurred from looking to the rear and the use of arm signals for warning drivers approaching from behind.

A sales combination that offers big business opportunities.

Rear Vision Mirrors

MODEL 170 is made of heavy, beveled-edge glass with durable backing. Furnished with nickel-plated clamps for installation above the windshield of closed or open cars. It reflects the road thru the back curtain window.

Model 170-A, for closed cars.
Model 170-B, for open cars.
Complete, $2.50.

Model 183 is for fender or windshield installation on all cars. The five inch beveled glass is held securely in place by a nickel rim. Finished in black enamel.

Model 183-A, closed car windshield model.
Model 183-B, open car windshield model.
Model 183-C, fender model for all cars.
Complete, $4.00.

Stop Signal

DON'T sell a customer a stop signal you can't depend upon yourself. The Stewart is electrically perfect. The unique design of the six inch beveled lens is something absolutely new. A distinctly Stewart feature. Flashes a signal with the prestige of a traffic officer at a street crossing. Demands attention—gets it. Large enough not to be mistaken for the tail light. A necessity in present-day congested traffic.

Model 184-A, complete with wiring and switch, $5.00.

A Neglected Part and a Dealer's Opportunity

The most conscientious car owner rarely, if ever, lubricates a metal to metal universal joint. Hard to get at, harder to lubricate, in a housing, this vital and busy joint is invariably neglected. And in time this neglect shows up in shaft, rear axle, transmission or clutch trouble.

GOODRICH FLEXIBLE DISC UNIVERSAL JOINTS completely eliminate joint and allied troubles by removing the fundamental cause—metal to metal surfaces. Ends of shafts permanently bolted to discs of fabric and rubber—that is the better way.

Friction is entirely disposed of. No lubrication whatever is needed. The joint is pliable and can flex in all directions. It has enormous strength and great durability. Will last the lifetime of the car. No housing required to protect it. Oil, water or sand cannot hurt it. Acts also as a shock absorber. Transmits a smoother, more even flow of power from engine to driving wheels.

You have a big opportunity, as a dealer, in GOODRICH FLEXIBLE DISC JOINTS. More and more they are becoming standard equipment on cars and trucks. More and more car owners are coming to know their advantages. Write us and let us show you your opportunity.

Pistons Reinforced Around Pin Holes

While the contact surface around the Spencer-Smith piston pin hole is relieved to allow for expansion, this section is reinforced on the inside of the casting by an extra layer of metal which covers the entire area of the relief—maintaining the same thickness of wall completely around the casting, and strengthens the piston wall around the pin bosses where strength is most needed.

Helping Him to Get a Real Good Look at It

AUTOMOTIVE trade association secretaries who attended the National Used Car Conference did not expect to "settle" the used car question and do not claim that they did. But they did turn the clear light of thoughtful, reasonable discussion on this one of the trade's most distressing problems. Facts and ideas which the conference brought out are told on the next four pages.

How Hard Will Dealers Try to Stop Used Car Losses?

National Conference at Chicago Shows There Are Some Co-operative Plans That Work and Suggests Essentials of Profitable Merchandising—Association Managers Will Issue a Manual to Assist the Trade

By NEAL G. ADAIR

CHICAGO, Sept. 15.

TRADE association secretaries from various parts of the country who attended the National Used Car Conference here this week rediscovered the fact that losses on used cars can be eliminated if dealers will buy and sell them as merchandise. Two days of discussion failed to develop any means of altering the truth that a dealer who employs used car trading solely as an agency of promoting new car sales must pay the cost just as he would for advertising or any other form of promotion. But the discussion did bring out into clear light some of the methods by which dealers, working individually or in groups, can lessen the grief over what the trade calls the used car problem.

Any secretaries, and there were some, who came to the conference feeling that co-operation among dealers to prevent or reduce used car losses is futile, went away convinced that the thing can be done. They heard about the work of dealer organizations that are doing it. They heard the details of plans on which co-operation is based. More important, they learned that while plans furnish the machinery of co-operation they are worthless unless men with understanding of the causes of used car losses and with courage to weed them out, furnish the power.

Dealer's Loss His Penalty

This power is not an enforcement of penalties. Generally speaking, penalties for violation of used car co-operative arrangements have passed out. *The real penalty for a dealer who allows more than a used car is worth is his loss when he sells it. The "teeth" in the unsuccessful co-operative used car plans of to-day are the means which the co-operating dealers employ to show the reckless trader what his losses are and that he cannot escape them. Of these means the foundation is prompt and accurate information regarding market value or actual selling prices of used cars.*

Common Sense Wanted

C. A. Vane, general manager of the National Automobile Dealers Association, put the truth into a compact kernel when he said the used car question was like murder and suicide, reminding the conference that every State in the Union has elaborate legal machinery to prevent murder but the only thing that will keep a person from committing suicide is common sense. And L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, declared that "no association and no plan will ever solve the used car problem; it must be solved by individual dealers." Yet Sanders told how an association with a plan—the Boston plan, one of the most effective in the country—is helping individual dealers to solve the problem.

The trade association secretaries, more than 40 of them, from cities with Boston, Jacksonville, Kansas City and Milwaukee skirting the edges of the territory from which they came, did not meet with any thought of finding a "cure" for the used car troubles of the trade. They hoped to center attention on the most effective means of alleviating these troubles. They realized their hopes and when they left for their homes after two days of long and earnest sessions they had stripped the decorations from numerous used car plans in operation about the country and had classified them for the benefit of themselves and their dealers and the trade in general. The classifications were:

1—*Central appraisal plan.*
2—*Maximum allowance plan.*
3—*Market value information plan.*

It was decided that this classification, with details of operation of different plans, would be put into print in a used car merchandising manual, to be made available for automotive trade association executives throughout the country. The manual will be issued under the auspices of the National Association of Automobile Show and Association Managers, which conducted the conference. Its compilers will be Herbert Buckman, manager of the Cleveland Automobile Manufacturers and Dealers Association, L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, and Neal G. Adair, editor of Motor World and executive secretary of the national association.

Learn Market Values

The conference would have been a poor place for one of those pessimists who think that nothing can ever be done about the used car question. There was plenty of evidence in the addresses and discussions that something can be done and that in more than a few communities something has been done, not only bringing dealers together in co-operation but with the individual merchandising problem of the individual dealer. And there was much to indicate that in a good many communities where dealers think there is no chance for co-operation a chance can be made by vigorous application of the one force that above all others will bring about improvement of used car merchandising conditions. That force is education. It takes the dual form of educating dealers to the fact that used cars have market values, the same as any other commodity, and that it is not good business to buy them except at prices which will permit profitable resale at those market values; and of educating the public to the equally inescapable fact that used

Digitized by Google

cars have definitely limited market values and must be turned in for those values or retained for further use by owners who think they are worth more.

Not once during the conference was there a hint that owners should be forced to sell their own used cars. It was conceded that while private sales should be encouraged where the conditions are right, the average owner has neither the time nor the means of finding a buyer. But the dealer performing the service for the owner should not do it gratuitously. He should insist on a fair profit.

Nor did the conference indulge in any rawhiding of manufacturers. Trading allowances were condemned as serious obstacles in the way of establishment of used car market values, in which manufacturers should be interested as a means of improving dealer conditions and so helping the industry generally. It was pointed out that trading allowances running all the way from two or three in some cities to 28 in one were interfering with the progress of the industry. Equally severe was the censure for manufacturers who have forced dealers to take cars beyond the reasonable market possibilities of their territories, thus virtually compelling destructive competition. The conference, however, regarded most manufacturers as appreciative of the fact that only profit-making dealers are good dealers, and attributed much of the over-allowing that prevails in the used car field to the failure of many dealers to understand the steps that lead to net profit.

High Plane for Used Cars

Talks that lifted discussion of the used car to a high, clean level of sane merchandising were made by L. B. Sanders of the Boston Used Car Statistical Bureau; B. B. Burns, Decatur, Ill., used car dealer and president of the Illinois Automotive Trade Association, and S. E. Comstock, vice-president of Williams & Hastings, Detroit Hupmobile distributor. Morris Adler, Dodge Brothers dealer in Quincy, Ill., described the operation of the Quincy Used Car Exchange, which is a central appraisal and selling bureau. T. J. Arnold, head of the used car department of the Garber-Buick Co. of Saginaw, Mich., told about the operation of the Saginaw plan. George A. Bond, secretary of the Kansas City Motor Car Dealers Association, related encouraging results obtained from the market value information service maintained by the association, and E. S. Bond, secretary in Jacksonville, Fla., had a similar report on the experience of his dealers with an information report supplemented by a maximum allowance list. A paper by Ginder Abbott of the Abbott Automobile Co., Packard, Chalmers and Maxwell distributor in New Orleans, described the information service plan there.

Sanders of Boston stirred the conference with a personal illustration of the observation earlier in this story that it is the men behind a plan, not a mere plan, that make co-operation possible to avoid used car losses. In Sanders, a former passenger car distributor, the delegates saw one of the reasons why the maximum allowance market value information plan in Boston commands the support of 80 dealers, for whom it has saved many thousands of dollars by keeping used car allowances down to figures that are fair to the used car owner and the dealer. They give the owner the market value of his car, less what it will cost the dealer to recondition and sell it. Sanders said the Boston plan has been sold to the dealers and kept sold by the application of pressure in the form of education, showing them the folly of competition that wipes out profits. The delegates found much evidence in Sanders' talk and in his presentation of it that he had been an aggressive factor in application of this pressure. Back of him is a strong committee of dealers who insist on making a profit if they are going to do business and who, in weekly conferences since the plan was put in operation, in February, have been able to persuade to their point of view dealers who showed tendencies to go back to trading for the benefit of the used car owner.

Sanders' talk suggested that almost any co-operative plan will succeed if strong men are behind it. Equally, the best plan in the world is useless without the commanding desire of its supporters to keep it going. Sanders declared that a business which had cost dealers more than $200,000,000 in used car losses in 1921 needed "a raid by a band of fool-killers." It needed to be made to understand that the dealer with his 20 or 25 per cent commission on a new car has to sell two cars before he gets into his hands the full list price on which the commission is based. It costs just as much to sell the used car as the new, and unless the dealer does it without loss, in which the used car reconditioning cost and salesmen's commission are included, he does not get the full profit on the new car.

Sanders told how this fact had been emphasized in getting Boston dealers to stop competitive bidding up of used car prices; how the necessity for correct market value information as a basis for maximum allowance prices had been used to induce dealers to make prompt and correct reports on allowances and sales; how mutual confidence has been maintained by getting dealers to call each other on the phone and learn that a prospect's tale of another dealer's extravagant bid was often pure fiction; how dealers were shown their own and the whole group of dealers' losses in the early months of the year, as proof of the need for reform, and how, through newspaper stories and dealers' and salesmen's interviews with prospects, the public had been educated to cease expecting exorbitant allowances.

He Told About a Successful Used Car Association

L. B. SANDERS
Secretary, Boston Used Car Statistical Bureau

Co-operation in New England

The plan has worked so well that associations, some newly formed for the purpose, have taken it up all over New England, buying and using the Boston loose-leaf vest pocket allowance price books. It may become the New England plan, with New England rather than Boston city headquarters.

The allowance price list, supported in Boston by the reports of prices the public is actually paying for used cars, is showing dealers that the value of a used automobile is not what the owner thinks it is or what the dealer, in his anxiety to get the owner's new car order, thinks he might get for it. The car's value is what the public will pay for it, and this is the lesson being taught in Boston.

The Saginaw plan, which has maximum allowances given by dealers on their own cars, without the modification by selling price statistics employed in Boston, has a practical feature in the exchange of used cars among dealers, so that as far as possible used cars will be marketed by dealers in the same make of new car. Arnold of the Garber-Buick Co. said that dealers exchanged cars on the basis of credit memorandums and settled up at the end of the year. The plan has resulted generally in more thorough reconditioning and better resale prices, he said.

The conference was treated to a sane, inspiring treatment of used car merchandising as an individual dealer problem when Burns of Decatur took the floor. Burns' reputation as a used car merchant—he has never sold new cars—is

Digitized by Google

indicated by his elevation to the presidency of the Illinois State association, dominated by new car dealers.

Burns declared that the used car business is "just as honest, upright and dignified and can be made just as profitable as the new car business." The foundation for such a result, he said, is good management and treatment of customers on a good will basis.

Dealers Should Sell Used Cars

Though a used car dealer, Burns stated his opinion that used cars should be sold by new car dealers, first, to give them a greater volume of business, second, to build future new car purchases on the strength of satisfied used car customers.

Burns stated three essentials of successful used car merchandising: first, buying at a price that would permit resale at a profit; second, reconditioning to make the car look well and operate satisfactorily; third, intelligent selling.

Burns advised a dealer in any community to bring about association action on maximum allowance prices if possible. If that could not be done, he suggested a weekly round table of dealers. If even this was impossible, he urged the individual dealer, by watching the market and studying his own records, to learn prices that permit resale at a profit and to refuse to pay more. Dealers pass up sales because of prospects' insufficient credit, why not because of their own insufficient profits he suggested.

Burns condemned the slovenly viewpoint of merchandising that lets some dealers open and close a sales interview on the question of the allowance on the used car, the prospect never seeing the new car.

Burns maintained that a used car is either junk or it is worth reconditioning. He recommended "as is" sales only to used car dealers. He said such sales to owners often hurt new car dealers' new car sales. He recounted generous profits made in "dolling up" medium and high priced cars with accessories. He suggested building or buying sport bodies for out-of-date appearing cars. In advertising Burns said that dealers must impress upon prospects that mere change of ownership does not damage a car. *The trade must raise the morale of used car merchandising; advertising must say why a car is a good buy, not why the dealer wants to get rid of it; dealers must realize that used cars are half their business and give them attention accordingly*—these were among Burns' suggestions.

Guarantee Satisfaction

Burns recommended that dealers guarantee used cars to give satisfaction, working to hold every used car customer, whether for another used car or a new one later on.

Interest in the talk of Comstock of Detroit centered in his plan for a campaign to sell branded used cars. Williams & Hastings, his company, sells the Hupmobile from its own salesroom and those of eleven associate dealers in Detroit and immediate vicinity. The name "Gold Seal" has been decided upon for used cars of all makes, which the company will sell on a "satisfactory service" policy. Display and classified advertising will be used to educate the public to accept "Gold Seal" used cars as cars that will give satisfaction. They will be put in condition to give satisfactory service, not overhauled, in most cases, said Comstock, who does not believe that a dealer can tear down and recondition a car from radiator to rear axle and still sell it at a profit under current competitive conditions.

Comstock said his idea of used car merchandising is that it must have the bargain atmosphere the public expects, supported by the willingness of the dealer to insure satisfaction.

He Showed How to Make Used Car Business Profitable

B. B. BURNS
President, Illinois Automotive Trade Association

Though the conference showed keen interest in individual used car merchandising ideas, it gave the greater part of its time to study of co-operative plans. For the benefit of readers who may not have followed the subject closely, it may be said that after sifting detailed information on numerous co-operative used car plans, the conference found three main "families," to one or another of which every known plan may be said to belong. They are:

1—Central appraisal bureau plan.
2—Maximum allowance plan.
3—Market value information plan.

The central appraisal bureau plan has various modifications. In some cities an association or group of dealers employs an appraiser who values all used cars offered in trade to the dealers supporting the bureau. The appraiser's figure is regarded as the maximum price which should be allowed for the car. If a dealer can get it for less, so much the better for him. Some of these bureaus also take on the character of a used car exchange, not only appraising but actually buying, reconditioning and selling used cars as a corporation operating for the dealers who own it. The dealers have no used car department. In other places the bureau merely makes the appraisal for the dealer who sends in a car, also reporting the appraisal price to other co-operating dealers who may inquire in case the owner also offers it to them. These used car exchanges and central appraisal bureaus have worked at least fairly well in some small cities. None, so far as is known, has succeeded in a large city.

Maximum Allowance Plan

The maximum allowance plan is found in numerous modifications of the Saginaw plan, which has been in operation in the Michigan city for eight years. Under the original plan maximum fair price allowances on all models of all makes of cars represented in the city are stated by the dealers with agencies for these cars. The lists are compiled and printed in a book distributed to co-operating dealers by a central committee, which also, on the basis of market values, fixes maximum allowances for cars not represented in the city, but more or less frequently offered in trade. The allowance price books usually are of vest pocket size, with loose leaves so that price changes, due to new car price changes or other causes, can be put in promptly without inconvenience. Boston and some other cities have modified the Saginaw plan by basing maximum allowances on a careful checking of current market values effected by gathering and averaging used car selling prices reported, usually weekly, by co-operating dealers. Whether individual dealers or the central committee states the maximum allowance, there is generally a groundwork of used car value depreciation on a percentage basis.

In Boston, now, 1922 models are listed at 65 per cent of list, 1921's at 55 per cent, 1920's at 40, 1919's at 30, and 1918's at 22. Some other plans allow only 60 per cent for a year old model.

The market value information plan is an exchange among co-operating dealers of used car selling prices. In several large cities, including Chicago, Kansas City, St. Louis, Cleveland and Detroit, and many smaller cities, the dealer association secretary, or a special used car secretary, is the pivot around whom the plan revolves. Each week, on a day specified, each co-operating dealer sends to the secretary a list of all used cars sold, giving the year, model and other identifying information, together with the car's general condition and the price for which it was sold. The secretary tabulates the information, multigraphs it, and at the

Digitized by Google

earliest possible moment sends it out to all members. Names of dealers selling the cars, of course, are not included in the report, the secretary alone having this information, which is held confidential.

Pressure by Education

This is the simplest form of market value information service. Improved plans, which most of the cities have worked out, include a listing of cars on hand, so that if cars of certain makes and models in any considerable numbers are shown unsold week after week, dealers are warned that they are not good cars to trade, except at prices which will permit attractive resale offers. In still other cities there are columns in the report for allowance price and sale price.

It is a foregone conclusion that none of these plans—central appraisal bureaus, maximum allowance or market value information—can be introduced or operated without pressure being brought to bear upon individual members of a dealer community or organization. Pressure on a penalty basis has never accomplished anything, except perhaps for a brief period, in any city. Threaten to fine a dealer or throw him out of an association or embarrass his credit facilities at the banks if he doesn't co-operate, and you make him an enemy of the co-operative plan. Unless co-operation is based on friendship and mutual trust, it won't last, because it isn't co-operation. So the pressure which association officers and members bring to bear upon individual members is an educational pressure—showing the individual dealer that it is to his advantage to give information so that in return he can get information, thus contributing to and profiting by establishment of used car market values; showing him that it is to his advantage to hold used car allowances down to market value figures, thus encouraging other dealers to do the same thing and cut down destructive competition; showing him that it is unsafe to over-allow on used cars by pointing out dealers who have failed because of it.

Sales Price Facts

When there is just a sales price information service, without maximum allowance figures, dealers are confronted weekly with the prices that cars are bringing in the market. These constant reminders, with jolts from time to time from the bookkeeping departments, in many cities have helped to discourage the over-allowance habit. There is not much evidence on the central appraisal bureau or used car exchange plan. In Quincy, 80,000 population, only 10 out of 24 dealers are co-operating in the exchange, which appraises, re-conditions and sells these 10 dealers' used cars. Yet Adler told the conference the plan was keeping down these dealers' losses and would be continued.

The conference devoted a half day to show management discussion. An Automotive Equipment Day, showing to dealers the "Ask 'Em to Buy" and "Shop Profits" films of the Automotive Equipment Association, was generally favored for the mid-winter shows. Ray W. Sherman, merchandising director of the A. E. A., offered to co-operate in such days.

There was a lively discussion of a proposal by John E. Raine, secretary of the Baltimore Automobile Trades Association, that a committee be named to draft a tentative constitution for a national association of automotive trade associations. The move was tabled until the annual meeting in January, when a report will be made on progress of organization of a proposed Atlantic Coast Association along similar lines, which its sponsor, C. H. Warrington, president of the Washington, D. C., Automotive Trades Association, said might be the seed of a national association. The delegates who voted to table the new association suggestion felt that it fell into an unfortunate classification halfway between the National Automobile Dealers Association and the Show and Association Managers Association. They also doubted the feasibility of financing a national association of local associations.

The conference, held at the Congress Hotel, was presided over by Robert E. Lee of St. Louis, acting president. The delegates present were:

Association Secretaries

Baltimore, Md., John E. Raine, Baltimore Automobile Trade Association.

Binghamton, N. Y., E. D. Deane, Binghamton Automobile Dealers Association.

Boston, Mass., L. B. Sanders, Boston Used Car Statistical Bureau.

Brooklyn, N. Y., Ralph Ebbert, Brooklyn Motor Vehicle Dealers Association.

Buffalo, N. Y., Carlton B. Proctor, Buffalo Automobile Dealers Association.

Chicago, Ill., Timothy D. Beard, Chicago Automobile Trades Association.

Cleveland, Ohio, Herbert Buckman, Cleveland Automobile Manufacturers & Dealers Association.

Detroit, Mich., H. H. Shuart, Detroit Automobile Dealers Association.

Detroit, Mich., W. D. Edenburn, Michigan Automotive Trades Association.

Grand Rapids, Mich., Marshall Elgin, Grand Rapids Automobile Dealers Association.

Indianapolis, Ind., John Orman, Indianapolis Automobile Trade Association.

Jacksonville, Fla., E. S. Bond, Jacksonville Automobile Dealers Association.

Kansas City, Mo., George A. Bond, Kansas City Motor Car Dealers Association.

La Salle, Ind., R. A. Alderman, Tri-City Used Car Exchange.

Louisville, Ky., George T. Holmes, Louisville Automobile Dealers Association.

Milwaukee, Wis., Bart J. Ruddle, Milwaukee Automobile Trades Association.

Philadelphia, Pa., C. C. Bulkeley, Philadelphia Automobile Trades Association.

Quincy, Ill., A. L. Stewart, Quincy Automobile Trades Association.

Quincy, Ill., R. Morrison, Quincy Used Car Exchange.

St. Louis, Mo., C. A. Vane, National Automobile Dealers Association.

St. Louis, Mo., Robert E. Lee, St. Louis Automobile Dealers Association.

Springfield, Mass., Harry W. Stacy, Springfield Automotive Dealers Association.

Springfield, Ohio, W. F. Townsley, Springfield Automobile Trades Association.

Syracuse, N. Y., Howard H. Smith, Syracuse Automobile Dealers Association.

Toledo, Ohio, T. J. Cooper, Toledo Automobile Trades Association.

Utica, N. Y., W. I. Love, Utica Motor Dealers Association.

Washington, D. C., C. H. Warrington, Washington Automotive Trades Association.

Wilkes-Barre, Pa., Norman Johnstone, Wilkes-Barre Automobile Dealers Association.

Dealers

B. B. Burns, Decatur, Ill.
Morris Adler, Quincy, Ill.
L. F. Wentzel, Aurora, Ill.
A. R. Becker, Cincinnati, Ohio.
Samuel Alpert, Kansas City, Mo.
J. M. Ginter, Wooster, Ohio.
Whitney Leary, Washington, D. C.
W. A. Sullivan, Jackson, Mich.
E. J. Quinn, Washington, D. C.
W. E. Dusenbury, Newark, N. J.
S. E. Comstock, Detroit, Mich.
W. A. Thomas, Louisville.

He Offered a New Idea in Used Car Advertising

Parts Makers See Good Fall Trade and Bumper Year in 1923

Need for Closer Co-operation with Jobbers and Dealers in Advertising and Selling Stressed—Production of 2,400,000 Vehicles in 1925 Predicted

By C. G. SINSABAUGH

BUFFALO, Sept. 18.

A BRIGHT outlook for the immediate future of the automobile industry, with prosperity extending throughout 1923, was predicted at the sixth annual credit convention of the Motor & Accessory Manufacturers Association, held here Wednesday, Thursday and Friday of last week. Ostensibly a meeting of parts manufacturers as represented by the heads of their credit, traffic, export and advertising departments, yet it really was a general symposium of the entire automotive industry in which the dealer and the jobber although not directly represented, came in for a deal of attention in discussing general merchandising problems.

A good fall business, with enough cars manufactured and shipped to supply the demands of the dealers even if there is a transportation tangle this fall and a shortage of coal, was promised, while indications point to 1923 being the bumper year of the industry, not only in car production, but in general prosperity as well. Closed cars are going to be in even greater demand and the replacement business is going to be much greater than ever. Throughout all the sessions, however, the used car loomed as the one menace to the industry, a problem that will not down and which is worrying not only the automobile manufacturers but the parts people as well, who feel the pinch in the reconditioning of these second hand machines.

ALFRED REEVES, general manager of the National Automobile Chamber of Commerce, interpreted the record-breaking production of the past four months. Reeves said that the car makers took Hoover's tip of an approaching coal strike, made last March, and planned a big production this summer in order to prepare for the expected trouble which materialized. During the first eight months of this year, the industry has made 1,664,000 motor vehicles, which is practically equal to the full year's production of 1921. August produced 272,000, and while all of these have not been sold, they have been shipped and the dealers throughout the country will have on hand cars enough to meet the anticipated demand, even if transportation falls down and coal is hard to get this fall. Reeves looks for a substantial slowing up in production in September because of the activities of May, June, July and August, but he feels that this let-up will not be as great as ordinarily might be expected, because the farmer will come into the market this fall with money for cars, while the demand for closed cars is expected to be heavy.

Reeves predicts that the 1922 output will total 2,100,000, with 30 per cent closed cars. In 1923 he thinks production will go to 2,300,000, of which 1,750,000 will take the place of cars already in use. Two years from now he looks for 50 per cent of the production being closed cars.

The used car situation will be worse this fall, Reeves thinks, and he can see no cure for it at the present time. He expressed the belief that second hand trucks never should be taken in trade—they should be kept running until they wear out and are ready for junk.

Others than Reeves pointed out the dangerous menace of the used car. In a telegram to the convention R. H. Collins, president of the Peerless Motor Car Co., said he would have no hesitancy in predicting an even greater general prosperity in the future, "if it were not for the one fatal menace which threatens the industry to-day, namely, the growing tendency of automobile distributors and dealers to place an exorbitant value on cars accepted in trade, and to overestimate their ability to dispose of these cars at their fabulous prices. If this condition continues, the resultant suffering must be shared by the entire trade, including motor and accessory manufacturers and dealers, as well as automobile manufacturers and distributors."

The credit men, too, pointed out the danger from their viewpoint. In the general discussion the first day of the convention, attention was called to the vast numbers of used cars offered for sale on the open lots in the larger cities. It was said that in Cleveland alone 30,000 of these used cars were sold at open air sales this year.

The Financial Outlook

"The Financial Outlook and an Outside View of the Automobile Industry" was the subject alloted to Merryle S. Rukeyser, financial and business editor of the *New York Tribune*, who was the principal speaker at the opening session of the convention on Wednesday.

"Next year's automobile business ought to be satisfactory," said this financial critic. "In most respects the factors which can be foreseen must be placed on the asset side. The main exception is the fact that part of the 1922 buying, which resulted during several months in the breaking of all previous production records, was due to the accumulated demand which had become pent up during the depression of the latter part of 1920 and of 1921. On the side of favorable influences, most of them can be expressed in the phrase—better general financial and industrial conditions."

As if bearing Mr. Rukeyser out in his predictions of better business, there were the telegrams received from various automobile manufacturers which were sent to the convention. In addition to the one from Mr. Collins, quoted above, messages were received from J. J. Cole, E. S. Jordan, C. W. Nash, A. R. Erskine, Windsor T. White, T. R. Lippard, H. H. Hills and others.

Importance of the dealer in the sale of automotive products was stressed at the session of the advertising managers' conference. The subject came up in a round table discussion on "My Best Bet for Getting More Returns from the Advertising Dollar," led by S. E. Baldwin, advertising manager of the Willard Storage Battery Co.

Baldwin declared the only way to sell the consumer successfully is by first selling the dealer thoroughly. "He is the fellow we must think about and concentrate upon," Baldwin said. "Up to this time the industry has been coming uphill without any effort on its own part, and we haven't had to sell. The time is near when we shall have to sell as we never sold before, if we are going to move our products. We must get the dealer to work with us intelligently, or we can't make good. We must sell the

Digitized by Google

dealer our advertising with the purpose and reason back of it."

Harry Tipper, business manager of *Automotive Industries*, asserted that undue importance had been attached to the direct acceptance of advertised products by the consumer. The average individual is not impressed by more than one one-hundredth of one per cent of the attempts made to reach him, he said. The great point is that attempts to advertise to the dealer have been much less effective than they should have been. This advertising, generally speaking, has not been sufficiently informative.

Tipper paid tribute to the men who sell the automotive products at retail. He declared that considering the comparatively few years since quantity demand for these products became apparent, the strength of the dealer organizations which have been built up was little short of remarkable. While there are thousands of changes every year, no branch of the industry has become stabilized and the dealers are doing exceedingly well in view of the limited amount of educational effort which has been profitable up to this time.

Tribute to Dealers

Alfred Reeves, general manager of the N. A. C. C., also paid tribute to the dealers of the industry.

He advised advertising managers to go out and live with their dealers as much as possible, for only in that way can they learn how to give them the greatest help in meeting their difficulties.

Harry Horning of the Waukesha Motor Co. expressed the view that automotive manufacturers are getting their message to dealers in an inefficient way. His chief complaint against automotive advertising is the number of meaningless adjectives and superlatives it includes.

Statistical information given by Harry Tipper, business manager of *Automotive Industries*, proved interesting.

"In 1925 the production of motor vehicles will probably reach approximately 2,400,000 and the registration will reach approximately 14,500,000," predicted Tipper. "The curve of production is considerably sharper than the curve of registration, and this arises from the changing relation between the new market and the replacement requirements."

C. A. Musselman, general manager of the Chilton Co., said that the turning point in the industry has been reached and that the industry no longer looks to newcomers to attain the greatest volume of sales. He said the average amount of business per service station has grown from 142 cars in 1919 to 177 cars per shop this year.

Jobbers Favored

That the credit men of the parts business look with favor on the jobber was attested to in the speech of T. E. Challenger, credit manager of the McCord Manufacturing Co., Detroit.

"When it comes to food products and some of the other necessities of life, I agree—and from the buyer's standpoint, mind you—that there should be practically an unbroken line from the producer to the consumer, or at least to his retailer," said Mr. Challenger. "From an economic standpoint alone this would be ideal and, I believe, more or less feasible. But with respect to countless thousands of other classes of manufactured products I very thoroughly and honestly believe that the so-called middleman or jobber, who some are pleased to call an evil, is on the contrary a real necessity to practically all the manufacturers in our line; and that, much by the same token, he is a necessity to the dealer and consumer.

"It is an obvious fact that there is a constantly increasing demand for replacement parts and accessories. The frequency of replacement is primarily dependent upon the nature of the part. Some, due to the use to which they are subjected, or inherent fragility, must be replaced several times a year, while others may last the lifetime of the vehicle, except in cases of unusual mishap.

Broader Markets

"This particular class of business now is greater in volume than the sale of new vehicles. Consequently, for many manufacturers, the replacement field presents a larger opportunity than does the equipment business of car manufacturers or engine builders.

Broadly speaking, I believe the parts maker for whose product there exists any considerable volume of business is losing a considerable and legitimate profit by confining his sales for service purposes exclusively to the manufacturers to whom his product is supplied for equipment purposes. Of the various channels of distribution to the retail trade, I think that only the manufacturer, with a huge volume of business, is justified either in establishing his own branches or selling direct to the retail trade. The exclusive distributor plan perhaps has some unique advantages, but usually results in restricted sale and consequently restricted service to the vehicle owner and has undesirable reactions in several directions. Therefore, for the vast majority of parts manufacturers for whose products there exists a reasonably large volume of business, I believe the well organized, established and financed automotive equipment jobber offers the most economical, most substantial and most profitable method of distribution.

"The automotive jobber now, figuratively speaking, acts as a purchasing agent for his retail customers as well as a warehouser and financier of the movement of merchandise from manufacturer to retailer. Consequently the jobber has many expenses in the conduct of the business and expenses that somebody must assume. Among them may be mentioned: stocking, inspection, investment, superintendence, distribution, untimely obsolescence and so on. So, as I see it, the manufacturer who sells the jobber eliminates most of the expenses and the dealer who buys from him secures service and many other obvious advantages not otherwise obtainable. So the name 'jobber' is in fact only a name for a number of necessary functions in the distribution of merchandise. He may be dispensed with in name, but the functions which the jobber performs must be performed by someone, and it seems to be pretty well agreed that the jobber who is properly organized, properly financed, and experienced in his line of business can perform these necessary functions more cheaply and efficiently than the individual manufacturer can for himself.

Active Merchandising

"Just now jobbers throughout the country are engaged in an active campaign toward better merchandising. The 'Ask 'em to Buy' and 'Ask 'em to Repair' campaigns are being conducted largely through the jobbers and are making better merchants of the supply dealers. This also applies to the garage and repair man—also to the ultimate benefit of the accessory manufacturer. These campaigns also have been of very great benefit to the jobbers' sales organizations. Another of the results is that of the dealers tying themselves more closely to the jobber, who is teaching them better and more productive merchandising methods. These and similar campaigns and other good stimulants mean more efficient jobber distribution, increased business and more substantial accounts for the manufacturer.

"I am not holding a brief for the jobber, but there are many good reasons why we should cultivate him and his trade and help promote his business, thereby promoting our own, and so few apparent or real reasons why we should not tie up with him, that it seems to me there is not much room for meritorious argument, except in a comparatively few cases.

"I believe we should make the jobber, in a way, a part of our organizations. He is performing a service for us that is of great importance and value in the developing of our businesses. He is, broadly speaking, performing this service better and more economically than we can and will do it even better if we give him proper and substantial cooperation."

Some Good News

A satisfactory fall business and a bumper year in 1923 were predicted at the credit convention of the Motor and Accessory Manufacturers Association, in Buffalo, last week.

Of particular significance was the definitely marked trend toward closer cooperation with the retailer and the jobber in the merchandising of the products of this branch of the industry.

The importance of the retailer in his intimate contact with the consumer was recognized and suggestions for practical assistance to them in advertising and distribution were discussed.

There is good news for jobbers and dealers in this story.

Is There Any Salesmanship? Man Who Had to Buy a Car Asks

A Story Based on Actual Experience Which Makes One Wonder If Many Other Prospects Have the Difficulties This One Had

MANY, many times I have asked myself—
"Why am I *sold* stocks and bonds?"
—"why am I *sold* insurance of all kinds?"—whereas, I never am *sold* automobiles—*I have to BUY them!"*

To me, this seems one of the strangest facts in all business—that, apparently there is no automobile salesmanship. How an industry could have developed from nothing to everything in ten short years—with apparently little or no creative, persuasive work by the seller on the buyer—is perhaps one of the greatest mysteries of modern history. (Loud cries of: "Unfair to automobile dealers!")

But the mystery is somewhat explained by the keen desire inherent in most people for new cars. We want to buy them regardless of whether we are led into it by salesmanship.

THERE could be no finer proof of this peculiar fact than that hundreds of thousands of people pay 50c. or $1, and even put on evening clothes—just in order to go and view a lot of machines that are for sale at automobile shows. Imagine people paying real money to go and see an exhibit of loaves of bread—or an exhibit of shoes for sale—or even an exhibit of clothes for sale, despite the lure that clothes have for so many of us mortals!

It is only because of the thrill in the idea of a new automobile that people pay money to spend time at automobile shows. That same thrill explains why the industry as a whole seems to have forged ahead without the salesmanship that has been so vital to the sale of washing machines, vacuum cleaners and talking machines.

And yet, during the last half of 1921 and the first few months of 1922, but very few automobile companies had all the business they could handle. Nearly every factory actually *needed* business. Therefore, their dealers would have found some extra sales quite desirable.

That period, then, was *the* time for salesmanship. What kind of salesmanship was applied? If you were to ask the dealer, he would undoubtedly give you a fine story of the intensive, strategic effort that he put into action. I have heard some such stories, but they do not seem in any way notable as sales stories. The noteworthy fact is that these stories were so isolated that they seemed to be *worthy* of *comment!*

As to what kind of salesmanship automobile people used during those lean eight months, I believe I am a better witness than the dealer. For some time I have been "advertising" to my community that I needed a new car. Every mile that I drove my old 1918 six-cylinder—every mile that my wife drove her 1920 Ford Sedan—should have served as a sort of "want ad" to urge the automobile dealers in my direction. Most of these gentlemen are personally known to me. Perhaps that is why they avoided me—but I do not believe that it was any excessive degree of *courtesy*, but rather their *habit* of order-taking, which made me almost as unsought as a leper.

I do remember, along about October last, somebody asked me if I didn't want to buy a new Ford. Being human, I said "No!" If I had been followed up, I would probably have bought another one.

I also remember that somebody came in sometime last fall and asked me if I didn't want to buy a certain expensive make. I told him the price was too high, and that when the price came down I would be glad to talk to him. I think the price has come down since. I have not been further urged.

I went to the automobile show early last winter with my chin out—just waiting for a real sales-wallop. There was a half-hearted effort on the part of a few people to sell me a car then and there—but I don't believe that human beings buy such things "then and there." Follow-up is a vital part of this kind of salesmanship.

Anyway, some ten or twelve different dealers got my name and address. I looked longingly at one big four-passenger coupe and asked the price. The man on the floor won my affection by telling me that the price was too high and that he did not want to sell the job to me at the figure then in effect.

A few weeks later I saw the owner of the same dealership. He lives across the street from me. I told him to remind me when the price came down. Mind you, this man was the proprietor, and its active manager, and a man who had made a wonderful record as an automobile dealer.

About two months later a salesman came into my office.

"Do you want to buy one of our cars?", he asked, as he handed me his card. I recognized his name as one of the oldest and best-known automobile salesmen in the community, repre-

If This Isn't You—

HERE is a story that says some rather sharp things about the lack of salesmanship of some automobile dealers and salesmen. If it doesn't fit you, you don't need to read it, though we suspect you'll want to anyway after you take a slant at the first few lines.

The writer for many years has been a student of merchandising. What he says does not apply at all to some dealers and salesmen we know, but it hangs on others as neatly as their skin. Read it and see.

Digitized by Google

senting the big car to which I have just referred.

"No," I answered—not too finally, but still in the same way that almost any business man would have answered the same question.

"*Somebody* told me that you wanted to buy our make."

I waited until he might remember that this tip had come from his boss—a personal friend of mine. But, apparently, this fact had been missed and, therefore, he was unable to use the human equation which could have been strongly utilized in this case.

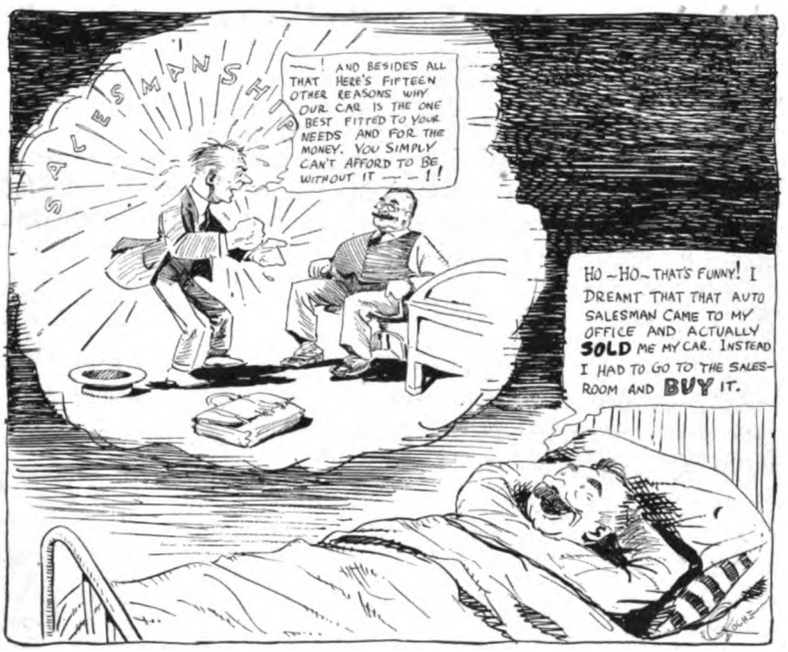
He then started in to tell me that a certain other car wasn't any better than his, and he got so deep into a discussion of the comparative merit of the two that I finally had to beg off. I had never mentioned the competitive car — that was his own idea.

Incidentally, that was the last I heard of him or his boss.

Then another car came into my life for a few moments. At the automobile show I found one of my old friends acting as the salesman for this make. Later, he called me up. A few weeks after, when I went in to look at the car at the showroom, I found that he had left the employ of the dealer, but apparently had not left my name as a fairly good prospect.

As to two other cars—I gave them my name at the show, and even went into the showrooms about a month later. I never received any follow-up from those visits.

One day I met a friend of mine driving a fine car of a new make. I asked him how good it was. He said he liked it immensely. A while later, a boy who seemed to be a school lad, came in and told me that someone had told someone in his organization that I wanted to buy his brand of car. That was all there was to that.



I met the representative of another fine car at a luncheon. He told me he had a used model for sale that had gone only 5000 miles and was quite new. He drove me down to the office in it the next morning. I made him an offer then and there. He said that someone else had a previous option on the car. He phoned me later to say that the other person had bought the car. That was the last I heard of his car—and that was months ago.

I went to see my friend who handles a medium-priced line. He is a great fellow—a very successful automobile man. My brother had one of this make and it did yeoman service over the mountains for five years straight—my cousin drives the same brand. One of my good friends is an officer of the company that manufactures it. I was more than kindly disposed. I said to the dealer:

"I want to look at a coupe—the same as Mr. So-and-so has, at such-and-such a number on such-and-such a street."

"What is it like?", he said.

"Why, it's a four-passenger coupe," I replied.

"Well, it *can't* be one of our cars," he answered.

At last I succeeded in convincing him that I *did* mean just that car—and then he remembered that it was a chassis he *had* sold, with a special body. If he had offered to sell me a chassis and to take me around the corner to have a well-known body builder duplicate this same four-passenger coupe, I am quite sure that I would have bought on the spot. However, he did not suggest it, and I did not want to force him.

And so it went.

One Sunday I was driving past an automobile salesroom, and saw a very nifty sedan job in the window. Later I arranged for a demonstration. So one morning I took my wife and little daughter down to the store. The car was on the floor inside. We were all very much pleased with its appearance, and as it was to be driven by my wife, the appearance counted a great deal.

But it was a very, very small car, and in some ways looked smaller than our old Ford Sedan. A gentleman appeared and introduced himself. He was a fine fellow, but, unfortunately, he was over 6 feet tall and weighed over 200 pounds. When he got in behind the wheel, it made the car look like a joke. A dapper, light-weight would have made the car look like a page from a fashion sheet.

Anyway, the big salesman crowded in behind the wheel. Then he got some men to push the car out of the door, until the front wheels were down over the curb, and the rear wheels were back on the sidewalk. My wife and daughter and myself piled in, and the giant put his foot on the starter. There was a great whirr, but no explosions. He kept this up—time after time—just crushing the life out of the poor little starter — until finally there was a slight sign of life from the motor. Then, by roaring the engine, he finally got started in low; so that at last we left our precarious position where we had been for over five minutes, with our nose protruding into the crowded street.

We started up the street on low and the giant then tried to crush the gears into second. She began to die—so he pulled it back into low. We grated along on low until he finally got up courage to stick it into second again. This continued for about six or eight blocks. Then we begged him to take us back to the store so that we might return to our Ford and recover our nerves.

Although we knew that this had simply been a faulty demonstration, and a violation of the first principles of salesmanship—yet, we were *off* that car.

The bond salesman makes $15 on $3,000 worth of a listed security. The automobile agent makes a gross of $750 on a $3,000 car. I am *sold* securities, but I have to *buy* cars.

And still stranger to me is the fact that no automobile salesman ever even *tried* to sell me a car without first trying to put me to the greatest possible inconvenience and expenditure of my time by making me take a ride.

In fact, no automobile salesman ever tried really to *sell* me, despite the fact that I was in the market, and despite the fact that the automobile salesman has the most interesting, the most alluring, the most fascinating thing of all things to talk about—namely, a fine, shiny, brand-new, spic-and-span, powerful automobile.

Business Didn't Come In—So This Dealer Went Out After It

How a Small Town Accessory Merchant Canvassed Farmers and Tradesmen and Built Up His Sales and Profits

THIS is a story of an accessory dealer who does not believe in sitting down and waiting for business to come to him and who has definitely proved that there is an opportunity for live dealers in small towns. Claire Low is the dealer and Ypsilanti, Mich., is the town in which Low is located. Furthermore, Low is just 21 years old and Ypsilanti is a town of approximately 6000 inhabitants, 30 miles from Detroit.

Low bought an accessory business located in a large old store last October. Low found it was deep enough to partition off the front for the accessory store and use the rear for living quarters for himself and his young wife. Other improvements in arrangement, lighting, etc., were made.

Business was what many dealers would have considered fair, but Low found that he had a good deal of idle time on his hands early in the mornings and he determined to go visiting from time to time, leaving Mrs. Low to care for the store during his absence.

HE went down the road and stopped in at a farm house. The farmer was in the field, so Low went to the field. He talked to the farmer about crops and stock and other matters of interest, then he talked about automobiles, trucks, tractors, oils, and accessories. Did the farmer have a car? Yes, he had a large touring car and a truck and his son had a small car. Where did he buy his tires and accessories? He had been buying most of them from a mail-order house.

Low made further inquiries and learned that the farmer had been patronizing the mail-order houses almost exclusively for several years, that he was very well satisfied with the goods and the service received from them, that their prices were usually lower than those of local accessory dealers, and that he had seldom been able to obtain just what he wanted from the local dealers. The farmer took his visitor up to the house and showed him the mail-order catalog. Then he gave the dealer a surprise by bringing forth a well-kept record of his purchases over a period of years.

Low saw that the farmer was a business man and that there was but one method of approach to be used. Low had no intention to berate the mail-order house, to appeal to the man's community pride, or to try to "slip anything over on him." He told the man simply that he had opened an accessory business in the near-by town, that he had a complete stock, and that his prices would compare favorably with those of the mail-order house. He asked the farmer whether he would not prefer to trade right there at home where he could get some service and a prompt adjustment in case anything went wrong, and the farmer agreed that he would. He had not known, he said, that Low had the goods he wanted and that his prices were so reasonable. He didn't like to trade in Chicago because it took some time to get the goods after ordering them, and in case of adjustments there was usually a delay of several weeks. He would come in and look over Low's stock.

Other farmers were visited and solicited in the same manner, just one or two every day or so, and pretty soon the effects began to be felt. Low took orders enough to justify him in buying a carload of oil, intended chiefly for tractors, and he brought in other business.

A large farm had just been purchased by a Detroit man and a new superintendent had taken charge. Low called on the new superintendent and found that he too had been accustomed to buy from the mail-order houses. He had a tractor and Low sold him a barrel of oil. While looking around the place, Low had noticed that a touring car and a pick-up were also used on the farm and that some tires were needed for them. The superintendent brought out the catalogue of a well-known mail-order house and they compared prices. On one tire Low's price was 70 cents higher, on another it was 50 cents lower. The man had been very well pleased with the mail-order goods, which he had used for years, but once there had been an adjustment that had taken about four weeks to settle. He bought a complete

There's Money for the Live Accessory Dealer in a Small Town

THIS story tells how a small town accessory dealer built up a large, profitable business by going out into the surrounding farm districts and canvassing farmers and by making direct selling effort on the business men of his community. It contains an idea that might be successfully used by a large number of small town accessory dealers.

When business didn't come in this dealer went out after it. You will profit by reading this interesting story about how Claire Low, of Ypsilanti, Michigan, made two sales where only one existed before.

Digitized by Google

set of tires for the pick-up and a spare for the touring car and promised to come in and look over Low's stock.

In the course of the conversation the superintendent divulged the fact that he was short of help, and Low promised to look out for someone for him. A short time later he learned of a family, living several miles distant, that were in search of employment and he made the arrangements which resulted in their moving over to the superintendent's. They had only a trunk to be moved, and this Low sent over in his truck.

That was several months ago. Since that time this superintendent has bought between $300 and $400 worth of goods from Low. There were no tools on the farm, for example, and the superintendent came to Low and bought one of every kind and size of wrench in the house. *Low is an accommodating fellow and he finds that he doesn't lose anything by being such.*

Detroit Trips Profitable

He makes three trips a week to Detroit for stock and on these trips he frequently makes purchases for others and brings back the goods without charge. On some of the purchases he gets a discount and this he of course retains, but otherwise he accepts no pay for his trouble. This brings him a great deal of trade and good will.

Low soon discovered that car and truck dealers and garagemen in his town did not carry parts, choosing rather to depend on the service stations in Detroit to supply their immediate needs as they arose. He found these men very glad to have him call at the service stations in the city and bring out such parts as they needed, splitting their commission 50-50 with him for his trouble. He now has about fifteen of these parts customers, for whom he purchases and brings out around $1,000 worth of parts each month.

This extra business is almost "pure velvet." To begin with Low had to go out and solicit the business, but now his parts customers come to him and give their orders each evening before his regular tri-weekly trip to Detroit. Many individuals also order parts through him in this way and on these orders he of course gets the full discount.

Low has also solicited and secured the accessories and parts business of the majority of the stores, banks, and industries of his town. In different ways he has secured the principal business of many residents of surrounding towns also.

Business in Small Towns

"There's worlds of business to be had in a small town, if one will only get out after it," he declares. "*When business doesn't come in of itself, I go out and look for it.* I never take an aggressive attitude, but merely state my case in a simple, straightforward way and ask them to give me a trial. Then when they do I take care to see that they are more than pleased. Service counts anywhere, but it counts most in a small town or country community. The people are more accommodating and less reserved, and they appreciate it if a merchant is the same.

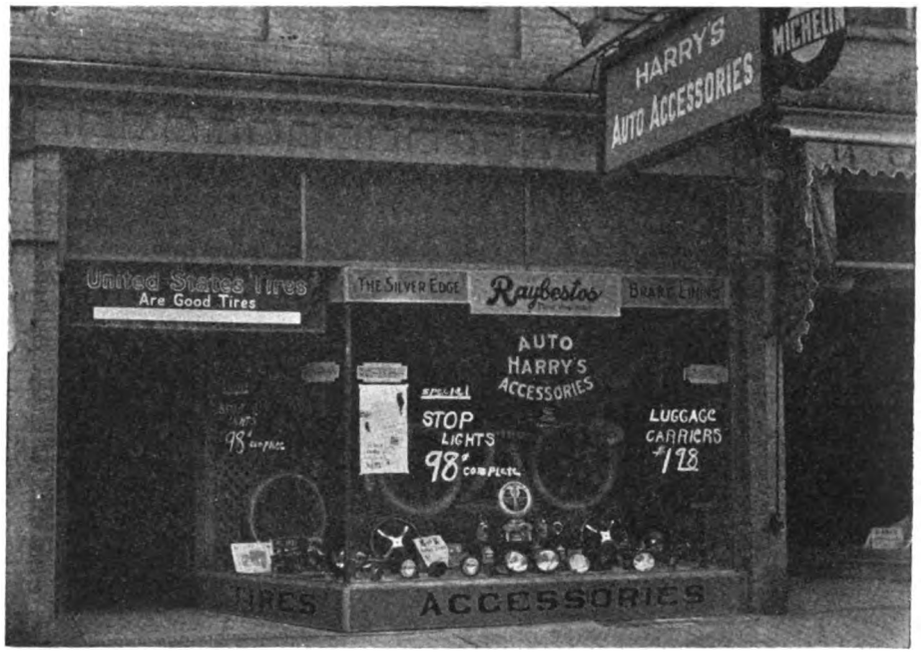
"I never break my word or disappoint a customer at any cost, and I'll do practically anything to accommodate one of them in any way.

"When people find out that a local dealer has the goods, at a reasonable price, and that he treats them right, they are glad to buy from him rather than from the mail-order houses or from the distant city dealers. Frequently they don't even suspect that their dealer has what they need, though."

Handling the Farmers' Trade

Ypsilanti is an agricultural town, the chief business being derived from the surrounding farms. The present-day farmer, Low says, is very different from the popular conception of a "hay seed," but still has distinctive characteristics. He is a good business man, as a rule, and is well posted in every way. He doesn't like to be hurried or to have things forced upon him.

"We never ask a man what he wants when he comes into the store," Low says. "Frequently a farmer will come in and stand around and talk for 15 or 20 minutes without mentioning a purchase, but we don't push him, he has a purpose when he comes here and we let him take his own good time. He will get to it eventually and he'll appreciate his trip to the store far more than if he had seen me at the door with a 'what can I do for you?" Sometimes one will come in and ask prices on a lot of things and then walk out without a word of explanation. In such cases I never worry. I know that he has a purpose and that he will very likely come back later and buy the goods he priced.



"The farmers are the best customers in the world. Once you have their business, it is mighty hard for anyone else to take it away from you. The farmer is what I would call just a 100 per cent man. Treat him right and let him know you have what he must have and he'll buy it from you. He won't buy fancy things, as a rule; you can't get him to doll up his car, but he is a good customer for replacements and necessities.

"*The greatest business opportunities in the country to-day are for accessories dealers in small towns.* The people don't want to buy from the mail-order houses, but right now *they are almost forced to do so because they have no real accessories dealer near.*"

Low declares that he has made money every single day since he entered business. His present sales are totaling around $120 a day, and as high as $380 on a Saturday. He expects to do a $40,000 business this year on his investment of approximately $5,000, which is his present inventory.

Low is a disciple of E. A. Bowman, the Detroit jobber, whose methods have been presented in former numbers of Motor World, and adheres strictly to the policy of carrying a wide variety but only small quantities of different items, thereby securing quick turnovers.

Claire Low's Store in Ypsilanti

Every day the display windows of Claire Low's accessory store in Ypsilanti carry "special" merchandising messages. But that is not all, Low doesn't wait for business to come in—he goes out and canvasses farmers and business men—and he gets it. Low believes there are wonderful opportunities for profitable business in small towns if accessory merchants do what he did in Ypsilanti

Same Appeal That Sells Hats Sells Tires, Woman Dealer Finds

Men Just as Susceptible as Women to the Lure of Odd Price Figures and the "Bargain" Appeal—Sales Effort on Special Groups Used Effectively

DOWN in Fort Worth, Texas, the only woman tire dealer in the Southwest is doing business. She is Miss Rose Erlich, formerly designer and saleswoman for one of the biggest millinery houses in New York. She is owner, proprietor, manager and chief "salesman" of the Bargain Tire Co. She is selling automobile tires despite the cry of hard times and little money, and she is using the tactics employed to move millinery stocks to do it.

Miss Erlich says mere man is attracted by odd price figures just as much as the woman. She declares the grasping at bargains is inherent in humanity, and that the desire to buy at a bargain sways all classes at all times.

Miss Erlich is not conducting a "cut rate" tire establishment. She simply "sells them at a bargain." She finds that the same impulse which makes a woman buy a $50 piece of headwear when it is marked down to $49.98, impels the sterner sex to purchase a $22.50 automobile tire when it is marked down to $22.22. And if not to make him buy, at least to make him go several blocks out of the way to get the "bargain," when he needs it.

Hence the policy of the Bargain Tire Co. is to use odd figures in the prices. There are no $7.75 tires, but rather $7.77 tires. She has no $14.25 tires for sale, but plenty of them at $14.14. She has no $18 priced tires, but plenty at $17.77, and so on through the entire list.

But Miss Erlich does not depend entirely on her peculiar marking of prices to sell automobile tires. She "drums up" business in other ways. She figures that physicians are the best bets for selling tires because they use their cars more than any other class of men. Hence she has a complete list of the physicians in her town and surrounding territory and keeps after them with personal letters, telephone calls and personal solicitation. Various kinds of business houses employing quick delivery service are also good bets, she says, and she has a list of these with their buyers, and she goes after them in the same way. These people are constant buyers, she says, and keep the trade stabilized. The ordinary automobile owner is the balance of power in the tire game so far as Miss Erlich is concerned, and she goes after him through newspaper advertising, attractive show windows and satisfied buyers.

Guarantees Every Tire

Miss Erlich says she is making no special effort to get the business of women automobile owners right now, because a woman is harder to sell an automobile tire than a man. She declares the woman is an uninterested customer, because such a plain thing as an automobile tire does not attract her, and she simply is not interested in them. But with a man, the automobile tire is an essential part of the car, and he wants to know just what he is getting and how long it will run before he parts with his money for it.

Miss Erlich sells nothing but "firsts". She guarantees every tire or tube she sells and she makes that guarantee good. She says her competitors have not accused her of "cutting prices," because she has not. She merely marked a couple or three pennies from the "stereotyped" quotations and moved the goods.

Miss Erlich has been in the tire business for four years. Her friends, who raised their eyebrows when she decided to desert picture hats, lace, ribbons, flowers, etc., for an automobile tire business, have seen her tire concern grow from a small one person business with a few tires in sight to one of the biggest tire houses in Texas, a concern which not only sells to Fort Worth automobile dealers, but does an extensive mail order business.

"The tire business is just like any other business," Miss Erlich says. "All you have to do is get in the game with the goods, treat your trade right, keep everlastingly hammering on the game, be honest with yourself and your customer, and you will win out." She says she expects to have the biggest tire house in the Southwest in three more years.

Her business principles are:

Handle the best of goods. Mark them as low as possible. Guarantee the goods and make every statement or promise good.

Honesty all the way round. Cheerfully refund money to dissatisfied customers, because the customer is always right and must be pleased.

PRICE

In Which a Retailer Makes Some Suggestions About Wholesaling

By NEAL G. ADAIR

BEN DOYNO, employer of jobber salesmen, and Cornelius J. Reilly, customer of jobber salesmen, were discussing jobber salesmen. Both being discussers of considerable expertness and more than reasonably familiar with the subject of discussion, it looked like a large afternoon, which it proved to be.

Reilly, who had managed to place anywhere from one to a dozen items of automotive equipment on most of the Sennett cars and Sayanna trucks he had scattered throughout the Callawassa territory, had been finding fault with the selling methods of the salesmen he bought the equipment from. Doyno, Callawassa's leading jobber, had been defending them. Neither side had scored a knockout, or even a knockdown, when Doyno suggested:

"But every man has some good points. I'll admit, for the moment, that these men—we'll talk about my own to make it interesting—might do some things better than they do, but they hit the bell some times, don't they? And if I should ask you what they do best, what would you say?"

"The thing they do best is to talk price," Reilly replied without a moment's hesitation, "and—you didn't ask me this, but I'll tell you just the same—it's the worst thing they could do."

"Price?" Doyno echoed. "Of course, they talk price. How can anybody sell anything these days, particularly supplies and accessories, without talking price?"

"We sell cars and trucks, too, without talking price until customers force us to," Reilly answered. "And, take it from a customer, you can sell equipment the same way. In fact, I'm beginning to think you can't sell it, or as much of it as you ought to, if you keep on talking price."

"What are you driving at?" Doyno demanded.

"Trying to get a high and mighty wholesaler to listen for a minute or two to some ideas of a modest retailer," Reilly retorted.

"I'm listening. Shoot!" the jobber said.

"All right, here goes," Reilly agreed.

"You can't make money unless your retailers do—the dealers, garagemen and accessory houses you sell to—can you, Ben?"

"Oh, I say," Doyno began in protest, "that's old stuff."

"Thought you were going to listen," Reilly reminded him.

The jobber motioned him to go on, and Reilly continued:

"And your retailers can't make money unless they sell goods?"

Doyno nodded.

"And they can't sell goods unless they have them to sell?"

The jobber nodded again, then burst out: "But what's that got to do with talking price?"

"Now we're getting somewhere," Reilly said. "Your salesmen — not so much as some others, but enough to keep me hot under the collar about half the time—and a lot of other salesmen are coming around day after day, hinting to me and my equipment buyer that we aren't getting the 'right price' on some items we are buying from somebody else. What's the result? We get suspicious of price quotations on these items—and others, too, because suspicion is contagious—and the first thing we know we are holding off buying this line and that line while we inquire around about possible lower prices. While we are holding off, perhaps we run out of stock on these items. We can't sell them when we don't have them, and when we don't sell them you can't make a wholesale profit by selling them to us.

"And there you are. If we do a fool thing like that, how much of it do you suppose is going on among retailers who don't have quite such big establishments and who don't think quite so seriously about lost profits on lost sales as we do?"

"But when our competitors talk price—," the jobber began.

"Let's not get to your competitors just yet," Reilly exclaimed. "I want to tell you a little more about your customers."

"I've been getting around the territory quite a bit," Reilly continued, "and among other things I've been talking with my dealers about accessory and tire profits, trying to show them that they need them and can get them if they'll only try. I've found the same situation out there—jobber salesmen talking price, price, price, until now, when one of them comes into a dealer's place and starts to talk about a line of equipment, the dealer almost automatically says, 'Yes, I know that line, but what's the price?' or something to that effect. And you can't blame him, because dozens of jobber salesmen have been teaching him to talk price, or at least they haven't been trying to teach him not to.

"What we ought to have, some day, is an attitude on the part of the dealer that would prompt him to say, 'Sure, that looks like a pretty good line but how do you sell it?'"

"Wonderful—and about as near as the millenium," Doyno observed drily.

"Just about—unless you and some of the other better jobbers will do something to bring it nearer," Reilly retorted.

"But how—I'm willing to be shown," said Doyno.

"I won't try to show you; you're a jobber and I'm just a retailer," Reilly replied, "but I'll tell you some thing about our business in cars and trucks that may contain a suggestion or two. We don't allow our salesmen to talk price. They go out and sell the car as a source of utility, convenience, comfort and pleasure to the prospect and his family and the truck as an agency of economy or business expansion. Price doesn't enter into the conversation unless the prospect forces it in, and then the salesman quickly switches the subject to the desirability of the car or truck. Some of our sales interviews get right up to the dotted line before price is mentioned.

"Why can't you do more than you do now along that line in wholesaling equipment? Why can't you talk about the desirability of your mechandise as something the retailer can make profits on and then show him how he can make them by telling him about methods of selling it?"

"We do—when we can get the chance," Doyno replied. "But if you were a jobber salesman and you called on a dealer and he had already been pestered by a dozen other salesmen since breakfast—"

"—I'd try to get him interested by talking about something the other man hadn't talked about," Reilly interrupted. "And if I were a smart jobber salesman I'd guess they *had* talked about price."

Editorial Notes

Christmas Time—Selling Time

WIFE thinks it's a fine idea to give husband a smoker's set for the living room—for Christmas.

Husband is convinced he's brilliant when he gives wife an electric toaster for the dining room—for Christmas.

Does wife ever think of giving husband a set of windshield wings for the open car—for Christmas?

Does it ever occur to husband that wife would be delighted with a vanity case for the coupe—for Christmas?

Everybody, every year, gives the kind of gifts suggested in the first two paragraphs.

Not much of anybody gives accessories for the car.

Why not?

Because the merchants in the automotive trade, with occasional exceptions, have not even begun to do what merchants in other trades too numerous to mention have done to make the Christmas gift-buying season a profit-making season.

These are the things other merchants do:

They stock merchandise that can be sold as Christmas gifts.

They tie this merchandise up with the Christmas gift-giving spirit.

They sell the merchandise for Christmas gifts.

Someone has said that the average motorist sleeps in his home and lives in his car. At any rate the average motorist is proud of his car. Sometimes this average motorist is a man, sometimes a woman. Sometimes the car is of the open type, sometimes of the closed type. And in the long list of merchandise made, distributed and sold by manufacturers, jobbers and retailers of automotive equipment are a great many articles that will make an owner prouder of his car, in addition to making use of the car more convenient or enjoyable.

Why can't these articles be sold as Christmas gifts, like other articles that people are proud to own or that give them convenience or enjoyment?

They CAN be sold as Christmas gifts.

Then why aren't they sold?

The principal reason is that the automotive trade has not tried in any consistent, persistent way to sell automotive equipment for Christmas gifts. Like other trades it is going to begin sometime. Why not this year?

And NOW is the time to begin.

The manufacturer who hopes to build business this year on the Christmas gift idea must begin now to prepare his stock and his appeal to jobbers, dealers and the buying public.

The jobber who expects to profit by the Christmas season must begin now to prepare his stock and to cultivate the Christmas merchandising idea among the retail trade.

The dealer who would make the before-Christmas "dead" season a "live" season must begin now to talk with jobber salesmen about the lines he can sell, to plan for his stock and to lay the groundwork for an aggressive Christmas gift buying appeal to the public, based on advertising, display and personal selling.

Any retailer, whether dealer or garageman, who thinks accessories, tires and the various products that are listed as automotive equipment cannot be successfully sold for Christmas gifts might remind himself of the following facts:

There are ten million car owners and as a class they have more money—for Christmas giving, for instance—than the other 90 million people in the country.

In the two months before Christmas—the gift-buying season—these ten million people, or a good many of them, at least, will make one or more visits to the establishment of a dealer or garageman.

These ten million motorists and their families are not different from other people; they have to rack their brains for gift ideas for fathers, mothers, wives, husbands, sisters, brothers, cousins, friends and all the other folks on almost everybody's gift list.

Almost any article of automotive equipment not only is an attractive gift, but a useful one.

Automotive equipment gifts are within reach of any pocketbook—the cost of the articles runs from a few cents up to quite a few dollars.

Many articles of automotive equipment contain silver, nickel, glass, leather or other materials which are always popular in the stocking or on the tree.

Automotive equipment business is almost exclusively cash business.

Why not go after it?

Motor World suggests that its readers start as soon as they read this editorial to plan for profits on automotive equipment during the Christmas season.

The American people are going to spend many millions of dollars for Christmas gifts this year. Must it all go for slippers for father and silk underthings for mother and a book for brother and silk stockings for sister, and so on down the line. Shall the newspapers be filled with all kinds of gift suggestions **except gift suggestions for the automobile owner?** Shall the spending throngs that fill the streets of big towns and small in the holiday shopping season see windows gay with everything **but automotive equipment?**

The merchants in this industry CAN sell attractive, useful Christmas gifts. They can profit by the sales.

Will they sell and will they profit?

The week before Christmas it will be too late to answer "Yes."

Facts Determine Garageman's Liability in Theft

Exercise of Ordinary Care a Question That Must Be Decided by Jury in Many Cases

EDITOR Motor World: We had a car stolen from our garage which was left for storage. We have not been able to find any trace of it and would like to know through your legal department to what extent we are liable. Our garage is posted (not responsible in case of fire or theft). Also party neglected to lock his car as usual and did not accept storage tag, which he had been in the custom of doing. Our storage tags are also printed on the face of tag (not responsible in case of fire or theft).

If you are not prepared or do not wish to pass your opinion on this question, please advise as to whom would be the best authority.—R. E. M., W. Palm Beach, Fla.

Answer.—A case like yours always depends on the facts, which must be judged by a jury. Did you use ordinary care to protect the property left in your charge? Did you use the same degree of care to prevent the car from being stolen that an ordinarily prudent man would use to keep his own property under the circumstances? If you were negligent, you will be held responsible. If you used ordinary care to protect the property, you will not be held responsible.

The fact that notices were posted and your tags contained a non-liability clause will have no bearing on the case. If the garage was locked up for the night and someone broke in and entered it and stole the car—for example—you would not be liable.

The general rule of law in most of the States seems to be that, while a garageman may contract to enlarge his liability, he cannot by contract limit his liability. As the court said in the case of Pilson vs. Tip Top Auto Co., "It is the better rule that a bailee for hire cannot by contract so limit his responsibility to the bailor as not to be liable for his own negligence or the negligence of his servants or agents. 67 Oregon pg. 528." This case has been followed in Pennsylvania, Indiana and a number of other States, but I find no case on this point in your State.

Application of Rent Law

Editor Motor World:

Can you please give us some information on the following trouble we are having with our landlord over our garage because we won't pay an increased rent? We have a very small garage with living quarters in the back and the landlord wants us to get out entirely. Now under the New York rent laws we understand we don't have to get out if we live there, do we? Just what do the rent laws provide anyway?—Binghamton, N. Y.

Answer: You do not tell just what the premises rented by you consist of but I think I am safe in assuming you do not live in the garage but in a room or rooms more or less closely attached to the garage. If there is however no separate entrance to the living quarters except through the garage the courts will not allow the landlord to dispossess you but if the rooms can be separately used and entered the court will probably have to dispossess you from the garage if you cannot reach some agreement with your landlord.

Right to Repossess Not Lost

That a seller of a motor car who upon default in installment payments under a bailment lease, neglects to replevin the car until long after the default in the making of the payments, does not waive his rights to bring a replevin action, when it appears that he made repeated demands for his money and threatened to institute the replevin action if the buyer did not make the agreed payments, was the decision of the Pennsylvania court in the case of Federal Sales Co. vs. Kiefer, recently decided in that State and reported in 116 Atlantic Reporter at page 545.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Cannot Charge for Street Storage

The New York City Municipal Court in a recent case denied a recovery to a steamship company in an action brought by it for storage charges where it appeared that the property had been stored in a public street holding that it was only entitled to storage charges where the goods were actually stored on its own property.

This decision may affect certain garagemen in summer resorts who in the busy season habitually store cars in front of their garages without specifically calling the attention of the owners to the fact that the charges are really for watching and guarding such cars and not for *storage*. New England S. S. Co. vs. Merrill Co., 118 Misc. Rep. N. Y., pg. 715.

Local Attorney's Help Needed

Editor Motor World: We sold a car to ———, a Chinaman, on a regular lease note. Car was registered with Motor Vehicle Department and on registration certificate we appeared as legal owners. This Chinaman was arrested for having drugs in his possession while visiting his wife at hospital. The doctor who treated his wife attached the car for a bill of $170 and same was sold at sheriff's sale—the medico bidding it in and getting it for the amount of his bill. We were never notified until after the sale when the sheriff called us up. Have we any recourse?—E. M. Co., Parlier, Cal.

Answer: Yours seems to be a very much mixed up case. I do not understand how the car could have been sold without any notice to you. I suggest you retain local lawyers to make a thorough investigation at once. Perhaps they can set aside the sale, get the car back or procure a settlement.

What Is a "Nuisance"?

Whether or not the use and enjoyment of one's premises is reasonable or prejudicial to the rights of others as a matter of law or of fact is dependent upon the evidence developed in each case bearing upon the locality, the particular surroundings, the status of the person complaining and the possible danger or inconvenience which may result to that party. Slattery vs. Herbstone, 233 N. Y., pg. 420.

Stop the Engine and Put on Brake

That the duty of a driver of a motor vehicle when he leaves it unattended in the street is to be careful to have it so secured that it will not start up unless it is started up by the intervention of some outside person or agency which is not reasonably to be expected, was the decision in the recent New York case of Maloney vs. Paplan, 233 N. Y., pg. 426.

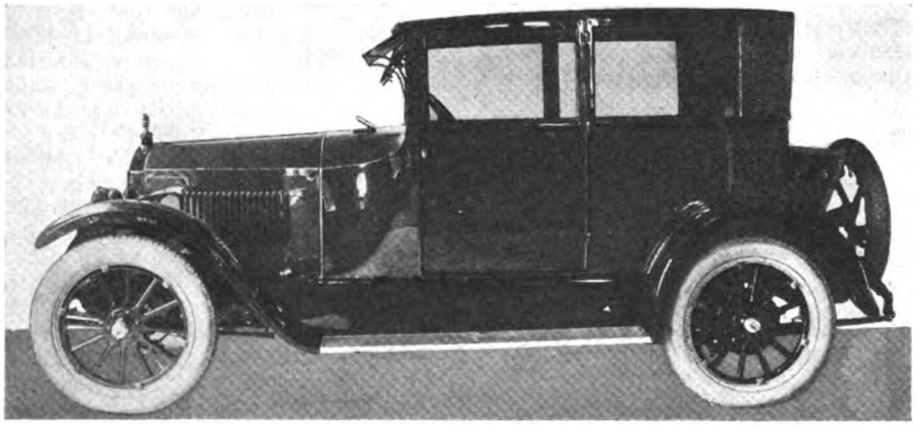
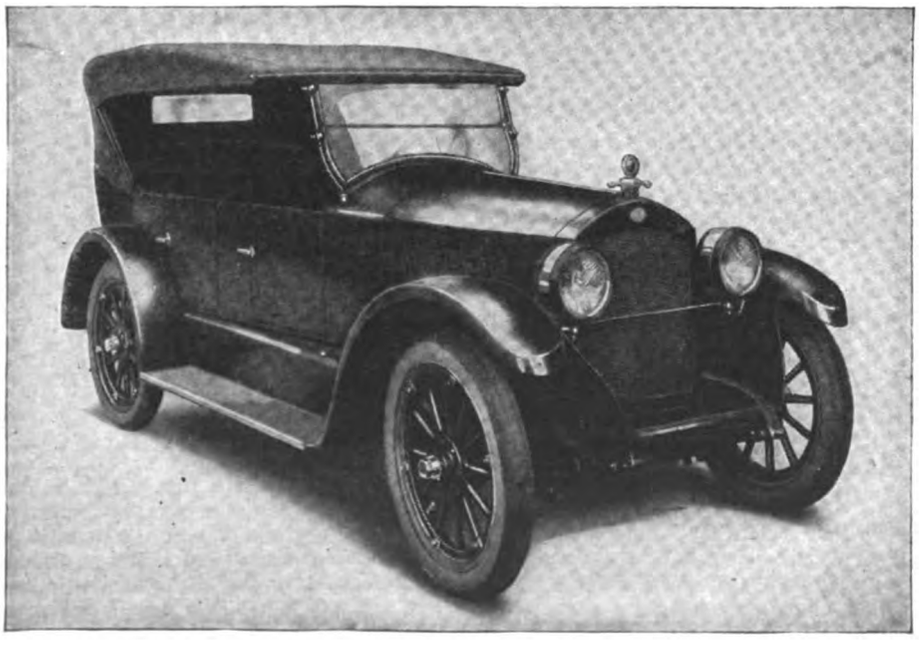
Anderson Light Six Has Aluminum Bodies



Phaeton and Coach Bodies Being Fitted Now—Other Bodies Later —Frame Unusually Well Cross Braced

THE Anderson Motor Co., Rock Hill, S. C., is now in production on the light six Model 41 which is a medium sized car of low hung appearance and of the sport type with plenty of power and speed. At the present time it is fitted with two styles of bodies, five passenger phaeton, and four passenger coach. The phaeton sells for $1,195 and the coach for $1,450.



The Anderson company, being an old coach builder, is concentrating its attention on the body work. The bodies are bench made throughout. That is, the body is framed and the sheet aluminum panels which are one of the special features, are put on by hand. The lumber for the bodies is cut locally and consists of practically all white ash with small amounts of oak, maple and sycamore. Poplar is used for the dash front and minor places not subjected to heavy strain. The lumber is seasoned for six months in the open and then kiln dried and then allowed to absorb moisture in the open to atmospheric humidity.

Each aluminum panel is worked out by hand and the joints are welded with oxy-acetylene torches and then filed smooth. The entire body is then surfaced by rubbing with a steel brush to give a suitable footing for the paint. The closed bodies are built up and metaled in a separate department from the open bodies. All body parts, with the exception of fenders, splashers, and other sheet metal parts, are finished with a number of coats of rough stuff, paint and varnish. The sheet metal parts are dipped in enamel and baked in an electrical japanning oven.

The cushions, tops, rugs, curtains, etc., are made in the Anderson trimming department. The upholstery is of genuine leather, cut to pattern, and sewed in pleats to the cotton duck backing. The pleats or pipes are stuffed with cotton. The cushions are built on wire coiled springs. The insides of doors, the front of the seat back and the sides of the cowl are trimmed in imitation to match the leather.

Anderson light six coach, $1450

Anderson light six phaeton, $1195

The Anderson Phaeton

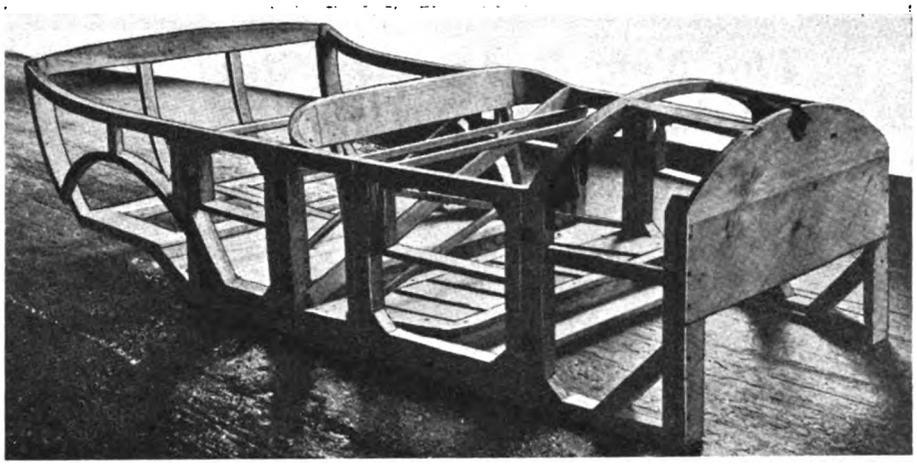
The five-passenger phaeton has unbroken lines in the entire length. It has a snappy block cornered effect and the floor level is 25 in. above the ground. The curtain compartment is in back of the front seat and the pockets are in the doors. The windshield is of the full ventilating type and a cowl ventilator is provided with dash adjustment. The top is of one man type tailored with dreadnaught material. The curtain light in the rear is 6 x 24 in. and is made waterproof. The side curtains have large Pyralin lights placed one above the other to match the doors and side panels of the body. The upper left light at the front can be unbuttoned for convenience in driving and for ventilation. The curtains over the doors are provided with nickel plated rods so that they open with the doors. The interior furnishings include floorboards covered with linoleum and bound with aluminum moulding. The body is finished in a bright blue.

The Light Six Coach

The coach also has aluminum body which is furnished in medium light blue between the belt line and the fenders and in black above the belt line. The fenders and running gear are also black. The upholstery is deep blue. The doors are very large so that entrance can be made to both the front and rear seats to them. There are only two doors. A dome light is provided in the roof and the cowl ventilator has a cowl adjustment. The upper windshield glass is movable and a sunshade is mounted directly in front of the body. A trunk is fitted on the rear of the body.

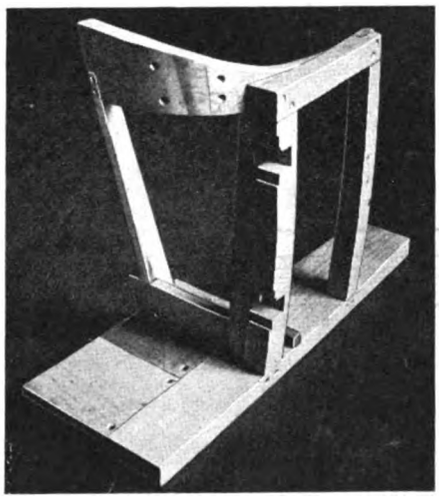
The Light Six Chassis

The frame is of new design throughout. It has three cross members, two cross tubes and a large plate in the rear. Gussets to the cross members give additional basing. All pressed steel parts are of carbon steel heat treated. The side rails are pressed from ⅛ in. stock



Digitized by Google

with 2 in. flanges and are 6⅞ in. deep in the middle tapering at either end. The cross tubes are made of 2 in. seamless steel tubing with ⅛ in. walls. The tubes are pressed on and riveted to bosses on the spring brackets at both front and rear ends of the frame. The brackets are in turn riveted to the side rails. Thus when the frame weaves it must either bend the side rails or twist the cross tubes.



The rear frame plate supports the tire carrier and supports and protects the gasoline tank. This plate is so flanged that it is riveted to both the upper and lower flanges of the side rails. The other cross members consist of the drop forge member which supports the front end of the engine, a 2-in. pressed steel angle member and a 4½-in. pressed steel panel member with 2 in. flange. These are reinforced by gussets at the ends. It is to the chanel member that the brake cross shaft and equalizer are attached.

The springs are 37 x 2 in. front and 58 x 2 in. in the rear. They are of the semi-elliptic type with tapered leaves. Both front and rear springs slant toward the rear to bring the line of road shock nearly perpendicular to the springs. In the front set this slant also is used to give the castor action to the front wheel. The master leaf of each spring is of chrome-nickel steel and the other leaves are of carbon steel with the ends rolled and tapered. The spring eyes are bushed with bronze and lubricated by the Alemite system through hollow shackle bolts. Gabriel snubbers are fitted as standard equipment.

The engine is a Continental 6-Y 3⅛ by 4¼ with a piston displacement of 195.6 cu. in., and an S. A. E. horsepower rating of 23.44. The engine has four main bearings and the camshaft is operated by chain drive at the front end. The carbureter is a Zenith. The clutch is a Borg & Beck 10 in. dry plate and the gearset is a Durston. The speedometer drive is from the gearset and a gearshift lock is provided. The axles are Salisbury, both front and rear. The rear axle is a newly designed light type semi-floating. The pinion is straddle mounted on ball bearings with Timken bearings in the wheels and differential. The propeller shaft is of the flexible disk type.

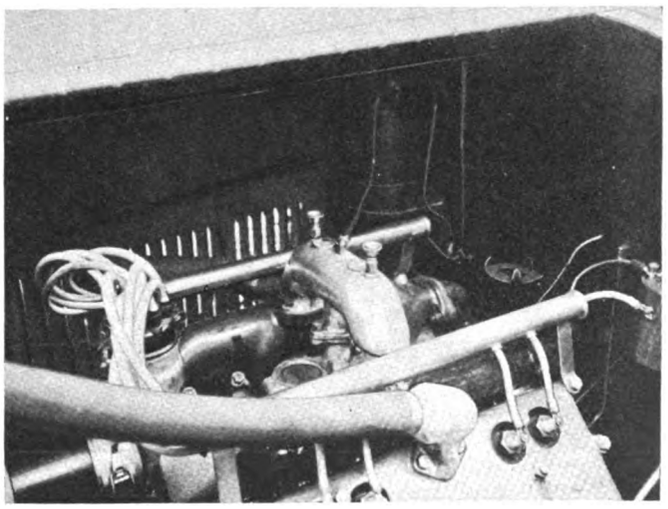
The Anderson wood body frame ready for fitting the aluminum plates

A section of the wood frame for the body which is glued and screwed

The service brakes are of the contracting type and operate on 12 in. drums on the rear wheels. They are equalized. The emergency brakes are also of the contracting type but operate on an 8 in. drum at the rear of the gearset.

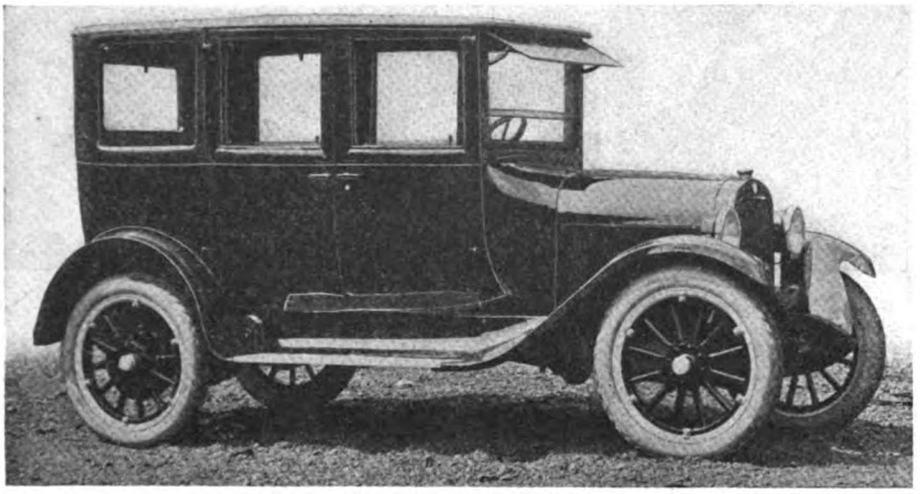
The electrical equipment, starting, lighting and ignition, is Westinghouse two unit single wire system. The 6 volt storage battery is supported by a cradle mounted on the chassis frame. An Anderson patented foot dimmer arrangement for headlights is used on the Light Six. The switch is mounted on the left toe board bracket and is operated by pressing the button with the toe of the left foot.

The headlights are of the drum type with S. A. E. standard universal mounting and tie rod. Other standard parts used in the construction are a Gemmer stearing gear, Fedders radiator and Briggs & Stratton ignition and lighting switch.



The gasoline tank has a capacity of 17½ gallons, the wheels are of artillery type with 32 x 4 cord tires, the wheelbase is 114 in. and the road clearance 10 in. The five-passenger phaeton weighs 2450 lb. and the coach 2650. The equipment includes Stewart speedometer, pressure gage, dash light with independent switch, Moto-Meter, Klaxon horn, windshield cleaner and the usual set of tools, tire repair outfit, pump and jack.

A rear view of the Anderson light six coach showing the trunk, trunk rack and tire carrier. The steel plate which protects the gasoline tank and strengthens the frame can be seen



The New Cole 890 Envelope Manifold

The intake is entirely surrounded by the exhaust manifold from the carbureter to the cylinder blocks. This results in a greater amount of heat and a more even heating of the intake manifold to prevent condensation of the fuel between the time it leaves the carbureter and the time it reaches the combustion chamber

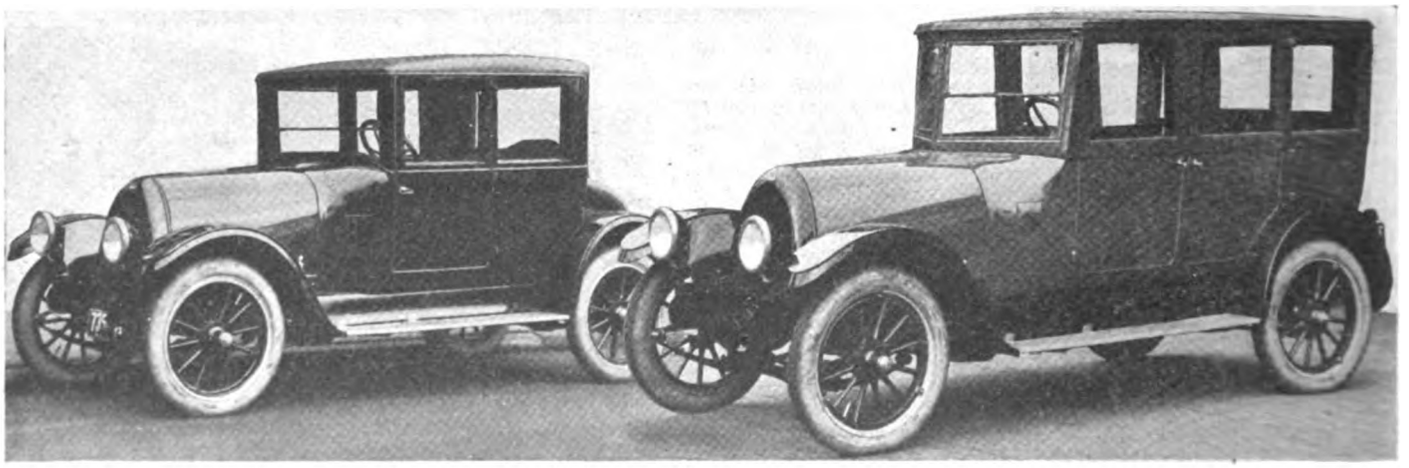
The New Dodge All-Steel Business Sedan, $1195



FOLLOWING only a couple of months after the debut of the Dodge business coupe comes the Dodge business sedan, announcement of which was made in the last issue of Motor World. The exterior lines remain almost unchanged, but the demountable rear seat and tilting front seat adapt the vehicle to business purposes equally as well as pleasure purposes. The rear door and the spacious rear compartment allow the carrying of trunks or good sized sample cases.

The New Franklin Victoria Coupe and the Sedan

The sedan is very little changed from the previous sedan but the Victoria coupe has a different seating arrangement and replaces the former coupe. Both are mounted on the new Series 10-A chassis which was described in the Aug. 30 issue of Motor World

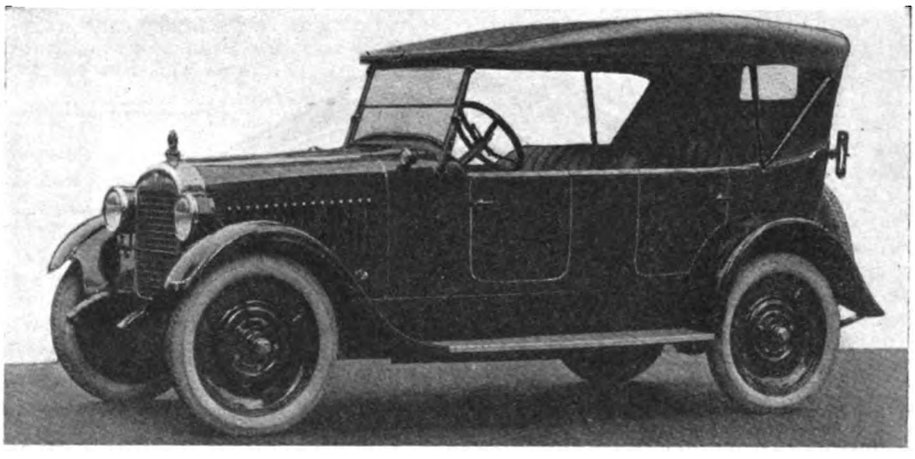
The New Jewett, Columbia and Commerce Models

Jewett Brings Out a Special Phaeton at $1095

A NEW special Jewett phaeton at $1,095 has been added to the line of the Paige Motor Car Co. It is mounted on the standard Jewett chassis. The body and hood are finished in deep moleskin gray. The color, besides being dust proof in character, brings out the straight lines of the body. A nickeled radiator shell and Tuarc disk wheels are fitted, the wheels being finished in the gray of the body with a touch of scarlet at the hubs, and nickeled rims. Outside valve stems furnish wood wheel convenience.

Harmonizing with the gray of the body, the upholstering is a gray green Spanish leather, laid over deep sprung cushions. Standard black running gear and fenders are fitted.

This model will be in addition to the standard phaeton which sells for $995, or $100 less. It is intended to fill in the line for purchasers who desire more of a sport model. The same chassis arrangements and design are used in this as in the standard chassis, with the exception of added equipment already mentioned. The wide doors are a feature of the body.

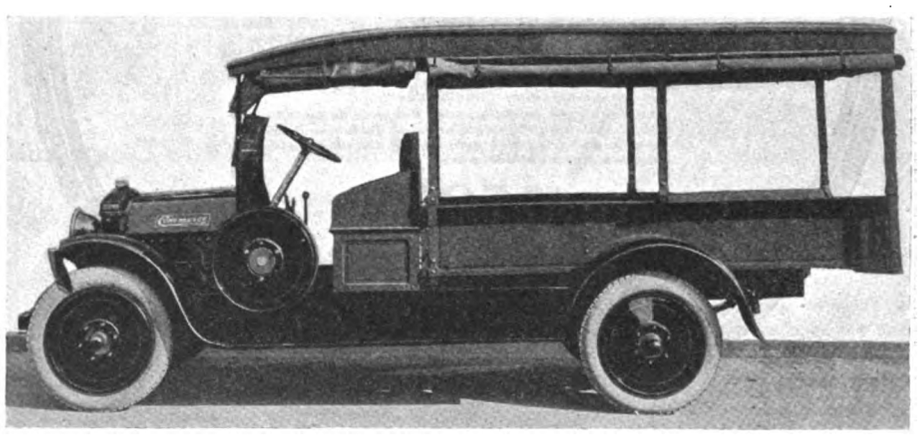


A new Jewett special phaeton, $1095

A New Columbia Special Six Phaeton, $1095

A NEW model known as the special six phaeton to retail at $1,095, f.o.b. Detroit, has been added to the Columbia line. This body is mounted on the standard 115 in. wheelbase chassis incorporating the Continental 6-Y engine, Timken axle, Durston transmission gearset with Timken bearings, Stromberg carbureter, Borg & Beck clutch, Gemmer steering gear, Spicer universal joints and Auto-lite electrical equipment.

Among the features of the special six are nickel-plated Harrison radiator with thermostatically controlled shutters, cowl ventilator, barrel headlamp as well as cowl lamps for parking, heavyweight crown fenders and cord tires. The body is of generous proportions, the rear seat being 46 in. wide, and the upholstery is of real leather over deep coiled springs.



Columbia Special Six Phaeton, $1095

Commerce Brings Out a Special Delivery Truck

THE Commerce Motor Car Co. has just put on the market its new Model 9 special delivery speed truck. This truck has a 1500 to 2500 lb. capacity and sells in chassis form for $1,150, f.o.b. Detroit. With canopy top express body, it sells for $1,330.

The new truck incorporates the 3¾ by 5 in. four-cylinder Continental truck engine with three-bearing crankshaft. This is a unit power-plant incorporating a cone type of clutch 14 in. in diameter.

New Commerce special delivery speed truck fitted with canopy top express body, $1330 *with body*

The truck is driven through a tubular propeller shaft with a spiral bevel, three-quarter floating type of rear axle. The rear axle ratio is 5.87 to 1. The brakes are 16 in. in diameter, both sets being mounted on the rear wheels. The wheels are Michelin steel disk with roller bearings, and the truck is equipped with 32 by 4½ in. non-skid pneumatic cord truck type tires, front and rear.

A single standard wheelbase is used, this being 127 in., and a choice of four types of body is provided. These are open express, canopy top express body with curtains, stake body and panel body. The open express body is $1,250, the platform stake body, $1,300, and the panel body, $1,430.

Helping the Salesman to Better Know His Line

Southern California Dealer Conducts Questionnaire School —Some Questions Asked

ON the extent of the knowledge of a salesman concerning the automobile or truck he sells largely depends the measure of his success. Frequently his ignorance on certain points as revealed when questions are asked by prospects results in impending sales falling flat.

That salesmen may be properly educated many dealer establishments have organized classes and have made it compulsory for the members of their sales forces to "attend school regularly."

The Reo Motor Car Co. of Southern California, Los Angeles, recently inaugurated a system of educating their salesmen that is particularly thorough and effective. B. C. Foy, manager of the company, found upon investigation that too often one of his salesmen lacked in several particulars of essential knowledge surrounding a Reo car or truck, as well as not being thoroughly conversant with the questions most frequently asked by automobile prospects.

In an endeavor to thoroughly Reo-educate the salesmen, a "questionnaire school" has been inaugurated. At the sales meeting every morning, five questions are handed out by Foy to each salesman. These questions are answered at that time and turned in before the end of the meeting. Each week these questions are corrected and each man graded, which grades are posted on the bulletin board.

Some questions concerning Reo passenger cars that are typical of those propounded at the Reo school are as follows:

"How many leaves in front springs?

"How many leaves in rear springs?

"Factory list price of sedan?

"What type of springs are used for cushions and backs?

"Name ten prominent people in Los Angeles who own Reo cars?"

Particularly interesting to dealers in trucks will be the following list of questions picked at random among those propounded at several meetings of the Reo school in Los Angeles:

What are inside dimensions of armored speed wagon bodies?

Factory list price of express bodies?

What territory is covered by Riverside Motor Sales?

What laundries use Reo Speed Wagons in Southern California?

Gasoline mileage?

Oil mileage?

Shipping weight of enclosed cab and short canopy?

What grocers in Southern California use Reo Speed Wagons?

Width of aisle in Carry-All job?

Height from floor to top of cab of express body with cab?

What banks and express companies are using Reo Speed Wagons?

What is percentage weight of wheels?

Cubic capacity of express body with canopy top?

In what cities throughout country are Reo branches located?

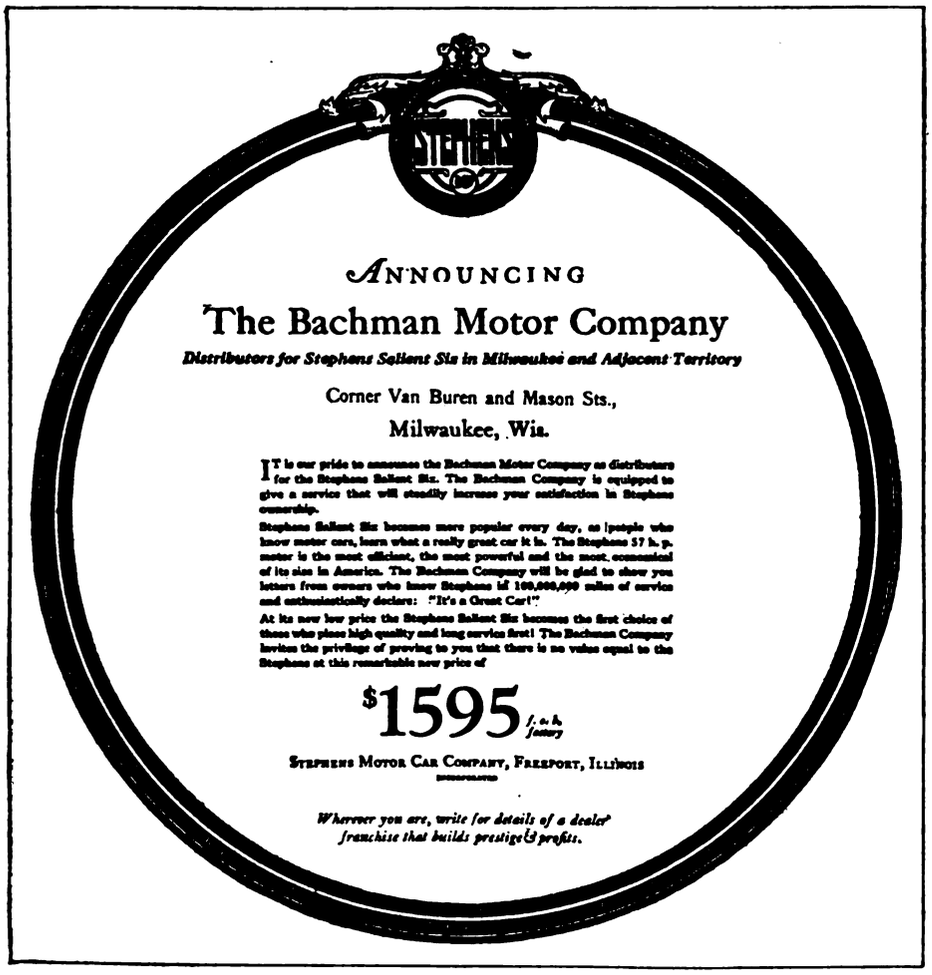
Name and initials of factory officials?

Clearance under front and rear axles?

Correct firm names of our dealers in Southern California?

Capacity of gasoline, oil and water tank?

Factory list price of Reo taxi cab complete and of taxi cab chassis?



Bore and stroke of motor of taxi cab?

What is price of 15-20 passenger school bus job?

What is wheelbase of this job, etc.?

"We have found that this system is a most satisfactory one for educating our salesmen as it is certain to bring up helpful discussions and create lively competition for the high grades, all of which leads to more constructive interest in the utomobile sold," says Mr. Foy.

A Striking Ad

In searching for examples of good advertising, Milwaukee dealers have been struck by the compelling character of the display advertisements announcing the appointment of the Bachman Motor Co. of Milwaukee as distributer of the Stephens Salient Six. The advertisement is illustrated herewith. Although the "copy" is the product of the Stephens factory advertising department, it is far different than the general run of "stereotyped" layouts so often published by manufacturers in behalf of dealers and distributers. The fact that the Bachman company's name appears numerous times in the text carries the reader away from the idea that it is "just an ad," like so many published under similar circumstances are. The advertisement has aroused a great deal of favorable comment and many compliments have come to the Bachman company upon the strength of it

When a Competitor Started Price Slashing

This Dealer Worked Up Volume Sales on Necessities by Original Selling Schemes

WHAT is a dealer in automobile accessories to do to keep up legitimate profits when his chief competitors decide to slash prices in order to raise money to pay past due bills or to increase trade in seasonal dull periods?

Should he follow in the groove made by his competitors and cut prices on popular articles like spark plugs, carbon removers, wrenches, etc.?

Arthur Mechanic, who conducts a tire and accessory business at Prospect Avenue and East 79 Street, says that the dealer who merely trails along in the groove set by his competitors and slashes prices in order to get under them, will not last in business.

Once you begin cutting prices, they cannot be controlled. They will go down and down and bring along disaster and trouble.

The thing to do when business conditions change for the worse periodically is to "use your noodle," says Mechanic. Do something out of the ordinary. Put on sales methods that will take your business out of competition with others in the same line.

Mechanic has been continually skirmishing around for special stunts to put his goods over. The system made him prosper.

A year ago he was plainly worried about business prospects. He was apprehensive about keeping up his volume of sales. He "used his noodle," and sales have grown continuously since early 1921.

Here is how he made his business grow when many other establishments in the retail accessory business showed losses in volume:

In the midst of price cutting campaigns carried on by his competitors, Mechanic selected several accessories that he considered absolute necessities to the owner and centered his advertising and sales work in putting them before the public. On account of their utilitarian value he decided to try selling them without cutting prices. He also decided not to reduce the price of a single accessory in his store.

His theory was that if he could work up a volume of sales on the special articles of necessity and thereby get customers into his store, he could sell the other accessories at the list price notwithstanding cut prices in other stores.

His theory worked. His books show a substantial increase in sales.

One accessory that Mechanic has been particularly successful with is an automobile lock. If he hadn't done something out of the ordinary on behalf of the lock he admits that he probably would not have sold it.

To-day he is selling Simplex locks to practically every dealer in Cleveland.

The automobile insurance companies also are selling Simplex locks for Mechanic.

When he took on the sale of the lock, Mechanic worked on the theory that the insurance companies would do anything reasonable to cut down their losses. He also used the rule of the insurance companies, which makes the auto owner carry 25 per cent of the value of the car as a risk, in his advertising campaign among the owners.

Mechanic first ascertained the theft insurance rates charged by the insurance companies on cars with and without locks. Here is what he found and then gave wide circulation to:

Buick: Without lock $4.20 per $100 and $3.57 per $100 with lock;

Hup: $1.50 per $100 without and $1.25 with; Ford $6.00 without lock and $5.10 with.

He gave figures to show that the owner could buy a lock and still save money on his insurance premium. The fact that the insurance companies add a penalty of $15 to the premium on cars that do not have a lock was used with telling effect among owners.

Dealers were urged to bring the facts about what could be saved by the lock in the matter of insurance premium to the attention of owners. A service station is operated to put in order without charge every lock that goes bad on the theory that fair treatment is one of the best mediums for building business.

The monogram automatic locking cap for motor meters has gone big as a result of similar sales methods by Mechanic. He learned that motor meters were being stolen and then in a smashing campaign by advertisements and circulars he told what the locking cap would do. He sold them without cutting prices.

Another stunt that Mechanic gives credit for boosting sales is that of displaying placards throughout his sales room. Persons entering the store will find all sorts of placards setting forth the merit of articles and telling just what each will do. These attract the attention of the patrons and the placard usually refers to some trouble that the owner is having. He buys.

Ideas On Selling and Management

Bring Your Car to One Who Knows

An effective advertisement that was particularly successful in bringing customers to a Los Angeles station.

Silent Salesman Helps Accessory Sales

"WE keep a large framed board in the front part of our store," said a successful middle western accessory dealer, "on which we display different accessories every two weeks. At the top of this board is this inscription: 'Accessories you should have on your car.' Under each accessory so exhibited we place a card giving the name and price. We find that this board attracts a lot of attention and is really a big help in making more sales."

The Foundation of Shop Profits

The Systematic Arrangement of Tools and Parts—How to Prevent Losses in the Stock Department by Having a Place for Everything and by Having a Check System

Article No. 2

By J. HOWARD PILE

THE replacement of lost, worn and broken tools is a heavy item of expense to any shop. The profits which are made on labor are sometimes completely eaten up with this expense item. The losses on parts and equipment that disappear and never seem to get charged up to a repair order are another source of profit leaks and these, taken together with the uncharged gasoline and oil, can well nigh bankrupt a shop.

System in the purchasing, keeping and using of these items will prevent these leaks and turn losses into profits.

Tools are pretty hard to keep track of. They seem to disappear in thin air at times. Perhaps they are like the scissors that the surgeon occasionally leaves in the innards of his patient. Owners never seem to complain of this, however. If anything they complain of the loss of their own tools.

Small Tools

A very commonsense idea for handling the tool situation is to roughly divide tools and tool equipment into three divisions:

1. Small tools which the mechanic uses himself.
2. Tools generally used by all mechanics in the shop.
3. Special tools and jigs used only occasionally.

There are some few tools that should really be the personal property of the mechanic. The exact list of such tools will necessarily vary with the nature of the work that the mechanic performs. A comprehensive list is given in Table A. Where these tools are supplied by the shop, there is always more or less borrowing between the men and the constant loss or misplacing of these tools with resultant loss of time on the part of the men and loss in money by the necessity of replacing them. If the men are compelled to supply their own tools, they will take better care of them, will not lend them and it has been proven time and time again that the private ownership of these tools is an economy. The entire list of tools shown in Table A can be purchased at retail for $9.05. Many shops make arrangements to purchase a quantity of these tools at wholesale rates and supply their mechanics with them at the lower prices. This would mean that the set could be had for from $6 to $7.

In order that the mechanic may keep his set of tools intact, it is necessary that he have some place to keep them when they are not being used and at nights. A handy tool chest is shown in Fig. 1. This type may be kept at the back of the work bench or on the shelf under the bench. Another idea is a drawer operating on slides under the top of the bench. This is handy and it can be locked at night. True, the tool chest can be locked too, but what is to prevent someone from taking the whole chest?

A still further development in a tool carrier idea is the "tea wagon" pictured in Fig. 3. This is designed to hold not only the mechanic's personal tools but the other tools he needs for quick service or for special or general work around the car. Where specialized work is carried on, this device can be worked out to provide exactly the facilities required by the nature of the work.

Bench Tools and Equipment

If the matter of private tool equipment is left to the mechanic, it will very often happen that the equipment will get in bad shape or part of it will be lost. Some shops have a weekly inspection of tools by the foreman and if tools are missing or damaged, they have to be replaced or repaired before the mechanic is allowed to continue at work.

In this class are the tools which are used generally by more or less all the mechanics in the shop. Some of the equipment, while only used occasionally, is too heavy to be carried to the tool room and some of the smaller tools are

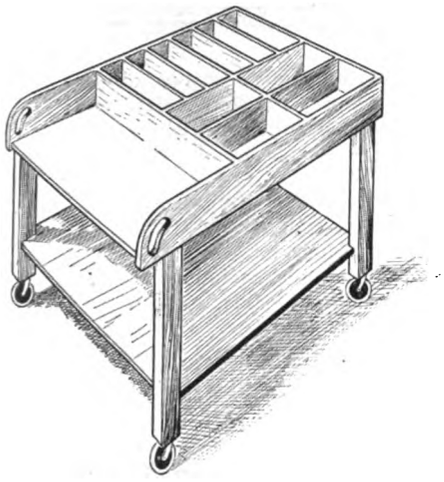

Fig. 3—A "Tea tray" tool outfit

in such constant use that it would not pay to use time carrying them back and forth.

A good selection of files is very important. The list in Table B gives some shapes and sizes that will find a ready use in the shop and Fig. 4 shows convenient racks for hanging them up. The racks are over the work bench and at such points that they are most convenient. The bench should be laid out so that certain kinds of work are most economically performed in some certain section of the shop. Reference to the plan which was published in the last article will show that the left end of the bench is adapted to engine work. Here are located the engine stand on the floor, the crankshaft straightening and aligning press, the connecting rod alignment gage and the surface plate, all pieces of equipment necessary to engine operations. A little bit further along the bench is the parts washing tank, which, however, is also convenient to other departmental work.

Immediately adjacent to the engine department is the mounting of two vises close together on the bench. These are for the purpose of holding a front axle while it is being overhauled, tested for alignment or straightened. The right side of the bench can be used for rear end, gearset and clutch work. In such a small shop it is not always possible to keep all departments busy at once, and the sections of the bench are therefore made available for all kinds of work.

One of the greatest time wasters in a shop is the continual losing of tools. It is vitally important that there be places for every tool, no matter what it is, and that these tools be kept where they belong. The solid wrenches in Table B may be disposed of in racks behind the bench. It is a good idea to hang everything up that will hang up and have a place specially marked out for it. Solid wrenches and other tools for that matter can usually be hung between nails or pegs and the shape of the tool can be outlined on the board or wall with red or black paint. A missing tool is then instantly detected and mechanics will save many hours in the useless hunt for tools.

Jigs and gages can well be protected when not in use with covers to keep dirt and grit from the finely finished surfaces. A little time spent in this care will be repaid by better working jigs and longer life.

In this ideal plan for a small shop, the tire and battery work has been grouped together in one corner. One obvious advantage of this plan is that the steam from the vulcanizer can also be used for softening battery compound. Also in a shop of this size it is entirely possible for one man to attend to the two departments.

The machine tools have been grouped together on one side of the shop where the light conditions are good and where the machines will be least in the way of the other work. The lathe should have the most desirable position in the shop. The best results are obtained when the operator has the light coming over his right shoulder. As a matter of fact this positioning is seldom possible and lathes are generally placed so that the light comes from in back and from the right. This gives light on the work and the tool and also allows light to penetrate into work being bored. The floor on

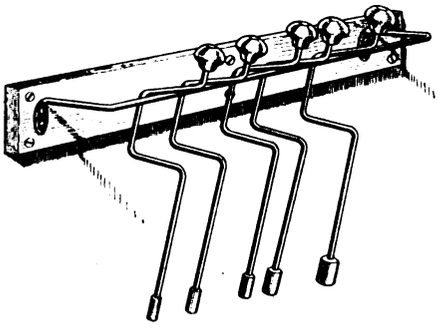

Fig. 5—Speed wrenches are hung this way

which the machine tools rest should be solid. If there is any shake in the floor, it should be braced from beneath. There should be free space all around each tool as the operator will have an occasional job which requires that he work from all sides of the machine. If the lathe is a hollow spindle type, there should be

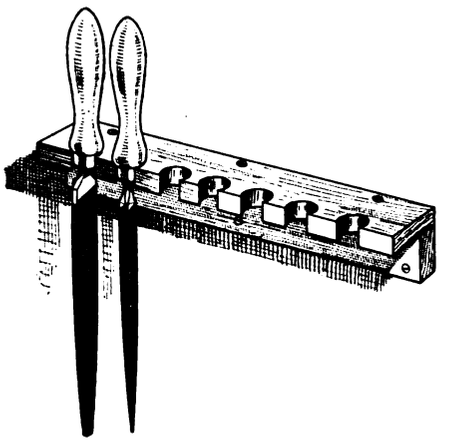

Fig. 4—File racks hang over the bench

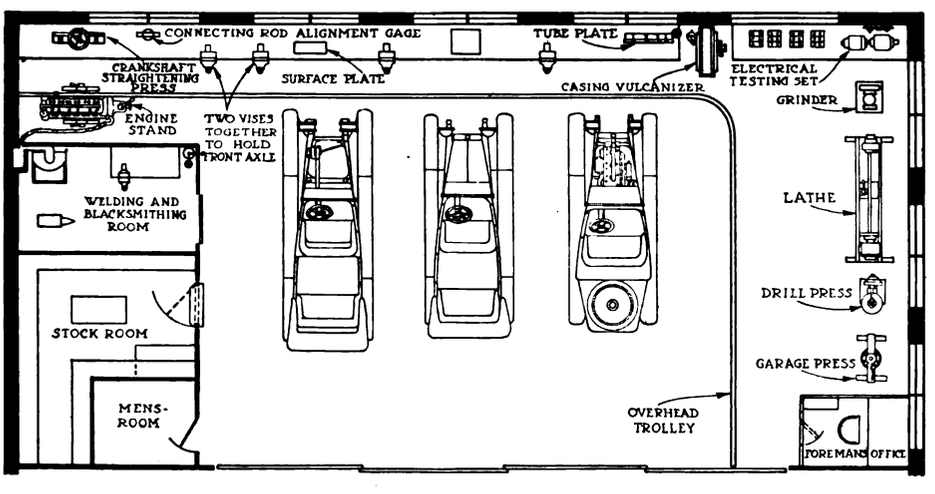

good clearance between the headstock and the wall or else a hole should be cut in the wall to allow long stock to be used.

The Smithing and Welding Room

The equipment of the smithing and welding room is simple and substantial. A stout bench in one corner, equipped with a blacksmith's vise answers all needs and the rest of the "furniture" consists of the forge, anvil, coal box and smithing tools, all grouped around the forge. The welding tank outfit also forms part of the equipment. The forge chimney is also used to conduct the exhaust of engines which may be run on the engine stand for freeing up the bearings or otherwise testing them out. The smithing room is required to be partitioned off with fireproof walls and with a fire door in most towns and cities. There are usually local regulations that have to be complied with.

The Stock Room

The stock room contains not only the stock of parts, but all special tools and jigs which are not part of the floor or bench equipment. One section is laid out in racks for these tools, each having its particular place. The balance of the stockroom is given over to the storage

The plan of the shop department of a garage. This shop is 25 x 50 ft. Detail illustrations of the shop were shown with Article No. 1 in the last issue

Table A—Tools the Mechanic Should Have

The equipment listed here would retail for about $14.

1½ Ball pein hammer.
Pair of slip joint pliers, 6 in.
2 Screw drivers, 4½ and 9 in.
Adjustable end wrench, 6 in.
Bicycle wrench.
Cotter pin puller.
Cold chisel, ½ in., 6 in. long.
6 in. Steel scale, graduated.
Pair outside spring calipers, 6 in.
Feeler gage set.
Set of three bearing scrapers.
Tool chest.

Table B—Tools and Equipment on the Bench

The equipment listed here will retail for about $225.

Assortment of files as follows:
1— 5 in. taper.
1— 7 in. taper.
1— 8 in. square bastard.
1—10 in. mill second cut.
1— 8 in. flat bastard.
1—10 in. flat bastard.
2—10 in. half round second cut.
1— 6 in. round second cut.
1— 8 in. round bastard.
2— 8 in. hand bastard.
2—10 in. hand bastard.
2—12 in. hand bastard.
Set of double end 15 or 22 deg. solid wrenches with openings from 7/16 to 7/8 in.
Set of speed wrenches, T-head, etc.
Piston vise.
Connecting rod aligning jig.
Surface plate.
Hub cap wrenches.
Crankshaft straightening press.
Valve lifter.
Spark Plug Wrench.
Ignition and generator wrenches and jigs.
Demountable rim wrench.
14 in. pipe wrench.
4 vises, 4½ in. jaws.
1 blacksmith vise, 4½ in. jaw.
Parts washing tank.

Table C—Floor and General Shop Equipment

The equipment listed here would retail for about $2,000.

10 lb. sledge hammer.
4 lifting jacks.
Castor jack.
Towing ambulance.
Engine stand with fittings.
Crowbar or pinch bar.
Overhead trolley system.
Chain fall.
Bearing burning in machine.
22 in. drill press with countershaft.
Partial set of drills, Nos. 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 1/4, 5/16, 11/32, 3/8, 13/32, 7/16, 15/32, 1/2 in.
60 deg. Center reamer for lathe centers.
Drill chuck with capacity to 3/8 in.
Drift pin.
V-blocks and cast iron pieces for drill pads.
15 hp. electric motor and starting rheostat.
Shafting and pulleys.
Screw cutting lathe, 15 in. swing, 63 in. between centers with equipment including countershaft.
3 and 4 jaw chucks, set of tools, lathe dogs and stock of self-hardening steel.
6 in. spring dividers.
Outside firm joint calipers, 10 in.
Outside spring calipers, 6 in.
Inside spring calipers, 6 in.
2 Center punches.
20 Ton garage press with drivers and equipment.
Emery wheel with two wheels, Spare buffer and rotary rasp.
Casing vulcanizer 3, 3½, 4, 4¾ cavities.
Tube plate for four tubes.
Tire tools including tire irons, shears, casing mandrel, roughing brushes, scratch brush, pliers, awl, tread gage, assorted knives, fabric hook, assorted rollers and stitchers, round nose pliers.
Forge.
Anvil, 100 lb.
Electrical testing equipment.
Battery charging outfit.
12 battery clips.
Blacksmith tools, including 2 hammers, fullers, chisels, punches, tongs and coal box.
Acetylene welding and decarbonizing outfit.
Air compressor.
Battery filler.

Table D—Stock Room Outfit

The equipment listed here would retail for about $375.

Special wrenches for various cars and parts.
Valve grinder.
Piston inserter.
Hack Saw frame and 1 doz. blades, 10 in., 14 teeth.
Micrometer calipers, 2 to 6 in.
Twist drill gage, 1 to 60.
Steel try square, 6 in.
Surface gage.
Dial test indicator.
Set of steel figures, 3/15 in.
Set of valve seat reamers 1 5/8 to 2 1/4 in.
Valve refacing tool.
Portable electric drill.
Hand drill, 3/16 in.
Set of taps and dies, S.A.E. and U. S. Std., 1/4 to 1 in.
Die for Ford hubs.
Set of reamers 1/4 to 3/4 by 32nds.
Set of special bushing reamers for Fords and others.
Surplus stock of numbered drills.
Surplus stock of fractional size drills.
Radiator test plugs.
Creeper.
Sharpening stone, 6 x 2 x 5/8 in., fine.
Valve grinding and lapping compound.
Wheel puller.

of parts, each in its own bin. The stockroom is also the place where oil is dispensed in a small shop. Larger shops necessarily need other facilities.

The proper handy arrangement of the parts in such a manner that they can be easily seen and quickly taken out is essential. It enables the man in charge of the stock to quickly determine low stock and put in orders and it also saves the time of mechanics who need parts for repairs.

Where any considerable trade is carried on in parts sold to car owners direct, it is desirable to have the stockroom arranged with two windows, one for retail customers and one for mechanics from the shop. As a rule one man can attend to both windows and still have time to attend to other duties. The plan calls for a desk and heavy table in the stockroom. The desk is used for the routine work of the department and in some cases can take the place of the foreman's desk which has been placed on the other side of the shop.

It may be thought that a stockroom with its bins and records is a lot of red tape and a waste of time in an organization of this size, but when the losses through stock leaks are considered, it will be found a good investment. Every shop that is without such a system loses heavily in parts, equipment, oil and gasoline supplied to repair orders and never charged to the customer. The stockroom can automatically check this by issuing no stock or supplies without getting from the mechanic the number of the repair order. Article No. 3, in the September 27 issue of Motor World will deal with the details of this phase of shop profits.

Names as Well as Numbers on Parts Bins

"OF course we carry our stock of accessories and parts on shelves and in bins in our sales room," said a middle western accessory dealer, "but we don't simply label these shelves by number as is so frequently the case. We also label each shelf and bin by name. We do this so that when customers come in they can look around and see for themselves just what we carry. In this way they frequently see things they want, which they haven't come in for, and in this way we make more sales than would otherwise have been the case."

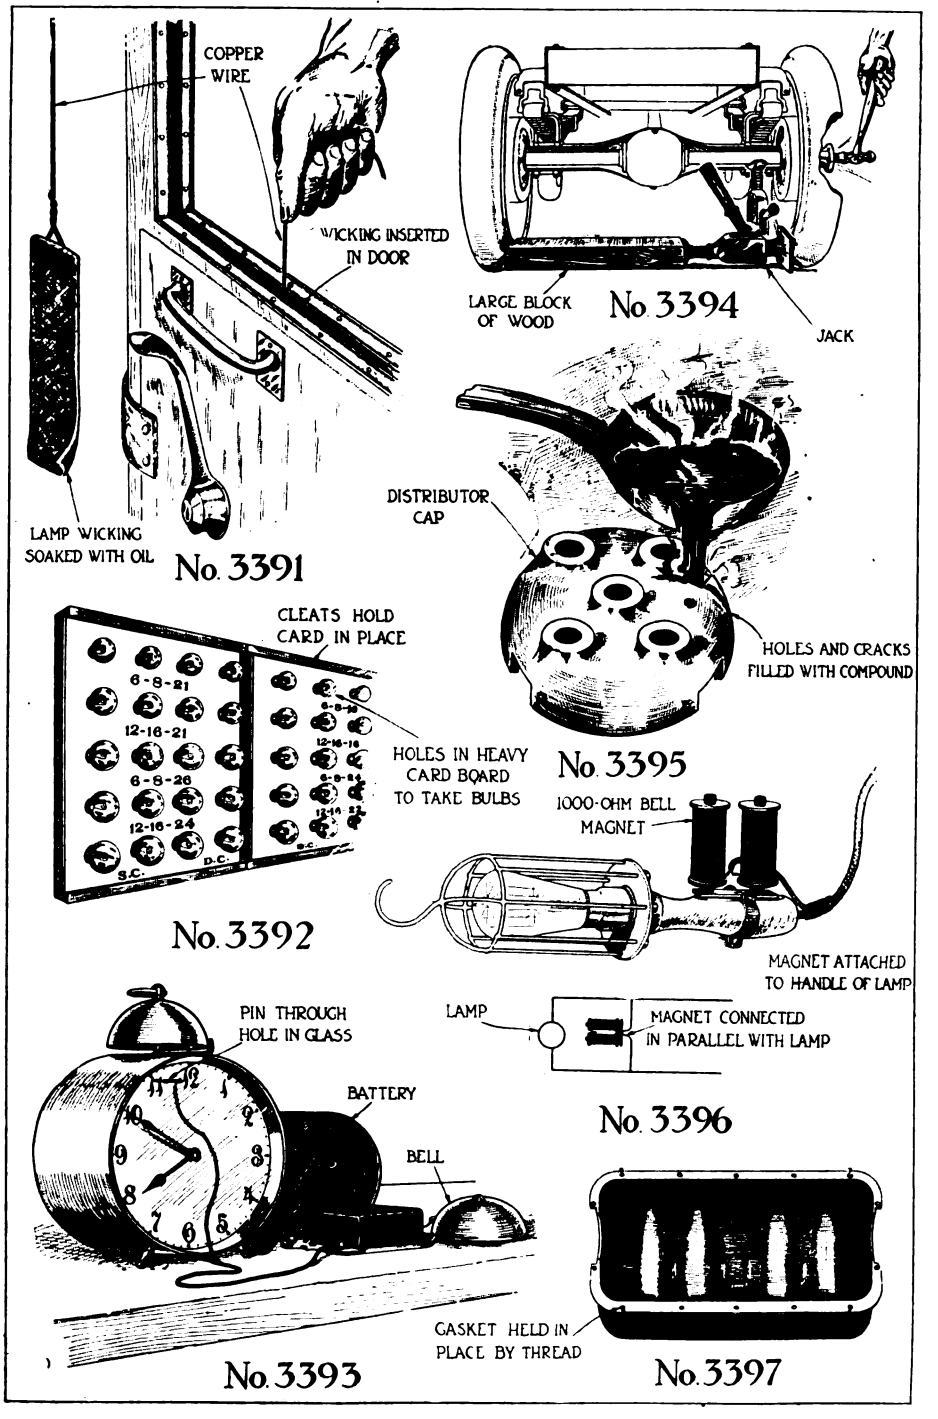
How About Diagnosis?

THE automobile service man has certain advantages over the doctor. If the doctor makes a wrong diagnosis, the patient may die, but if the service man guesses wrong the most that can happen is a continuance of the trouble or the breakage of some part. No matter how good a trouble man may be, it is not possible for him to look at a car and say offhand just what the matter is. He needs electrical testing equipment and other handy devices just as the physician needs a stethoscope or a watch to time the patient's pulse. Much of this equipment can be better purchased ready made.

What have you made in the shop that helps your electrical diagnosis? Tell Motor World about it.

No. 3391 — Lubricating Closed Car Door Fittings. — Lamp wicking, soaked with oil and fastened to the end of a long wire, is used to oil window regulator hinges, pins and levers inside the doors of closed bodies.—Donald McClean, Cleveland.

No. 3392 — Lamp Bulb Holder. — A lamp bulb holder is made of heavy cardboard with holes cut and the voltage and contact of each bulb marked. The boards can be cleated to the wall or several boards can be kept in slides.—Henry Parker, American Thread Co. Garage, Holyoke, Mass.



No. 3393—Time Signal for Vulcanizing.—To set the time of the cure in minutes, an alarm clock has a small hole drilled in the glass, a brass pin being inserted. The glass is movable so that the pin can be set any number of minutes ahead of the minute hand which closes the bell circuit.—F. W. Walton, Salem, Ore.

No. 3394—Removing a Rear Wheel.—A rear wheel which is stuck to the shaft is removed by putting a block and a jack between the wheels and raising the jack till it exerts pressure against the wheel. A smart rap on the axle shaft loosens the wheel.—Carson Crowley, Valdosta Garage, Valdosta, Ga.

No. 3395—Repairing a Distributor Cap.—A cracked or perforated distributor cap is repaired by cleaning the break and pouring hot storage battery compound in to fill up the fracture.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3396—Magnet for Portable Light.—A magnet to hold a portable light in any position is attached to the lamp handle. It consists of a 1000 ohm bell magnet and is connected in parallel with the lamp.—Arthur G. Raabe, Long Island City, N. Y.

No. 3397—To Prevent Gasket Slipping—Gaskets for crankcases, oil pans, etc., are prevented from slipping while the part is being installed by fastening several pieces of thread through the holes. The thread is fine enough to mash into the gasket when it is tightened.—Crawley B. Cash, Cash Garage, Gaffney, S. C.

Interesting Things Automotive

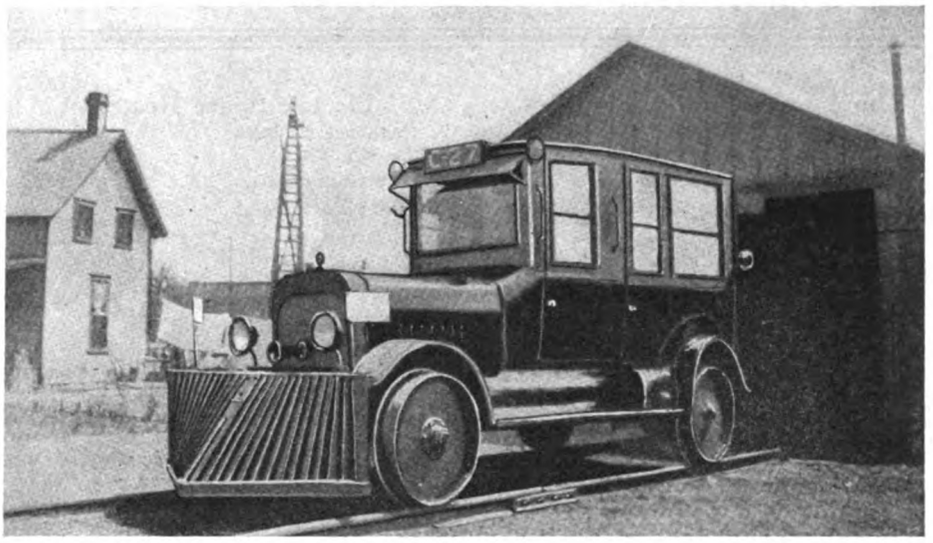
Traveling Grocery Stores Spreading

Fifty grocery stores on wheels, like this one, are promised Buffalo by the Entrez Stores Corporation, which indicates the growth of this type of business, and incidentally a growing market for trucks.

In One of the Parks Dodge Brothers Gave Michigan

Candidly acknowledging its own responsibility for part of the car congestion on the highways of Michigan, Dodge Brothers, Inc., has given eleven tracts of forest and lake sites to the state to afford car owners relief. This is a scene in one of them on the Huron River, Wayne County.

When New York Dealers Hold an Outing



Fred Wagner, the "Wag" who is known from coast to coast as a starter of automobile races, is always the host at his farm at Smithtown, Long Island. Here he is with Mrs. Wagner and an ear of the corn that has something to do with drawing the "Boosters" to Wag's farm. Charles H. Larson (with the arm band), head of the Cutting-Larson Co., New York distributor of Oldsmobiles, and Thomas F. Moore, executive secretary of the Automobile Merchants Association of New York, are amused spectators of the archery contest—can't you just imagine how the old bull's eye suffered with these metropolitan motor car salesmen behind the bow?

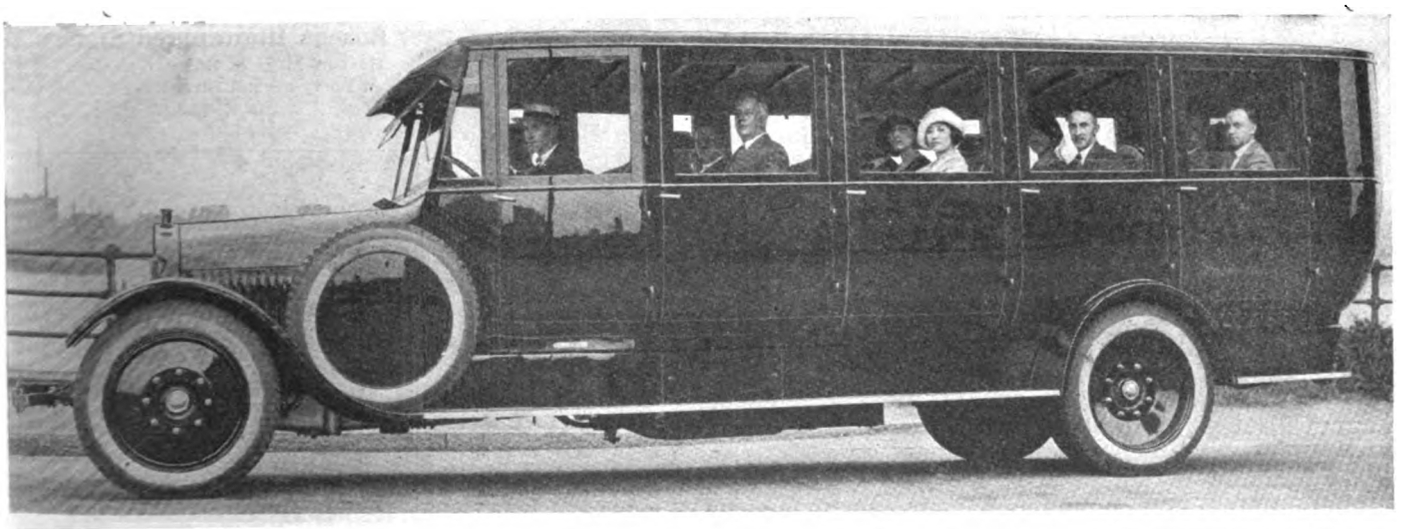
Caught by the Camera

Old Buick Still in Service

This old Buick, said to have delivered 90,000 miles already, is now on the job as a private railroad car used by Phil Carroll, superintendent of the Kansas division of the Missouri Pacific. The wheels are disk type with flanges. A cowcatcher, special radiator shell and hood, have been installed. Over the regulation Buick body a special winter top, mostly glass, has been built.



Winner of Dominion Championship Race

Lon Disbrow with his Essex special in which he won the heat winner's race of the Dominion championship series on the Canadian National Exhibition oval, Aug. 28. This was the concluding event of the meet that opened in Toronto, Aug. 26 and was witnessed by between 40,000 and 50,000 speed fans. There were 10 entrants.

A Motor Bus De Luxe

The Mohawk, a vehicle specially built to carry passengers between Boston and Albany this summer. The body is entirely enclosed with plate glass windows that can be readily opened by passengers. The interior finish is equal to that of a private limousine. The car is equipped with dual pneumatics in the rear and carries spare tires.

Equipment for the Shop

New Machinery and Tools

Thompson's Draw Cut Undercutters

Thompson Mfg. Co., Meadville, Pa.
Price, $1.75 per set of four.

A complete set of graver type tools for undercutting commutators on starting motors and generators. After the commutator has been trued up, the self-aligning box guide is placed on the segment to be cut and with the proper width graver a push cut is started, after which one or two draw cuts will complete the section. The gravers can be sharpened without changing the width or shape.

Ont-O-Dor Garage Door Opener

Harry G. Ainsworth, Kentland, Ind.

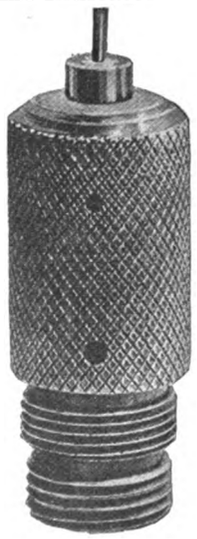
The doors are opened by means of a crank driven by a small electric motor through worm reduction gears. The switches controlling the current are standard electrical equipment. Private garage doors may be opened by driving over a plate in the driveway and public garage doors may be opened by a three-way switch and as many four-way switches as desired.

Apex Piston Ring Compressor

Thomson-Friedlob Mfg. Co., Peoria, Ill.
Price, $3.75.

The corrugated band encircles the piston rings and turning the controlling shaft winds a spool which tightens the band. The device can be worked from the top of the block or from underneath, and as the shaft has a universal joint it is possible to work it at an angle around the crankshaft.

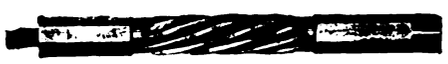
Electric Space Heater



Westinghouse Electric & Mfg. Co.,
East Pittsburgh, Pa.
Prices $2.50 to $6.

These heaters may be used for preventing cars stored in unheated garages from freezing up. The heating element is contained in a sheet steel casing. The terminals project on only one side of the casing. The heaters are made in sizes from 220 watts up to 1250 watts and for operation on either 110 or 220 volts.

Sauer's Engine Time Indicator

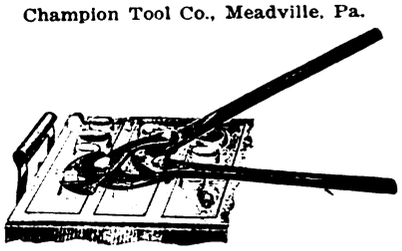


Sauer Brothers,
Chico, Cal.
Price $2.50

The purpose of this indicator is to show when the piston in any cylinder is at top dead center on the compression stroke. It is inserted in place of the spark plug and indicates the pressure in the cylinder. When the indicator shows maximum pressure the piston is on dead center.

Millersburg Expansion Reamer

Millersburg Reamer & Tool Co., Inc.,
Millersburg, Pa.



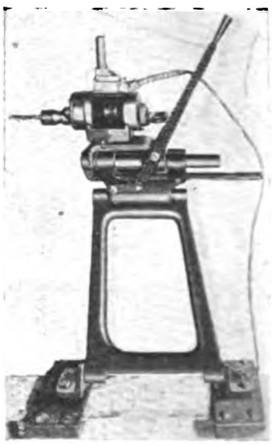
The smooth-cut expansion reamers have helical flutes which shear the metal and work well in holes with keyways or oil grooves. They are made in two types: A, which are the same length as the standard straight fluted tools, and B, with a 1½-in. pilot, which are specially adapted to automotive work. The expansion limits are as follows:

¼ to ⅝ in.	.010 in.
⅝ to 1 in.	.013 in.
1⅛ to 1½ in.	.015 in.
1⅝ to 2 in.	.017 in.
2⅛ to 2½ in.	.020 in.

The reamers are made in sizes from ¼ to 2 in. by sixteenths and from 2 to 2½ in. by eighths. The style illustrated is Style B.

Champion Utility Clipper

Champion Tool Co., Meadville, Pa.



A double-acting cutter with a capacity for cutting up to ¼-in. bolts, or thicker material if softer. The angle of the jaws throws the handles above a level plane so that the work is made accessible. It consists of two jaws, two handles and four bolts. The jaws are renewable. The length is 15¾ in. and the weight 2¼ lb.

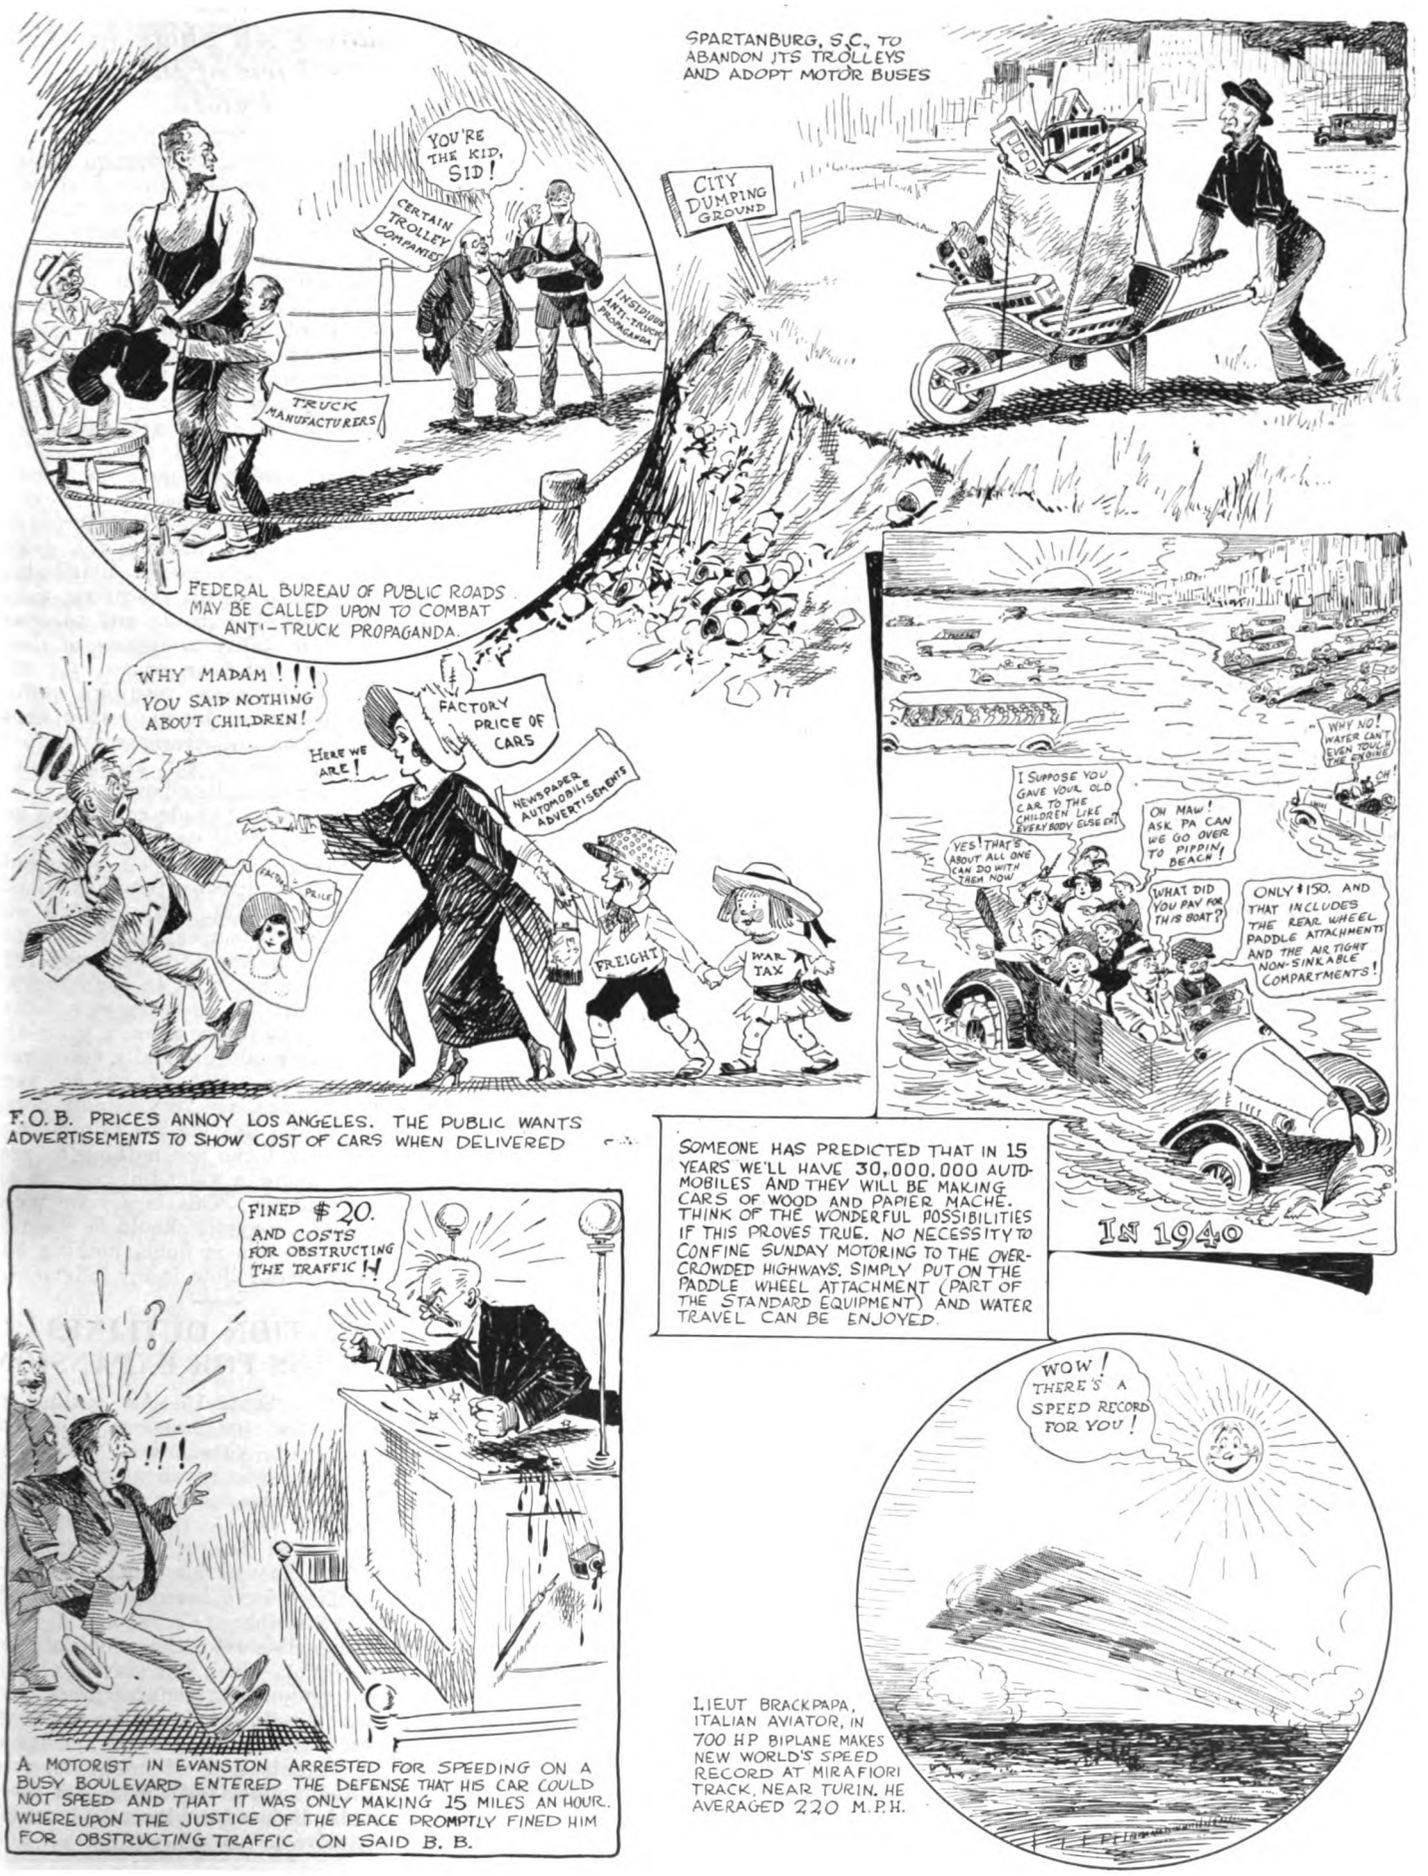
Van Dorn Radial Arm for Portable Electric Drills

Van Dorn Electrical Tool Co., Cleveland.

The scope of the arm is such that it extends over a large area and with its double joint can easily be manipulated to find the center mark of the hole to be drilled. A strong tension spring lifts the drill out of the hole. It will accommodate any size Van Dorn portable electric drill up to ⅝ in. in steel.

Beacon Illuminated Signs

Beacon Mfg. & Sales Co., Inc.,
220 West Forty-second Street, New York City.
Price, $50.



The sign is illuminated at night with electric lights on both sides and is suspended with a pipe and chain hanging. Lettering and colors optional.

AUGUST SALES GAIN, REPORT TO N. A. C. C.

Dealers Feel That Price Reductions Have Retarded Total Sales Volume

NEW YORK, Sept. 14—Dealers' reports presented at the first fall meeting of the directors of the National Automobile Chamber of Commerce indicate that August sales generally were much better than the previous month and from 50 to 100 per cent better than August of last year. This condition prevailed except in a few states which represented no one section of the country. Where percentages of increase were given, they ranged from 9 to 30 per cent.

There is a general feeling on the part of the dealers that the effect of price changes has been to stimulate sales of cars where there had been reductions but that the volume of sales as a whole has been retarded.

Light trucks are in much greater demand than heavy duty vehicles.

The used car market is reported as being very irregular with some dealers stating it to be good and others dull.

Excellent conditions in the agricultural and industrial fields promise fairly good prospects for fall trade, although, at the same time, it is reasonable to suppose that there may be some decline in output.

Standardization Data

The committee on simplified practice of the N. A. C. C. is actively engaged in the preparation of data looking toward standardization of parts, spark plugs, starters, roller bearings and brake linings. The motor truck committee states that it was getting inquiries from milk producers relative to the adoption of trucks for use in shipping. If the producers ship by trucks rather than by rail it will mean that 10,000 additional motor vehicles will be needed.

The service division has been campaigning during the summer and has distributed more than 100,000 stickers to service association members for placing on cars. In its work it has had the active co-operation of the Automotive Equipment Association with assistance given by parts and equipment manufacturers. Inquiries relative to the formation of service associations are on the increase and the division is helping materially in carrying through programs, after formation, including the furnishing of speakers, films, and the like.

The drawing of space for both New York and Chicago shows will take place at the N. A. C. C. rooms on Thursday, Oct. 5 at 2 o'clock.

Phelps Manages Barley Sales

KALAMAZOO, Sept. 11—William Elliott Phelps has been appointed general sales manager for the Barley Motor Car Co. Until Aug. 1 he served as general sales manager of the Haynes Automobile Co.

1,671,418 *VEHICLES* 8 *MONTHS OUTPUT*

NEW YORK, Sept. 15—A total of 1,671,418 cars and trucks were manufactured during the first eight months of this year compared with 1,668,550 total production for the entire year 1921, according to the National Automobile Chamber of Commerce. Production by months is as follows:

	1921	1922
January	51,919	90,481
February	65,218	120,293
March	109,758	171,390
April	156,892	219,294
May	163,667	225,167
June	177,757	289,120
July	176,067	244,355
August	178,831	*272,640

***August 1922 estimated from traffic reports.**

PACKARD ADDS TWO NEW CLOSED MODELS

DETROIT, Sept. 16—Two new closed models have been added to the single six line by the Packard Motor Car Co., a five-passenger sedan limousine at $3,325 and a five-passenger coupe at $3,350. Both are mounted on the 126 in. wheel base chassis. With these the company has six closed models in the single-six line, four on the short chassis and two on the 133 in.

The new sedan limousine is similar to the seven-passenger sedan limousine already included in the line, except for the shorter chassis. It is convertible from owner to chauffeur driven by the raising or lowering of a glass partition between the front and rear compartment. The front compartment is upholstered in black leather and the rear in gray broadcloth.

The new coupe seats three on its rear seat which extends across the width of the car. It is fitted with a large trunk containing two suit cases and a hat box. Nickel bar fenders are fastened on the rear panel of the body.

FIRST GRAY ROADSTER COMING THIS MONTH

DETROIT, Sept. 16—Gray Motor Co. will produce the first of its roadsters this month, the price being fixed at $490, the same as the phaeton model. The company is now building 60 cars daily and will increase its production to 150 daily with the completion of its second manufacturing unit which will be ready in November.

The compartment in the rear has been made extra large for commercial use and the rear deck is detachable so that a small commercial body may be attached when desired.

Gray Motors is staging an economy run from San Francisco to New York under the sanction of the A. A. A. with Capt. A. B. Walton as official observer.

BIGGER YEAR COMING IS GENERAL OPINION

Executives All Share in Optimistic View of Industry's Future

BUFFALO, Sept. 18—Several widely known automotive executives have sent messages to the annual convention of the Motor and Accessory Manufacturers' Association in session here expressing highly optimistic views of the future of the industry. Some of those already received, follow: R. H. Collins, president of the Peerless Motor Car Co. "In my opinion the automobile business is the finest business in the world. Present conditions in the trade are more than satisfactory to us and I would have no hesitancy in predicting an even greater general prosperity in the future were it not for one fatal menace which threatens the industry to-day, namely, the growing tendency of automobile distributors and dealers to place an exorbitant value on cars accepted in trade and to overestimate their ability to dispose of these cars at these fabulous prices. If this condition continues the resultant suffering must be shared by the entire trade including motor and accessory manufacturers and dealers as well as automobile manufacturers and distributors."

H. H. Franklin: "Trade conditions are good and the outlook is bright."

J. J. Cole: "Our August shipments were 30 per cent greater than any month since January, 1921. We believe our shipments will be normal for the balance of the year. We see no reason why 1923 will not exceed any year in our history."

C. W. Nash: "It appears to me that prophecies made more than a year ago that business would gradually but surely improve to the point of having very prosperous times, are very rapidly being brought about. Barring the railroad and coal situation, I can see nothing to prevent 1923 being a splendid year in all lines of business. This is a time when courage and foresight should be used to the limit. If this is done, nothing but good results can follow, in my judgment."

ASSOCIATION OUTLINES PLANS FOR EXPANSION

CHICAGO, Sept. 16—An outline of the plans for the expansion of the Association of Automotive Equipment Manufacturers was given at yesterday's meeting of the association at the Chicago Hardware Club by George Fritz who was recently elected general manager of the association. It was announced that executive offices have been opened at 926 Consumers' Building, Chicago.

Members discussed the ambitions of the association, which was started among Chicago equipment manufacturers, but now has enrollment in other sections. The association grew out of a demand for an organization of manufacturers who, without other trade elements present, could discuss problems and activities exclusive to manufacturing.

FORD CLOSES PLANT; 70,000 MEN DROPPED

No Time Set for Resuming Work—First Laying Off Since March

DETROIT, Sept. 16—The Ford Motor Co. factories closed to-day for an indefinite period. Approximately 70,000 men employed in the Ford factories at Highland Park, River Rouge and the Lincoln plant were dismissed with no word as to when work might be resumed.

No official statement has been made by the company, but recent conferences of executives would indicate that steel prices rather than coal have principally influenced the closing. Thousands of workmen in other factories making parts and materials for the Ford company will be affected. Few other factories in the Detroit district serve the Ford company alone, so that operations will be maintained in most other plants, but on a greatly reduced scale. Body, wheel, tires, parts and other accessory manufacturers for the company will make big curtailments in operation.

In going into the closed down period, the company declared that it is carrying a considerable number of orders over. Denial was made that the closing was because of business falling off appreciably, but on the contrary that orders would warrant a continuance of heavy operation. A sufficient stock of parts has been accumulated to carry over the servicing of all cars until factory operation is resumed.

In the case of the Lincoln company, orders are known to have been on hand to cover several more months of operation without new orders being received. Some material suppliers report that they had been notified that the closing was for two weeks, but others said no notice of any kind had been received.

Branch managers from all parts of the country have been in conference with the sales department for the past two weeks, the purpose of which, however, was said to be to obtain a check on the situation in all parts of the country and having no direct bearing on the closing.

Many other car factories in the district are operating on a greatly reduced schedule. This is especially true of the cars in the low price field, with cars in the middle class field also affected. Many workmen are being laid off in plants, and there is considerable unemployment in the industry for the first time since March.

BUFFALO, Sept. 16—The local assembly plant of the Ford Motor Co. closed to-day and will reopen Tuesday to dispose of a shipment of cars. It will then close again for an indefinite period.

CHICAGO, Sept. 16—The Ford assembly plant in this city will close at noon Monday.

KEARNY, N. J., Sept. 16—The Ford Motor Co. assembly plant here will not close for the present, according to notices posted to-day instructing 2800 men employed to report for duty as usual on Monday.

CAMBRIDGE, MASS., Sept. 16—Officials stated to-day that the New England assembly plant of the Ford Motor Co. here will shut down late next week. The closing will affect 500 men.

COURSE IN AUTOMOBILE MECHANICS

BERKELEY, CAL., Sept. 18—The University of California announces several courses in automobile mechanics to be offered by the extension division this year. One of the courses is for car owners, designed to teach them the mechanics of their own cars. Instruction will be given on any car owned and driven by the applicant for the course. Another course of the same kind is offered exclusively to women. Still another course is for shop mechanics who wish more advanced training, and there is a fourth for chauffeurs, truck and bus drivers and men similarly connected with the operative end of the industry. Instruction will be individual in all the classes and carried on in automobile shops.

PRICE REDUCTION MADE BY WILLYS-OVERLAND

TOLEDO, Sept. 18—The Willys-Overland Company has announced price reductions effective to-day on all models of Willys Knight and Overland cars which bring the lists down to the lowest ever quoted. The reductions on the Willys Knight cars range from $80 to $140 and on the Overland from $20 to $55. The new prices include many improvements. The revised list is as follows:

Willys Knight		
5-passenger	Old Price	New Price
Phaeton	$1,375	$1,235
Roadster	1,350	1,235
Coupe	1,875	1,795
Sedan	2,095	1,950
Chassis	1,150	1,125
7-passenger		
Phaeton	1,575	1,435
Sedan	2,295	2,195

Overland		
	Old Price	New Price
Phaeton	$550	$525
Roadster	550	525
Coupe	850	795
Sedan	895	875
Chassis	450	425

John N. Willys, president of the company, is enthusiastic over business conditions and prospects. "We are rapidly settling many of the fundamental problems which have held business back over here and conditions are improving daily," he said. "I cannot see anything but a period of increasing prosperity ahead. We are not worrying about coal. We are simply bending our energies toward getting ready for the big increase in business which we know is ahead of us."

FLINT CAR FIRST APPEARANCE SOON

Production Set to Start January 1 at Long Island City Plant

NEW YORK, Sept. 18—The first showing of Durant's new Flint car will be given simultaneously in New York and Flint, probably this week. Production is expected to be started at the plant in Flint, Mich., by Jan. 1 and at the Long Island City plant possibly at an earlier date. Operations at the latter factory will depend upon the progress that is made on refitting the former Willys Corp. plant at Elizabeth, N. J., which Durant Motors, Inc., purchased and which it will use exclusively for the production of the Star and Durant.

These two cars are now being turned out at the Long Island City plant and no effort will be made to begin production on the Flint there until they have been removed to New Jersey. Work is being pushed rapidly on equipping and making re-arrangements at the Elizabeth plant to meet the requirements for Star and Durant production with the result that removal may be effected by the middle of next month.

No schedule has been outlined for Flint car production, but the Long Island City plant has a capacity of 100 cars daily and the first five units of the plant at Flint, a capacity of 500 a day. By next spring it is thought that the two plants will be turning out from 400 to 500 cars.

The schedule for the Durant has been fixed at approximately 6,000 for September, an increase over August output.

No complete plan of distribution of the Star has yet been made. As a starter the car is being given to Durant distributors in various cities who will act in the capacity of branches of the state company. This will establish a closer contact between distributor and factory. Star Motors, Inc., the selling organization, has companies in most of the states.

5000 Sales Per Month

CHICAGO, Sept. 16—A report by R. G. Dun & Co. gives the number of new automobiles sold in Cook county, including Chicago, in the seven months ending July 31 as 28,590. It states that sales in May, June and July were about 5000 a month and that the August figure would be only slightly less.

Rickenbacker and Bride Sail

NEW YORK, Sept. 18—Major Edward V. Rickenbacker, vice-president of the Rickenbacker Motor Co., and his bride, who was formerly Mrs. Adelaide Durant, sailed for Europe on Saturday to be gone two months. While abroad, the couple will make a tour of the battlefields, and upon their return will make their home in Detroit.

A. E. A. PLANS XMAS SALES CAMPAIGN

Will Show Dealers How to Sell Automotive Christmas Gifts

CHICAGO, Sept. 16—An early start on an intensive Christmas merchandising campaign for automotive equipment and service has been decided upon by the Automotive Equipment Association, and Ray W. Sherman, director of merchandising, is preparing a series of bulletins to show dealers and garage proprietors how to get the greatest results from the undertaking.

"Buy an automotive gift for Christmas" will be the central idea of the campaign and the manufacturers and jobbers who are members of the A. E. A. will be urged to advise their dealer customers to display an attractive placard bearing these words. It is Sherman's opinion that dealers should make thorough preparation during November for this Christmas selling and be prepared to jump into it intensively the first of December. He advises a special appeal to women and says, "There is no reason why the department stores should forever be the one great mecca of the Christmas shopper."

Can Buy Shop Service

Many suggestions and ideas for the planning and execution of the Christmas selling campaign are given in Number 3 of the Sales Executive, publication of which was recently commenced by Sherman.

One notable suggestion is that shop service can be merchandised for Christmas gifts as well as articles of equipment. "A paint job, a carbon cleaning job or any job for which a price can be flat-rated beforehand can be sold as a Christmas gift," it is said. "The service gift could be a very neatly done authorization on the dealer's stationery stating that Santa Claus had ordered the dealer to do the work required and that it would be done at the convenience of the receiver of the gift. This would make the money spent for gifts useful, which is what a lot of it is not. Many a man would rather have a set of spark plugs than a handful of wild neckties."

Another suggestion is that many common replacement articles can be fitted into Christmas merchandising. For instance, a set of piston rings, brake lining, a timer, or other articles would be very acceptable to the man whose car is in need of such equipment.

A warning against stocking up with Christmas cartons is given. This is to guard against the possibility of having a lot of unsalable packages left on hand after the holiday season. It is stated that the best plan for Christmas goods seems to be to take standard merchandise and provide materials or a plan whereby the dealer can wrap the article in holiday paper and tie it with ribbon or colored cord.

The importance of Christmas decorations in the sales room is emphasized. It is advised that there should be a tree at least in every dealer's place.

TENNESSEE DEVELOPS ROAD FINANCING PLAN

NASHVILLE, TENN., Sept. 16—The Tennessee Good Roads Association has plans which, if adopted, will cause the entire automobile tax collected in that State to be put into a system of state highways. In addition they propose a two cents per gallon tax on gasoline.

Last year the automobile tax in this State amounted to $1,600,000, half of this tax was used by the highway commission for the purpose of supplementing county and federal aid. The other half was prorated to the various counties, giving them approximately $6,876.20 each.

Under the plans proposed by the Good Roads Association the entire amount will be under the direction of the State Commission. It is stated that a bond issue of $75,000,000 could be retired in 30 years by this method, without additional taxation on property or other sources of revenue.

It is estimated that bonds in this amount will build a hard surface road of permanent construction, connecting every county seat in the State; and in addition complete main trunk highways.

BUYING STIMULATED BY TRACTOR CARAVAN

Awaken Dormant Interest in Power Farming Equipment —Many Orders Taken

PORTLAND, ORE., Sept. 19—After a series of demonstrations occupying nearly a month, during which practically every city and town in central western Oregon, from the California state line to Portland, was visited, the Fordson tractor caravan and power farming demonstration has reached Portland. The demonstration is being carried out by the Oregon branch of the Ford Motor Co., the Standard Oil Co. and a number of companies handling power farming implements.

Upon its arrival here, the caravan disbanded for a few days while those in charge secured a brief rest. It will start out again, going West into the Tillamook country on the coast and will spend the month of September visiting the coast and Columbia river towns.

Holidays Provided

The caravan thus far has met unusual success, according to Manager Goodwin of the Oregon branch of the Ford Motor Co. In every town at which they stopped wide publicity was given to the demonstration, and a virtual holiday was provided. Stores and business institutions in the various towns co-operated in a splendid way, assisting in drawing in the farmers from the outlying districts. In many instances the crowds attending the demonstrations numbered several thousand people.

"Not only was the demonstration a big success in attendance and in interest shown," said Goodwin, "but it has brought splendid results in the way of actual business. Following the demonstrations efforts were always made to follow up the advantages thus attained.

The caravan, it is declared, has already ushered in a period of buying throughout the section which it has visited thus far, after a period of about two years, in which there has been practically none.

A Caravan That Is Arousing Interest in West

When a town is reached, the vehicles which are making an extensive tour of parts of Oregon, draw up in a central location and prepare for a demonstration. At the left is seen the sheet used to flash motion pictures and at the right is taking place one of the demonstrations. Unusual success has marked the venture in bringing the farmer back into the market

N. Y. MARKET GATHERS STRENGTH FOR FALL

Upward Sales Trend Following August Slowing Down Portends October Spurt

NEW YORK, Sept. 15 — Although August showed an appreciable falling off in car sales in the Metropolitan territory, according to figures based on registration issued by Sherlock and Arnold, there is every indication that the sales curve has taken another turn upward and that September will show an improvement.

The falling off could hardly be characterized as a slump, although there were notable exceptions where some makes reached a point nearly fifty per cent lower than the peak months of April, May and June. However, balancing these in the total sales were others, particularly in the higher price class, whose August sales showed a distinct improvement over July and reached points within striking distance of the boom months.

September opened slowly following the downward trend of the market during the closing days of August and each day is showing an improvement. The upward trend is expected to gather momentum in October and develop into a strong selling market, especially for closed cars, during the fall and early winter months. The closed car show, scheduled for the latter part of this month, is expected to contribute some impetus.

Deliveries Slowed Up

With but a few exceptions the railroad situation has not affected New York to the extent of actually preventing deliveries. Delivery service between the factories and dealers has been considerably slowed up, however, and some dealers already are organized to make drive aways this fall if conditions do not improve.

Unless weather conditions are particularly unfavorable the fall promises to develop a fairly active used car market.

The outlook for truck sales this fall is brighter than in many months, but up to the present time there has been no acute upward turn. September truck sales were slightly better than August on the whole and inquiries indicate a stronger demand in October and November, especially in the light delivery car field.

Tractor Interest Grows

CHICAGO, Sept. 15—Increased interest by farmers in tractors was noted by Guy H. Hall, director of the National Institute of Progressive Farming, at the Minnesota and Wisconsin State fairs from which he recently returned.

The Minnesota fair was not as largely attended this year as in the past, Hall said, but the farmers who were there showed unusual interest in the tractor and other power farming exhibits. "The amusement section was practically deserted," Hall said, "while the men and boys from the rural sections were climbing all over the tractors and other machines."

The Wisconsin fair was largely attended, and the tractor exhibit was one of the most popular, Hall said. Many orders were taken, he said.

Sergt. Alvin C. York Takes Dodge Agency

Sergt. Alvin C. York, officially declared America's greatest hero in the World War, has gone into the automobile business, having taken over the Dodge agency at Jamestown, Tenn.

SHOW BRINGS FORTH CONCEALED PROSPECTS

WILMINGTON, DEL., Sept. 16—A successful summer automobile show was staged last week here in connection with the Delaware State Fair. The exhibitors were Wilmington dealers, and nearly all of them were represented, as were also some accessory men.

The exhibitors seem to feel that the effort was worth while. Some sales were made, but the chief result was in the number of prospects secured which there seemed to be no other way of reaching. The whole state and surrounding sections of Maryland, Pennsylvania and Delaware were represented among the fair patrons, and it seemed as if nearly all took some interest in the motor show.

In addition to having cars on display, there were commercial vehicle and tractor demonstrations.

Friday was probably the best day for the motor show. On that day automobile races replaced the horse races on the track.

Moon Record Output

ST. LOUIS, Sept. 15—The Moon Motor Car Co. reports a record production of 1,018 cars for August with indications pointing toward a higher market for September. The company has under construction an extension to its plant, half of which will be used for the factory maintenance division.

INDIANAPOLIS SHOW MAKES BIG SALES

All Lines Exhibited Make Sales —Dealers Anticipate Large Fall Business

INDIANAPOLIS, Sept. 18—The State Fair Auto Show held here this week during the State Fair under the auspices of the Indianapolis Auto Trade Association proved the best business getter of all auto exhibits held since 1920. Previous selling records of fair shows were surpassed in all lines. On the third day reports of more than fifty sales were made to the show office. During the next twenty-four hours reports of twenty-seven vehicles sold were received and six of the large distributors had not turned in their reports. The end of the week was even better.

Trucks also made good. During the first morning one distributor sold two trucks. Another distributor who has had some slack times during the season reported eleven sales made during fair week. Even the makers and dealers in special truck and commercial vehicle bodies used their order pads frequently. Brisk commercial business is expected from now on through the fall.

Accessory Business Good

Accessory business was unusually good. One dealer who does more retail business than any other city firm reported that sales, both of retail and wholesale, were far ahead of those at the last fair show in number of units. Specialty men also did well and found live buyers in both the retail and wholesale departments.

Brisk business was reported in all popular lines of agricultural machinery, and some new equipment that is being introduced was sold to the surprise of the exhibitor. There was less tractor demonstration of farm work than in previous years. The tractor is at last being taken for granted here and more attention was given to the display of new equipment and tools both for agricultural and industrial work.

More Space Provided

There were 41 passenger car exhibitors, seven truck, seven showings of special bodies and 52 accessory and miscellaneous exhibits. Larger spaces for the vehicle exhibits marked the show and less crowding of spaces. This doubtless helped the sales work and the smaller crowd of fair visitors than in some previous events also acted to the same end. Those who came seemed the live, interested classes who wanted to buy.

Local distributors whose state organization have not been large in the past, signed up many dealers and found "three times as much activity in this direction" as they had expected. The well organized distributors reported brisk wholesale business but not so many additions to the country sales staffs.

TOMMY MILTON WINS KANSAS CITY RACE

Captures 300 Mile Race Using Leach Special—Roscoe Sarles Killed

KANSAS CITY, MO., Sept. 18—Tommy Milton, champion driver of the American Automobile Association and winner of the 1921 Indianapolis speed classic, driving an eight-cylinder Leach special, won the 300-mile automobile race held at Kansas City's new $500,000 speedway Sunday, Sept. 17.

Milton's time was two hours, 46 minutes, 52 seconds. Harry Hartz, driving an eight-cylinder Hartz Special, was second in the race, making the required 240 laps in two hours, 47 minutes, 50 seconds. Frank Elliott came out in third place with his eight-cylinder Leach Special, doing the 300 miles in two hours, 49 minutes, 46 seconds. Ralph Mulford was fourth, driving a Duesenberg, straight eight special. Jerry Wunderlich, also with a Duesenberg straight eight special, Jimmy Murphy driving Bennett Hill's Miller special and I. P. Fetterman were next in order.

Roscoe Sarles, relief driver for Cliff Durant, was burned to death when his car caught fire after smashing through the railing of the track. The car hurdled 40 feet and smashed to the ground. His mechanician, C. V. Pickup, was injured dangerously.

Murphy Forced Out

Jimmy Murphy was forced to leave the track early when his car threw a tire and he collided with Joe Thomas, but he took Bennett Hill's place when Hill was taken from his car in the 135 lap too ill to continue the race. Peter De Paolos Jr. Special turned turtle and caught fire, dangerously injuring Paolo and his mechanician, Tony Guletta.

Frank Wagner, the veteran, officiated as starter. A crowd of over 60,000 attended the races which were postponed a day because of a heavy rain the day before.

The speedway is the first plant ever built with steel grandstands which seat approximately 35,000. The track is one and one-fourth miles long and is oval shaped. It is said by many to be the finest board speedway ever built. There are more than 450 different degrees of pitch in the track. An average of 42 degrees was allowed on the turns. Drivers made an average speed of 110 miles an hour in the Kansas City speed classic.

Sixteen drivers started the 300-mile race but only 11 finished. Prizes amounted to $30,000, the first prize being $10,000. Drivers who entered the race were: Eddie Hearne, Bennett Hill, Peter De Paolo, Joe Thomas, R. J. Brett, J. P. Fetterman, Tommy Milton, Frank Elliott, Leon Duray, Harry Hartz, Howdy Wilcox, Ralph Mulford, Jerry Wunderlich, Allen A. Mulford, Roscoe Sarles and Jimmy Murphy.

COMBAT RAILROAD CROSSING ACCIDENTS

CHICAGO, Sept. 15—A conference of highway commissioners, railroad officials and presidents of automobile clubs in Illinois has been called by the Illinois Commerce Commission to meet at Springfield Sept. 30 to plan a campaign for the purpose of reducing the number of accidents to automobiles at railroad crossings.

Such accidents have increased rapidly, according to the commission, notwithstanding the precautionary measures taken by the railroads and highway officials in installing warning signs and bells at all dangerous crossings.

It is the purpose of the Commerce Commission, after a full hearing which will be public, to issue a general order dealing with the situation.

Moving a Town by Motor Truck

Moving a town is the latest job of a motor truck. The town is Jennings, which is being taken to Cadillac, Mich., a distance of eleven miles. To do the job the Acme Motor Truck Co. built a special trailer upon which the houses are carried bodily. The eleven mile trip is made in about four hours at a running speed of five to eight miles an hour.

IOWA REPORTS GAIN IN FARMING SECTIONS

Many Low Priced Car Sales—Closed Car Demand Increasing Steadily

SIOUX CITY, IOWA, Sept. 18—Automotive business is on the up-grade. Of the 37 lines of cars handled by the 22 dealers who went out of business in 1921 only five have been picked up, but optimism prevails among dealers and distributors as a rule.

Being fed from the farming sections of three States—Iowa, Nebraska and South Dakota—business in the automotive lines has reacted with the farmers' conditions in 1921. Some tractors are being sold which seems to indicate that the buying power of the territory has been improved.

Light cars are finding a good market, the dealers in some cases being unable to secure enough deliveries to fill their orders. Medium priced cars are a little slower, but sales in this class are increasing. Higher priced lines are moving very slowly, but are for the most part cash sales.

Sales of lower priced cars have been mostly on the instalment plan. From 60 to 75 per cent of all cars sold in this territory during 1922 have been sold this way.

Strike conditions have affected the business slightly, several dealers reporting cancellations from this cause. No dealers report any embarrassment in deliveries because of transportation difficulties.

Open cars have been in demand during the summer months, although August showed a decided increase in closed car business. Light coupes are in strong demand.

Crop conditions in the Northwest have been promising until the last few days, when reports have been received that South Dakota corn is suffering from lack of moisture. As yet there has been no reaction felt because of reports.

Big Gain in London, Ont.

LONDON, ONT., Sept. 15—The local automobile dealers are showing the biggest increase in years. By the end of the year there will be close to 5000 cars in London, and well over 8000 in the County of Middlesex. With indications of a good harvest, dealers expect the business to be maintained.

Demand for Closed Jobs

ST. LOUIS, Sept. 18—The Gardner Motor Co. reports a large demand for its new closed models, and production has been continuing at an increasing rate through the summer. Heavy shipments have been made to the East and to the Pacific Coast. The southern market is reported just beginning to become active, with indications that the automobile business throughout the South will be better this fall than for a long time.

DETROIT EXPANDING PLANT FACILITIES

Manufacturers Rush to Complete Building Programs to Increase Output

DETROIT, Sept. 18—Many millions in new buildings will be made ready for the industry in the remaining months of this year and the early spring of 1923. With the announcement by Dodge Bros., of a new eight story body and assembly building, practically every large maker in the middle class or low class field is now definitely committed to the expansion of plant facilities. Though the expansions are largely to permit of increased closed body production, they likewise mean that general production capacity will be larger.

Hupp Making Additions

Besides Dodge, the Hupp Motor Car Co. has recently announced the addition of a new manufacturing building which will give it about 50 per cent added production space. The Ford Motor Co. is contemplating the erection of assembly plants at Jacksonville, Fla., and Minneapolis in the United States, as well as in Tampico, Mexico. The Canadian plant capacity is to be doubled by 1923 through additional factory buildings, and the Manchester and Cork plants in the British Isles are being extended.

Work has just been started on a one-story addition at the Lincoln Motor Co. plant which will be 1,600 feet long and which will be used for general production. No formal statement has been made by Ford officials as to the extent Lincoln production will be increased, but the size of the building under way would indicate that Ford is beginning to put into effect plans which will place the Lincoln car on a much larger production basis.

Columbia Motors, with the acquisition of the former Saxon plant, is in a position to triple its former production. Wills Sainte Claire is adding factory space for the special painting and finishing of its cars. The Buick Motor Co., with the addition of the former Scripps-Booth plant, has doubled its former production capacity. A new body plant is being built at Flint by the Chevrolet Motor Co. which it will lease to the Fisher Body Co. for the exclusive production of Chevrolet body work.

Durant's Program Biggest

The Durant building program in the district is the largest of all. In Flint the buildings to be constructed for the Flint Motor Car Co. alone will cost approximately $1,500,000 and will cover, when complete, 37 acres of ground. In Lansing, the buildings for the Star and Durant four are nearing the point where production will begin, giving capacity for about 300 daily of the former and 150 daily of the latter.

The Gray Motor Co. has started the erection of an additional assembly building in Detroit which will give it a capacity in this district of about 200 daily. Similar assembly plants in Oakland, Cal., and Albany, N. Y., planned for operation before the season of 1923 will give a production capacity of about 100 daily in each plant. Philadelphia also has been mentioned as the site for an assembly plant which may be started this year.

There has been no expansion of truck manufacturing facilities in this se because most of the plants were built to meet war time conditions and are never built for peace time requirements to date. Truck business is showing steady gains, however, and makers are optimistic over the possibilities of putting most of their plant space into operation by the spring of 1923.

Closed Car Output High

DETROIT, Sept. 14—Reports by the Maxwell Motor Car Co. show that the closed car output is running 50 per cent of total production. From present schedules it is very likely that the company will reach its estimate of 56,000 cars as the total output for the year. The September schedule calls for 5,500 cars and the last quarter 13,500.

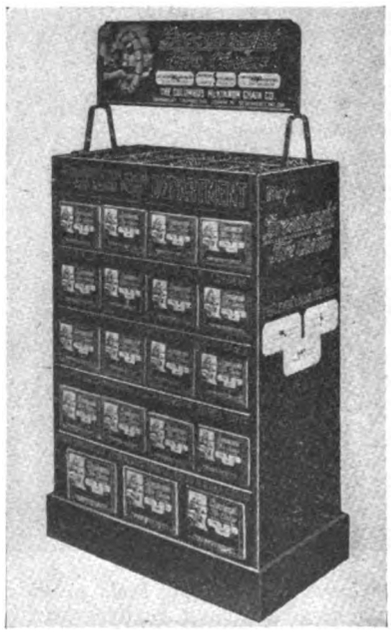
Increase School Bus Fleet

BIRMINGHAM, ALA., Sept 16—The Board of Education of Jefferson County, Ala., have found the motor bus or truck so efficient in transporting children to and from school that they are increasing their fleet. Bids have recently been requested for four new trucks for this work.

TARIFF BILL KEEPS 90 PER CENT IMPOST

House Conferees Accept Senate Amendment—Will Check Speculator's Efforts

WASHINGTON, Sept. 15—Protection for the American automotive industry is assured in the conference tariff report as submitted to the House to-day. One of the most important features of the tariff bill is the acceptance by the House conferees of the Senate amendment imposing a duty of 90 per cent foreign value upon motor vehicles, bodies, chassis, and parts exported from this country prior to Feb. 11, 1919, for use during the war. The enactment of the provision will put a check to speculators, who have bought this equipment abroad, from taking unfair advantage of American producers and dealers.



The House bill provides that if any country imposes a duty on motor vehicles or parts when imported from the United States in excess of the American levy there shall be placed an equal duty on similar articles imported from that country. This duty is, however, not to exceed 50 per cent, American value. This amendment strikes out the House provision; and the House receded from its disagreement with an amendment restoring the House provision and making certain clerical changes.

Tire Chain Display Cabinet

THE Dreadnaught chain cabinet is another merchandiser prepared by a manufacturer to provide the dealer with a means of displaying this item of equipment in a neat, attractive manner. Complete sets of chains in strong cartons are carried on the shelves of the cabinet and an assortment of spare cross chains is provided for by dividing the top into compartments. Each compartment is marked with the size and number of links in the cross chains it contains. Clamps are installed on the side of the cabinet to carry advertisements of this make of chain which appear from time to time in popular magazines.

The cabinet is furnished the dealer free on receipt of his order for 50 pairs of chains and 500 cross links. The dealer may select any assortment of sizes and parts he chooses. However, the Columbus-McKinnon Chain Co. has worked out an assortment of sizes which will enable the dealer to supply the needs of most of his customers.

Dreadnaught chains are packed in waterproof, riveted fibre cartons. These cartons are packed in crates of ten for shipment to the jobber. Only one size of chain is packed in a crate. These two features simplify handling and stock-keeping in the jobber's warerooms. The cartons are well adapted for dealer display purposes and, in addition, may be used by the buyer as a compact container for his chains in the toolbox of his car.

The Dreadnaught chain cabinet provides a neat, attractive means of displaying chains and cross links

TIRE MAKERS STILL FEEL PRICE EFFECTS

Ignorance of Production Costs Hurts Industry—General Improvement Seen

CHICAGO, Sept. 15—Tire manufacturers speaking at the monthly meeting here yesterday of the Midwest Rubber Manufacturers' Association declared that eight out of ten of the small tire manufacturers are selling tires for less than the cost of production. It was the opinion of the speakers that probably half of the eighty per cent do not know that their selling price is below the cost of production because they are not able to figure manufacturing cost.

The price situation was said to be seriously affecting the tire makers in the Midwest group, but some hope of improvement was seen in the business trend. It was pointed out that most of the manufacturers have discontinued the shipment of tires on consignment and are now requiring cash on delivery.

The tire trade is greatly hurt, it was said, by the frequent failures of tire manufacturers with the result that in the liquidation process carloads of tires are dumped on the market at a fraction of the production cost. One manufacturer went so far as to declare that there are no longer any legitimate retail tire dealers. "The 'gyps' are the only ones who can make money enough to stay in the business," he said.

It was decided to hold the November meeting of the association in St. Louis.

General Tire to Expand

AKRON, Sept. 15—Between now and the first of the year the General Tire & Rubber Co. proposes to double its capacity, which will give it a capacity of about 4500 tires a day. The expansion will cost about $200,000 and will be in the nature of machinery rather than buildings.

John N. Willys Returns

NEW YORK, Sept. 16—John N. Willys, president of the Willys-Overland Co., has returned from a two months' visit to Europe. Willys, in anticipation of stiff competition abroad because of the tariff, has planned increased production in his English plant at Manchester.

A Demonstration Stand for the Jobbers' Salesroom

The bureau of electric tools provides a substantial work bench upon which the units displayed may be demonstrated. The back piece carries an assortment of machines as well as pockets for booklets. The stands are made of oak with a wax finish. The side and front panels consist of colored slides which are removable and new slides are supplied periodically. The bureau is illustrated in the new Black & Decker book, "Products, Markets, Policies," which has been issued to the jobbing trade

INSURANCE HANDLING BY DEALERS RESENTED

Agents in New Jersey Protest—State Officials Also Complained Against

NEW YORK, Sept. 15—Northern New Jersey insurance agents are protesting against automobile dealers acting as insurance agents when selling cars to new customers, the Eastern Underwriter says, and the National Association of Insurance Agents will be asked to take some form of action at its Hot Springs convention.

So indignant are the Jerseyites that it is said they contemplate retaliation by asking their friends to buy cars in New York City rather than in their home State. It also is charged that some of the insurance companies are open to criticism in that they co-operate with the automobile dealers in this practice by accepting their insurance.

Still another charge made is that certain insurance brokers have agreements with automobile dealers whereby commissions received on the sale of a car and those received upon the insurance are divided equally.

Another alleged practice that is condemned is against direct soliciting of insurance by state officials who issue automobile licenses.

The Eastern Underwriter also is authority for the statement that "with a loss of over $500,000 to companies writing fire and theft policies on automobiles in the cities and towns of Northern New York in one year, the agencies writing this class of insurance have practically retired from the field and are not only refusing to write new business, but are cancelling old policies." It is said that 30 out of the 40 in this field have quit.

COLLECTOR EXPLAINS ASSESSMENT OF TAX

MILWAUKEE, Sept. 18—A. H. Wilkinson, collector of internal revenue at Milwaukee, has given an explanation of the section regarding assessments on automotive parts used in connection with repair and replacement work by garages and service shops to combat misunderstanding among some dealers and manufacturers. He says:

"Regarding repair work other than top and body work, a person who manufactures for sale separately parts and accessories, and who is also engaged in the repair business, will be held to be a manufacturer with respect to all such parts and accessories made and sold by him, regardless of whether used in repair work or not. A person who does not manufacture any parts or accessories for sale separately, but is engaged in doing a strictly repair business and who makes only occasionally a part needed for an immediate repair job performed by him, is not a manufacturer, and is not required to pay any tax with respect to any such parts or accessories."

SOUTH AFRICA MAKES STEADY SALES GAINS

Revival Marked by Great Increase in Use of Motor Trucks

JOHANNESBURG, S. A., Aug. 9 (*By Mail*)—Motor traders throughout South Africa complain that July was the worst month they ever experienced, but in spite of this, car sales have been good. That is difficult to understand. More actual cars—new and used—were sold in the Transvaal, Natal, Orange Free State and Cape Colony in July than in May and June, and yet the workshops were almost idle and the accessory and tire business was dead. August has already shown an improvement, and it looks as if the new car sales are going to continue.

Mines Reopening

The fact is that the results of the Revolution that took place on the Rand early this year are only making themselves felt now. A bright feature, however, is that there is less unemployment than since the strike, and gold mines that have been closed down for a considerable period are being started up again. Also there is talk of another gold reef in the Northwestern Transvaal, and it is known that several of the big mining houses are sufficiently interested to keep their experts touring around that part of the busveld where the gold belt is believed to be.

The latest car arrival is the English Austin. This has been specially built for colonial work and has met with a very favorable reception. The first Austin cars that came to S. A. after the war were not as suitable to conditions here as this later model. The standard touring job is a high grade production selling here at about the same price as the Hudson. It is powerful, has high clearance, sufficiently low gearing, and is not too heavy. Other English and Continental cars in the shape of Fiats, Vauxhalls, Talbots and Renaults have recently arrived.

Reliability Competitions

The Transvaal Automobile Club had arranged three reliability competitions (1000 miles) to take place early in August, but owing to lack of entries these had to be cancelled. Last year the T. A. C. Motor Marathon was a great success, and it is to be regretted that nothing of the sort is to be run in 1922. As a matter of fact the Transvaal Automobile Club—the largest automobile body in the Union of South Africa—has come in for considerable criticism lately. It is asserted that it is not sufficiently representative, and it is thought that some form of associate membership should be arranged.

Johannesburg, Cape Town, Durban and Pretoria—the Union's four largest cities—are all endeavoring to "put their house in order" as regards traffic and parking. Dealers here realize that better traffic means better business, and are acting accordingly. In Johannesburg there is a traffic advisory board consisting of members of the Municipality, the Police, the Transvaal Automobile Club, the Motor Traders and the South African Railways (who are large users of heavy transport). This body is now wrestling with parking problems, and as a result it is thought that owners will get into the habit of garaging their cars during the day instead of leaving them about the streets. The number of parking spaces in comparatively narrow thoroughfares right in town has been reduced, giving better facilities for improving traffic.

Motor Trucks Increasing

A great feature about traffic in Johannesburg—and in a lesser degree throughout South Africa—is the increasing use of motor trucks. The traffic is becoming thoroughly motorized. Just lately firms that have always expressed the opinion that motor transport was useless for their particular work have gone in for trucks, and in every instance this change has been successful. For instance a well-known firm of coal merchants in Johannesburg purchased a White truck, but before doing so it needed a tremendous amount of persuasion to convince them that the outlay was justified. Now they are concentrating on these trucks, and their example is being followed by others.

The Municipality of Benoni, a Reef town with a population of about 15,000 whites, has just purchased the first White motor bus chassis to come to this country.

At present they are operating motor buses built on ordinary truck chassis. There is likely to be a demand for motor buses in South Africa in the near future. In Johannesburg two or three companies are now operating from one to four buses each and competing successfully with the municipal trolley cars.

URGE LAW REQUIRING MIRRORS ON TRUCKS

WASHINGTON, Sept. 16—Accidents on the highways could be greatly decreased by the passage of uniform state laws requiring every truck to carry a mirror, and by requiring every horse drawn vehicle, as well as automobiles, to display some sort of light when using the roads at night.

This is the opinion of M. O. Eldridge, director of roads of the American Automobile Association Good Roads Board, after making a careful digest of the traffic laws of all the States of the Union. Eldridge, in a report to the Secretary of Commerce, sets forth that 13 States have laws requiring the mirror on trucks, but that very few have any regulation for horse-drawn vehicles.

SHORT MEASURE SALES OF GASOLINE FOUGHT

N. M. A. Estimates 1,000,000 Gallons Daily Loss to Motoring Public

WASHINGTON, Sept. 18—The crusade against short measure selling of gasoline inaugurated by the National Motorists' Association has been started in earnest. The first shot produced results in that of 46 warrants sworn out in Louisville by the Louisville Automobile Club against managers of filling stations, six pleaded guilty and paid the fine of $10 each that was imposed by Judge William Earl. These warrants followed a four day tour of inspection by the club in cooperation with the city inspector of weights and measures. At each station visited five gallons of gasoline were bought and it is said that there was an alleged shortage of measurement in each case.

Charges made by the National Motorists Association are that the average filching of short measure artists amounts to two pints in each five gallons, a daily loss to purchasers of 1,000,000 gallons, valued at approximately $250,000, or $90,000,000 a year. This is based on the assumption that each motorist buys two gallons of gasoline daily.

STRIKE PROVES TRUCK SHIPMENTS BEAT R. R.

CHICAGO, Sept. 16—Automobiles have been placed in operation by the Northern Jobbing Co., a wholesale grocery concern here, to make hauls to all Illinois, Wisconsin, Michigan, Indiana and Iowa towns. This move was inaugurated because of the railroad strike, and it is the opinion of the traffic managers of the firm that this will continue even after the shop men have returned to work.

Figures compiled by this house show that the average cost per mile on operations is fully fifty per cent less than rail shipments have been since the war. Light speed trucks will work on the roads for this company, as no heavy goods are handled.

Grocery dealers in towns supplied by the company were writing that certain commodities could not be found in the town at all. One town in Wisconsin complained that "not a bar of soap is to be had," and so the motor truck whizzed out with a shipment.

Great Gains by Pierce-Arrow

BUFFALO, Sept. 16—The Pierce-Arrow Motor Car Co. reports sales and shipments for last month as greater than in any previous August and three times the amount for August, 1921. The company states that it is behind in production especially of closed cars which total more than 70 per cent of the entire output.

CHANGES IN THE TRADE

George F. Reed has been appointed distributor for the Moon in McKeesport, Pa.

Lee Motors, Inc., Syracuse, has taken over the agency for Syracuse and central New York for the Oakland.

Overholt Motor Co., Greensburg, Pa., has secured the agency for Mack trucks for all of Westmoreland County.

E. G. Streett has been appointed southern representative for the **Klaxon Co.** with headquarters in Atlanta, Ga.

Herr & Co., Lancaster, Pa., has been appointed sole distributor for **Firestone** rubber products in that territory.

Queens Vehicle Corp., Jamaica, Long Island, New York, now represents the new Peerless 8 in that territory.

W. M. Renick and Blair Pyle have been appointed to distribute the Lomar shock absorber in Cleveland territory.

Edward Payton of Syracuse has been appointed sales manager of the **Birkett L. Williams Co.** of Cleveland, Franklin dealers.

Robert Strong of Fruit Hill, Ohio, has been appointed a territorial salesman for the **Peck Motor Car Co.**, Cincinnati Hupmobile dealers.

Peck & Adler, formerly of Little Falls, have been named distributors for the **Westcott Motor Car Co.** in the territory adjacent to Syracuse.

Mack Trucks, Inc., has opened a factory branch at Toledo, which will be in charge of **J. C. Smith**, formerly manager of the St. Louis branch.

Bachman Motor Car Co., Milwaukee, distributor of the Dort and Stephens, announces the appointment of S. S. Morehouse as retail sales manager in Milwaukee County.

John Nicol Co., 2210 Michigan Avenue, Chicago, formerly handling the Federal, has become distributor for the Liberty and will continue to represent the Saxon Duplex.

Brunswick-Balke-Collender Co. announces the appointment of **Fred W. Earle**, formerly of the United States Tire Co., as district representative, located in Sioux City, Iowa.

Nielsen Buick Co. of Brigham City, Utah, has filed incorporation articles. Capital will be $10,000 in $1 shares. **John Heaton** is president and **J. C. Nielsen** secretary-treasurer.

Meixell Tire Co. has been established in Atlanta by **A. C. Meixell**, who was with the Fisk company for thirteen years, for the distribution of Fisk tires in the Atlanta territory.

Kleiber Motor Truck Co. of San Francisco announces the appointment of **L. B. Stephens** as general manager of the sales and service departments of their Atlanta factory branch.

Templar Motors Co. of Cleveland has opened a Philadelphia salesroom and service station under the direction of the factory. The local concern is known as the Templar Sales Co.

Elton Motors Co., Youngstown, Ohio, has opened a sales and service station for Cadillac and Chevrolet in Salem. **E. B. Drake** will be manager with **A. D. Stewart** in charge of service.

John P. Dods, for years associated with the **Automobile Blue Book Publishing Co.**, has been appointed general manager of the Brightman Manufacturing Co., South Columbus, Ohio.

Diamond Chain & Mfg. Co. has opened an office in Cleveland in charge of H. I. Markey, who has been with the company for five years as mechanical engineer in the engineering and sales departments.

William Love, who recently handled Packards at Toledo, has become the distributor for Rickenbacker cars and Standard trucks. **H. C. Bulask** of Toledo, who has been in Cleveland with Packard, will be sales manager.

Jack Devins, formerly of the E. S. Gahagan Co., Cincinnati Studebaker distributors, has assumed the sales management of the **Lexington-Cincinnati Motors Co.**, **Jack Duval** having been promoted to general manager.

Peerless Motor Co., Cleveland, has been incorporated with a capital of $100,000, to deal in motor cars and accessories. The incorporators are **D. A. Burke, W. H. Collins, J. F. Porter, F. A. Trester** and **E. R. Cameron.**

Cookson Motor Car Co., Dayton, has been incorporated with a capital of $25,000, to deal in motor cars and accessories. The incorporators are **C. R. Cookson, R. H. Brundrett, Roland C. Landis, A. F. Hullinger** and **Ralph P. Dixon.**

Homeier-Whorley Motor Co., Akron, has been incorporated with a capital of $25,000, to deal in motor cars and accessories. The incorporators are **A. L. Homeier, Merton M. Whorley, Pierce A. Snyder, Z. M. Whorley** and **C. H. Stahl.**

James J. Flynn, for six years with the Chevrolet Motor Co. and in charge of Cincinnati zone as sales manager for three years, is leaving to accept a position with **Durant Motors, Inc.**, with headquarters at Elizabeth, N. J.

Columbus United Tire Co., which has been operating two stores in Columbus and a chain in central Ohio, has opened a third local store. The new store will be under the management of R. N. Pharis. J. E. Leacy is general manager of the company.

Arch McBrair is the first Elgin dealer to be appointed for Cincinnati suburbs and other points in the western part of Hamilton County by the **Dornette Motor Car Co.**, Cincinnati, which has just assumed distribution of the Elgin in the Cincinnati territory.

John D. Harrison, assistant manager of the Willys-Overland branch in Atlanta, formerly assistant manager of the Toledo, Ohio, branch, has resigned his position and accepted an important post in the sales department of **Barrett & Co.** of New York City.

R. M. Dobson has been appointed general manager of the new Milwaukee County sales and service division established by the **International Harvester Co.** The I. H. C. maintains one of its largest tractor works in Milwaukee, these shops also producing numerous other lines.

R. S. Beane, who formerly operated in the south for the Sparks-Withington Co., has been made southern district manager for the **Hinckley-Myers Co.**, Jackson, Mich., which manufactures automobile tools and equipment. Beane has been connected with the industry since 1907.

C. S. Johnson, for many years with the Peerless Motor Car Co. of New York City, the General Motors, and from 1910 to 1914 an attache of the American Embassy at Berlin, has been appointed District Sales Manager for the new Peerless car in New York, Connecticut and New Jersey.

Harry E. Smith of Columbus, Ohio, has purchased at receiver's sale a stock of parts and accessories from the United Auto Stores Co., and will head the **Economy Auto Supply Co.** in this city. All of the stores of the United Auto Accessories Co. have been closed and the stocks moved to Columbus.

C. G. Atwood, formerly distributor of Overland cars in northwestern Ohio and of late years head of the battery sales for Prest-o-Lite in Toledo, has joined the Cadillac-Toledo Co. as a salesman. He is also head of the Toledo Auto Shows Co., which will have charge of the annual spring show.

S. M. Williams, who for several years was in charge of the work of the Federal Highway Council in Washington, D. C., and who joined the Autocar Co., Ardmore, Pa., when the Federal Highway Council was abandoned, has been appointed manager of the New York City branch of the Autocar company.

D. C. McCready is the new district manager of the **B. F. Goodrich Rubber Co.** in the Cincinnati territory. He comes to Cincinnati from Washington, where he was district manager for the organization for a number of years. For four years he was in the Goodrich sales department at the factory.

A. F. Bassett has been appointed assistant sales manager of the motor bearings division of the **Hyatt Roller Bearing Co.** Bassett is a graduate of Yale Sheffield school and has been connected with the sales and engineering divisions of the company. Recently he has been sales engineer for the Detroit territory.

Walter F. Wright, southern division manager of the Willys-Overland Co., has taken over the Cleveland branch of Willys-Overland and will operate it under his own name as a distributor. Wright has been with Willys-Overland for ten years, serving alternately as factory representative, special representative, branch manager, division manager and assistant to the vice-president in charge of sales.

Nash Sales Co., Milwaukee, which on Sept. 1 took over the retail franchise on the Nash line in Milwaukee County and vicinity, has also been appointed distributor and local retail dealer of the **LaFayette**, the wholesale territory comprising all of Wisconsin. Alfred Reeke, who has gone to Cleveland, Ohio, as distributor of the Nash and LaFayette, formerly handled the retail franchise of both lines.

J. M. Dixon and **N. E. Oliver** have been appointed directors of the **Quaker City Rubber Co.** Dixon is president of the Tobacco Products Co. Oliver, who has been identified with the rubber industry for 25 years, was formerly associated as a director with the Diamond Rubber Co. and later became general manager of the B. F. Goodrich Rubber Co. of New York, where he had charge of practically all of the eastern states.

Accessories Oversold

CHICAGO, Sept. 15—After the greatest summer season in its history, the automobile accessory business in Chicago is getting back to its accustomed stride. Dealers in accessories everywhere report sales in the past six months as beyond every expectation and preparation. Spotlights, bumpers, stoplights and seat covers have been oversold in a number of places, and every dealer expects that the winter will be good.

ASSOCIATION ACTIVITIES

Springfield to Hold Show

SPRINGFIELD, MASS., Sept. 15—At a meeting of the Springfield Automotive Dealers Association a proposal to have a closed car show in the Municipal Auditorium three days the latter part of October was favorably considered, with probability of a special meeting being called to make arrangements for the event.

A resolution was adopted providing for the abolition of the practice of extending free use of cars to various fraternal and social organizations soliciting such aid from association members, except in such cases as the board of directors may decide that the occasion merit such courtesies. The same rule will apply to advertising solicited among the members by organizations conducting fairs and the like. Exceptions will be made, however, in the case of charities and aid to war veterans.

Cincinnati Holds Outing

CINCINNATI, Sept. 16 — The monthly meeting and outing of the Cincinnati Automotive Trades Association, held early this month at a river resort near the Queen City, was an unqualified success.

At the business meeting Manager John J. Behle reported that the sale of space for the association's big automotive and radio show to be held in November has exceeded every expectation of the executive committe. The success of the enterprise is now assured, sufficient space already having been let to guarantee the expenses.

The business meeting was preceded by a stake dinner prepared under personal direction of William Pister, a member of the association; and the afternoon was spent in various forms of recreation.

As a result of the outing, several new members were added to the association.

Georgia Head Resigns

ATLANTA, Sept. 15—Volney Williams of Savannah, Ga., president of the Georgia Automotive Dealers Association, advises that the organization will temporarily operate minus the services of a secretary, due to the resignation of Percy A. Megahee. Williams will act in the capacity of both president and secretary until a later state-wide meeting of the body, at which time Megahee's successor will be chosen. The Georgia Motor Bus and Transportation Association, of which Megahee was also secretary, will also name his successor at its next state-wide meeting.

ASSOCIATION GIVES FREE LEGAL SERVICE

CHICAGO, Sept. 16—The value of the free legal service recently instituted by the Chicago Automobile Trade Association is shown by the fact that the day following the announcement of this service 25 members telephoned to ask questions. Many of these questions involved large sums of money. Among them were such as these:

"Can we hold the car of a party who owes us?" "Would you advise filing suit against this man who did thus or so?" "What is the state law regarding this or that?" "An officer came in and demanded that we pay another $35 license on our service station. What shall we do?"

The manner of conducting the legal department makes it of value to all members, even those retaining their own attorneys. It does not attempt to handle cases in court, but the fact that it devotes its attention exclusively to the automobile trade enables it to answer immediately many pressing questions which a lawyer in general practice might have to study for a considerable time.

Service Association Meets

NEW YORK, Sept. 14 — The Automotive Service Association of New York held its first fall meeting at the Automobile Club of America on Sept. 7. Two motion pictures were shown, one subject being the care and adjustment of the Borg & Beck clutch and the other the construction of the modern automobile, a film made by the Department of Agriculture and the Studebaker Corp. Fifty service managers attended and the meeting was conducted by the new general manager, John R. Eustis. The organization will hold its annual clambake and shore dinner on Long Island Sept. 24.

Brooklyn Holds Clam Bake

BROOKLYN, N. Y., Sept. 15—The Automotive Service Association of Brooklyn held its annual outing and clambake on Aug. 27 outside of Freeport, L. I. Over one hundred attended, and in addition to the regular program of sports the organization brought along its own jazz band, made up of service manager members.

Plan February Show

CHARLOTTE, N. C., Sept. 18—The Charlotte Automotive Trade Association announces that the Carolina automobile show will be held in Charlotte some time during the month of February. No specific date for the show had been set, it was stated, but definite decision made by the Charlotte automobile interests that the show would be held.

Syracuse Annual Meeting

SYRACUSE, Sept. 18—The annual meeting of the Automobile Dealers Association will be held here Oct. 1, at the S. A. M. Club. Officers of the local association will be elected.

San Diego.....January

BUSINESS CONDITIONS IMPROVING, SAYS RICE

DETROIT, Sept. 14—Following a convention of distributors and dealers this week, at which fall and winter sales were discussed, President H. H. Rice of Cadillac Motor Car Co. has declared that factory operation will be continued through the winter at full force. He said:

"I believe that general business, in spite of a few disturbances on the surface is decidedly on the up-grade. I not only believe that people will be able to get coal this winter, but also manufacturing concerns will get enough coal to operate.

"Strikes in any essential line of business are bound to be settled after a short duration. These strikes are too vital to last long. The crops this year are good, and I believe the farmers will obtain good prices for them. Factories that have been shut down are gradually opening."

Lynn McNaughton, general sales manager of the company, said business in the past twelve months has exceeded the business of any similar period, both in number of cars and in total value.

Anti-Theft Law Enforced

DETROIT, Sept. 18—The Secretary of State has cancelled permission to use an affidavit in lieu of a certificate of title in handling a used car in trade. The permission is withdrawn after 14 months grace.

The sale of a new car does not have to be titled in order to be sold, but the purchaser must immediately obtain a title or be guilty of a violation of the law which carries heavy penalties.

Stress is laid on the execution of this so-called Condon Law, which is a measure to reduce the theft of motor vehicles.

COUNTY FAIRS HELP AUTOMOBILE DEALERS

BLOOMINGTON, ILL., Sept. 18—The county fair season, now nearing an end, has been very advantageous for the automotive dealers. They have placed exhibits extensively, due to bountiful crops, higher prices for all kinds of farm products and the general tendency of the farmer to spend money again.

Dealers in cars, trucks and tractors have been quick to note prosperous conditions and the display of automotive equipment has been proportionately large. Now that farmers are buying tractors once more, dealers are opening up their selling campaign after a long period of quiet.

Big plowing matches in Kane County, known as the Wheatland and Big Rock, gave the tractor men an opportunity to talk their machines, and most of the manufacturers had a corps of men on hand looking up prospects.

FISHER BODY PLANS ASSEMBLING PLANTS

DETROIT, Sept. 15—Fred J. Fisher, president of the Fisher Body Corp. has announced an expansion program involving plants at six points in the United States, aggregating more than 1,500,000 sq. ft. of additional floor space, which will be devoted exclusively to the manufacture of closed bodies for Chevrolet cars.

The corporation through a newly organized subsidiary, the Fisher Body St. Louis Co., has taken over the General Motors Buick plant at St. Louis and will devote it exclusively to the manufacture of Chevrolet closed bodies.

The corporation recently acquired the O. J. Beaudette Company at Pontiac, for the production of open bodies for the Chevrolet.

As the greater part of the Cleveland plant is devoted to Chevrolet production this will make a total of three plants with a joint floor area of over 3,000,000 sq. ft.

Six New Plants Under Way

In addition to these three manufacturing plants, six new plants are in process of construction for assembling, painting and trimming Chevrolet bodies.

The assembling plants will be operated in part by the Fisher Body Ohio Co. of Cleveland and in part by the Fisher Body St. Louis Co. of St. Louis.

Chandler Value Explains Chandler Sales

The New Metropolitan Sedan, at $2295, is typical of the smart, exclusive style and advanced design of the new Chandler Six.

A Price That Wins The Public

PRICE is always interesting—but the motor buying public has learned to look behind the price to find the value.

The unusual sales success of the new Chandler Six is due to *extraordinary value at a price within the reach of the many.*

Chandler anticipated the demand for new style and smart appearance as well as superb performance in the popular price field.

Its success is reflected in the prosperity of Chandler dealers.

Ten models—each a distinctive value of its type—meet every transportation need and personal preference.

Your territory may not be permanently closed. Inquire.

DAN MORGAN INCREASES HIS PROFITS

Dan says:

"Your business success depends on securing the greatest possible return on the money you have invested. The way you can make more money each day is to make more sales. To make more sales, you must suggest dependable auto equipment to every car owner who comes into your store—CHAMPION DEPENDABLE SPARK PLUGS, for instance.

"You can make more money—NOW—with CHAMPION Dependable Spark Plugs than you ever did before, as CHAMPIONS are the best adapted to getting the most benefit from the 'ASK 'EM TO BUY' campaign, as they are the most universally used equipment. I want you to know that CHAMPION co-operation has succeeded in speeding up profits for me in auto equipment, and what I have done you can do.

"You will be surprised to find how many more sales can easily be made by putting this idea to work—whole-heartedly—in your business.

"Ask 'em to buy a full *set* of Champions so that they may get 'Full Service from their Engine.'"

BLACK & DECKER
8 *inch* ELECTRIC GRINDER *Price* $90

Complete with pedestal $108

THE EIGHT INCH ELECTRIC GRINDER is designed and built by the manufacturers of the well-known PORTABLE ELECTRIC DRILLS

"With the Pistol Grip and Trigger Switch"

It is a heavy duty machine which has been designed to meet an insistent demand for a Black & Decker grinder **for the larger Service Stations and Repair Shops.**

The Black & Decker 5-Inch Portable Electric Grinder with quick detachable base for bench work and the Black & Decker 6-Inch Electric Bench Grinder have proven so popular that we have been urged to expand our grinder line so that Black & Decker grinders to suit any requirement may be available.

You will find this 8-Inch Electric Grinder just as husky and serviceable as it looks. *Write for literature.*

SPECIAL NOTE--Our new booklet, "666 USES FOR PORTABLE ELECTRIC DRILLS IN AUTOMOTIVE REPAIR SHOPS" is now ready and will be supplied on request.

SPECIFICATIONS

One-half horsepower.

Size of wheels
8 in. diameter by ½ in face
No. load speed....3600 R. P. M.
Net weight .....75 lbs.

Complete with two 8 inch grinding wheels, 2 wheel guards, 2 adjustable tool rests, toggle switch in base and 5 feet of duplex electric cable fitted with attachment plug.

Price for 110 volts.....$90.00
Price for 220 volts $94.00
Price for Pedestal..$18.00 Extra

Be sure to see the new "Shop Profits" film produced by the Automotive Equipment Association.

Lower Priced Closed Cars Feature of New York Show

Soft-top and Kindred Models Attract Attention to Broadening Closed Car Market—Twelve Manufacturers Show Seventeen Models New to the Trade—Trend Toward Two Door Type

By NEAL G. ADAIR and J. HOWARD PILE

NEW YORK, Sept. 25.

THE closed car this week is having its first formal showing as everybody's car—the automobile of to-day and to-morrow. The New York Closed Car Show is the first to exhibit low-priced closed cars, with soft tops and other cost-reducing features, in numbers almost as great as the conventional, higher-priced types. It is a closed car show, not a salon. Luxurious models are there, but they do not stand alone, as in closed car shows of former years, serving notice that the person who would step up from his open car must pay a big price differential. Alongside the "regulation" sedans and coupes in many of the exhibits are brand new or recent models of the new school of design which is rapidly narrowing the gap between closed and open car prices.

Public Interested

The show visitor cannot walk the length of a single aisle without getting the impression that the industry has been putting itself earnestly to the task of bringing closed cars within the reach of a far greater number of pocketbooks than in former years. The trade, of course, has realized this development, and so has the public to some extent, but the metropolitan Closed Car Show has offered the first opportunity to give it the emphasis that so important a movement deserves. First-night visitors last Saturday were heard on all sides making the comment that "I had no idea they were getting these closed car prices down so low." Inquiries of salesmen on the opening night gave promise of wide interest throughout the week in the lower priced jobs.

The show, the first ever held by the New York dealers in the Grand Central Palace, where the national show has been held for several years, presents the closed car products of 54 manufacturers. There are also a number of truck and automotive equipment exhibits.

In the show are 16 new body models brought out by 11 manufacturers. Several of these bring their makers for the first time into the growing group of producers who are offering the public virtually three classes of cars, open, lower priced closed and higher priced closed.

It's a Dealers' Show

The New York dealers have done a creditable piece of work in the presentation of the show. The decorations, while dignified and attractive, are in keeping with the educational idea of the show—to suggest the closed car not merely as a winter car, but as the ultimate automobile of the average American family or business man looking for utility and comfort.

There are some dealers in the show who are exhibiting merely because their competitors are. They can't get closed cars enough to fill orders and don't expect to catch up before midwinter. They don't need the sales promotion assistance that the show furnishes, it is true; but haven't they overlooked the value of the exposition, particularly at this stage of the development of lower priced closed cars, as a means of educating the public to the closed car idea and so laying the foundations for a more stable, year-round business in future years? On the floor of this New York show are several hundred specimens of the closed car builders' highest art, shown with facilities for ease of comparison of make with make, model with model. The Grand Central Palace for a whole week is talking closed cars; so are the newspapers, and so are thousands of people who are flocking to the show. Isn't this worth something to the trade in the New York territory, even to distributors and branch managers who, just at this moment, are oversold on closed cars? Wouldn't a similar educational effort be worth something to the trade in other large centers? For a year or two, at least, while the industry is building up the closed car idea, aren't all well promoted, well managed closed car shows of value to the industry as a whole?

Before we leave the show as a show to talk about new cars exhibited, a word should be said about the attendance. The first night did not bring out the throngs of sightseers that go to the mid-winter shows. It was a serious, plainly interested crowd that drifted through the aisles, admired the cars, climbed in and out of some of them and, in contrast to some show crowds, indicated an active buying interest by rather freely giving names and addresses to salesmen. The sales staffs were noticeably alert, showing the effects of training in preparation for the contest which offers money prizes every night for the best examples of salesmanship observed by sleuths working incognito for the managing committee.

Special Days a Feature

The show is getting a good deal of attention in the newspapers through holding special days, with special features arranged for each. Monday was Family Day, and it was announced that all families of eight or more presenting themselves at the doors would be admitted free of charge. The record family, which came from a suburban town, consisted of a husband and wife and 21 children, all of which, they claimed, were their own. Families of eight and more were numerous. The

Digitized by Google

newspaper men made quite a bit of this feature, and the show got a good deal of publicity of the kind that cannot be bought.

Tuesday was set aside as Actors' Day, when a committee of stage people were to take part in selling cars in some of the exhibits.

Another publicity-commanding feature in connection with the show is a contest among high and grammar school art students for the best paintings suggesting ideas for construction and decoration of automobile bodies. Well known artists were selected as judges, and their prominence contributed to interest in the competition and so in the show.

The New Models

The show presents the current closed models of nearly all types of the 54 manufacturers represented by their metropolitan agencies. Especially noticeable, in addition to the soft top models, were cars showing a trend of some manufacturers toward two-door sedans and coupes with the wider windows made possible by this arrangement. Novelties included a Pierce-Arrow limousine with two windshield cleaners and a Dodge Brothers town car, a special job, with the sunshade built integral with the top. A number of exhibitors had special body and paint jobs, the latter decorating the show with frequent bright spots of color.

Two new Chandler bodies at the show are the limousine at $2,895 and the town car, $2,895. Both these models are fitted with what has become generally known as "sport" equipment, including aluminum steps with individual fenders and splashers, drum type headlamps and so on. Sliding glass panels divide the driving compartment from the rear compartment and a locking device prevents shifting of the panels. The limousine carries five passengers in the rear and is equipped with all the usual fittings of a car of this class and also has a dictaphone for communication with the driver.

Nash Changes Chassis

The Nash chassis has been changed slightly and a new four-door, 5-passenger sedan is added, this being $2,040. Among the chassis changes are the addition of five cross braces in the frame, which still further prevent frame weaving. Although these braces were added primarily to prevent flexing of closed bodies, the open bodies are fitted to the same chassis. Another feature of the closed jobs is the copper guttering of the windshield sides to prevent leakage of water.

A new Oldsmobile body is the brougham at $1,425. This is a two-door body with a seating capacity of five and uses the tilting front seat. A feature of the design is the rear carrying compartment which is reached from the outside. A cover, curved to conform to the body lines, is hinged at the top and can be locked. A strut holds it open when access is desired. The tools are all buttoned to a board which drops from this cover and beneath this is space for a considerable amount of luggage.

Two new bodies are added to the Reo line, these being of steel and comprising a sedan at $1,885 and a coupe at $1,835. They are to be known as model C and will be produced along with the aluminum bodied coupe and sedan which have been in production for some time at a higher price. The price of the aluminum bodies remains as before at $2,355 and $2,435. The new steel bodies are being built in the Reo shops and an option of either wood or disk wheels is offered.

A new five-passenger, two-door sedan is added to the Stephens line, this being priced at $2,195. The tilting front seat arrangement is used and the equipment throughout is of the sport class, including drum type headlamps, a trunk with double suitcase in the rear and aluminum bars on the rear of the body.

The new Oakland sedan and coupe, both Fisher built, made their debut at the show. The sedan, a four-door job, is priced at $1,445 and the coupe, which has a five-passenger seating arrangement with tilting front seat, is $1,545. The coupe, which is $100 higher in price than the four-door body has considerable additional equipment, including a platform for a trunk, aluminum back rails, etc. Equipment on both the models is of the sport character.

The Packard line is augmented by the addition of a coupe and a five-passenger limousine-sedan to the single six chassis. The coupe has a seating arrangement for four and is priced at $3,175. All window and door glasses lower flush with the sills. The limousine-sedan is $3,275.

A new seven-passenger sedan, to be known as Model 27, fills out the Willys-Knight line. The price of this job is $2,195. The chassis is identical with the regular model.

A two-door brougham is added to the Lexington body selections. The rear seat is quite wide and deep and has an unusually high back. The two front seats are of chair type, the right being of the tilting type. There is a trunk at the rear which contains two removable suitcases.

Cole has made several changes in its closed bodies, including the addition of a cowl ventilator. Due to the ventilation secured by this means the lower part of the windshield has been made fixed. The closed bodies have three-quarter running boards with an extra wheel mounted just forward of the end of the running board. The wheel equipment, consisting of six wheels, is optional, wood, wire or disk. The price of the two-door sedan is $3,685.

New Liberty and Maxwell

A new cabriolet to be known as the Commander is added to the Liberty closed models. The price is $1,695. The dash is finished in walnut and a walnut molding is used on the interior. The interior finish is gray with leather upholstery. The exterior finish is maroon. The equipment includes clock, cigar lighter, windshield cleaner and cowl ventilator.

A new Maxwell body is the club coupé at $985. It is featured by quarter windows which drop full length in place of the solid, fabric-covered quarter sections which are generally used in connection with two-passenger coupés.

The seating space is arranged the same as the Maxwell roadster. The ventilation features have been given particular attention by the arrangement of the quarter windows and by the special type of windshield which has been adopted for all the Maxwell closed cars. Both sections of it swing outward, the upper half being hinged from the top and the lower from the bottom. To keep the windshield weather and water tight the entire assembly is set around a rabbet.

Give Employees a Future, Says This Detroit Tire Dealer

Making Old Hands Stockholders Reduces Labor Turnover, Gets Men Personally Interested in Firm's Success and Puts New Life into Business

A PLAN for promoting contentment and conscientious service among employees has been given a three years' trial in the stores and shop of Henderson Tire Co., Detroit, and is pronounced a success.

Henderson Tire Co. operates three retail tire and accessories stores and a large vulcanizing shop in Detroit. The employees usually number twelve or more, depending somewhat on the season. Every one of the employees who has been with this company for one year or more is a stockholder in the corporation. Harry H. Henderson, founder of the business, is president, and holds the majority of the stock, while J. C. Heeran, manager of one of the stores, is vice-president, and John H. Arbogast, a salesman in one of the stores, is secretary-treasurer.

The corporation was not formed for the purpose of furnishing capital with which to establish the business. The business had been established for seven years before this plan was introduced.

"WE incorporated and submitted the stockholding plan," Henderson explains, "for the one purpose of giving the men a future; something to encourage them to remain with the business and strive to build it up.

"A good man must have something to look forward to if he is to remain a good man. On a straight salary basis he has no future other than his wages and the rather doubtful prospect of promotion to some minor position. He is restless, and you can't blame him. What incentive has he for being contented and interested in his work?

"The tire business is seasonal. During slack times a dealer can get all the men he wants at reasonable wages, but as soon as the rush season comes on men become scare and others begin to look around for good men. The men have no reason for holding onto their jobs other than their wages, so if some other fellow offers them a little more they quit and go to him. The result is that the labor turnover is abnormally high and the men are nearly always restless and discontented.

"We can say what we please about what a salesman or workman *should* do, but the fact is that he is working for somebody else, and even the best of men are not very likely to serve another as well as they would serve themselves. The one who works for himself has a vital interest in everything that in any way affects the general welfare of the business, while the one who works for somebody else is more than likely to be indifferent. If the business prospers, well and good; if it fails to prosper, that is the boss' lookout. He himself can get another job to-morrow.

"After studying several plans carefully, I decided that the only satisfactory solution of the problem was to make the men partners in the business. That would give them a definite and a permanent incentive to stick with their jobs and to take advantage of every opportunity to build up their own future by building up the business."

Employees Share in Profits

Three years ago Henderson got his men together and put his cards on the table. He told them what he wanted to do and why he wanted to do it. He opened his books and showed the growth of the business and the profits he was making. Neither was sensational, but both were normal and showed a healthy growth during the seven years he had been in business. There was every reason to believe that the business would continue to grow. He was not offering them a share in the proposition because he needed additional capital, but because he wanted them to share with him and help him grow. He wanted each man to feel that he was in business for himself, that his future was assured, and that the more he accomplished the more he would prosper.

He planned to incorporate with a capital stock of $25,000. Each man who had been in the employ of the company for one year or longer would be given an opportunity to buy stock. No shares would be offered to outsiders, and in case any employee wished to leave or to sell his stock, he would give the company first offer. As the men were hardly expected to have sufficient cash on hand to pay for the stock, a partial-payment plan was provided.

It was an open, frank offer of an honest proposition that was bound to pay good dividends and the men readily agreed to accept it. The eight men who were eligible to buy stock each took $1,000 worth of shares and the bookkeeper took $500.

That was three years ago. Every one of the eight men who bought stock at that time is still with the company and is now enjoying good returns on his investment. The stock is paid for and the men are contented.

All employees receive straight salaries that compare favorably with those paid for similar work in other establishments. Dividends are declared annually.

Not only has labor turnover been almost entirely eliminated, but the capital turnover has been greatly stimulated and initiative and co-operation on the part of the men has been developed to a remarkable degree.

During the business boom the corporation turned its entire capital twelve times. This year, with an investment of approximately $25,000, it is expected that the sales and service will total more than $200,000.

There is a meeting of the stockholders about once a month, at which time each stockholder is free to offer any suggestions he may think will be helpful. The men get together in the evening around a table, with plenty of appetizing food before them, and discuss matters pertaining to the general welfare in an informal way. The president of course presides, but the discussions take the form of a friendly conversation rather than of a formal business meeting.

Men Show Interest

The men offer suggestions for stunts, competitions, service, and business-building plans generally. One man suggested, for example, that they place a boy in uniform in front of each of the three stores to give free air and water to each car that came up. The suggestion was adopted and is said to have proved very popular with the trade, although it had to be discontinued later on account of the shortage of labor. Another suggested a competition among the stores, the employees of the store making the greatest sales increase for the month to be given a dinner by those of the other

Digitized by Google

A Tire Store Front with a Selling Appeal

This is one of the stores in which Henderson's plan of giving his employees a future to work for is being worked out successfully. Through participation in the profits of the business he has the hearty support of all of his employees. Notice the inviting appearance, the facilities for promptly and efficiently taking care of customers. Wouldn't a motorist just naturally expect satisfactory service if he drove up to a place like this? The story that begins on the opposite page tells some interesting facts about Henderson's tire business in Detroit

two stores. This also was adopted, and the competition is now a permanent one.

Sales experts and other authorities are sometimes brought in to give talks at these meetings. The men appreciate any assistance of the kind and they immediately try out such suggestions as seem to them to be applicable to the business. They are continually on the alert for anything that will promote the common prosperity of the group.

In the Vulcanizing Shop

In the vulcanizing shop, said to be the largest in the city, the men have not only discarded a lot of cheap, obsolete equipment, but have in several instances invented equipment of their own. One of the men, for instance, devised an equalizing pressure tank that insures every cure and that has proved almost invaluable. Some one else thought of the idea of making matrices of all tread designs of non-skid tires. Now when an owner has his tire vulcanized in this shop he gets exactly the same tread. He also gets the same stock and the same colors, so that one would have to observe closely to discover that the tire had ever been vulcanized. The vulcanizers have also done much to standardize their work and bring their efficiency up to the highest point.

The men are settled. They see their future definitely established in the future of the business. They know that their positions are secure and that the harder they work, mentally or physically, the more they will prosper. They feel safe in buying homes, marrying wives, and looking forward to years of contentment and prosperity. Patrons have declared that they are the happiest, most alert, and most agreeable employees that have ever served them.

They are now pooling a large share of their dividends with the expectation of opening a fourth store next spring. They are using a rather extensive advertising campaign which is expected to result in greatly increased business.

They emphasize service and insist that they sell mileage rather than tires. The volume of their business enables them to buy all tires in carload lots, thus getting them at jobbers' prices. Accessories are also bought in large quantities.

Asked what suggestions he would offer other dealers who might want to introduce the plan, Henderson said:

"Nothing other than to warn them to be perfectly honest and frank with the men. Don't try to hide anything, and don't try to get the best of the bargain. The purpose of the plan is to promote permanent relations that will assure prosperity for all.

Henderson entered the tire and vulcanizing business in Detroit in Aug., 1912, with a capital of about $400. He rented a little, ramshackle shop out Michigan Avenue, put most of his capital in cheap vulcanizing equipment, and employed one man. He "ate snowballs," as he expresses it, during his first winter in business. Since that time the business has grown steadily. He opened a second store in 1918 and a third one in 1920, and plans to open a fourth in 1923.

Could You Have a "Day," Too

AN effective advertising idea was carried out on Saturday, Sept. 2, by Rue Motor Co. of Bloomington, Ill., Ford dealer. To stimulate business, which has been quiet since the railway strike, it was decided to ask the merchants of the city to co-operate for a Ford day in which every owner of a car of that type be invited to attend a barbecue. The business men willingly responded and gave away number tickets during the week preceding with every sale of fifty cents. The holder of the winning number was presented with a new Ford car. In addition, there were fifty other prizes given by the dealer and other merchants, these going to the Ford owner who came from the most distant point; the Ford owner with the oldest car; the Ford owner with the largest family, etc. There was a large response, and the event was voted a great success by the promoters. H. Dale Rue, president of the Rue company, gave a dinner to all of the motor car dealers of Bloomington one week prior to the event and invited all of them to take part and procure what advantage they could of the presence of this army of Ford owners. He believed that in this great number of visitors there would be many prospects for the higher priced cars, and the Ford day might be of value to all of the dealers, and he hoped that each would find some profit in the assemblage. This exhibition of brotherly spirit was appreciated by the dealers, and all agreed to do what they could to make the day a great success.

A feature was a parade of Ford cars. The finale was a program of athletic sports and the awarding of the prizes. The success of the event led to the decision to make Ford day an annual event in Bloomington. All of the retail merchants profited by the event, and there was a great army of purchasers in from the rural districts.

Our City Thoroughfares—Shall They Be Highways or Garages?

A Consideration of the Parking Problem, Showing Causes of Congestion and Means of Relieving It

By HERBERT S. SWAN

THE parking question has become, within the last few years, one of the most aggravated traffic problems. Cars must be parked, and parked conveniently to the destination of the people using them, but where to park them except in the streets where they deprive other vehicles of the facility of using the thoroughfares is a problem which no city has solved satisfactorily.

Whether a particular space in the roadway shall be occupied by a standing or by a moving vehicle is not the question. Nor is it a question of whether a given vehicle shall be allowed to stand or be forced to move. It is much broader than either of these alternatives, for in the more acute cases it squarely presents the issue whether standing vehicles shall be permitted to drive moving vehicles entirely off the streets.

A vehicle has as much right to stop as it has to move but its right to stand in the streets is not equal to its right to circulate. The purpose of a street is to serve as a highway, not as a storage yard. To permit vehicles to stand in the streets as long as they might choose results, where there is a considerable amount of traffic, in barricading the streets to all traffic. To make parking spaces of streets none too wide to care for circulating traffic must inevitably result in diverting traffic to other streets where it can move more freely.

The studies made by the City Plan Commission of Paterson, N. J., on the subject of parking should be of particular interest to other cities.

The maximum number of cars parking in the business district of Paterson at one time during the day is ordinarily between 12 and 1 p. m., when sometimes there are as high as 700 cars. Many cars are parked in the streets the entire day. On secondary streets this is of minor importance, but when cars park on Main Street for five and six hours the consequences are too serious to ignore.

Main Street is *the* retail street and dependent as no other downtown street for its business upon the volume of traffic. Anything that detracts from Main Street's accessibility to the buying public is a direct stab at its business prestige; anything that increases the number of people frequenting the street tends to enhance its potential opportunities for business.

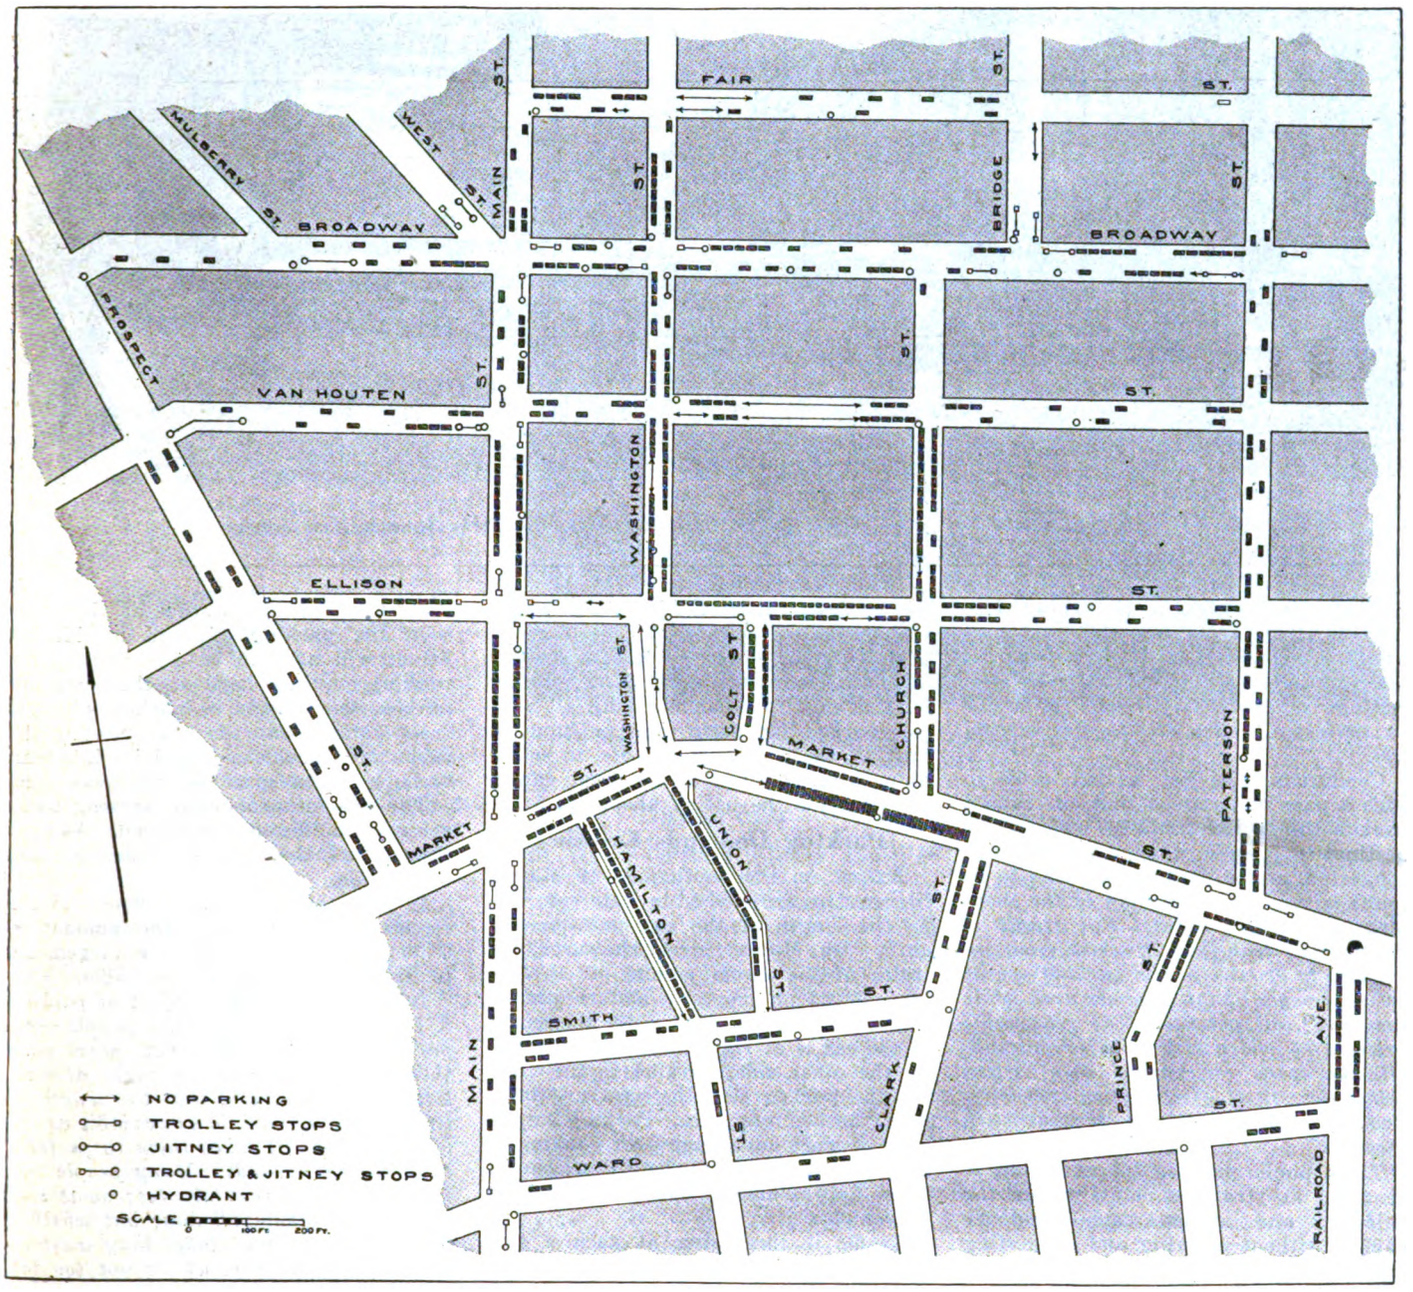
Out of the 235 cars parked on a single block of Main Street during the ten hours from 8 a. m. to 6 p. m. on a June day, ten cars stood at the curb for periods varying from over two hours to six hours and five minutes. The total parked car hours for the 235 cars was 130 hours and 45 minutes; that for the ten cars parked more than two hours, 33 hours and 27 minutes. The average parked time for all cars was 33 minutes per car. Cars parked over two hours, though they constituted only 4.2 per cent of the total cars parked in the block, consumed 28.7 per cent of the total vehicle hours parked by all the cars.

More than half of the machines parked were parked for less than 15 minutes. Seven-tenths were parked for less than half an hour. Only one machine in seven parked longer than one hour. Yet the machines parked more than one hour consumed 55 per cent of the total time parked by all the machines.

At its busiest point Main Street passes an average of 2.25 vehicles per minute per traffic unit of roadway width during the maximum traffic hour. With a double track trolley in the center, its roadway width, if free of all obstructions at the curb, readily passes one traffic unit on either side of the car tracks, but with vehicles parked at the side, all traffic is forced onto the tracks.

Every machine parked for an hour elbows 135 vehicles out of their alignment, but the annoyance suffered by traffic exceeds the embarrassment to the machines hourly thrown upon the trolley tracks by parked cars. One-half of the roadway width, and that the most effective half so far as ordinary vehicular traffic is concerned, is completely paralyzed, so that traffic requiring two roadway units for its free movement is forced into one where it must fall into an agonizing goose-step behind trolleys, which, through a series of jerks and starts sometimes manage to cover only two or three miles an hour.

The combined result of these different factors operating together is that the traffic along Main Street often backs up



Is the Parking Problem Retarding Car Sales in Your City?

THE story beginning on this page was written for Motor World by Herbert S. Swan, a consulting engineer and city planner with offices in New York. It treats of the parking problem in general and illustrates points by stating facts developed in a study of traffic conditions extending over many weeks in a New Jersey city of slightly more than 125,000.

How many people in your city would buy a car, or another car, if it was easier to drive into the office or shopping center? How far can you go with parking restrictions without driving people to give up their cars for trolleys and buses? What can be accomplished by half-hour street parking restrictions, with supplementary free parking space provided by the city? Where does the individual motorist's convenience clash with the convenience of the general motoring public?

These and other questions are answered in this story by a man who makes a business of studying traffic conditions and solving traffic problems. The story may show you how you can help the public authorities overcome traffic difficulties which discourage motoring and cause motor car sales resistance in your town.

Digitized by Google

Parked cars in the downtown district of Paterson, N. J., take up more roadway space in some streets than do moving cars. Note the congestion of parked cars on the busiest streets while the streets immediately to one side are comparatively unused

and fills the street, not only to the first, but even the second and third cross street to the rear.

Viewed solely from the interests of moving traffic, all parking should be prohibited on Main Street. Such a rule would, however, appear to be needlessly drastic at the present time. It would unquestionably increase the traffic capacity of Main Street. But in depriving all vehicles of the right to stand at the curbs, even for short periods of time, it would prove a serious blow to retail business.

The real parking problem on Main Street is how to confine the parking privilege to shoppers while excluding non-shoppers. How to allow those who are especially convenienced by parking on Main Street to park there while prohibiting those who are not, is an object which can probably be best achieved by limiting the parking privilege on Main Street.

A one-half hour limit on Main Street, with longer or no time limits on the other streets, would at one stroke remedy one of the worst abuses of the parking privilege on this street—it would put an end to half day and all day parking. Limiting the parking privileges on Main Street to thirty minutes would almost quadruple the number of cars able to park on the street.

A large part of the downtown street congestion in Paterson is due to machines cruising around in search of a place to park. Every day many people wishing to stop on Main Street are forced to park their cars several blocks away because the space that should be theirs is monopolized for hours at a time by the cars of non-shoppers. In some cases these cars are owned by shop keepers who are so thoughtless as not to realize that by parking in front of their premises they barricade their stores to prospective customers.

The distance an owner may reasonably be expected to walk to his destination after parking his car varies more or less in the same ratio as the time it takes to perform his errand. If his errand is quickly performed, he will wish to park immediately in front of the premises; if his errand is a long one, he will still, of course, wish to park in front of the premises, but where this is impossible, he may be induced to park at a proportionately greater distance. This distance in a city like Paterson does not at the outside limit much exceed a quarter of a mile, or the equiva-

Digitized by Google

Utilization of a street intersection for parking purposes, Longacre Square, New York

lent of a five-minute walk. If a parking space, either in the street or elsewhere, is not available within a five minute walk of one's destination, the advantage of proceeding thence in a car as against a trolley or jitney is largely lost.

Conditions have not, as yet, come to such a pass in Paterson that one cannot park within a five minutes' walk of his destination. Even when traffic is most congested, ample parking space is to be found within that time limit of the shopping and office center. *But traffic is growing so fast that it seems wise for the city to acquire public parking spaces on the fringes of the business area while they are still obtainable at reasonable prices. To widen streets to provide additional space for parked cars is unthinkable. It is entirely too expensive. Too buy exclusive parking spaces is much cheaper.*

These public parking spaces should be acquired at strategic points where the half-day and all-day cars could be parked without entering and congesting the business district. In other words, they should be parked immediately outside of the downtown area. The amount of land acquired should be determined with a view to accommodating all vehicles parked for more than an hour, so that all the downtown streets, in so far as parking is permitted on them, can be reserved for the use of shoppers.

Parking Demands Growing

Except on the south side of Market Street, cars are ranked in Paterson, that is, the length of the car parallels the curb. On Market street, however, the width of the street admits of cars being parked on one side and ranked on the other; that is, on one side the length of the car is at right angles to the curb, on the other side, parallel to the curb. On the parked side the cars are invariably backed into place. Parking has the very distinct advantage over ranking in that the same street length accommodates approximately double the number of vehicles.

Traffic is increasing at such a rate that it is only a question of time how soon the parking of cars on Market Street will have to be discontinued for ranking, but as long as the cars are parked, they should be parked with the front rather than the rear next to the curb. It is much easier to drive into than to back into a space between two cars.

The present prohibited parking zones are very indifferently enforced. And yet these zones should be extended as soon as possible.

In some cases, the narrowness of the streets, in other cases, the amount of trolley traffic makes these enlargements to the prohibited zones desirable.

In approaching the subject of parking it is well to remember that people must park their cars; that they must park them as conveniently to their destination as possible; and that the length of time they may park is as variable as the length of time it takes them to perform their several errands. Many people will wish to park a few minutes; some several hours; others all day; but whether the time is short or long, they must be enabled to park somewhere not too far from their destination.

It is not to be assumed, however, that everybody has a right to park wherever he chooses or for as long as he pleased. When the public is embarrassed more than the individual is convenienced, then the privilege must be curtailed. On some streets, it may have to be limited to a short period; on others entirely prohibited. As the population and business in a community increase, its parking regulations will have to be revised—the parking time limits reduced, and the prohibited zones enlarged, until finally in a large portion of the downtown business area, cars be allowed to stop merely for a sufficient time to pick up and discharge passengers.

Meeting the Demand

When that time arrives, parking spaces must be provided off the public streets. To a degree the need may be met by commercial garages, private parking spaces or perhaps by department stores and other large owners of delivery

A prohibited parking zone, Paterson, N. J., but the cars don't know it

Digitized by Google

trucks placing their private garages at the service of their customers. Although these efforts are all very laudatory and in some instances appreciably help to fill the need, they do not fill the whole need.

Many persons cannot afford to store their cars in commercial garages, even though they pay only one fee per day for the privilege. Others, able to pay a single fee per day, are in and out of their shops and offices so many times a day that, were they to have to pay a fee each time they withdrew their car, the cost would amount to a very pretty penny each year.

The real solution is public provision of free parking space, as it is needed, and of regulation of street parking so that, as far as possible, the convenience of individual car owners is served without serious inconvenience to the general car operating public.

What Kind of "Parkers" Cause Most Congestion in Your Streets?

(This investigation in Paterson, commented on in this story, developed definite statistical information of value in studying a parking problem. Particularly interesting are the tables below, showing how the parked hours are divided among short and long-time parkers and giving some examples of "parking hogs.")

MR. SWAN is preparing another article for Motor World which will deal with the fundamentals of traffic control. Still another story in prospect for Motor World readers will tell about a picturesque and practical highway construction and traffic control plan being worked out for the rural highways of a western State. Traffic articles, carrying interest and practical information for automotive men, will appear in Motor World throughout the fall and winter.

Selling a Car to a Chronic Prospect

LEE STANCLIFF, a railroad engineer, had been termed a "chronic prospect," as he had been looking over different makes for three years and seemed unable to make up his mind.

After many demonstrations favorably received by himself and wife he still insisted he was afraid to buy because friends had advised him not to.

I asked Stancliff to let me analyze the objections of his friends with the proviso that if I could overcome them he was to give me a deposit and if I could not I would trouble him no more. He agreed.

"Well," I asked, "who was the first to advise you?" He replied, "Jumbo Williams, a locomotive engineer, warned me against a ———— on the ground the car is complicated and rides hard." The explanation was simple: A deal which Williams had up was stopped because the prospect had a poor reputation for paying his debts and I suppose he was angry. "You are right, Jumbo is poor pay," replied Stancliff.

Now for the next party. Stancliff informed me Mrs. Struble, wife of the constable, said: "Don't buy a ————." "That is queer," I remarked, "as the Strubles know little about a ———— and are good friends of my employer, but I am going to learn why she tried to queer my sale."

Before Stancliff could protest, I was across the street and asked Mrs. Struble about it. She declared, "I did not knock the ————, as I think it is a good car, but I wanted Mr. Stancliff to buy the make we drive." At my request she telephoned Stancliff what she told me.

Returning to Stancliff, I asked for the next. He answered, "Barnett, the garageman, a good mechanic warned me not to buy because he was working on the rear of those cars all the time."

I expressed my doubt, that Barnett, who runs a small shop, had ever seen the new ————, with full floating axles. I asked Barnett on the telephone, "Can you tell me what kind of a rear end the ———— has?" He replied, "A three-quarter floating axle and —— bearings." "Just a minute," I said "will you please repeat that?" I handed the receiver to Stancliff, who quickly realized Barnett knew little about it.

Replying to my question Stancliff said he could not think of any more names. "Were the objections of others strong enough to overcome what you have seen for yourself?" I asked; "No, they are not," was the answer, and he paid the deposit.—J. J. JACOBS, Sacramento, Cal.

Newspapers Furnish Accessory Sales Tips for Small Town Dealer

Direct Mail Follow Up of New Car Purchasers Brings Results —How Ask 'Em to Buy Salesmanship Built a Successful Business

"ONE way that helps us sell a good many articles of automotive equipment and spare tires," says I. C. Keinard, of Keinard Bros., accessory dealer in Phoenixville, a 12,000 town in Pennsylvania, "is through reading our Phoenixville daily paper through carefully every morning for hints. You see our paper is filled with 'small town' gossip, and whenever a car dealer, or his salesman sells a car, he rushes down to the local newspaper office, or telephones, telling of his sale, and this is run as an item of news. Then I quickly mail a personally addressed and typed letter to the new customer, offering what we have suitable to equip his new car.

"Very likely this particular method would not be applicable to an automotive equipment business in a large city, or any place where the local newspapers do not make news items of car sales, but it suits our purpose admirably. The letter has a personal note and, coming right after the customer has bought a car, it strikes home.

"For some reason, car dealers hereabouts have not seemed to think about selling the customer a quantity of goods with which to properly equip his car. They seem much pleased to have made a sale and let it go at that. Sometimes they let the customer get away without even buying a spare tire. Of course that is where we profit.

"In the letter which we send, suggesting extra equipment, *we usually tuck in a leaflet or so, advertising something either new, or especially suitable* for that customer's car."

In spite of a hard downpour or rain, customers kept entering the store. Between sales, the manager of the accessories department, Frank Supplee, contrived to say:

"We have always 'asked 'em to buy.' This has been the store's plan ever since it started. Nobody ever stops at our gasoline pump, in front, or enters the store and comes to this department without having some buying suggestion made to him other than the purpose for which he came. That's the only kind of salesmanship that counts.

"Anybody can hand out goods that are called for. There isn't much actual service in that sort of thing. What we aim to do is to supplement the customer's ideas, to suggest something that he may need and hasn't thought of, or to remind him of some need that, for the moment, he may have forgotten. This is the sort of thing a customer feels like thanking the salesman for. It may save him a lot of trouble and another trip. In any event a purchase made under such conditions is helpful to him.

"In fact, the store has been asking people to buy ever since the days of the old 'one-lunger' type of automobile. The house sold accessories then and it went on the principle that the customer couldn't always think of everything and there are always times when a good suggestion about a purchase of equipment would be welcomed. It is a policy that has paid from the start. Undoubtedly, there are many stores that need to have the value of the policy pointed out to them, but much of the success of this department has been due to salesmanship of this kind.

"When filling cars at the pump we have a good opportunity to make a cursory examination of each car and we note whether it is without a spare tire, or whether it needs a stoplight, or anything else. Then we call attention, diplomatically, to the deficiency and ask the owner if he wants the article. If the equipment can be attached easily, we do that for him."

How Keinard Bros. Do It

ASK 'em to buy whenever customers stop in front for gasoline, or come inside the store.

—

Read the local paper carefully for "news" items of car sales.

—

Follow these up with personal letters and envelope inserts addressed to those who have bought cars.

—

Watch all cars for deficient equipment or lack of spare parts or proper tires.

—

Maintain carefully selected stock, displaying some in showcases and in windows changed frequently enough to arouse interest.

The store, which is a story and a half high, but deep, has good display windows, in one of which there is usually a display of tires, in addition to automotive equipment. There are also show windows for the half-story, which contain attractive displays.

Inside, the stock is arranged neatly and in an attractive manner. There are large display cases filled with equipment and there is an adequate reserve on shelves and in bins behind the counters. The firm is careful not to overstock and yet it carries a quantity sufficient to care for all immediate and some prospective customers. The offices are in the rear of the store and on the mezzanine. The sporting goods department has proved a good "feeder" to the automotive equipment end, as the "outdoors" man and woman usually have a leaning toward motoring, anyway.

Study and hard and intelligent work have overcome for the Keinard brothers such obstacles as have been met in their path. The salesmen usually have to ask callers who inquire for either of the brothers to state their business, as, unless it is important, the Keinards are not apt to see callers personally when they are engaged in office work. This is a little unusual for proprietors in the smaller towns and boroughs of Pennsylvania, but is owing to no lack of affability, as the brothers are particularly courteous.

"I have found," said I. C. Keinard, "that the man who starts in the automobile accessory business with a moderate amount of capital, say $2,000, is not nearly so apt to succeed as the man who has a few hundred dollars.

"Why? Because the man with a little capital usually wants to make a very good appearance at the start. Ordinarily, he wants nice appointments about his store and office—nice counters and show cases to begin with, a fine lighting system and many other refinements that cost money. The man who starts in with little else besides a determination to win out, has to go easy on these things at first because of necessity and for the same reason has to work hard every minute, with grim determination.

"Attention to details, hard work and salesmanship will count for the automotive equipment man who is earnest in his desire to win out."

Bought But Not Sold

By NEAL G. ADAIR

"WE'VE sold Judge Hitchcock!" Tommy Trumbull and his announcement burst simultaneously into the office of C. J. Reilly, who had distributed Sennetts so long and copiously about the Callawassa territory that many people called them "Reilly's cars." Nearly everybody in the Reilly organization, from sales manager Trumbull down to Georgie Roper, the junior salesman, had tried year after year to land Judge Hitchcock, wealthy and popular citizen and veteran motorist, but until now he had resisted entrance into the Reilly family of owners.

"Good boy!" Reilly exclaimed. "How did you do it?"

"Why worry about that?" Trumbull retorted. "The Judge knows everybody, goes everywhere and always goes in his car—and now he'll go in a Sennett. That'll help some, won't it?"

"Sure it'll help some," Reilly agreed, "if—."

"If what?" Trumbull demanded with a bit of impatience.

"If he says a good word for the Sennett wherever he goes," the distributor finished.

"But he'll be driving one—and actions make a bigger noise than conversation."

"Usually," Reilly conceded, "unless the conversation is of a particular kind that I have in mind."

"Meaning?" Trumbull prompted.

"Meaning—Tommy, what did you allow the Judge for his old car?" Reilly asked in a sudden shift of his questioning.

"An even thousand," said Tommy.

"And it's worth—."

"We'll easily get $700," Trumbull interrupted, "and if Judge Hitchcock in a Sennett sedan isn't worth three hundred as a year round advertisement I'll—I'll—."

Trumbull hesitated for lack of words strong enough to complete his sentence but his chief shook his head in apparent disappointment.

"Tommy," he said, "I thought we were all through buying that sort of advertising."

"But Judge Hitchcock—," Trumbull began.

"—is a more or less ordinary mortal with a head and body and two arms and two legs; sort of bow legs, at that," Reilly added whimsically.

"But think of his influence; think what he'll be saying all around town about the Sennett," the sales manager persisted.

"Even if he said it—all that you hope he will—I don't believe it's worth degenerating into that kind of trading," Reilly said, "and—and—he's just as likely to say something that wouldn't suit us quite as well."

"What could he say that wouldn't help us?" Trumbull wanted to know. "We know the Sennett is good and the Judge will have to say something about it and—"

"Now we're getting to the point," Reilly exclaimed. "We know the Sennett is good—sure. But does the Judge? Why hasn't he bought from us before? Why did he buy this time? Did you sell him the Sennett or buy his old car?"

"But he's got a Sennett, hasn't he? Doesn't that answer all the questions?"

"Hardly," Reilly replied, "and now that we've got into this thing, Tommy, let's go all the way in. Maybe the Judge really wanted a Sennett—in which case you pulled a fine boner to make him a present of three hundred perfectly good dollars, but there's nothing to indicate that he wanted it more than any other car in our price class. And if he has just bought 'another car' will his talk about town do us any particular good; in fact, may it not do us some harm?"

"I'm skidding; this is too slippery for me," Trumbull protested.

"All right, let's forget about Judge Hitchcock. Maybe he'll say all the nice things we hope he'll say about the Sennett—and help us get back some of our three hundred. Let's forget the Judge and talk about this over-allowance business in trading used cars. I'll admit we don't overstep often—and I give you credit for holding the salesmen to our policy, Tommy—but when we do what's likely to happen? We're after a prospect who owns a car. If we go after him the way our policy tells us to we sell him a Sennett. When we get all through and he wants a Sennett we talk with him fairly but firmly about the worth of his old car. If we are on the job we get it at market value. If we pay too much one of two things has happened; either he's a better talker than we are or we haven't sold him the Sennett.

"Now suppose we yield a hundred or two or three, whatever it may be, and close the deal. What is the thought uppermost in the mind of this buyer? Just this, that he has been pretty shrewd and has got a fine price for his old car. And his new car—well it's a new car, that's all, and just as likely as not he'll tell his friends that he didn't intend to get a Sennett, he had his mind set on another car, but we made him such a tempting offer for the old crock that he couldn't afford not to take it."

"But Judge Hitchcock—," Trumbull interjected.

"Forget Judge Hitchcock," said Reilly. We got through with him somewhere back in the year one. What we are talking about was using every possible means of making our owners boosters for our car and our house. Our service helps a lot there, of course, but we've got to get our owners started right and they are started all wrong if they get an impression that our car isn't worth as much as we advertise it for. How can they be blamed for getting that impression if we cut the price on the new car by raising the price on the old one?

"Even for the moment forgetting our loss, which we surely can't afford to forget for more than a moment, here's one thing, Tommy, that the boys here and the dealers out in the territory should understand thoroughly: We've only half done the job when we get a man to buy a car; the real achievement is to steer the transaction so that he buys the car because he wants it. Then the car is—."

"Sold—not just bought; I get you," Tommy finished and Reilly nodded.

Questions

Everywhere people turn they are reading advertisements of closed cars. Have you a sedan or coupe on your salesroom floor? Have you a closed demonstrator?

Every automobile price reduction, or at least every run of them, reduces the value of used cars in dealers' hands. Do you have a minimum for used car stocks and hold to it?

What are the most popular fall touring roads in your territory? Do you have signs on them, telling what your business is and how motorists can reach you?

Editorial Notes

Jones from Missouri

JONES from Missouri Wants to Know About the New Jersey $40,000,000 Road Bond Issue—that is the way the Good Roads Association of New Jersey introduces a little book that promotes an issue to come before the voters of the Garden State this fall. The book tells its story in questions and answers. It begins like this: Question: What's this 40 million dollar bond issue everyone is talking about? Answer: It's the pay-as-you-use plan to finance the completion of New Jersey's State highway system by 1927. Q. Won't the present pay-as-you-go plan based on the one mill per dollar tax do that? A. No. In the first place the present plan is a pay-as-you-go plan, but we haven't the money to see it through. This policy for State highway construction was all right for the problem as it stood in 1917, but it won't do for the vastly greater problem that faces us today. Then the book goes on with interesting questions and answers for eight little pages, showing how the lesser cost of upkeep of better roads will offset the interest charges on the financing of the new, and when it's all over "Jones" says he's convinced there is no other way of getting a State highway system built in five years.

The book offers a suggestion for good roads associations in other States looking for a popular method of promoting their plans. It is published in Newark by the Good Roads Association of New Jersey.

Used Car Values and New Car Sales

USED car co-operative movements among dealers which are in force or springing up in all parts of the country, are efforts to establish market values for this class of merchandise. They may be called something else, but that is what they are. There are market quotations for many classes of merchandise. They are known to buyers and sellers and they take price out of the conversations of salesmen and prospects. Used cars have varying values, according to their condition and the local market, but their prices should not be subject so largely to the obstinacy of the seller or the gullibility of the buyer as they are now.

The Chicago Used Car Market Report, issued by the Chicago Automobile Trade Association, gives average used car market values nationally and by sections and is of value to dealers as a guide to fair allowances. Its use is recommended by some secretaries of local used car bureaus, who declare that the Chicago report is valuable as a supplement to the local report. But it is the local report, issued weekly in many cities by co-operating dealers, that tells the prices used cars are bringing in the local territory, thus furnishing the dealer a guide by which he can give the owner a reasonable price for his used car and still avoid a loss on the trade. The local report establishes known market values for various makes and models of used cars. It could be adopted with profit by an association or group of dealers in any community large enough to warrant the slight clerical expense involved.

A local market report which dealers actually use as a guide to allowances serves virtually the same purpose as a maximum allowance list. It used to be thought that operation of such a plan would put a damper on new car sales. It hasn't in Boston because the dealers are paying what cars are actually worth. What more can owners ask, and if they do ask more, for a time, can't they be persuaded out of an unreasonable attitude by constructive educational publicity regarding the reasonableness of the allowances? That is what happened in Boston and it has happened in other cities where dealers have co-operated in name as well as in fact to establish market values.

"Dynamic" Fred Caley

HONOR has been paid an automotive man, well known to the trade throughout the country, in the issuance of a little book entitled, "He's Dynamic," which is called, "A short story of a real man and a live club" and which describes the activities of Fred H. Caley as secretary of the Cleveland Automobile Club. Caley has been known to the trade for many years through his former connection as secretary of the Cleveland Automobile Manufacturers' and Dealers' Association. He recently retired from dealer activity to devote all his time to the secretaryship of the club and to the executive secretaryship of the National Association of Motorists, recently formed by local organizations which have seceded from the American Automobile Association.

The book states Caley's motto as secretary of the Cleveland Automobile Club as follows: "Good roads, better streets and better conditions for the man who owns and drives a car!" It is hard to think of a better slogan for any automobile club, and a dealer association might do much worse than devote some of its energies to accomplishing the reforms advocated by Caley.

Some dealers make extra profits "dolling up" better class used cars with extra equipment and accessories. Do you? These dealers say their customers are glad to pay the additional cost of cars that "look like the money." Are yours? How can you tell till you try?

Must the Trade Have Longer Discounts?

It Must, or Reduce Selling Expenses, Says Dealer Who Points Out That Selling Costs Are Going Higher Instead of Lower—What Do You Think?

A DEALER in the Far West—not a big distributor, but a typical small city dealer in two lines of cars with the average retail discount to work on—sat down a few days ago and wrote a letter to Motor World. Before he mailed it he asked several of his competitors to read the letter. They approved of its contents as telling the truth of the present situation in the trade, as they saw it. Motor World prints the letter on this page, with the thought that it may bring out constructive suggestions from other readers regarding this perplexing problem of the trade—the high cost of doing business with the bearing that used car trading has upon it.

EDITOR Motor World: A nationally known figure in the automobile world remarked recently that the romance of the automobile business was gone.

Perhaps it is.

But what is more important, the financial responsibility back of the retailing of automobiles is going. As proof of this statement, it is necessary to talk with men of business capacity only a few minutes before they are almost certain to remark, "The retailing of automobiles is not only unprofitable, but it is hazardous as well."

This is a serious situation that is developing, because the automobile business is in no sense of the word a "piker" business. Large sums of money are required to handle even a limited automobile account, and money in quantities is never attracted into anything without the inducement of a satisfactory profit.

Inasmuch as the retailing of motor cars was at one time so amply financed, why has this change come about? Mainly for the reason that very few dealers in the United States are making a satisfactory profit, regardless of their managerial ability, the lines handled or the volume of business done. From the standpoint of profit, dealers are up against a stone wall and do not know what to do.

Manifestly the problem has but two aspects, lower costs of doing business or increased discounts, or perhaps both. There are those who claim that discounts are sufficient for the reason that dealers at one time made money by selling a quantity of cars and that intensive selling will bring the same result again if overhead costs are reduced.

Let us examine business costs for a moment. Waiving those cases where elaborate establishments and extravagant business policies have been indulged, we have three factors in sales to-day which formerly did not exist, viz., stronger competition, more conservatism on the part of buyers, and more old cars with a weaker second hand market.

To meet stronger competition, it is necessary to have salesmen of greater ability. To get them to work harder, their morale must be bolstered with special inducements, because to-day only maximum effort will close sales.

Then, again, because prospective buyers are being solicited harder they become harder and harder to sell. This makes it necessary for the salesman to make many additional visits to the prospect, all of which cuts down his productive capacity, increases his selling overhead, and runs up the cost of each sale.

Finally, the used car adds one more burden of expense. Now the gist of used car discussion during the past few months has simmered down to this: "Buy 'em Right,' and Sell 'em at a Profit." That sounds simple—if it can be done. But except in a few outstanding cases it is not being done although there are a lot of wideawake go-getters throughout the country who have been doing their best along that line. The fact is that merchandise which is bought *competitively* is almost never sold at a profit. No experienced merchant will dispute this contention because the truth of it has been proved again and again.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

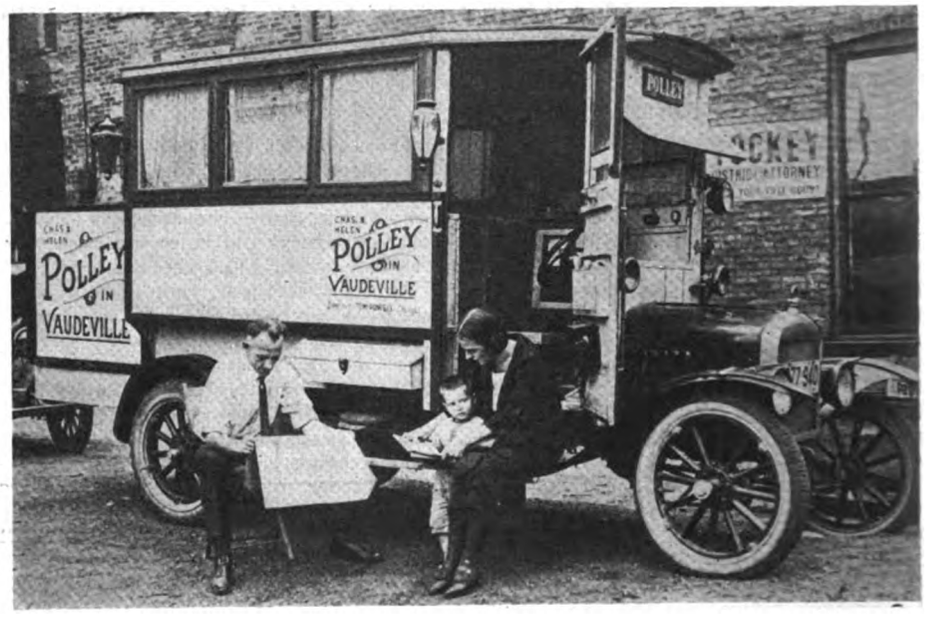
The Problem of Increasing Costs

The question then arises, how are we to handle a sales situation involving constantly increasing costs and show a profit unless discounts are increased? Sure enough, how are we to do it?

The answer is that it is not being done and furthermore, the dealer organization of the country, even in the best lines, is slowly disintegrating. The most desirable salesmen are quitting the field for more lucrative lines of endeavor and financial men are giving automobile dealers the go-bye. These things are actually taking place. Another six months will find the situation still more acute than at present.

Dealers who desire to fight the battle through have a man-sized job ahead. In the first place it is necessary to cut all overhead costs, including sales overhead, to the basis of potential motor car demand. The only buyer who typifies this potential demand is he who can be persuaded to purchase an automobile at a profit to the dealer on terms that will never necessitate excessive cost of collection or repossession.

Must Eliminate the Used Car



To my mind the used car must be eliminated from the new car sale. In no other way can the prospect with an old car be forced to keep his rightful place in the transaction, viz., that of purchaser of new merchandise only. Whenever a salesman attempts to sell a new car and the sale is a competitive one, the prospect who owns an old car will invariably force concessions that rob the transaction of all profit for the dealer.

In smaller cities where a used car department cannot be maintained as a well defined unit of the organization with a man in charge who has authority to make all appraisals, divorce of the old car from the new car sale is very difficult. Probbably the small dealer has no alternative at the present time but to refuse to handle any used cars at all. At least this plan has the advantage of ridding his organization of an overhead expense which is not compensated for by profits gained.

Inasmuch as factory executives concede that dealers who sell from 25 to 50 cars per year are responsible for marketing a major portion of the factory output, it seems strange that no one of them is willing to pay this important individual a living wage for his services, but on the other hand, after he has invested his own money, compel him to work for nothing and board himself. What kind of treatment is this for such an industry as ours to mete out to one branch of its organization, a branch which has been directly responsible for millions and millions of dollars of profit returned to factory owners and executives? Is it any wonder that the small dealer is entirely willing to turn his thankless and profitless task over to someone who desires no compensation but glory?—*Western Dealer.*

Convenience a Consideration in Filling Station Design

Should Be Easy for Driver to Get to and from Pumps— Accessory and Battery Service Sales Provided for

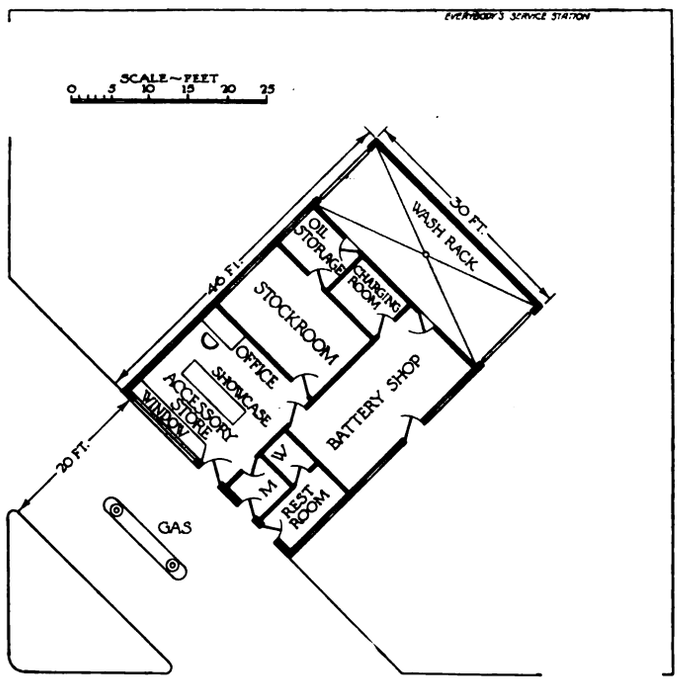
THE floor plan shown on this page provides for the sale of gasoline, accessories and battery service. The building is 46 ft. deep and 30 ft. wide.

Easy entrance to and exit from the driveways is important in a filling station. Drivers prefer stations where it is easy for them to drive up to the pumps. Consequently the entrance and exit in this filling station have been made wide and the driveways on either side of the concrete island carrying the pumps are of an accessible width. There are two pumps and they are placed far enough apart so that four cars can drive up to them. No roof is provided over the driveway as this is not a necessary feature. The comparatively small number of wet days in a year do not ordinarily justify the investment in a roof over the driveways.

Nothing should be allowed to interfere with the sale of gasoline at the pumps. Air and water service should be placed so that cars taking advantage of them will not block the pumps. During rush periods accessories should not be sold at the pumps. People expect quick service from a filling station and it is important for a station to maintain a reputation for such service. Convenient toilets and a ladies restroom are provided at the front of the building.

The accessory store has a display window facing on the driveway. The interior of the store is fitted up with display cases. A small office provided in the rear. The cash register and cashier's desk should be placed convenient to the entrance to the store. The stockroom is located directly in back of the store. A small room for oil storage opens off of it. The battery shop is located next to the stockroom. A separate battery charging room is provided. The inclosed washrack at the rear of the building is large enough to take two short wheelbase cars.

The small triangle on the corner formed by the driveway should be planted with grass. A sign should be placed on the corner. This sign should be readable at several hundred feet so a motorist will have time to make up his mind to buy gas and to stop his car. It should be visible from both streets.



The balance of the lot is available for any one of a number of services connected with the filling station. In these days of low grade gasoline, it is desirable that oil be changed every 500 to 700 miles. Many owners do not care to get under the car to take out the plug for this purpose and the vacant space around the station is useful to park cars that owners have left for a few hours for the renewing of oil.

Motor World's Department of

Better Business Buildings

Is a weekly feature of the paper.

Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage should be given when making inquiries.

Building for filling and accessory business on corner property. The building is 46 x 30 ft. The washrack is big enough for two cars of short wheelbase length

Republic Issues Booklet on Service Department Operation

MERCHANDISING and Sales Methods Applied to the Dealers' Parts and Service Department is the title of a recent publication of the Republic Truck Sales Co., Alma, Mich. Recognizing the fact that the prosperity of the truck dealer is based on the efficiency of his service department, The Republic Corp. has produced this booklet which tells its dealers how to operate a service department efficiently and profitably.

The text of the book deals with the selection of parts stock, when re-orders should be placed, proper cataloging and arrangement of parts in stock room, records of parts received and sold, and handling of claims with factory. The handling and billing of repair orders, gasoline, oil and grease records, repairshop equipment and methods of operation are also discussed.

All forms recommended for the use of the dealer are illustrated and drawings are given, showing the layout of model stockroom and construction of the parts bins in it. Illustrations of proper shop layouts and arrangements of mechanics' tools are also given.

The monthly inspection plan is also explained in detail. Sample post cards to be used in notifying truck owners of the time inspections will be made are given as well as a sample monthly inspection report. Typical letters to be used in advising truck owners of findings of inspectors, and for following up jobs are given.

An Effective Used Car Advertising Effort

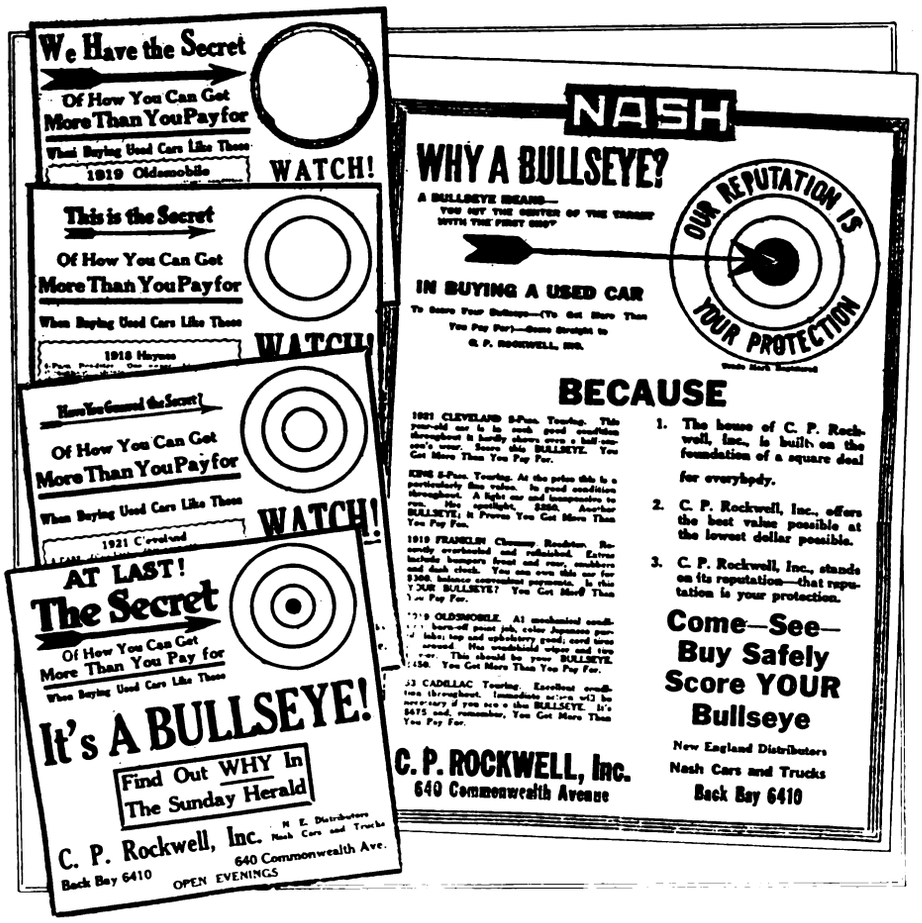
A Striking Example of How Co-ordination of Selling Force May Be Secured by a Dealer

A USED car advertising effort with a decided punch was used successfully recently by C. P. Rockwell, Inc., New England distributor of Nash. It consisted of a series of small ads, followed in the Sunday papers with a large ad. The advertising was linked up by having the windshield of each used car labeled with a bull's-eye sticker, the bull's-eye being the feature of the campaign. To perpetuate the idea that the bull's-eye is the mark of dependability, Rockwell is having a two page folder on which the bull's-eye appears printed. The folder is primarily a chart allowing for a record of maintenance to be kept. A 30 x 30 ft. sign, featuring the bull's-eye, was erected on the corner of the building.

As the bull's-eye becomes better known, and the idea developed, it is intended that it shall indicate the shortest way to the best values, back of which is an established reputation for the buyer's protection. The plan is evolved as a result of Rockwell's efforts to back up the slogan "Our Reputation Is Your Protection."

Motion Display in Car Salesroom

MOTION has always been regarded as a sure way to draw attention to a window display.



Motion was used to excellent advantage recently in a window display in Atlanta by the Martin-Nash Motor Co., a display said to be one of the most unusual any dealer has ever attempted in this section.

An incline of planks of several feet in length was constructed just inside the display rooms, running upward to the very edge of a plate glass window. A Nash sport model ran back and forth on this incline, so arranged as to work automatically and without a driver, the car, of course, being operated under its own power. It would run up the incline to within an inch or two of the expensive plate glass window, then automatically shift gears into reverse and back away for another trip.

The device which controlled the car was invented and perfected by J. M. Turnage, of Atlanta, and before being shown here was successfully exhibited in two other southern cities.

No display of any automobile concern has perhaps ever attracted a greater amount of attention in Atlanta. The street in front of the Martin-Nash salesrooms was continually crowded by interested spectators, many of whom remained for some time expecting to see the car miss connections and keep on until it had smashed the plate glass window. Nevertheless hundreds of trips were made during the display, and the device worked perfectly on each occasion, the car always reversing when it was within an inch or two of the window.

A Series of Used Car Ads

This series of small ads followed by a large ad in the Sunday paper, used by C. P. Rockwell, Inc., New England distributor of Nash in Boston, is a good example of the "campaign" idea. Note how the development of the bullseye ties the ads together and leads interest to the revelation of the merchandising message

Calling Out Public's Car Selling Ability

"HOW many people here could sell this car as well as men in the business?" said one automobile salesman to another, after a crowd had been absorbed for nearly an hour in a demonstration.

"More than you think," replied the other salesman.

The Velie Automobile Co. of St. Louis is putting the question to a unique test. A contest awarding $1,200 in prizes for the five best letters embodying impressions and opinions on the Velie car after a demonstration has been announced by this company.

Anybody can enter this contest except members of the Velie organization.

Letters must be limited to 100 words. Only one prize will be awarded to any one person, but any person may write as many letters as they desire.

The winners will receive negotiable credit vouchers as follows: First best, $500; second best, $300; third best, $200; fourth and fifth best, $100 each.

Mayor Kiel, A. R. Morgan, principal of public schools, and Franklin Miller, judge of the Circuit Court, will judge the letters.

A Hallowe'en Window Display Idea

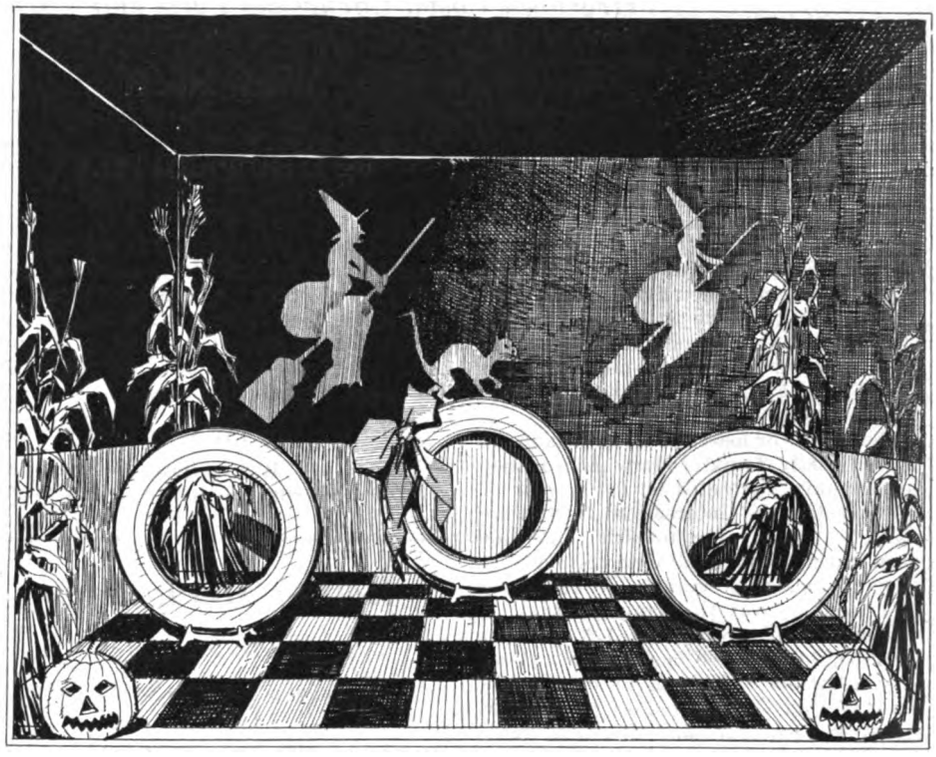
A Simple and Inexpensive Trim That Will Help Accessory and Tire Dealers Make a Timely Appeal

EVER notice that the department store windows, hardware windows, and those of many other merchants, especially if they are progressive fellows, have a suggestion of Hallowe'en along toward the end of October? Sometimes it is only the use of black and orange decorations. Sometimes it is one or two pumpkin masks, or an old witch. Hallowe'en falls on Oct. 30.

Of course, these special efforts to appeal to popular thought are not expected to actually sell the merchandise in the stores. What is accomplished by such displays is an impression on the public mind that will remain, often, and make a person think of that store because of its striking display.

So it is good business, occasionally when opportunities permit, to relieve the window display by something that attaches itself to public thought in connection with some holiday.

The next opportunity for such a window appeal is Hallowe'en.



On this page is presented a suggestion for a tire or accessory store window that is simple in its construction and costs but a few cents.

In making this window the walls are covered with black crepe paper to a distance of about three feet from the floor. Orange crepe paper is used on the walls for the remainder of the distance to the floor. At the stationery store it will be possible to buy silver or gold stars, old witch cutouts, cats, etc., which may be pasted on the black paper in the manner shown in the sketch. If these figures cannot be bought they may be cut from Hallowe'en crepe paper on which they often are printed as borders, etc. Even if they cannot be gotten in this way, a sign painter would make them for a very small sum.

The floor of the window is covered with strips of black and orange crepe paper woven to produce a checker-board effect. Shocks of corn are placed in the corners and a couple of pumpkin masks will complete the properties. Tires, on which the beading or lettering on the sides may be gilded are then placed in the window. A big bow of black and orange crepe paper, pasted so as to show black on one side and orange on the other, will be effective tied to the center tire as shown.

The same general background may be used with an accessory display instead of tires.

If used for a general accessory display the window may be built just as this one is, with the center tire in the back center and a few accessories spotted on the checkered floor of the window.

With the investment of a few cents for crepe paper and a couple of pumpkins the tire or accessory dealer can set up this Hallowe'en window. Full instructions for building the window are given on this page

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer Equipment and Tire Dealer Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Women's Week in Accessory Store

WHY not arrange a "Women's Week" at your store? During this week you could have displays and demonstrations of accessories which make it easier for women to drive cars and which make car driving more comfortable for them. Included in the accessories thus pushed could be heaters for cars, robes, spotlights, etc. Advertise this stunt by means of cards in your windows and by means of ads in the local papers. Urge the men to patronize your store during the week and buy accessories for presentation to the women folk as birthday and wedding anniversary gifts.

A "Stop That Puncture" Campaign

THE Lee Tire Co., 289 Monroe Avenue, Memphis, Tenn., staged a contest a short time ago in which $50 in cash was offered to the boys of Memphis. Seventeen prizes in all were offered, first prize being $15, second $10, etc., and prizes grew smaller, down to 11 prizes of $1 each. Money was awarded to boys who picked up the most glass, wire, nails, tacks, etc., that might puncture a tire and brought same to the firm's office. There was no fee and any boy could enter, but boys had to register. The contest was confined to the city limits and objects were to be taken from the streets and brought in each day by the contestant and signed for. The contest was known as a "Stop That Puncture Campaign Contest."

The 555 Tire & Service Company, Little Rock, Ark., has also had on a similar contest.

The Foundation of Shop Profits

Systematic Records Are Just as Important as Good Mechanics and Good Shop Equipment—Turn Losses Into Profits by Watching Overhead Costs, Uncharged Parts and Unrecorded Labor

Article No. 3

By J. HOWARD PILE

PEOPLE go into business primarily to make money. If you buy a watch for $10 and sell it for $15, you have a profit of $5. There is nothing complex about this transaction, and you do not have to have an adding machine or a set of books to find out whether you made a profit.

The profits or losses of a repairshop are not so easily found. Many times shop owners have struggled on for a year or more under the impression they were making money, only to find that they were eating into capital investment to keep the business going. A dwindling bank account was the danger signal.

It sounds fine to charge $1.25 an hour for labor and pay 60 cents for it. Very easy to calculate: 65 cents an hour profit, 9 hours a day. That makes $5.85 profit a day on each man, and five men working, let's see, that makes nearly $30 a day profit on labor alone and 25 per cent on parts and accessories. Well, it won't take long to get rich at that rate. Ought to be able to retire or start a factory or go into the moving picture business or something in a couple of years. No more greasy hands and grimy clothes. No, sir!

But wait a minute.

Let's introduce the well known killjoy, OLD MAN OVERHEAD. He puts quite a dent into those wonderful profits with his rent, light, heat and so on. And how about the hours you pay for and don't collect for, and the jobs that have to be done over again, and the bills you send and never collect, and the reamers you break and all that sort of thing? Let's take that $30 a day and see whether it is really a profit or whether it may possibly be turned into a loss. If it is a loss, we've got to do something quick or the old ship will sink.

The Importance of Keeping Records

That's it. We must keep records. Then we will know where we stand. To do that we need various books and cards and forms. A careful entry must be made of every cash and credit transaction. Regardless of how these items originate, they are eventually recorded in the cash-journal or some equivalent book and posted to the individual ledger accounts of customers and people the shop buys goods or services from. Regardless of how the details of such a bookkeeping system are handled, at the end of any week or month or year, it is possible to find how much money the shop owes for materials and service and how much money is owed to the shop for parts, equipment and labor.

Figuring the Overhead

It will not do to allow the compilation of fixed charges and overhead to go to the end of the year, and then see if there is a profit or loss. These items must be systematically recorded and tabulated in such a manner that at the end of any period it will be possible to ascertain the cost of doing business.

Overhead is a charge or expense which can be easily ascertained after it has occurred, or can be approximately estimated in advance, but which is difficult to definitely charge against any department of the business. The following items are generally included under the head of overhead in a moderate size establishment:

Rent, light, heat, power, depreciation, telephone, advertising, administration, office expense, stationery and printing, shop non-productive labor, free service, shrinkage of stock, bad debts, insurance.

These things are all necessary to the successful business, yet they do not produce direct revenue. You buy an article and sell it at a higher price, and it produces direct revenue. But you pay money for rent or taxes, and it does not produce direct revenue, yet it has to be there or you could not do any business.

Suppose you make up a list something like this, using figures that you know are nearly right:

Rent	$1,500
Light	100
Heat	125
Power	250
Depreciation of stock and equipment 10%	500
Telephone	50
Advertising	150
Administration (salaries of yourself, foreman, etc.)	8,000
Office expense	4,000
Stationery and printing	100
Shop non-productive labor	1,000
Work done over	500
Stock shrinkage	100
Bad debts	500
Insurance	500
	$17,375

This makes a total of $17,375 in overhead or fixed charges to start with. This is perhaps typical of a fairly large shop, but here's how it looks:

$17,375 pear year
1,448 per month
334 per week
48 per day
5.33 per hour

Where is the $30 a day profit now? Not counting profits on the sale of parts, the loss on labor would amount to $18 per day, and you would have to sell a whole lot of parts and accessories to make up this loss before the profits began to roll around. There would be something radically wrong with a shop that showed up with figures like this, yet many shops are operating under a handicap nearly as great.

The remedy is to cut down the overhead. Turn off lights when they are not needed. Don't run machinery, except when it is needed. Cut out the useless phone calls. Cut down non-productive

Better Mechanics

Repairshop Forms to Reduce Labor and Material Losses

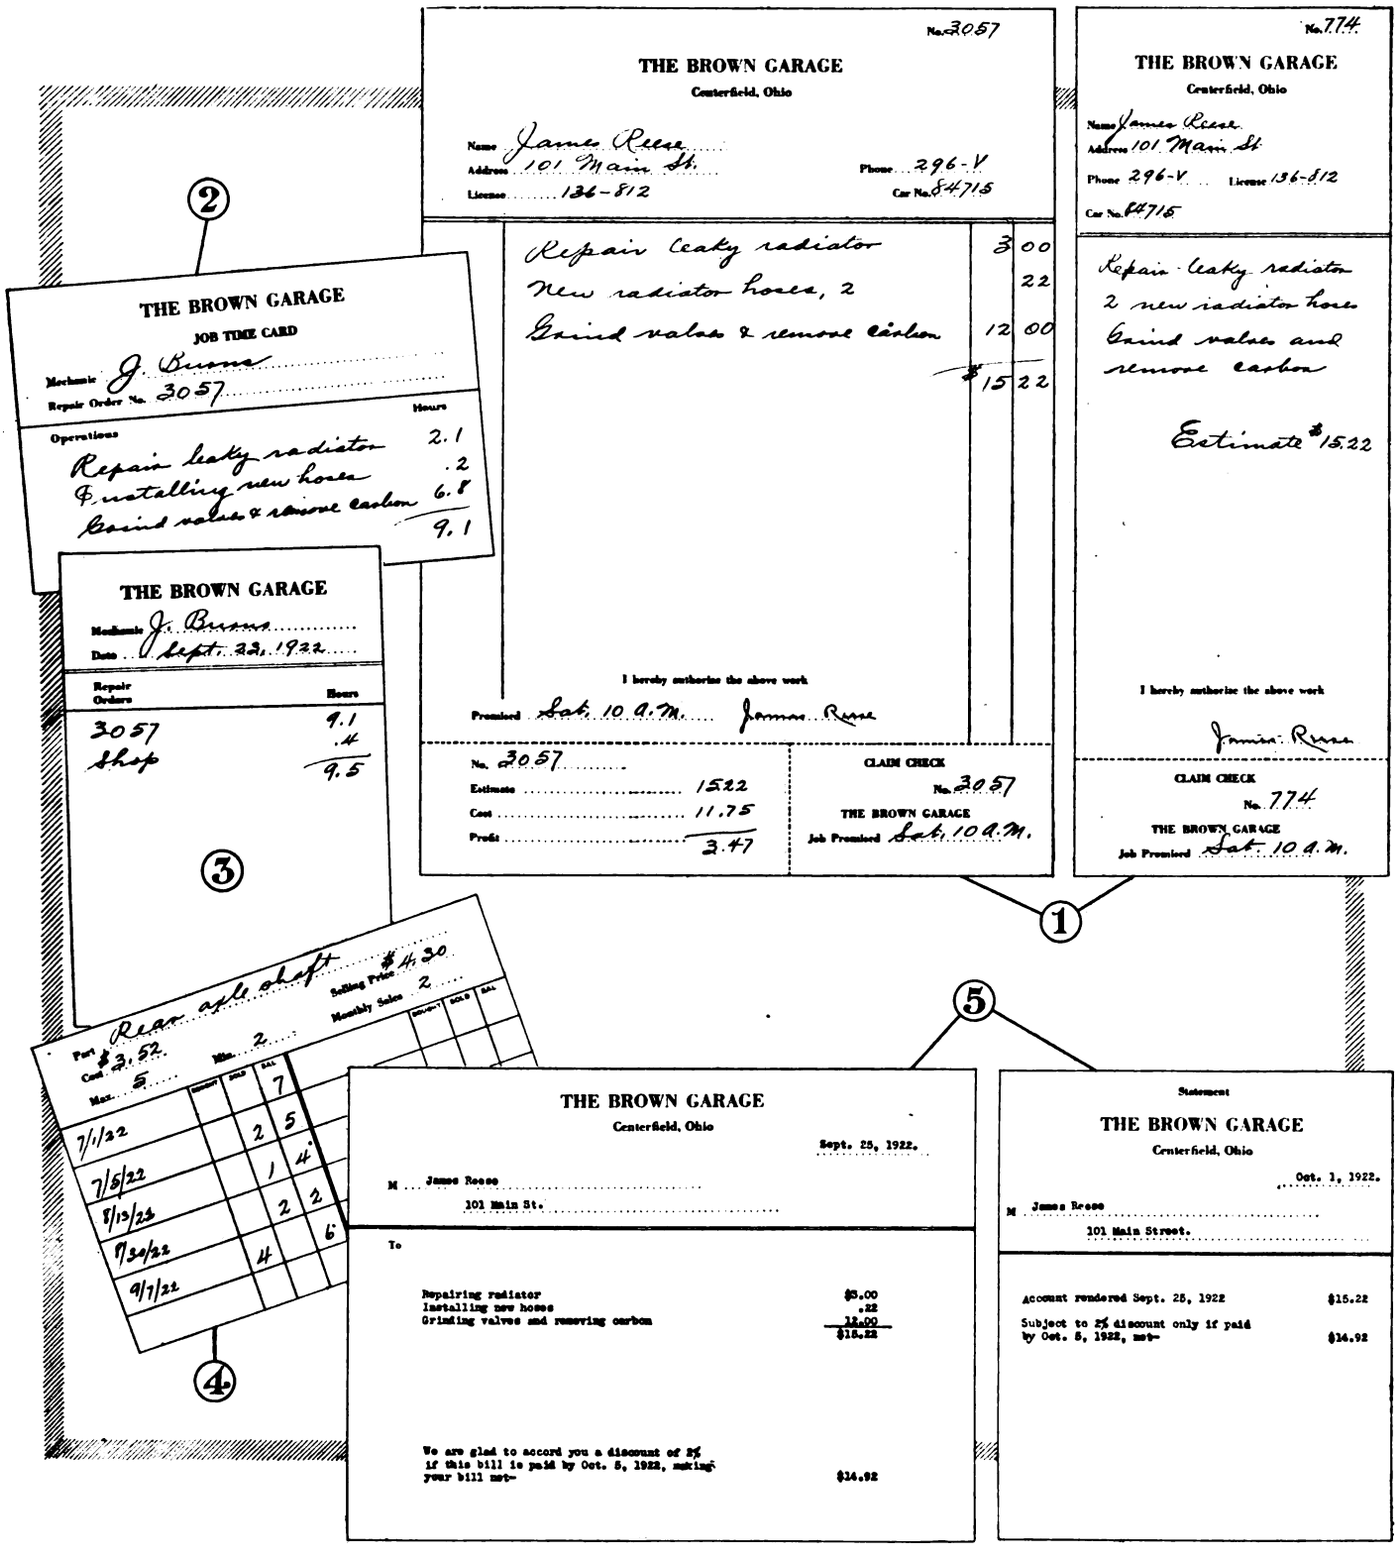

Fig. 1—Two kinds of repair order. The one at the left is for larger stations and allows sufficient room for detailed instructions. The one at the right is more simple and is suitable for a moderate size garage. Both have claim checks attached and the larger one has a tracer card. Fig. 2—The time for each job is kept on a job time card. If a time clock is used the operations may be timed separately if desired. Fig. 3—Mechanics keep daily time records to double check the jobs and to record unallocated or uncharged time. Fig. 4—A stock inventory card which enables the stock clerk to detect low stocks and reorder. Fig. 5—The invoice is sent out when the job is completed, itemizing the operations. The statement refers only to the date of the invoice

Digitized by Google

labor and reduce free service to a minimum by doing the jobs right so they will not come back. These are only a few of the actual economies that can be made.

The Repair Order

A most valuable form in the shop is the repair order form shown in Fig. 1. In the larger shops it is made in triplicate by means of carbon papers. In the very smallest shops a single copy on heavy paper is sufficient. The repair order specifies exactly and minutely what work is to be done on the car and carries the owner's signature authorizing the work. Most shops are working toward a flat rate, and where such a system has been developed, the predetermined cost of the job is noted on the repair order. The orders are numbered and have a detachable claim check which is given to the customer.

The claim check is an important part of the order. In the first place it protects the shop owner by preventing the surrender of the car to anyone other than the holder of the claim check. In the second place it gives the owner a feeling of security. Without a claim check, he is not quite certain that somebody else will not walk into the shop and drive off with his car. It also shows the owner that the shop is careful and methodical, and he really has more faith in the shop.

Some kind of a record must be made of all parts, material and time used on every job. It will not do to pay good money to the manufacturer for parts, then lose track of them and give them away to customers. A great source of loss is gasoline and oil put into cars by mechanics and never charged up. This is giving the owner something for nothing. He does not even know that you are giving it to him and so does not thank you. You do not know it either, or you would not be giving it away.

In a larger establishment, a "material requisition" is required for every cent's worth of material used on a job, the requisition giving the name and number of the parts, the repair order number and the mechanic's name. There are other variations for smaller shops, one of them being a sales register on the parts room counter, on which is entered the same details as in the case of the material requisition.

Regardless of whether flat rates, maximum estimate or time and material systems are in use, a careful record must be kept both of time on the various jobs and the mechanics' time. The job time record is important, even if the flat rate system is used, because it is possible to continually check up actual time against estimated time and revise estimates according to practice, or find out why certain mechanics cannot finish jobs within the time limits.

Mechanics' time is necessary in order to tabulate at the end of the week the number of hours the men worked on jobs that could be charged for and the number of hours they were idle or working on general shop work, which is nonproductive. A close watch on this will save much money. When there are not enough jobs to keep the workmen busy on productive work, the big majority of the time it is necessary to go out and get some more work in, or to cut down the force of mechanics to fit the work in the shop. When the non-productive hours dwindle to nearly nothing, it is time to think about getting more help. The shop should try to keep productive hours between 80 and 90 per cent.

Every square foot of space in the shop is worth money. If the rent of the place, plus light, heat and all the other items of overhead is assumed to be $48 per day, and the shop, occupying one-third of the whole building, has 1250 square feet, then each square foot is worth 1 cent per day. The average car requires 70 square feet, and therefore it costs 70 cents a day to have a car sitting around. It is therefore of great importance to keep the stock of parts in such shape that those parts required will be instantly available. Five days waiting for a part adds $3.50 to the cost of doing the job, for which the shop receives nothing and during which time the owner frets because he cannot use his car.

A careful check-up of stock must be made all the time. Regularly used parts should have a card system with a maximum and minimum mark. When the minimum is reached by count, an order should be put in at once. In addition to costing money through delay, express shipments, telegrams and so on increase the job to a surprising extent. Sometimes it is possible to collect from the owner for these, sometimes not. Even if he pays, the higher cost of the job and the delay leave a bad taste in his mouth that will require much satisfactory and low priced work to eliminate.

A stock record or stock inventory card is shown in Fig. 4.

These forms and records are part of an orderly and well managed business. Another evidence of the good business man is the proper use of a checking account at the bank and a neatness in issuing checks. A pocket checkbook with check numbers put in in ink does not impress the one who receives it very favorably. Any business which amounts to anything at all can make arrangements with the bank to have checks printed with the name of the concern and have the checks numbered with a machine. Keeping the bank account straight is a very important part of the business, and a point should be made of carefully comparing the monthly statement of the bank with the checkbook stubs. This will not only check up errors monthly, but will relieve the concern of liability for banking errors. Most banks require that errors be reported within ten days after a statement is rendered.

Getting the Business

The last of the series of four articles on shop profits will appear in the October 4 issue and will cover the merchandising of service. No amount of system, records, layout or fine workmanship will bring profits without new business.

Handling Charge Accounts

Dealers and repairshops are making efforts to do business on a strictly cash basis. Occasionally a business is able to work this out 100 per cent, but not often. There are always some customers who will not pay cash, and it is either a question of doing business the way the customer wants to do it or allowing his business to go somewhere else. This is especially true in the case of commercial accounts, truck fleets, etc. Chauffeur-driven cars also come in the same class, as the chauffeur is seldom given the money, but instructed to bring a bill.

The handling of these accounts and the collection of the money is part of the business and must have its share of attention. Bills which are allowed to run without any attempt at collection generally fall flat and remain unpaid. The first of the month is the usual time to check over accounts. Bills should be rendered immediately on the completion of work, and thereafter if the bill remains unpaid, statements are sent the first of each month. There are thousands of methods of securing the payment of bills, the most effective of which are the offer of a 2 per cent reduction for cash within five or ten days, and the use of a carefully worded personal letter with the first bill or with the first statement. A typical bill and first statement are shown in Fig. 5.

Fairness to Employee and Customer

The shop which has a careful record of costs, losses and profits will be able to deal fairly with both employee and customer. One of the greatest causes of dissatisfaction in most shops on the part of the employee is his being paid 60 cents per hour when he knows his boss is collecting $1.25 or $1.50 for this same time. Many mechanics who stand a good chance of advancement in the business, quit and start in some alley shop on their own account, secure in the belief that they can make twice as much for themselves as they can working for a shop. Most of these men come to grief sooner or later because they have bumped into the overhead and expense problem and it has licked them. A shop which had the confidence of its mechanics could thoroughly explain all these details to dissatisfied men and show them that their chances for making good are better with a good concern.

Customers who hear talk about the discrepancy between wages paid and time charged are also prospects for a convincing talk on the same subject. The shop owner with records of his transactions, of his costs and of all the details of his business is able to treat his employees and his customers in fairness and make the profits to which he is entitled as a good business man.

Repairshop Shortcuts

Don't Make Him Mad

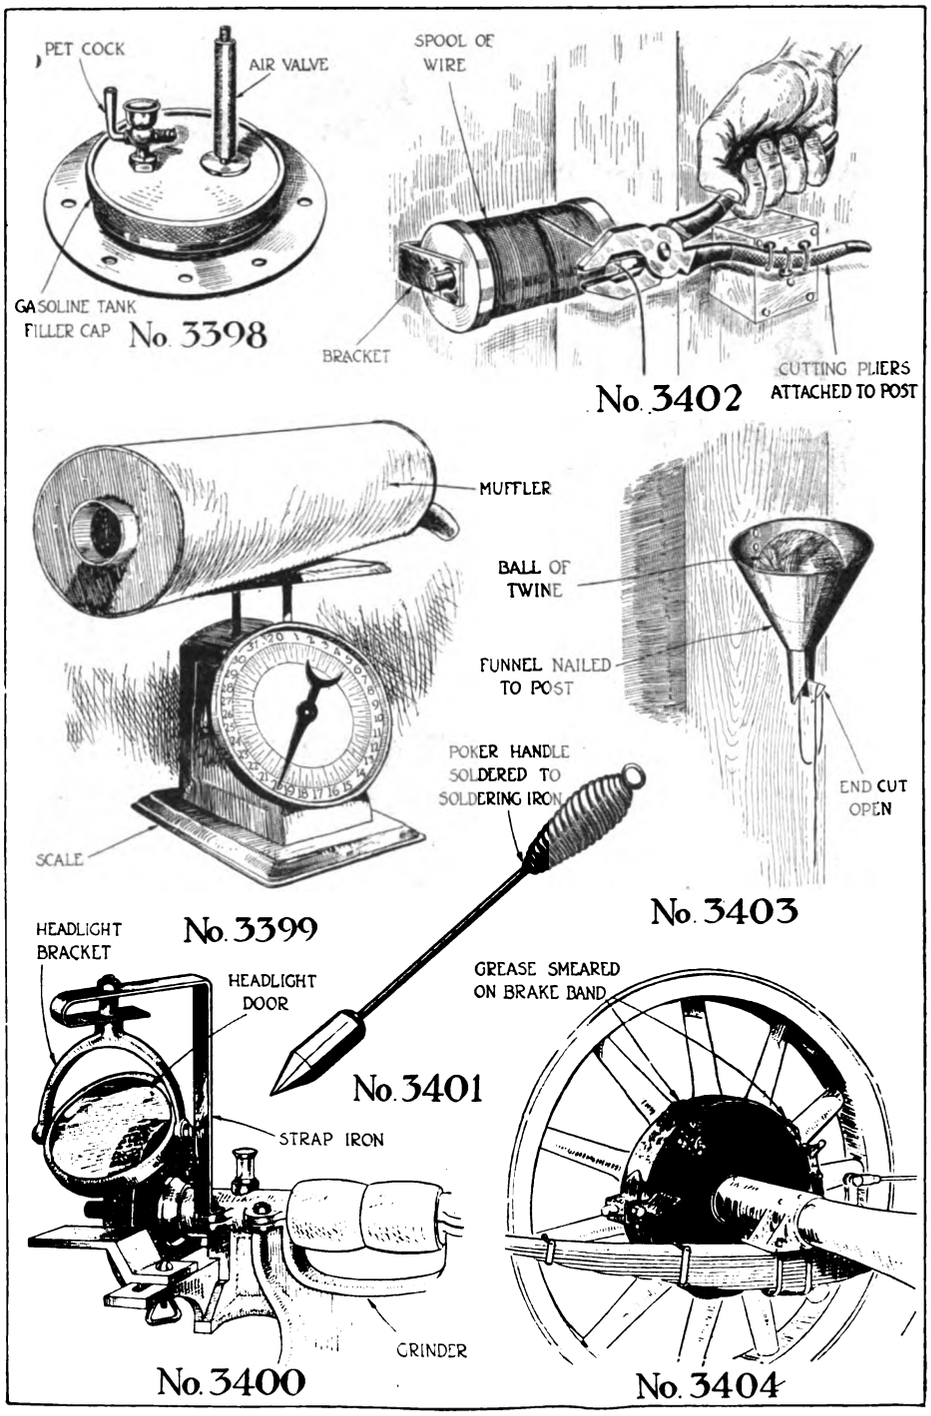
MECHANICS have been pretty well flooded with literature on the subject of not getting grease and grime on the seats of sedans and coupes and how much the owner appreciates grabbing hold of a nice clean steering wheel. So we can consider that world's problem settled. Here is another don't that slips by once in a while.

Keep the car floor clean too. You know how much grime is on the shop floor and it is easy to transfer it to the floor of the car. If the mechanics don't do it, the owner may. Put newspapers in and leave them in. The owner can throw them away when he gets outside.

Send in your shortcuts to Motor World. One dollar will be paid for each one accepted and we will accept any that are practical and that have not been used before.

No. 3398—Air Pressure for a Gravity Tank.—A special gasoline tank cap fitted with a tire valve and pet cock is useful for bringing a car into the shop when the gas is low or when the gas line is partially obstructed. The cap is fitted with a gasket to make it air tight.—W. B. Wheatley, Norfolk, Va.

No. 3399—Detecting a Carbonized Muffler.—When there is a lack of power in an engine that has been overhauled, the trouble may be in a carbonized muffler. This can be detected without disassembling the muffler by weighing and comparing the weight with a new muffler.—Donald McClean, Cleveland.



No. 3400—A Grinding Wheel Guard.—To prevent eye injury in using a grinding wheel an old headlight bracket and door with plain glass are rigged up over the wheel.—H. R. Grigsby, Garage Superintendent, Oklahoma Gas & Electric Co., Oklahoma City, Okla.

No. 3401—Cool Handle for Soldering Iron.—A twisted wire handle from a stove poker is welded to the shank of a soldering iron, making a serviceable soldering iron which will not be loosed with the heat.—A. N. Bostwick, Bostwick & Thompson, Minden City, Mich.

No. 3402—A Handy Wire Supply.—A spool of wire mounted at a convenient place and a pair of cutting pliers with one handle fixed to the same support make it quick and easy to get the required length of wire.—Donald McClean, Cleveland.

No. 3403—Holder for Twine Ball.—A holder for the ball of twine is a funnel which is fastened to a post or the wall. By making a diagonal cut in the spout and turning it back, filing it sharp, a cutter is also provided.—G. A. Luers, Washington, D. C.

No. 3404—To Locate Dragging Brakes.—A small dab of grease on both brake drums will disclose whether either or both are dragging as the grease will melt from the heat on the one that is dragging.—Donald McClean, Cleveland.

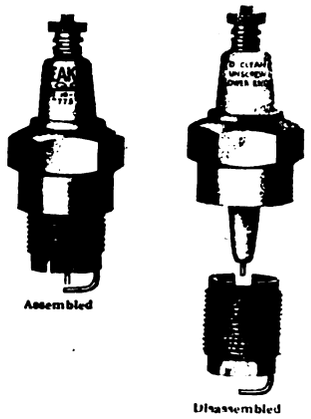
Equipment to Sell

New Devices for the Car and Truck

F. B. Oil Saver for Fords



F. B. Equipment Co., 119 East Atwater Street, Detroit.

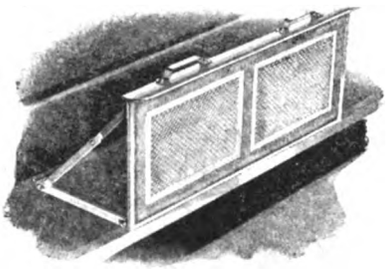
The oil saver fits over the oil filler pipe of the Ford in place of the filler cap. It contains a valve which opens with the down stroke of the pistons to allow the passing of gases and closes on the up stroke closing the crankcase against dust and road dirt. A slight vacuum created by the device reduces oil leaks.

Meaker Two-Piece Spark Plug

Meaker Spark Plug Co.,
1366 Antietam Street, Detroit.
Price $1.

The plug can be disassembled for cleaning the porcelain and the central electrodes, but the separation is between steel parts, the upper part of which is permanently fixed to the porcelain at the right pressure. The plug can be disassembled any number of times for cleaning or other purposes without disturbing the packing between the spark plug shell and the porcelain.

Yale Tire



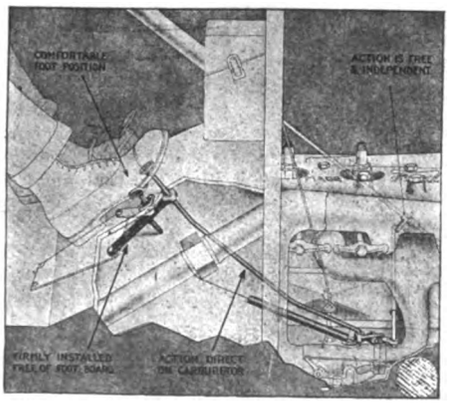
Yale Tire & Rubber Co.,
New Haven, Conn

Yale tires are made in fabric from 30 x 3 to 32 x 4½ and in cord non-skid from 30 x 3½ to 36 x 6. Red and grey tubes are made in sizes from 30 x 3 to 36 x 6. The 30 x 3½ four-ply fabric casings list at $11.15, five-ply, $13 65. The same size in cord non-skid is $15.40 for four-ply, $19.00 for six-ply.

Kaufman's Convertible Carry-All Auto Step

Eclipse Timer Mfg. Co., Milwaukee, Wis.
Price $15 in aluminum; $10 in cast iron and aluminum.

A combined runningboard step and luggage carrier. It is hinged on the outer edge and when used as a step folds down flat on the running-board. The aluminum surfaces are corrugated. By releasing a knob and raising the step, the luggage carrier is brought into position to hold suit cases, parcels, etc.

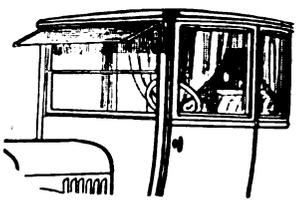


Sani-Mist

The Sani-Mist Co.
16 Home Street, New London, Conn.
Price $1 per quart

A preparation for cleaning and polishing automobiles. It may be applied with a cloth or sprayer.

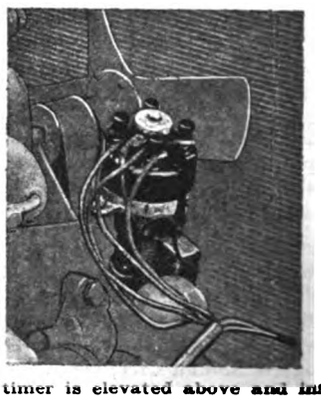
Snap Foot Accelerator for Fords



Morse Mfg. Co., Syracuse, N. Y.
Price $1.50.

The accelerator has two parts and is easily installed. A positive action is given directly from the foot to the carbureter throttle in the line of pressure. The action of the hand throttle is independent from the throttle lever down to the carbureter arm. A bracket attached to the transmission cover plate affords necessary support for the pedal close up under the foot board but free of it. The foot rest is liberal in size and supports the foot in a comfortable position.

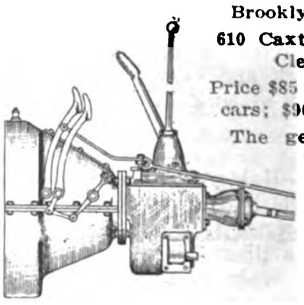
Sunbeam Junior Visor for Fords



Thoma & Son, Inc.,
Fairfield, Iowa.
Price $8.

The visor is made with ¼ in. ribbed glass with a choice of semi-opaque amber or green which is claimed to kill the glare without darkening the car. Made in two models, one for open cars and the other for closed cars. The angle of the visor is adjustable by means of humb screws.

Mallory Timer for Fords

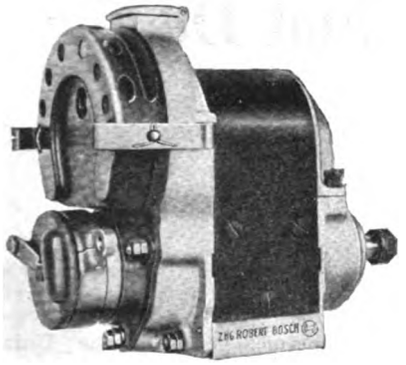


A. R. Pollaski Co., Milwaukee, Wis.

The timer is elevated above and inside of the oil filler hole and the original plan of wiring is not changed. The timer breaks the circuit mechanically so that a spark is produced at the plug at very low speeds of the flywheel magneto. When using a battery system exclusively for running a car the vibrator points are locked.

Brooklyn Three-Speed Gearsets for Fords

Brooklyn Mfg. Co.,
610 Caxton Building, Cleveland.
Price $85 for passenger cars; $90 for trucks.



The gearset is attached immediately in back of the transmission case and carries a universal joint at its rear end. It provides three-speeds forward and one reverse and gives the Ford a control consisting of left pedal for the clutch and right pedal for the service brakes which are on the drums on the rear wheels. The emergency brake lever is fixed to the gearset, next to the gear lever. This brake operates internally on the drums as in the standard model.

Digitized by Google

Robert Bosch Type ZH6 Magneto

Robert Bosch Magneto Co., Inc.,
123 West Sixty-Fourth Street, New York City.

The magneto is designed for 6-cylinder engines and is very small, weighing only 10¼ lbs. It is entirely enclosed to make it water and dust proof. The magnet field sleeve is movable with the interrupter housing, thereby producing the same intensity of spark in retard as in advance position. The timing range is 40 deg.

Grizzly Grip Cold Patch

20th Century Tire Protector Co.,
Midlothian, Texas.
Price $1 per can.

A cold patch for tubes put up in two sizes, 30 sq. in. 3 in. by 10 in. at $0.50; 4 in. by 18 in. $1. The can, in each case, contains sufficient cement for the amount of patching.

Exlo Steering Post Control for Fords

Exhaust Lock Co., 201 Chamber of Commerce, Indianapolis.

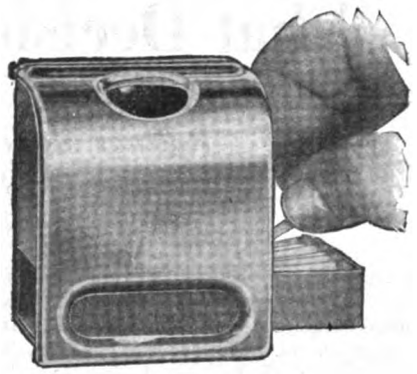
The device clamps to the steering post under the hood. The anchor arm fastens to the frame. When the steering wheel is turned the cams spread, the top half riding up the steering column ⅜-½ in. The connecting spring supplies the tension which holds the parts rigid in any position desired by the driver.

Monogram Lens

Monogram Lens Corp.,
277 American Circle Building, 1835 Broadway, New York City.
Price $3 to 8⅞ in.; $3.50 to 10 in.; Over 10 in. $4.

The lenses are designed to give a light 44 ft. wide with an intensity of over 80,000 candlepower on the roadway. The lens is perfectly smooth on the outside for washing. The inside center of the lens has a rectangular depression in which is molded the name of the car or the monogram of the owner can be put on with a decalcomania.

Westinghouse Junior Air Spring



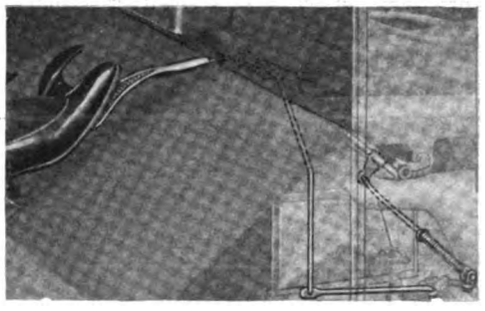
Westinghouse Air Spring Co.,
William and Henry Streets, Long Island City, New York.
Price $175 per set of four installed.

The Junior air springs are substantially of the same type and construction as the larger air springs which have been in production for some years. The Junior set is especially adapted to medium weight cars such as Studebaker, Grant, Essex, Oldsmobile, Maxwell, Chandler, Wills St. Claire, Dodge, etc. The stationary member of the device consists of a ground steel cylinder with a forged, bronze dome in a malleable iron bottom or guide. This unit is attached to the car frame with steel brackets. A cross bar between the air springs increases the rigidity of the frame. The moving element is a ground steel piston rod which is attached to the leaf spring. The piston head operates in a bath of oil against the air chamber, which is inflated from the top. The springs are kept at the proper height by increasing or decreasing the air pressure.

Ruby Match-Ash Holder

Ruby Mfg. Co., Springfield, Ohio.
Price $1.75.

The device is complete with two small screws for fastening to wood and two bolts for metal. The choice of six holes for fastening to the back permits its being installed almost anywhere. It is operated with one hand and can be easily cleaned.

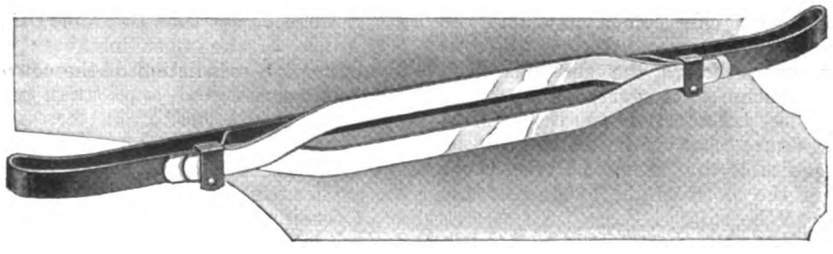


Veedol Fordol

Tide Water Oil Sales Corp.,
11 Broadway, New York City.

A compounded oil especially for Fords. A fatty oil with a higher flash and fire point than mineral oil to eliminate chatter and which will stick to the surfaces of the bands.

Ruby Foot Accelerator for Fords



Ruby Mfg. Co., Springfield, Ohio.
Price $1.75.

The accelerator is attached to one of the rear cylinder head bolts and requires practically no alteration of the car. It does not interfere with the removal of toe or floor boards and the rod connection to the carbureter eliminates lost motion. There is no interference with the functioning of the hand trottle. The finish is in nickel and the weight about 1 lb.

Weed Safety Bumpers for Fords

American Chain Co., Inc., Bridgeport, Conn.
Prices, Front $13. Black enamel, nickel plated front bars $14. Rear, black enamel $14. Nickel plated front bars $15.

The bumper is made of 1¾ in. spring steel hardened in oil and tempered. The wide front space made by an up-kick and drop, prevents other bumpers from going under, over or in between. It fits all models of Ford cars, front and rear and does not interfere with shock absorbers or other working parts.

What Decisions Bind the Individual Dealer

Rulings Made by Courts of Dealer's Own State Must Be Followed—The Structure of the Federal Court System Explained

Editor Motor World: From time to time we see reports of cases, but we cannot figure out just what decisions are binding on us. Will you please try to make this clear to us.—J. L., Trenton, N. J.

Answer.—As you live in New Jersey the decisions of the courts of New Jersey must be obeyed by you. Except as a matter of interest, you are not concerned with the decisions of the courts of New York, Connecticut or any other state courts.

The decisions of the U. S. Supreme Court must likewise be obeyed by you and rulings of any federal courts in your State. When a dealer sees a New York case reported, it may or may not be true that the same rule of law applies in his State.

When the Court of Appeals of New York State hands down an opinion in one case, however, and the Supreme Court of New Jersey passes on the second, while the third opinion is possibly rendered by the United States Supreme Court, the dealer begins to wonder a little about the formation of our court system, why there are so many courts and what cases they are respectively entitled to decide.

Let us suppose that John White is a manufacturer of magnetos, with his principal office in New York City. If he should have any disputes with any other residents of New York State and desires to bring suit, the case would naturally be tried by one of the New York courts, the particular court chosen being determined according to the amount involved.

If, on the other hand, he desires to sue a resident of the State of New Jersey, Connecticut or some other nearby State, the courts of the particular state in which that person lived would be the ones in which the case would come up for trial. In the event of the person whom he desires to sue coming to New York State, a summons might be served upon him there. In that instance it might be tried in New York.

Whenever a case comes up where the parties to it are residents of different States, even though the suit has been started in some state court, it may nevertheless be transferred to the United States Court as it is deemed to be more equitable that a case be tried there than in the home state of one of the parties to the suit.

Some law suits can only be started in the United States courts, and the state courts cannot deal with them at all, as, for example, where a case arises under the patent and copyright laws. The United States court system is composed of the Supreme Court, which is the highest court in the country, the Circuit Court of Appeals, of which there are nine, and the various District Courts, the Court of Claims, the Court of Customs Appeals and the Commerce Court.

Cases are usually started in the District Courts in one of the States. There are about 75 District Courts in the United States, each state being divided into one or more districts, according to its size and population, for example: in New York there are four District Courts, the Northern, Eastern, Southern and Western respectively. Suit may be started in the United States Court in a great many different cases.

In some cases, when the United States is a party, or a State is a part, or when it is brought for infringement of letters patent, etc., it must be brought only in the United States Court.

The intermediate courts between the Supreme Court and the District Courts, which are the low courts, are the Circuit Court of Appeals. There are nine Circuits in the United States, or, in other words, nine branches of the Circuit Court of Appeals. These courts review final decisions in the District Courts, except where such appeals may be taken direct to the Supreme Court, which are in the most instances cases involving the jurisdiction of the court, or the construction and application of the United States Constitution, etc.

Where the jurisdiction of the court is dependent entirely upon the fact that the parties are citizens of different states, or of foreign states, cases arising under the patent and copyright laws, revenue laws, criminal laws and the admiralty cases, the decision of this court is final, except that it may certify questions of law to the Supreme Court if it so desires, and the Supreme Court may then review the whole case as if it had been carried there by appeal.

The Supreme Court of the United States is the highest court in the country. It has a chief justice and eight associate judges, any six of whom constitute a quorum and are able to hear and decide cases brought before it.

The Supreme Court has exclusive jurisdiction in all cases where ambassadors, public ministers, etc., are parties, and also of cases where a State is a party, except where the suit is between the State and its own citizens, or those of some other State or aliens.

In some cases appeals may be taken direct to the Supreme Court from the District Courts, where there is a question of constitutional law involved. But ordinarily, cases come to it only for final decision from the Circuit Court of Appeals.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Foreclosure Not Worth While

Editor Motor World:

We have a car in our garage on which we did repair work amounting to about $30 under an agreement with the owner. We agreed we would make the car run. It does. He thinks it ought to run like a Rolls Royce for $30 and has refused to pay us. We still have the car. What can we do? C. G., Brooklyn, N. Y.

Answer: The best thing you can do considering the small amount of the bill is to sit tight and wait for him to start something, meanwhile holding on to the car. It would be a good plan in addition to send him a registered letter advising him that the car is ready for delivery upon payment of the repair bill and that if he does not call for it you will charge him storage at whatever you think is a fair rate per week. Of course you have a repairmen's lien but it would cost you too much to try to foreclose it to make it worth while on such a small bill.

Buyer Is Responsible

That where a delivery of goods has been made to a buyer or to a person authorized to accept delivery on his behalf, under a contract and the seller retains the property or title in the goods merely to secure performance by the buyer of his obligations under the contract the goods are at the buyer's risk from the time of such a delivery and any loss through fire, etc., falls on him. Standard Casing Co. vs. California Casing Co., 233 N. Y., pg. 413.

Ford Factories Resume Operations

ARRANGEMENT MADE FOR FUEL SHIPMENTS

Production Schedules Will Be Speeded Up to 5,500 or 6,000 Daily

DETROIT, Sept. 22—Ford Motor Co., plants resumed operations at midnight Thursday employing all men formerly making up the different shifts. The company will speed up its daily production schedule to a point aggregating the 5500 to 6000 mark reached previous to the shut down.

In re-opening, the sales department made the statement that capacity operation will be necessary to meet requirements of branches and dealers.

Heavy Production Expected

In the four days the factory was down a stock of orders covering several weeks' operation was accumulated, factory heads report. Business was reported to be up to seasonal expectations and a heavy production schedule is expected to be necessary through the winter months. The service department, which was to have closed this week, will continue work uninterruptedly.

The detail of lining up work in all departments to a point where maximum production efficiency can be obtained probably will require 10 days or more. If sales continue to approximate the former daily production record, this will result in a further supply of deferred orders so that it will mean October production must be almost entirely devoted to meeting business running a month back.

The determination to re-open the factories followed the success attained by Edsel Ford in lining up satisfactory coal shipments from operators in Kentucky and West Virginia fields.

No Stocks on Hand

The company went into the period of closing with its branches and dealers absolutely devoid of any stock of cars and with sales aggregating to the last day of operation all the cars that it was possible for the factory to produce for the past four months. Retail sales were on an equal footing with production, running higher than 5000 daily. This condition, the factory points out, made it impossible for any stock of cars to be collected.

In connection with insistent reports that there would be a reduction in prices when operations were resumed, it was said that with sales taxing the capacity of the factory, the question of a change in price has not entered into consideration, and that until satisfactory arrangements were completed for the purchase of coal, steel and other materials, no thought of change will be entertained. If a reduction comes later, it will be determined upon business conditions and the terms upon which the company arranges for its materials.

Whether new models will be introduced now that the factory has been reopened depends upon the progress the experimental department makes with the work upon which it is steadily engaged, and upon which it continued during the closing of manufacturing operations. One of the models which the company has considerably advanced to this time is a new closed car which will be more commodious than the former model of its type.

PRIORITIES REMOVED ON COAL SHIPMENTS

WASHINGTON, Sept. 20 — Through the action yesterday of the Interstate Commerce Commission in connection with its new service order number 25, petroleum and its products are added to the list of commodities given preferred movement, effective at 12 o'clock to-night. The order means that there will be a freer transportation movement of gasoline. A number of other commodities also were added to the preference list.

The order is based upon the provision that the railroads can move all traffic as required and at the same time it abolishes the priorities created for the benefit of preferred users of coal, except when such preferences may be asked by the commission itself. The adding of gasoline and other products of petroleum to the preferred list has been the source of gratification to automotive interests. The action of the commission is further evidence of the easier transportation and coal situation due to settlement of the strikes.

TARIFF BILL SIGNED; HAS RE-IMPORT DUTY

WASHINGTON, Sept. 22—President Harding yesterday signed the tariff bill following the adoption of the conference report by the Senate.

Among the items included is that which places a 90 per cent ad valorem duty on all automobiles re-imported to this country.

Crude oil remains on the free list, which will mean millions of dollars saved the motoring public.

MICHIGAN PREPARES FOR SHOW CIRCUIT

Majority of Entrants of Last Year Join in Association's Plans

DETROIT, Sept. 20 — Approximately eighteen Michigan cities outside of Detroit will make up the show circuit of the Michigan Automotive Trade Association in 1923. Every city but one which made up the circuit of the 1922 season has come back strong for the plan of placing their shows under the supervision of the State association so that expense might be lessened and more elaborate shows held.

Tentative Dates Set

Cities entered for the new season and the tentative dates assigned are: Ann Arbor, week of Jan. 29; Lansing, Feb. 5; Kalamazoo and Flint, Feb. 12; Grand Rapids and Mt. Clemens, Feb. 19; Saginaw and Muskegon, Feb. 26; Bay City, March 5; Port Huron, March 12; Battle Creek, March 19; Alpena, April 2. Pontiac is the only city not re-entered, but this is because dealers in that city have not taken action on show plans yet.

Under the new plans of the association, two complete sets of decoration will be provided that shows may be held in the same week by cities at intervening points. One set of decorations will be designed especially for smaller exhibition halls, the other for halls in which the space is more adequate. Smaller halls will be considered as those in which there is less than 20,000 feet of floor space and the larger ones with space in excess of that figure. The show schedule will be so arranged that neither two large shows nor two small ones may be held in the same week.

Hope to Bring in Others

An early start has been made in arranging for the circuit so that W. D. Edenburn, manager of the state association, may work out plans for decorations and special exhibits, and also arrange to bring other cities into the circuit plan. Cities which it is hoped to bring in are Benton Harbor, Pontiac, Cadillac, Traverse City, Cheboygan, Mt. Pleasant and Owosso. Dealers in these cities are interested and, with a majority of them entered, the entire lower peninsula of the state will be completely covered so far as bringing shows home to residents is concerned.

Representatives of the cities in which the circuit shows were held last year were vigorous in their endorsement of

Demand in Country Shows Increase

SEPTEMBER KEEPS UP IN FACTORY OUTPUT

First Week of Month Gains Twenty-five Per Cent Over Production of Year Ago

NEW YORK, Sept. 25—With a further marked awakening of interest on the part of the farmer, the demand for automobiles, while showing a slight decline in cities, is taking a perceptible swing upward in the agricultural districts. Improvement of general business conditions is equalizing the demand for motor trucks, dealers availing themselves of it as well as beginning to realize on the potential market the farmer offers.

Agricultural interest is most in evidence at the State fairs now in progress in many sections of the country and forms a good barometer of what the industry may expect during the coming months.

Month Maintains Pace

Present indications that September is keeping up with the steady pace maintained since early spring may upset predictions that this month will show the seasonal falling off in sales, as a whole, and with it a consequent curtailment of factory schedules. The first week of the month, for which reports have been received, shows a surprisingly good production record with an output from twenty-five to thirty per cent greater than for the similar period a year ago.

With Ford the only automobile factory closed, practically all other manufacturers are maintaining production at a high level. Securing coal has not been so serious a deterrent to producers in maintaining capacity schedules as has been the difficulty in getting through steel shipments. Up to this time, however, tie-ups that have come in steel deliveries have been merely temporary and not such as to cause deep concern.

May Not Reach August Level

Several factors will combine to keep production from reaching the high mark attained in August. A short month, the cessation of work over Labor Day and the closing of the Ford plants will effect a reduction in the total output for the month.

A further easing up in the coal situation through the order of the Interstate Commerce Commission abolishing priorities will place the industry in less danger of having to curtail their programs through lack of fuel.

De Palma Inspects Plant

MINNEAPOLIS, Sept. 25—Ralph De Palma, automobile racer, has been inspecting the plant of the Pan Motor Co. at St. Cloud, Minn., in the interest of a company which considers purchasing it for the purpose of manufacturing cars there. It is stated that he will return in a month with business associates to make another study of the plant. De Palma was accompanied by W. E. Merrill of the Lafayette Minnesota Motor Co. of Minneapolis during his inspection.

DISTRIBUTOR PLANS TO HAUL APPLE CROP

SPOKANE, WASH., Sept. 25—The Nelson Motor Co. has made preliminary arrangements for the hauling of the apple crop of the Hunters Land Co. from Hunters to Springdale, Wash., which will begin in a few weeks.

The Nelson company had the contract for the transportation of the apples last year, and kept a fleet of 25 trucks on the job for six weeks.

This year it expects to employ only 15 trucks, but will begin hauling as soon as the first apples are packed, instead of waiting until the packing houses are full, as it did last year, when there was 10,000 boxes ahead of it when it began hauling.

GASOLINE HEARINGS HALT UNTIL WINTER

WASHINGTON, Sept. 26—The subcommittee of the Senate Investigation Committee on Manufactures, which is investigating the gasoline situation, will postpone further hearings until the reconvening of the new session of Congress in December, it has been announced by Senator La Follette, Chairman of the Committee.

Further hearings are being postponed until a sufficient number of replies to questionnaires sent out have been received and digested, thus allowing the committee to get a line on subsequent procedure. Gilbert E. Roe, attorney for the sub-committee, who is conducting the investigation, states that replies are coming in daily and that digests of the same are being made as rapidly as possible.

Hardware Meeting in October

CHICAGO, Sept. 24—The Hardware Association will hold its annual convention at Atlantic City from Oct. 17 to 20. The motor accessories meeting will be held on Oct. 16 and 17. During the week a show will be staged at the Ambassador Hotel where the convention will also be held. It is expected that the accessories meeting will be especially well attended.

DEALERS IN CHICAGO KEEP ON ADVERTISING

No Let Up Despite Buying Movement and Slow Deliveries of Cars

CHICAGO, Sept. 27—Automobile dealers in Chicago, this year, despite the great buying spurt, have kept well out in front with their advertising, many dealers going even farther than to spend their regular amounts.

One advertising manager says that his firm has spent as much money this year advertising new cars as ever, even though deliveries were as far as two months behind.

"We have spent much money on advertising our shop and selling tires and accessories," says an outlying dealer who advertises in a community weekly, "and I believe that it has helped sales wonderfully."

Closed Cars Feature

At this time, the dealers are coming forward with a greater amount of advertising than has been seen for some time. Closed cars are given nearly all of the space and the success of the idea is proved by the fact that sales, after a two-week lull, are again on the upgrade and hold promise of mounting even to the late fall and early winter.

Used car sales are the only part of the dealers' commodities that are not moving with marked uniformity. Sales in these departments are gradually dropping off, "because," one salesman remarked, "we have not got enough of the real used cars to meet the popular demand." By "real used cars" is meant cars that are bargains.

ADDITION PLANNED FOR LINCOLN PLANT

DETROIT, Sept. 22—Work has been started on a large addition to the Lincoln plant of the Ford Motor Co. which is declared to be designed to meet the needs of Lincoln manufacturing. The new building will make possible a large increase in production but details as to how large this might be were declined. The question if it would reach 100 a day was met with the statement that definite totals could not be told at this time.

In addition to providing for more production, the new plant will take care of a lot of manufacturing which is now being done by outside companies. In this will be included some of the body work but it was not declared to what extent the company would go in building its own bodies.

PACKARD EARNINGS EXCEED $1,000,000

May Reach $1,500,000—Company Is Now Building 2,000 Cars Monthly

NEW YORK, Sept. 23--The annual report of the Packard Motor Car Co. for the year ended Aug. 31, 1922, will show that after setting aside adequate reserves the net earnings will be more than $1,000,000. If no reduction in inventory is called for the company's net earnings for the period may reach $1,500,000. In a statement issued preliminary to the annual report, the company says:

This showing does not reflect the true operating condition of the company at the present time, for it was not until May, the last month of the third quarter, that the company began to receive benefit from the sales of its new single six car and from products manufactured from materials at current low prices.

Net earnings at present are running in excess of $500,000 monthly and there is no indication of slackening of business. The company is now on a production basis of about 2000 cars monthly and is planning a considerable increase in production.

"A MILLION MILES" IS MITCHELL SLOGAN

CHICAGO, Sept. 22—The return to Chicago of the first "white streak" car sent out by the Mitchell Motors Co. in its extensive demonstration campaign, was celebrated at a luncheon Monday at the Congress Hotel for Mitchell officials and guests at which announcement was made of the company's "million miles" advertising campaign.

"A Million Miles" has been selected as the new advertising slogan of the Mitchell company, it was explained, because the "white streak" demonstrating cars have completed more than 1,000,000 miles of demonstration running. It was stated that this new slogan will be extensively used hereafter by the factory, distributors and dealers.

COSTS 10 CENTS MILE FOR RUNNING OF CAR

MILWAUKEE, Sept. 25 — The Railroad Commission of Wisconsin has arrived at the intereeting figure of 10c a mile as the cost to the average owner of operating his car, and this is now used as a standard in all computations made by the commission in the distribution of costs between the public and railroads growing out of the relocation of grade crossings, separation of grades, etc.

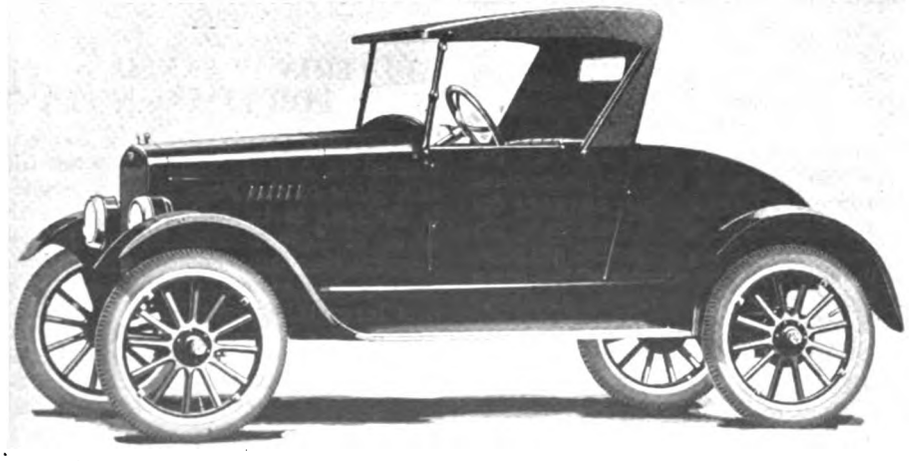
If a grade crossing relocation shortens a highway two miles, and the average number of motor vehicles traveling over this particular highway is 300 a day, the commission figures that this saves 600 miles a day to car owners, and at the rate of 10c per mile, the saving to the public is $60 a day. Computed on the basis of 10 months, this is considered a saving of $18,000 in a given year, which saving will continue from year to year.

3000 Bodies at Durant Plant

NEW YORK, Sept. 26—Following the announcement of the determination of Durant to build bodies for the Durant four and the Star for the eastern territory in the Elizabeth plant, the company states that 3000 of these bodies will be built there during the month of October, so as to be ready for assembly work on Nov. 1. At the present time there are 165 men on the Elizabeth payroll, but it is hoped to increase this to 3000 by March 1.

CHEVROLET PURCHASES PROPERTY FOR PLANTS

Additional Factories Will Give Company Production of 2000 Cars Daily



DETROIT, Sept. 27—The Chevrolet Motor Co. has purchased tracts of land in Buffalo and Cincinnati on which it will begin building operations at once in preparation for manufacturing soon after Jan. 1. These with the existing manufacturing plants in Flint, St. Louis, Tarrytown, N. Y., Oakland and Fort Worth will give it a production of over 2,000 daily.

The new manufacturing plants will provide building for the Fisher Body Co. which will be devoted solely to supplying bodies for Chevrolet cars. The Cincinnati property includes 16 acres and is located on B. & O. and P. C. C. and St. Louis railroads. The Buffalo plant will be located on 29½ acres of property on Erie Railroad.

Cincinnati will employ 1,200 men on Chevrolet work and 900 men in the Fisher plant and will have a production capacity of 300 cars daily. In the two plants there will be 350,000 feet of floor space. Buffalo will have 2,000 men on Chevrolet work and 1,800 in the Fisher factory with a production capacity of 500 cars daily. In these plants there will be 600,000 feet of space.

W. S. Knudsen, vice-president in charge of operations of the Chevrolet company, said that with the completion of the new plant Chevrolet will be prepared to enter a production schedule of 2,000 cars a day. At the present the capacity is about 1,100 cars daily, this figure being the one at which the Chevrolet factories have operated since early summer.

The Gray Roadster, $490

The Gray Motor Co. will shortly be in production as announced in the September 20 issue of Motor World. The price will be $490, the same as the phaeton model. The rear compartment of the roadster is exceptionally large, being suitable for commercial work and the rear deck is detachable so that a small commercial body may be attached when desired.

"ACCURATIME" MAKER ENTERS PISTON FIELD

MUSKEGON, MICH., Sept. 23—The Muskegon Motor Specialties Co., which has been for some time exclusive manufacturer of camshafts under the tradename "Accuratime," is about to enter the piston field. This company will specialize on lightweight, cast-iron pistons.

According to F. C. Whitney, general manager, an investigation of the field has been made showing that several manufacturers are buying piston castings at one point and shipping to another point for machining and then reshipping the finished products for assembly in the engine. The pistons will be both cast and machined in Muskegon, and this centralization, it is claimed, will result in a considerable saving in freight and, consequently, handling costs to the engine manufacturer.

The Muskegon Motor Specialties Co. has about completed its tooling operations for production and will be completing pistons by Oct. 1.

PRICES OF ROAMER REACH LOWEST MARK

Reductions Range from $100 to $500 — New Special Phaeton Being Built

KALAMAZOO, MICH., Sept. 26—The Roamer Motor Car Co. announces reductions on its full line of open and closed models ranging from $100 to $500, effective immediately. The cars are now being fitted with the new model 12XD Continental engine.

The new schedule which is as follows brings the price of the Roamer lower than it has ever been:

Model 6-54-E	Old Price	New Price
4-passenger phaeton	$2,585	$2,485
4-passenger sport	2,750	2,750
7-passenger phaeton	2,785	2,685
Roadster	2,850	2,685
3-passenger cabriolet	3,585	3,285
5-passenger coupe	3,850	3,585
5-passenger sedan	3,850	3,585
7-passenger suburban sedan	4,150	3,950
5-passenger brougham	4,500	4,000
Special 5-passenger sedan	(New)	4,250
Model 4-75-E		
4-passenger phaeton	3,585	3,485
4-passenger sport	3,750	3,650
4-passenger sport sedan	4,650	4,650
2-passenger speedster	3,985	3,785

Although the price of the four-passenger sport model, 6-54-E, has not been changed it is announced that extra equipment has been added.

The company is building a special phaeton with wood wheels, priced at $2,285.

HUDSON AND ESSEX PRICES AGAIN CUT

DETROIT, Sept. 25—Another price reduction, effective Sept. 22, is announced by Hudson and Essex, which is the second within three months. The cuts do not affect the sedan and coupe in the Hudson line. The drops are $50 in Essex and $120 in Hudson. The new list:

HUDSON	Old Price	New Price
4-pass. phaeton	$1,645	$1,525
7-pass. phaeton	1,695	1,575
Coupe	2,570	2,570
Sedan	2,295	2,295
Coach	1,745	1,625
ESSEX		
5-pass. phaeton	1,095	1,045
Cabriolet	1,195	1,145
Coach	1,295	1,245

The Essex sedan, it is announced, has been discontinued.

Oldsmobile Reduced

LANSING, Sept. 25—A new list is announced by the Olds Motor Works. The four cylinder phaeton has been cut $120 and the others in proportion. The list follows: Four cylinder roadster, $975; phaeton, $975; semi-sport, $1,075; brougham, $1,375; coupe, $1,475. In the eight cylinder line the new prices are: Phaeton, $1,375; super sport, $1,675; sport roadster, $1,625; coupe, $1,875; sedan, $2,025.

DEALER CAMPS ON GROUND WHEN VISITING PROSPECT IN COUNTRY DISTRICT

San Antonio, Texas, Sept. 25.

A UNIQUE sales program has been put in use by Richard Drake, truck sales manager of the Chaddick Automobile Co., Oldsmobile distributor here.

Drake declares that the character of the country is such that it has often been found that a salesman would go many miles out into the country to interview a prospect. It has been found, he says, that the sale could not always be completed in a single day and it was equally impossible for the rancher or farmer to ask him to have dinner with his family or spend the night there.

With this end in view, Drake has fitted a truck with side curtains, two three-fourths width beds, mattresses and bedding, which fold up when not in use during the day. A duofold is also used as seat for day traveling and can be used as another bed at night, so that six people in all can be accommodated.

In addition to the use of this truck by the salesmen for the purpose of camping right on the ground of a prospective customer, Drake intends to have the salesmen invite the rancher, his wife and children and friends, if he cares to, into San Antonio for a visit and the party will use the truck to camp in Breckenridge Park for several days. In this way, he says, the prospect will be given both an outing and a great opportunity to study the truck.

The city buyer, on the other hand, will be taken out into the country for a day off, if he can be induced to go.

Lower Prices for Hawkeye

SIOUX CITY, IOWA, Sept. 22—New prices have been announced by the Hawkeye Truck Co., effective immediately. The schedule is as follows:

	Old Price	New Price
1 ton	$1,500	$1,375
1½ ton	1,850	1,645
2 ton	2,650	2,145

The 3½ ton and 5 ton models will be built on special order only.

Gary Prices Increased

GARY, IND., Sept. 22—The Gary Motor Corp. announces an increase in the prices of its trucks as follows:

	Old Price	New Price
Model F 1-1½ ton	$1,675	$1,775
Model I 2 ton	2,250	2,450
Model J 2½ ton	2,650	2,850
Model K 3½ ton	3,650	3,790
Model M 5 ton	4,100	4,450

Cox Brass Increases

ALBANY, N. Y., Sept. 25—The Cox Brass Manufacturing Co. reports a 60 per cent increase in business during the year ended Aug. 1 in the sale of Mo-lyb-den-um bumpers, mostly through dealers and distributors of passenger cars. Ground has recently been broken for an addition to the Albany plant, to be finished Jan. 1, which will double the capacity of that factory. Additions also are being made to the Cleveland plant, largely increasing its production facilities.

Adrian H. Boyce Dies

ROCHESTER, N. Y., Sept. 22—Adrian H. Boyce, well known automobile dealer of Western New York, died at his home here after a year's illness. He became identified with the trade in 1909, when he handled the Ford agency in Sheldrake. At the time of his death he was Chevrolet distributor.

DELIVERIES ESCAPE EFFECTS OF STRIKES

Rail Situation Good Although There Is No Surplus of Freight Cars

NEW YORK, Sept. 25—So far as the effects of the recent strikes are concerned, the automobile industry may be said to be back to normal in the matter of manufacture and delivery. Railroads are functioning once more in something like pre-strike form.

Transportation is in much better shape now than it was two weeks ago. Supplies of materials for the factories are coming in with comparatively no interruption so that production has not been hampered. Deliveries of finished cars to the dealers are being made without much handicap and it is likely that dealers will experience no trouble in this direction until such time as weather conditions may disturb the situation.

Cars in Good Shape

While there is no surplus of freight cars the railroads seem to be in good shape. As evidence of this statistics show that the percentage of bad order freight cars is lower than before the strike started. Whereas, this percentage was 14.3 before the strike, the last statement showed 14.1 per cent. This may be said to be better than normal, for in the last three years this range has been from 13 to 15 per cent. These figures show the railroads have rapidly recovered from the effects of the strike.

There should be no difficulty in getting enough coal to keep the smoke coming out of the chimneys of the industry's factories. The movement of coal is above normal as is shown by statistics which tell of 195,000 car loads being moved the week of Sept. 16. In the corresponding week of August only 81,959 car loads were moved.

SHOW SEASON OPENED THROUGH NORTHWEST

Many Inquiries Received at Exhibit Staged by Dealers in Minnesota

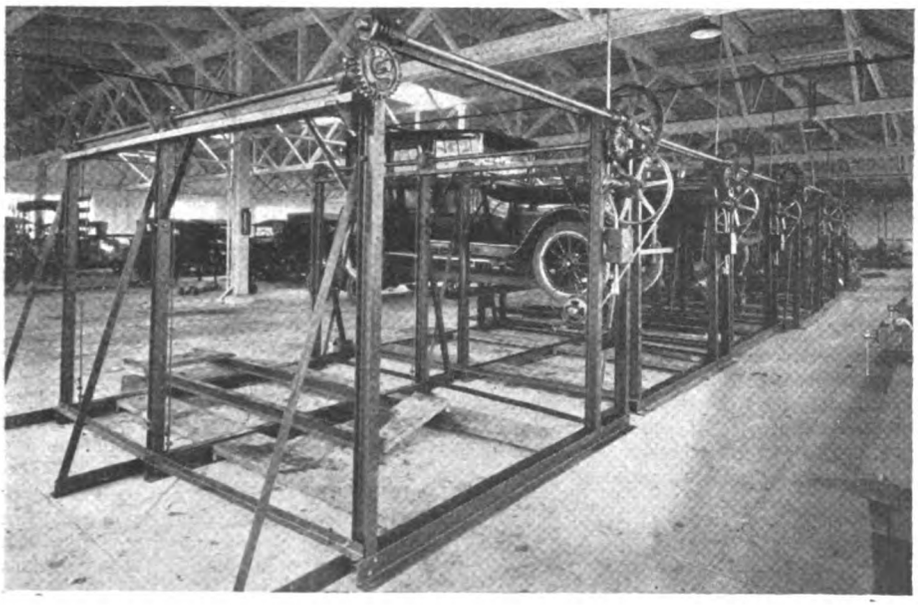
MINNEAPOLIS, Sept. 23—The Northwest has had its first automobile show for the new season. It was held on the State Fair grounds midway between St. Paul and Minneapolis and consisted of a regular automobile and accessory display in the grand stand exhibition room, independent and individual shows by dealers in tents and separate buildings and in the tractor show and power farming parade before the grand stand on the mile dirt racing track.

While it cannot be truthfully said that it was a sales show, it was undoubtedly an inquiry show. While dealers sold cars occasionally, none of them was jubilant over the situation except as it developed a big crop of prospects.

In all 389,900 persons attended the fair in seven days. It is fair to suppose that automobile was the big word with all of them, because of the various motor car exhibits, the power farming display, the automobile races two days and the big exhibit by the State Highway Commission of its work, and its repair shop on the fair grounds.

Additional space had been provided in all parts of the grounds for the automotive exhibit, including a Ford industrial show in which some 53 pieces were at work. The accessory show was brought down to the main floor of the grand stand building.

In all, one hundred acres, or 20 more than last year, was devoted to tractors, threshers and road making machinery, and the parade, which was a mile long, on next to the last day, was a remarkable sketch of the growth of the business in the last few years, as well as in improvements. Tractors were on the track drawing all sorts of farm and road machinery.



The power machinery parade was termed the pageant of progress and was in charge of E. S. Tectonious, W. R. Biggs, C. A. Claypool and L. C. Pryor, who is secretary of the Northwest Tractor Trade Association.

Two features of the parade, which lasted 45 minutes, were the State highway snow plow and a tractor with calliope attachment and the placard, "Music with your fall plowing." The parade is expected to give a big impetus to sale of tractors of all varieties as well as farm machinery of many types.

Anderson Schedule Doubled

ROCK HILL, S. C., Sept. 26—The production schedule for the Anderson Light Aluminum Six, originally set at 5000 for the year beginning Oct. 1, has been doubled. The reason for the increase is said to be due to the fact that parts will be more available than was first thought possible, coupled with requests from dealers for increased allotments for this model.

Repair Elevators Reduce Service Costs

A BATTERY of six elevators for raising cars to a convenient height has reduced service costs in the shop of the J. E. Sloan Co., Buick dealers in San Jose, Cal. The elevators are constructed of angle iron and can be either bolted in place on the floor or can be set down loosely so that they can be moved about. The operation is by means of a small electric motor for each elevator. The motor drives a worm shaft through suitable reduction gearing or chains and the two worms turn the two shafts which are on top of each of the side supports. These shafts wind up or let down the cables which are attached to the cradles going under the car. By this system more men can work on a car at the same time and the car can be placed at any height that is convenient for the work to be done on it

PALACE OF PROGRESS HOLDS CAR EXHIBIT

Dealers in Cleveland Aim to Make Retail Sales All-Year Business

CLEVELAND, Sept. 25—The importance of the automobile industry to this city has been demonstrated forcibly in the Palace of Progress, which is an exhibit and style show being conducted from Sept. 18 to 28 in the new $8,000,000 municipal auditorium under the auspices of the local merchants and manufacturers.

The ranking of the automobile industry is shown by the fact that dealers and makers of cars are the biggest factors in making the show a success; second, the industry is using as much space in the exhibition as are all other local industries combined, and, third, it is getting as much publicity in the papers here about its end of the exhibit as are all the other lines shown.

This Palace of Progress, which was started last Monday, is to be an annual fall affair. It is being conducted to center the attention of the shoppers of this city and Northern Ohio on Cleveland's wares. Through it the exhibitors hope to swell fall and winter buying by cooperative advertising and effort, and by means of the same sort of spectacular endeavor that proved so valuable when the Government was floating bond issues during the war.

To Avoid Seasonal Slumps

In addition to all the advantages that retail merchants in other lines expect from the show, the automobile distributors expect Cleveland to become a better territory for motor cars as a result of the show, and they also are banking heavily on making retail sales an all year business, free from seasonal slumps.

Retailers here expect to do this by making the closed car as popular in winter as the phaeton is in the summer. They have tried to do this through spasmodic efforts in previous falls and winters, and they have gradually sent the sales of the closed models up. They have been giving the closed car models a week of exhibit preference in their salesrooms, and they have set aside a week to boost it.

Advertise Freely

The Palace of Progress has given the dealers and makers an opportunity to cooperate, to pool their interests and put their strongest cards down in one place—the Municipal Auditorium.

They have taken liberal space in all the daily papers for advertisements. Only closed models are shown in these advertisements and in exhibition hall, where 39 firms are represented.

The automobile show is being staged under the auspices of the Cleveland Automobile Manufacturers and Dealers Association, of which Herbert Buckman is manager.

MICHIGAN PREPARES FOR SHOW CIRCUIT

Majority of Entrants of Last Year Join in Association's Plans

(*Continued from page* 36)

the association idea. Savings of from $500 to $1,500 for decorations and other expenditures were effected, and better shows were given than had ever been held before. Larger crowds had been attracted by the special exhibits and dealers were enabled to capitalize this in increased sales both during the show and in the months following.

The opinion was expressed by many that with the success of last year in mind, the association should plan larger expenditures for decorations and other details this year, to give the public the best shows possible and thus foster future attendance and interest. It was shown, however, that with greater time for preparation, the association will be able to obtain much more satisfaction in the selection of its material and that the expense will be about the same as before. Larger cities will stand a slightly heavier burden of expense than the smaller ones, but the average will be about the same.

Specially Built Settings

This season the settings will be specially built and prepared for the halls to be decorated. Color plans and materials will be selected which are adapted to stand the strain and wear of transferral from town to town as the circuit progresses. A further detail will be added in decorations and special lights for the outside of the show buildings, a feature that was omitted last year due to the lateness of the start. Posters similar in design, but lettered according to the dates and show locations in each city, will be more elaborate than last year and will be distributed in larger numbers.

With the nucleus of the circuit started the association will speed the work of enrolling the other cities if they care to enter so that a composite idea of the needs of each city and the cars to be exhibited may be obtained. With this information compiled the aid of distributors and branch managers of these lines will be enlisted so that special chassis and special paint work cars may be obtained from factories to feature and add interest to the exhibits.

Only Members to Exhibit

The point has been made by the association of permitting only dealers to exhibit who are members. It was declared that through the medium of the circuit plan alone, dealers are enabled to save enough money from the expense of local shows, to more than compensate for the cost of membership. The circuit show plan is the best service that the association has to offer to dealers generally, it was declared, and for that reason if no other, they should enroll. In this connection it was stated the association had enrolled 91 new members in sixty days.

Admission prices will correspond with those of last year, the larger cities charging fifty cents and the smaller ones twenty-five.

Present at the meeting, when the plans were gone over, were M. L. Garlock, Lansing, president of the state association; Joseph Thompson, Ann Arbor; O. H. Boylan, Kalamazoo; O. R. Dickerson, Mt. Clemens; G. L. Simmons, Flint; F. R. Lusk, Grand Rapids; Guy S. Garber, Saginaw; C. A. Mitchell and George Weiler, Bay City; John C. Cawood, Port Huron; H. E. Loomis, Battle Creek; Louis Richards, Alpena; Guy O. Simons, Walter J. Bemb, A. L. Zeckendorf, Detroit; H. H. Shuart, secretary of the association, and W. D. Edenburn.

A directors' meeting was held following the show meeting at which legislative and membership plans were discussed. Joseph Thompson was elected a director at large.

FRANKLIN WILL MAKE 1923 BIGGEST YEAR

SYRACUSE, N. Y., Sept. 25—Production of Franklin cars will continue at full speed during the fall and winter months, according to H. H. Franklin, president of H. H. Franklin Manufacturing Co. Announcement has been made by Franklin that production of Franklin cars next year will, according to plan, aggregate 14,000 cars, the greatest in the company's history.

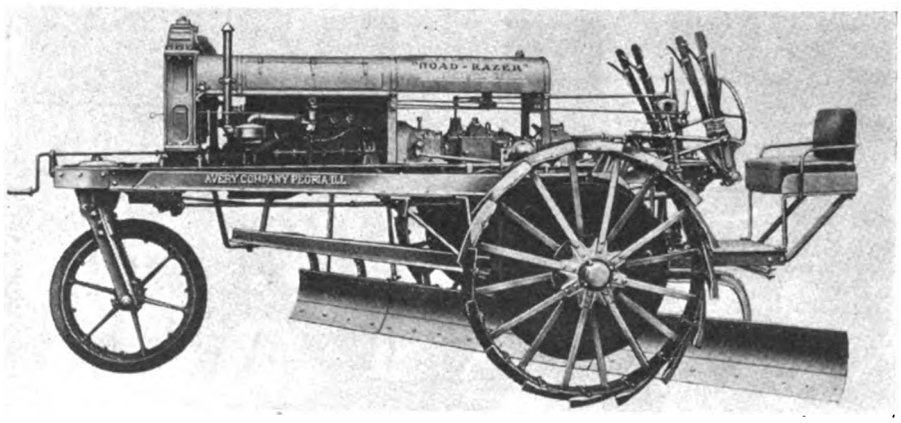
Shipments from the Franklin Automobile Co. during the first half of September exceeded shipments for the entire month of September of last year.

ROAD CONSTRUCTION REDUCED BY STRIKES

Federal Report Shows Curtailment Approximates 15 Per Cent of Program

WASHINGTON, Sept. 25—Curtailment of approximately 15 per cent in the Federal highway building program is reported by the United States Bureau of Public Roads, attributed to the twin railway and coal strikes, the effects of which are just being felt in the road building industry.

The significance of a 15 per cent reduction in the Federal-State program is seen when viewed in the light of the national program calling for the expenditure of $700,000,000 this year on good roads.



At this season of the year, when good road construction is proceeding at its fastest, the Federal and State governments are spending approximately $105,000,000 a month in road construction.

Figured on an average cost of $17,000 per mile for first class highway construction, this 15 per cent means a slow-down or decrease of 926 miles of roads being built per month.

The contributing causes for this reduction in the roads program are: bad order of cars, inability of rock crushers, cement mills, brick plants and asphalt companies to get railroad cars and also their inability to get coal.

The effects of the strikes, it is believed, will be even more pronounced during the next three or four months and officials of the bureau are of the belief that road building may, of necessity, fall off even more than the 15 per cent already felt, with the approach of winter and the necessity of greater shipments of coal.

Avery Road-Razer Has Powerful Lift

A new model of Road-Razer incorporating a power-lift is being manufactured by the Avery Co., Peoria, Ill. The power-lift feature enables the operator to raise or lower the blades by tripping a lever. In the new machine the blades are arranged so that their angularity may be changed. All gears have been inclosed and run in oil. Ball and roller bearing equipment is used throughout. A frictional brake, controlled from the driver's seat, is installed by means of which the front wheel may be held in any desired position to assist in turning. A platform, cushioned seat and back-rest are provided for the comfort of the operator. The fuel tank is now carried at the rear of the engine so that the hood may be without disturbing the tank. A drawbar attachment for pulling wagons, oil tanks, cement mixers, etc., is provided.

PRODUCERS OF MILK CONSIDERING TRUCKS

Association Will Take Action on Adoption for Use at November Meeting

WASHINGTON, Sept. 26—The use of automotive transportation by the National Milk Producers Federation will be taken up in November when the executive committee of that association meets early in the month.

For more than three months the association has had under advisement the advantages of automotive transportation of their milk products over rail transportation. Because of excessive freight rates (all milk carrying a passenger freight rate) the federation is seeking the establishment of its own milk transports, if it can be done satisfactorily.

Data on the subject, submitted to the federation by the Truck Committee of the N. A. C. C., will be placed before the executive committee at its coming meeting, which will be held either in Utica, New York, or Boston. The scope of the project will be seen from the fact that the federation, which is composed of 26 associations, has 200,000 milk producing members.

Preliminary consideration of the milk producers' trucking problem was taken up last week in a meeting in Philadelphia.

Receivers for Comet

BLOOMINGTON, ILL., Sept. 25—Receivers have been named for the Comet Automobile Co. by Judge Baldwin, to avert foreclosure proceedings against the property, in behalf of the Citizens National Bank and the Farmers State Bank & Trust Co. of Decatur.

The Millikin Trust Co. and Roy W. Jones of the Comet company have been named receivers at the request of the company and with the consent of the bankers. They were instructed by the court to make an appraisal of the property before further action is taken.

President George W. Jagers looks upon the action as a most favorable way out of the financial difficulties, and believes that it will be beneficial to stockholders and creditors alike.

It is not planned to wind up the affairs, but it is hoped that the concern may be financed and given another opportunity to proceed with the manufacture of cars.

TRACTOR BUSINESS EXCEEDS LAST YEAR

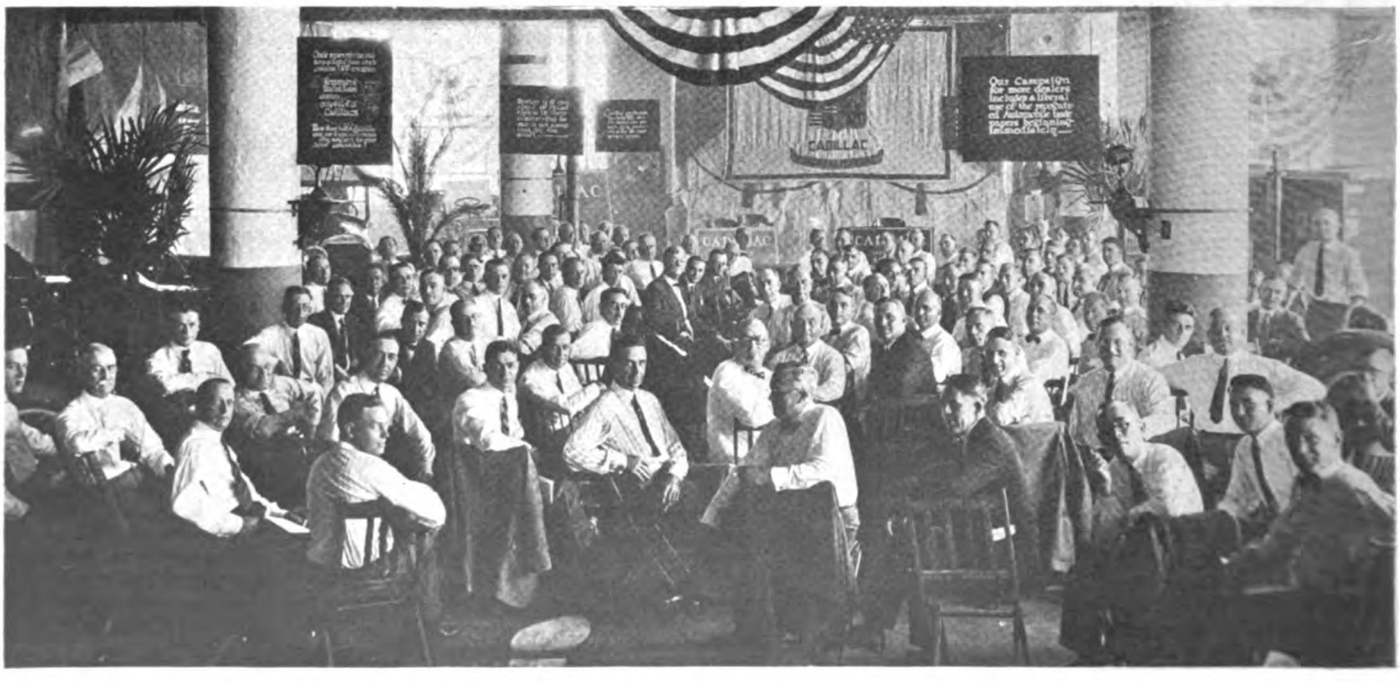
CHICAGO, Sept. 22—Manufacturers of tractors agree that their business up to late in August was considerably better than for the corresponding period last year, according to the monthly review of trade conditions issued by the National Association of Farm Equipment Manufacturers. It is stated that the business of some of the larger companies compares very favorably with that of a normal year. One company stated that its business in the last year would amount to more than for any year previous to the war period.

August shipments of tractors were reported generally as equal to or greater than those of July. Production was reported to be still below normal, due principally to the fact that some companies are shipping from stock.

INDIANAPOLIS BUSY AS BUILDING BOOMS

Approximately $1,000,000 Involved in Real Estate Transfers and Leases

INDIANAPOLIS, Sept. 26—Meridian Street, automobile row of this city, is experiencing a brisk automotive building boom in five blocks just below Twelfth Street. Approximately $1,000,000 in real estate sales and leases for the five new automotive buildings will change hands and all of the buildings are expected to be up by late winter.



The Indiana Battery Service is the latest concern to announce a new building program acquiring land by lease for a total rental of $317,800. In the building to be erected on the Meridian Street front will be housed the Milburn salesrooms for which the company is distributor, and the Exide Service Station, also run by the concern.

The Olin-Wilmeth Co., Ford and Lincoln dealer, is rushing foundations for its four story building and will have a spacious plant adequate for its large sales and service rooms.

Conduit Automobile Co. is also actively at work on a four story plant for its Peerless, Chalmers and Maxwell business. This construction plan is one of the recent announcements.

Besides this there is the Hassler-Indiana Co. with its new three story building under way, and the Automotive Equipment Co. with another building not far from ready. There have been several new automobile "hotels."

Cadillac Distributors at Factory Meeting

Fall and winter sales plans were laid at a meeting of Cadillac distributors and dealers last week. The meeting radiated optimism. Incidentally it was announced that business in the past twelve months had exceeded the business for any other similar period, both in number of cars and in total value

MUCH GOOD EXPECTED FROM TIRE MEETING

Official Statement of Recent Conference Issued by Associated President

CLEVELAND, Sept. 27—R. F. Valentine, president of the National Tire Dealers Association, has made public, through an official statement, what had been accomplished at the meeting of a special committee of the tire dealers association and the ruling board of the Rubber Association in New York City on Aug. 9.

Horace De Lisser, acting president of the Rubber Association, is quoted as saying: "This conference has been productive of incalculable good to both the manufacturer and the dealer and it has seldom been my privilege to sit in a conference holding more interest and where there was such evidence of clear understanding."

Re-equipment Sales Considered

In the matter of adjustments, the rubber association assured the committee that all available means were being used to acquaint the public more thoroughly with the new policy, which calls for the elimination of mileage guarantees. The rubber men also agreed to endeavor to induce certain manufacturers giving such guarantees to discontinue the practice.

Re-equipment sales were considered and on this subject the manufacturers pledged the use of every possible precaution to prevent the purchase of larger quantities than actual equipment requirements and that re-sale of equipment stocks through car agencies will be discontinued.

A discussion of the topic. "Re Car Manufacturer," developed that a few companies are now supplying five tires on equipment orders instead of the regular four tires. Future contracts will, in all probability be based on four tires, leaving the fifth to the dealer to be supplied.

The national and commercial accounts have been a problem to the tire dealer and when this subject was reached, one of the largest tire manufacturers announced that he had discontinued such accounts, with the exception of a few that run until the end of the year. The dealer representatives argued that there was no justification for such accounts and the rubber men agreed that this matter would be given the closest consideration by the sales organization.

Would Restrict Price Publication

The dealers' committee asked that the publication of all price lists other than the consumer lists be eliminated. They stated it would save money for the manufacturer and eliminate misunderstandings for the dealers. It was the consensus that if manufacturers found it necessary to issue lists other than consumer lists, their distribution should be carefully controlled.

Regarding the production of more than one line or grade of tires in one plant, the dealers questioned the practice of any company producing more than one line and grade and marketing the products under separate agreements and contracts. This brought the statement from some manufacturers that in the future or just as soon as practicable, their products would be offered through one channel and the same policy would apply on all lines.

Several manufacturers reported that dealer practices would come in for consideration and close scrutiny and that the flagrant abuses indulged in and practiced by a great many dealers would not be tolerated. Other companies reported that they already were enforcing many needed restrictions. The dealers promised every co-operation possible in the correction of these abuses and demoralizing practices indulged in by some dealers.

TIRE DISTRIBUTOR USES OLD BREWERY

MILWAUKEE, Sept. 22—The establishment of the Jung Tire & Supply Co. as distributor of Norwalk tires marks the conversion of part of a large former brewery property in Milwaukee into an automotive equipment business, at the head of which are the members of the former brewing concern, namely, the Jung Brewing Co.

Philip Jung, Jr., son of the founder of the brewery, is president of the new tire and supply concern.

The literature of the new company bears the familiar "Jung" name of pre-Volstead days, while the phrase, "Serves You Right," internationally known in connection with old-time Jung beverage, is applied to Norwalk tires and the Jung Tire & Supply Co.

COURIER TO BUILD 750 REST OF YEAR

SANDUSKY, OHIO, Sept. 27—The Courier Motors Co. which, under the name of the Aero Motors Co., purchased the assets of the Maibohm Motor Co., plans to build 750 cars for the balance of this year and has a tentative schedule of from 3000 to 4000 for next year.

It is reported that most of the old Maibohm distributors have continued with the new company, that others have been secured and that an aggressive dealer campaign is now under way. The old Maibohm has been considerably changed in everything except the lines of the car.

Durant Dealers Meet

CEDAR RAPIDS, IOWA, Sept. 26—Twenty-seven Durant dealers in this territory were guests at the Hutchings Motor Co. plant and heard C. Jackoby, district representative, discuss both the Durant and Star cars. Dealers plan to go to Flint, Mich., next week.

MURRAY RUBBER CO. TO SUCCEED EMPIRE

Products of Both Companies Will Be Continued—Officers Are Elected

TRENTON, N. J., Sept. 22—Steps have been taken for the organization under the laws of New Jersey of the Murray Rubber Co. as successor to the Empire Tire & Rubber Co. which was purchased at a receiver's sale last week by Campbell, Heath & Co. of New York and their associates. The purchaser backed the re-organization plan which was offered the creditors by William M. Pepper and J. Cornell Murray.

C. Edward Murray, Jr., will be elected president and general manager of the Murray Rubber Co. The other officers will be: William M. Pepper, vice-president and treasurer; Harvey R. Nason, secretary; Ray H. Paddock, director of tire sales; Robert M. Stuart, director of mechanical sales; W. W. Sanders, factory manager; Albert N. Alexander, comptroller; H. Earl Berrien, assistant treasurer; and Norman S. Conover, assistant secretary.

The directors will include William H. Peck, president of the Third National Bank of Scranton; H. J. Angermeier, vice-president of the National Bank of Kentucky; W. D. Campbell, president of the Van Camp Packing Co.; W. M. Pepper, treasurer of Campbell, Heath & Co., and C. E. Murray, Jr.

This is the exact organization that ran the plant successfully during its receivership. It is also announced that there will be no change in the personnel of district managers.

The Empire products inclusive of tires and tubes will be continued as in the past and in addition the Murray products will be manufactured. The Murray Rubber Co. is simply a new corporate name, the products being continued as at present.

Bendix Develops New Engine

CHICAGO, Sept. 21—The Gernandt engine, a full Diesel type, has been developed by the Bendix Engineering Works. It is claimed that it is adapted for use in cars, trucks and tractors, and for marine and stationary use. The Bendix Co. has been allowed basic patents on the new engine. It will not, however, manufacture the engine, but will license its manufacture by others. The engine will burn crude oil, distillate, kerosene and gasoline, and may be designed for operation on either a two or four stroke cycle.

Chandler Cleveland Branches

BOSTON, Sept. 25—Factory branches for the Chandler and Cleveland have been established here, following the taking over of the business of the Chandler Motors of New England by the respective factories. Ralph P. Nettleton and P. E. Underhill have been the controlling members of Chandler Motors.

CHANGES IN THE TRADE

Mall Motor Co. of Cleveland has been appointed distributor of the Gray.

C. H. Reckford has entered partnership with **A. B. Hayes** in the **Kelly Tire Sales Co.**, Dubuque, Iowa.

Dowling Motor Co., Charlotte, N. C., has been made distributor in western North Carolina for the Star.

Don E. Barth, proprietor of Don's garage, Davenport, Iowa, has taken over the agency for the Earl motor car in this territory.

Harry W. Anderson, recently with the Duesenberg Motor Co., has taken charge of the eastern business of the Stutz Motor Car Co.

George B. Beaudry is president and Frank C. Magranis treasurer of the reorganized **F. C. Magranis Co.**, Hudson and Essex dealer, Northampton, Mass.

Murphy & Powers, Inc., a new firm composed of former employees of the **Dunbar-Laporte Motor Co.**, Holyoke, Mass., has taken over the tire and accessories department of that concern.

Morrow Motors Corp., 1761 Broadway, New York, has been appointed to handle the National for southern New York state, northern New Jersey, southeastern Connecticut and Long Island.

W. E. Lohr, formerly with the **Cunningham Auto Clearing House**, Des Moines, has joined the **Payne Motor Co.**, Paige distributor for Iowa, and will be in charge of the used car department.

G. H. Seagert has been appointed general sales manager of the Hoeveler-Stutz Co., Pittsburgh, distributor of Stutz and Cleveland cars, to succeed F. H. Hoover, who has become general manager.

Ideal Motor Corp. will distribute Moon cars for the Minneapolis territory. This is a new corporation, of which **Gordon Blake** is president and **W. G. Garber** of La Crosse, Wis., is vice-president and treasurer.

Clarence E. Beck, four years salesman for the **Hudson-Jones Co.**, Waterloo, Iowa, has resigned to become sales manager of the **Baum-McDonald Co.**, which handles the Lexington and Gardner cars.

Jones-Nyquist Co., Minneapolis, has been formed to take a sub-agency for the Buick by **Parke H. Jones** and **C. W. Nyquist**, who have been connected with the Pence Automobile Co. for eleven and seventeen years respectively.

Herring Motor Co., Des Moines, has taken over the business of **Beamer & Wissler**, jobbers of automobile accessories. Lee Wissler has joined the sales force of the Herring company and John Beamer is devoting himself to other business interests.

Therkelsen Motor Co. has been formed in Portland, Ore., to handle the distribution of the Rickenbacker car throughout the Oregon district. The company is headed by Lawrence Therkelsen, for the past five years sales manager of the Braly Auto Co., Franklin distributor.

Gluek-Hennessy Motor Co., Minneapolis, has been organized to succeed the **Madsen-Peterson Motor Co.**, selling Ford and Lincoln cars. The organizers are **Alvin** and **Eugene J. Gluek**, and **C. P. Hennessy**, formerly with the Lincoln Motor Co. and later general manager of the Madsen Co.

Robert N. Todd, for two years in the New York sales branch of the Pawling & Harnischfeger Co., Milwaukee, cranes, machine tools, etc., has resigned to join **Walter Price**, formerly eastern sales manager of the Milwaukee company, in the business of Ford dealer in Philadelphia.

Northwestern Republic Motor Truck Co. has opened headquarters in Minneapolis for distribution through the northwest. The company has taken over the stock of the former **Stevens Corp. P. S. Willis**, more than two years manager for the Master Truck & Tractor Co., is general manager of the new company.

F. G. W. Sudrow, for many years zone manager of the Chevrolet Motor Co. of Kansas City and recently identified with the Gardner Motor Co. of St. Louis, has resigned to become general sales manager of the **Hathaway Motor Co.** of Kansas City, Durant and Star distributor for Kansas City and the southwest. Sudrow's headquarters will be at **Kansas City.**

Van Cortlandt Vehicle Corp., metropolitan distributor of the Peerless, will remove Oct. 1 from its present quarters at the corner of Broadway and Sixty-third Street, New York, to the four-story building at the corner of Broadway and Sixty-second Street, which it is completely renovating. This property, formerly occupied by the Keystone Tire & Rubber Co., is opposite the New York Cadillac Co. and adjoins the Packard Motor Car Co.'s salesrooms.

C. P. Fisken, manager of the Wisconsin Sales Division, Mitchell Motors Co., Inc., Racine, Wis., has announced the following appointments of new Mitchell dealers in addition to the **Nelson-Mitchell Co.**, Milwaukee, distributor in Milwaukee, Ozaukee, Washington and Waukesha counties, and retail dealer in Milwaukee: **H. M. S. Motor Car Co.**, Manitowoc, Wis.; **Holterman Motor Co.**, Fond du Lac; **Mitchell Auto Sales Co.**, Madison; **Warner Mitchell Co.**, Janesville; **Schroeder Motor Co.**, Racine; **Frank X. Dietz**, La Crosse; **Genger Bros.**, Wausau; **Ballatine Garage**, Prairie du Chien; **Lawrence Warner**, Beloit; **J. B. Wilkes**, Watertown; **Sharp's Garage**, Mauston; **Edw. C. Wolf Co.**, Appleton; **Monroe Mitchell Co.**, Monroe; **West Racine Garage**, Racine; **Hollandale Auto Service Co.**, Hollandale; **Schroeder Motor Co.**, Plattsville; **Gem City Garage**, Baraboo; **H. Bruns & Son**, Madison; **Earl Wetmore**, Patch Grove; **Smith Auto Co.**, Oregon; **S. H. Shults, Jr.**, Walworth, Wis., and **A. A. Tillman & Co.**, Hancock, Mich.

AGREEMENT REACHED ON CHALMERS PLAN

NEW YORK, Sept. 23—Further steps in the adjustment of the affairs of the Chalmers Motor Co., by which it is expected that the Maxwell Motor Corp. will obtain title to the Chalmers company, were taken this week with the approval by the Noteholders' Protective Committee for the Chalmers first mortgage 6 per cent five-year gold notes of the plan under which the notes will be exchanged for stock in the Maxwell corporation. It is understood that a majority of the noteholders already have consented to the plan. Time for additional deposits of the Chalmers notes with the New York Trust Co., as depository, expires Oct. 5.

The plan provides for the exchange of notes on the basis of ten shares of Maxwell Class A, ten shares of Maxwell Class B stock and $60 in cash for each $1,000 note, or the alternative of $860 in cash. The Class A stock is of the par value of $100, and the Class B stock of no par value. Class A is entitled to noncumulative preferred dividends, and the rate of 8 per cent per annum and to participate equally with Class B stock in any year after 8 per cent has been paid on each class. Upon any liquidation of the corporate assets, Class A stock is entitled to receive par in priority to Class B stock. Both classes have voting power.

NEW PORTLAND FIRM HANDLES STUDEBAKER

PORTLAND, ORE., Sept. 25—Studebaker retail sales for the Portland district have been taken over by the John K. Leander Co., recently formed here and capitalized for $100,000. The firm is headed by Leander, who for three years was manager of the Portland branch of the Studebaker Corp. of America. Leander recently resigned from the corporation in order to form the retail company.

For about a year retail sales for the Studebaker in this section have been handled by the factory branch. Under the new arrangement Leander will handle both sales and service. For the time being the company will occupy quarters with the factory branch, but construction of a big building is planned for early spring. Prior to coming to Portland three years ago Leander was manager of the Studebaker branch at Denver and prior to that was with the firm in Chicago. He has been with the corporation for about nine years.

CALIFORNIA REPORTS SALES CURVE RISING

SAN FRANCISCO, Sept. 25 — California automobile dealers had next to the best month of their history during August, 1922, though they did not reach the number of sales made in June of this year when they smashed all records by selling 14,180 cars. August registrations showed sales of passenger cars totaling 13,893, which is 287 cars short of the June record, but enough to indicate that the sales curve is again rising, since the August volume of sales exceed that of July by 882 cars. There is more than a possibility that September sales will equal, or even surpass, the June highwater mark.

Aggregate sales for the month of August, 1922, were 4398 cars more than for August, 1921, a gain over the same month of last year of 46 per cent. Southern California keeps its lead over Northern California in number of sales, 7515 for the south, and 6378 for the north. Sales for the past August in the south were 2131 more than in August, 1921, a gain of 40 per cent.

ASSOCIATION ACTIVITIES

Detroit Makes Show Plans

DETROIT, Sept. 23—The Detroit Automobile Dealers Association will hold a closed car show in the General Motors Building Auditorium in the week of Oct. 17 to 21, this show taking the place of the closed car week showing in dealers' salesrooms as held last year. The exhibition will be the largest exclusive closed car show the Detroit dealers have held.

Only exclusively closed cars will be permitted at the show, the association having ruled against showing convertible open and closed models such as California top jobs and others. It has also been decided that only one car of a type or model can be displayed. The exhibit space to members of the association has been allotted and other exhibits are invited. From two to six exhibits will be the range of the individual company showings.

The auditorium of the General Motors Building is on the fourth floor, the entrance being on the Grand Boulevard side of the building with transportation to the exhibit floor by the regular elevator fleet. Separate exits will be provided. Decorations to set off the models will be erected by the association and every effort will be made to attract a large attendance. An admission fee of fifty cents will be charged.

To insure the attendance of persons who might be expected to be prospective closed car buyers, the association will mail 10,000 engraved announcements from a specially compiled list. In addition, there will be regular newspaper announcements and posters.

Greenville Chooses Officers

GREENVILLE, S. C., Sept. 25—The Automotive Trades Bureau of the Chamber of Commerce has elected Eugene B. Smith president for the next term, succeeding O. B. Mills. Fred Plexico was elected vice-president and Browning Goldsmith, Charlie Upchurch and O. P. Mills, executive council. The bureau went on record as in favor of holding an automobile show in the city this year.

Spokane Honors Strickle

SPOKANE, WASH., Sept. 24 — R. L. Strickle, vice-president of the March-Strickle Co., Inland Empire distributors for the Durant products, was elected to the board or directors of the Spokane Automobile Chamber of Commerce at an association meeting recently. Strickle took the vacancy on the board left by the resignation of James F. Boyd, who has gone east. Discussion was given to problems of automobile men in general, as well as the association, according to P. J. Garnett, president.

Sales Managers Organize

PHILADELPHIA, Sept. 21—The Automobile Sales Managers Division of the Philadelphia Automobile Trade Association was formally organized in the quarters of the latter association and the following officers were elected A. P. Hawes, sales manager of the W E. W. Motor Corp., president; F. N. Delavan, Philadelphia-Nash Motors Co., first vice-president; William P. Berrien, Herbert Bros., second vice-president; Charles C. Bulkeley, executive secretary of the Philadelphia Automobile Trade Association, secretary, and A. J. Hamilton, Gomery-Schwartz Motor Car Co., treasurer.

In addition to the foregoing the directors include R. Scott Smith, Neel-Cadillac Co.; Fred Culver, Kip Motor Co.; N. S. Jorgensen, Girard Automobile Co., and the Messrs. Skilton, Larsen-Oldsmobile Co.; Casserly, Harper & Harper, and Moore, Philadelphia-Packard Motor Car Co. An admissions committee was appointed, consisting of the Messrs. Stankowitz, Thornton-Fuller Automobile Co.; Lockwood, Studebaker Corp. of America; Brown, Lexington Motor Co.; Horner, Locomobile Co. of America, and Clayton, Oakland Motor Car Co.

Bulkeley is now engaged in secretarial duties for the new organization, the Philadelphia Automobile Trade Association and the Automotive Service Association of Philadelphia.

Rules and bylaws were adopted. The object of the association is to establish a closer relationship among the sales organizations of the city's automobile companies and to stabilize sales methods throughout the industry.

Issues Used Car Manual

PHILADELPHIA, Sept. 21—The manual for the used car exchange of the Philadelphia Automobile Trade Association has just been issued containing the current list price for used cars and the schedule of allowance. The association's membership is 100 per cent in the exchange and it is agreed that the plan has been of material assistance to the industry.

Show for St. Paul

ST. PAUL, Sept. 26—A closed car show is planned by the Automobile Dealers Association for Oct. 11 to 14 in the municipal auditorium, the first in two years.

BIG TOURIST TRAVEL OVER OREGON ROADS

Forms One Fifth of Traffic—Census Shows Percentage of Cars

PORTLAND, ORE., Sept. 16—Tourist traffic over the state highways of Oregon this summer reached the point where it amounted to the amazing total of over one-fifth of the total travel, according to a road census taken by the Oregon State Highway Department during one day late in August. The complete figures for the census were made known to-day, after the figures had been secured, checked over and tabulated.

The census was taken by stationing men at 138 different points on the 30 most important roads of the state. A count was made of traffic both ways at every one of these points, the observers starting work at 6 a. m. and counting traffic until 10 p. m. All observation points were on highways outside of incorporated cities or towns, so as not to include the merely local city traffic. Every part of the state was represented in the list of observation points.

During the period a total of 57,589 vehicles were counted as traveling past the observation points. Of this number 11,537, or 20.03 per cent, were passenger automobiles bearing licenses of other states than Oregon. A large proportion of these were tourists, it was stated, although some were motorists from adjoining states using the roads for business purposes.

Of the total traffic, an overwhelming proportion consisted of passenger automobiles.

A Sticker That Asks for Courtesy

"We wish to apologize for taking the liberty of putting this 'Automobile Courtesy' paster on your car," says a notice which is left in the car when the above paster is put on the windshield. "We know you will want to have a part in this campaign to make it safer and more pleasant for motorists and pedestrians.

"Old time courtesy seems to have been forgotten. To-day many motorists assume a selfish attitude. It is your job and my job to educate the other fellow. This paster on your car will carry this thought to more people than would be possible in any other way.

"Courtesy is cheap."

The campaign has been inaugurated by the Chicago Automobile Trade Association and is assuming country-wide proportions through other associations taking it up.

An exclusive factor of Safety

THE INSTANT that pressure is applied to the Williams Accelerator pedal, the carburetor responds, at any setting of the hand throttle. There is no lost motion. When the pressure is removed, the compressed throttle-closing spring returns to normal and is stopped by the nut at the end of the rod, thus shutting off the gas.

There are very few parts to the Williams Accelerator, and these are designed for strength and accuracy of operation. The slide, to which the carburetor is attached, is made of high-grade babbitt with a long bearing surface, which assures long service. A few drops of oil, placed occasionally at a point shown by the arrow, is all that is necessary to keep the entire mechanism clean and perfectly lubricated.

* * * *

These are exclusive features of the Williams Accelerator. They provide prompt and positive acceleration. They constitute a factor of safety worth considering.

NO-LEAK-O Piston Rings

Get Your Share of Business

You can get your share of business if every repair and replacement job you do results in a satisfied customer, for satisfied customers pass the good word along. You can easily win the good will of your customers by using the No-Leak-O Piston Ring on every piston ring replacement job.

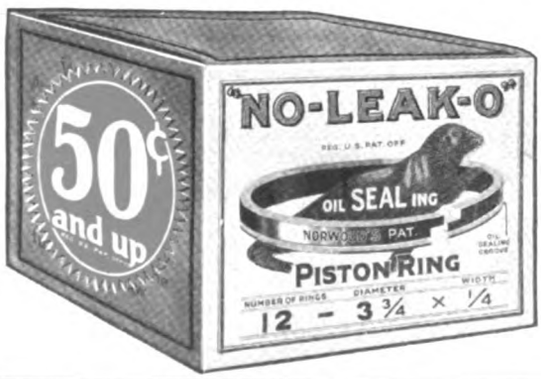
No-Leak-O Piston Rings "won't leak because they're sealed with oil."

They are made in one piece—of finest material—easy to install—quick seating—fully guaranteed—individually tested for accuracy and give equal tension on cylinder walls.

The "oilSEALing" groove—found only in No-Leak-O—packs an oil film in between piston and cylinder walls like "packing" in a pump.

This oil "packing" seals in all the expanding gas. Every drop *must* work. The same "film" not only prevents oil from working up into cylinder heads to form carbon but also keeps "unburnt" gas or kerosene from seeping down into the crank case to weaken lubrication.

No-Leak-O gives you *perfect oil control and compression in each individual ring.*



For replacement jobs you need a dependable ring designed and made especially to give satisfaction on replacement jobs. No-Leak-O started as a replacement ring; they are still the *leading* replacement ring; they make good on every job.

Over 200 reliable jobbers carry No-Leak-O Piston Rings in all standard sizes and *over* sizes. Prompt service *always*.

Write for free booklet, "Know the Facts About Grooved Piston Rings." Also let us tell you about our liberal dealer proposition and how our National Advertising can increase your profits. Quick action on your part will mean bigger profits.

NO-LEAK-O PISTON RING COMPANY
Dept. T-43
BALTIMORE, MD.

One price during eight years of continued success
One design—for all cars—50c and up

Important—In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

This magnified view of a Never-Leak Gasket corner indicates plainly why Never-Leak is strongest where others are weakest. The advantages of a bound outer edge with scalloped corners are quickly evident to the experienced mechanic.

This new Never-Leak design increases the strength of the gasket more than 100 per cent over the old type open edge cylinder head gasket. It prolongs a good repair job — and keeps the customer sold. Write for details.

A Leaky Gasket May Spoil a Good Job

The mechanical work on an overhauling job may be well done and the whole job be knocked because of a leaky gasket.

No "pep" and loss of power are facts to a customer—the reason he may not know.

Never-Leak Gaskets can be used again and again, consequently they are the cheapest in the end.

Why take the chance of losing a good customer through a poor gasket.

A sample gasket for any car, truck or tractor sent upon request, either direct or through your jobber.

Never-Leak Gaskets are listed, pictured and priced in our catalogue—copy sent upon request.

In Jamaica, N. Y.—

"We formerly handled no less than five different makes of automobiles—all standard makes—and can honestly say that we never knew what real business was until we took on the Olds line one year ago last January. And this considering we handled the other cars during what was conceded to be the best period—1918 to 1920. One reason that we have made some real money is the fact that it has been necessary to give so little service on Oldsmobile cars in general—for instance on the Model 47 it is not worth while mentioning. Long live the Oldsmobile!" —SCHMIDT & KASTNER MOTOR CO.

R. Schmidt

Can you say the same thing about the line you handle? Do you feel that you've made a friend with every car you sell?

And do your customers stay sold without a lot of gratis service? Is your present connection a happy one? Are you proud of it?

It's a good thing occasionally to take an inventory of your contract just as you take a periodic inventory of your parts department. If the count isn't satisfactory it's time to look around.

Be an Oldsmobile dealer and you have a complete line of famous cars with a wide price range, with one factory connection, one deposit, one parts account, one advertising message, and with the privilege of using the strong General Motors financing plan which has no equal in the help and cooperation given the dealer.

If you want this kind of a factory contract, communicate with us at once—don't hesitate because you think the territory may not be open. We may have plans which will give you just the opening you want.

The first step is yours—write, wire, or phone.

What Are You Doing to Cultivate Your Best Salesman, the Satisfied Owner?

Digitized by Google

Making Satisfied Customers an Active Selling Force

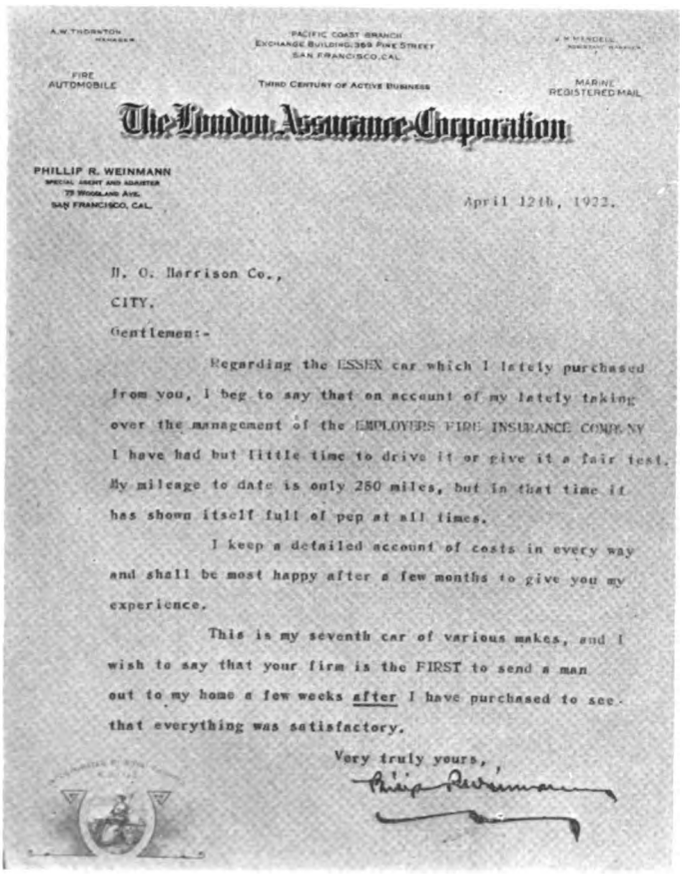
High Development of Preventive Service Idea in Western Dealer Organization Contains Suggestions for Every Man in the Business of Selling Cars

"WHEREVER there is one of our cars in Northern California there is a candidate for another of our cars. Wherever in Northern California there is a motorist who bought his car from us there is an active salesman for the cars we sell."

This is the statement of R. B. Alexander, sales manager for the H. O. Harrison Co., 1600 Van Ness Avenue, Hudson and Essex distributor for San Francisco territory. When he made it he was sitting at his desk, not in a lofty office up in the three-story building, but right down next to the ground, among the salesmen, close to the repair division and within arm's reach of the cars in the salesroom. And he is making good on the statement, making good by means of progressive methods in service, with 50 capable service men helping him make good, and piling up car sales.

"We sell automobiles, we sell repairs, we sell some service, but the mainspring that keeps all our customers contented, makes them successful drivers, urges them to send us prospects, impels them to buy the same car when new models come out, and builds up our repair business, is what we call 'preventive service.' That is to say, the service which follows the owner home after he has paid us for his car, keeps track of him, teaches him how to get the most out of his car, how to drive it, and how to keep the car in the best condition at the lowest maintenance cost."

The H. O. Harrison Co. distributes and sells Hudson and Essex cars. B. M. Taylor, assistant general manager of the company, is responsible for the preventive service idea and for its installation in the organization.



This is a story of how the service is given and the results it accomplishes in increased business for the firm and maximum satisfaction for the owner.

The Harrison company keeps two men, both expert automotive engineers, both men of good appearance, as capable of talking with a bank president as with an automobile mechanic. Each travels in one of the cars sold by the firm, and each keeps up his own car, so that he knows constantly all the inside secrets of that car. Each can be put on the floor as a salesman, and each has made good there. Each can go into a repair shop, take a Hudson or an Essex to pieces, put it together again, and make it run.

As soon as a car is sold, a complete record is made of the deal and of the buyer, and filed in the "Preventive Service" file. A day or two after the purchaser has driven away with the car, one of these service men calls on him, or her, as the case may be. If possible, this service man takes a ride, with the purchaser as driver, in the latter's car. If the customer is not a skilled driver, he is taught the things about driving that he does not know—gear shifts, controls, handling the car in traffic and on turns, all the troublesome little details that beset the driver on a highway filled with thousands of other cars and other drivers.

If the car is not working exactly as it should, the preventive service man knows it. He gets into the inside of the machinery at once, straightens out all the tangles, irons out the kinks, and demonstrates to the owner just how to keep the car in order. Time is not

The London Assurance Corporation

PHILLIP R. WEINMANN
SPECIAL AGENT AND ADJUSTER
79 WOODLAND AVE.
SAN FRANCISCO, CAL.

April 12th, 1922.

H. O. Harrison Co.,
CITY.
Gentlemen:-

Regarding the ESSEX car which I lately purchased from you, I beg to say that on account of my lately taking over the management of the EMPLOYERS FIRE INSURANCE COMPANY I have had but little time to drive it or give it a fair test. My mileage to date is only 280 miles, but in that time it has shown itself full of pep at all times.

I keep a detailed account of costs in every way and shall be most happy after a few months to give you my experience.

This is my seventh car of various makes, and I wish to say that your firm is the FIRST to send a man out to my home a few weeks after I have purchased to see that everything was satisfactory.

Very truly yours,
Phil R. Weinmann

The last paragraph of the letter reproduced above shows what one owner thinks of a firm that shows interest in him AFTER the purchase. The story beginning on this page tells how a western dealer organization builds business on the basis of cultivating and satisfying the customer. To be sure, this is a large dealer organization, but what is there in the plan, generally, that cannot be carried out by any dealer on a scale fitting the resources of his organization? Read the story for suggestions for your business

Digitized by Google

an object to this service man; if it requires an hour to teach the driver what he should know, or if it requires a half day, or even a whole day, the time is taken to do it, and time, training and effort are made entirely subservient to leaving the purchaser in that frame of mind in which he is glad that he bought that Hudson or that Essex, and no other car.

Two weeks later the service man calls again on the same customer. If there are any complaints, if there is the slightest dissatisfaction, if the driver is not clear on any point in the operation of his car, the service man gives him another lesson, solves his problems, makes him feel that the giving of his check for the car was merely an incident in the life of that automobile, not the breaking point of relations with the H. O. Harrison Co., and by no means the end of the dealer's interest in the customer. Thereafter, at least once a month, frequently more often than that, the service man calls on the car owner. If there is anything wrong with the car, if there is any overhauling or repair needed, the service man advises just what should be done, how much it will cost, and arranges the time for the making of the repairs in the repair plant at the headquarters of the Harrison company. Often the owner believes his car needs overhauling or repairing when some minor adjustment, made on the spot by this service man, will remedy the trouble.

Satisfactory Car, Satisfied Owner

"The result of this," says Alexander, "is longer life for every car we sell, and better care from the owner for his car. You would think that this would mean fewer sales for us; on the contrary, it has greatly increased our sales, for every man or woman who has bought a car from us, and received our preventive service, tells every other man, woman and child about it. We get more prospects from this service than from any other branch of our organization, and almost without exception the man or woman who has had this service comes to us for another car when he or she feels that the old one should be replaced with a new one.

Gets Repair Business

"Receiving such free service, which unquestionably cuts down the repair bills and maintenance costs for the individual motorist, brings that motorist to our repairshop when his car needs attention. Our repair business has been tremendously increased by this preventive service, until to-day we have more than 50 men in the service and repair department alone. Of course we keep road repair outfits and service trucks, for whose work we make the regular charge, but these have nothing to do with the free preventive service, unless they are called out by customers to tow in cars, to make roadside repairs, or to make adjustments in the home garage."

In connection with these repairs and service jobs, as soon as any work for which the charge is $5 or more is completed, a personal letter is sent to the customer, a letter written on the letter head of the company, and signed by B. M. Taylor, the assistant general manager, who has direct charge of the service department. This letter reads as follows:

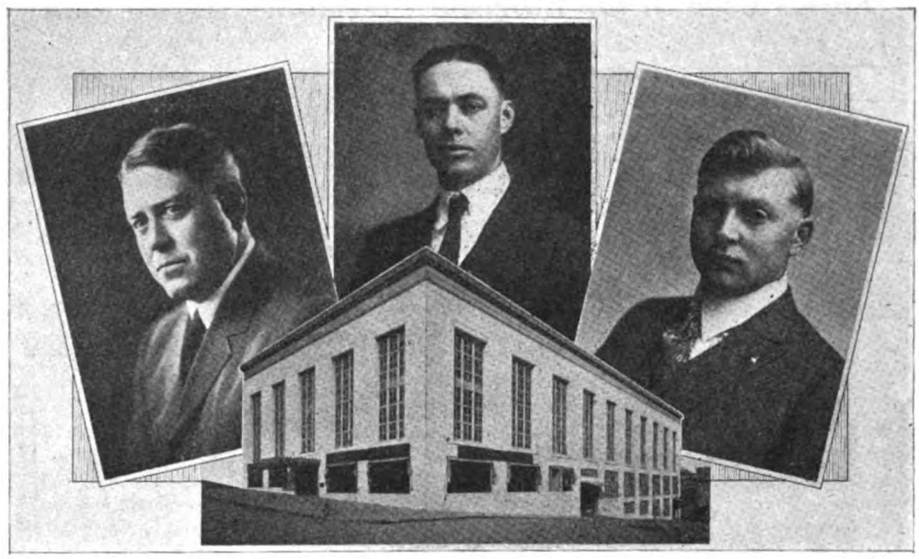
Mr. B. Goodfriend,
680 Sutter St.,
San Francisco, Cal.
Dear Sir:

How can we improve our service?

That is a question we are continually asking ourselves, as it is our hope to render the very best service possible.

Just having taken your car from our shop, after having some repair work performed, you may be in a position to offer some constructive criticism that will help us to improve our work or methods.

Will you kindly answer the questions asked on the reverse side of the letter and mail it to us?



Thanking you for the consideration given us, we are

Yours very truly,
H. O. HARRISON CO.,
(Signed) B. M. Taylor,
Ass't General Manager.

On the reverse side of the letter, as mentioned, are printed the following questions:

Did you receive prompt and courteous attention? .....
Was the car ready when promised? .....
Have you any criticism to make in regard to the work performed?
.....
.....
.....
Have you any suggestions to make?

Heads and Headquarters of Western Firm That Makes Satisfied Customers the Foundation of Sales

Left, H. O. Harrison, president and general manager; center, R. L. Barrett, superintendent of service; right, B. M. Taylor, assistant general manager of the H. O. Harrison Co., Hudson and Essex distributor in San Francisco. The building is headquarters for sales and service

The replies to these questions—and it is worth noting that almost every customer takes the time to fill out and return the questionnaire—have furnished the company with suggestions which have resulted in material improvements in the service and repair department. They also have been of benefit to the salesmen and service men, as individuals, through showing them various methods by which they can increase the pleasant impression left with the motorist. The Harrison company seems to realize that the future of the automotive industry depends on the buyer more than it does on either the seller or the manufacturer, and their devotion of time, energy and ability to the pleasing of the customer has had material cash results.

The preventive service men, to get back to them after this brief digression, make daily reports on a blank form. These reports are filed, forming a continuous history, not only of the car sold, but of the owner's attitude toward the purchase, and of the work of the service man as well. A second report is made out by the service man after his call at the end of two weeks of ownership of the car by the customer. These reports are filed consecutively, and likewise show at all times a record of every car sold

Digitized by Google

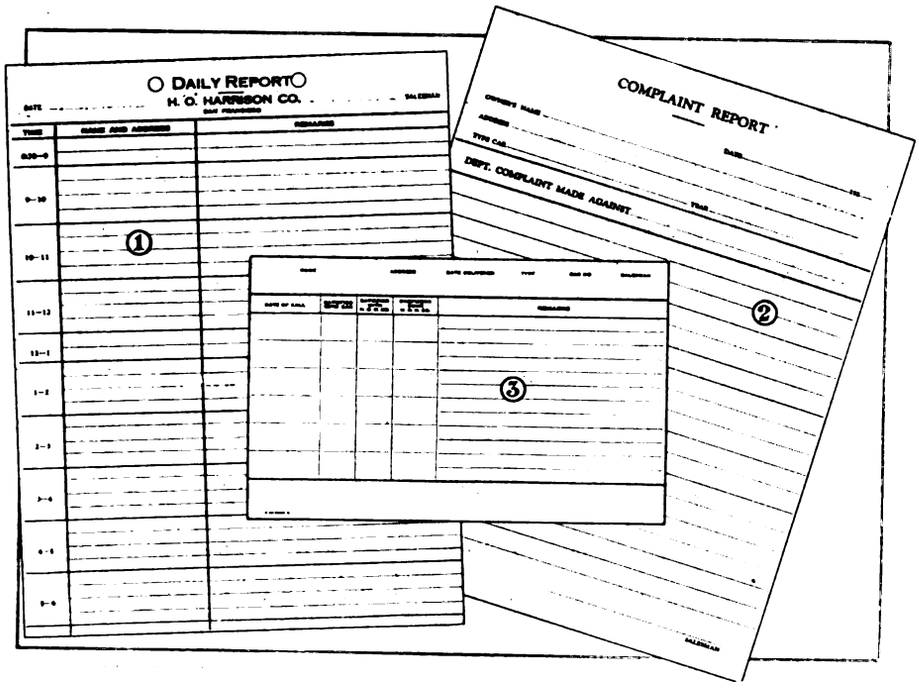
by the company. Out of these files come scores of prospects. As the years roll on, the owner of a Hudson or Essex eventually decides that the time is ripe for him to have a new car. The sales manager, watching his files, has a chance to learn when the psychological moment to make a renewal sale arrives.

Out goes the service man to the owner's home, or to his office, on his regular preventive service call, but this time he "feels out" the owner as to the latter's attitude toward a new car. If he finds him in a frame of mind to buy, he discusses the new models with him and eventually closes the sale, or reports to the sales manager and a salesman is sent out to make the deal. The number of new cars sold in this manner, of course, will be small, until the free preventive service has been in operation for a year or two, but already it is producing results.

A steadily increasing number of sales of new cars are being made as the result of this service, through letters written to the sales manager by the contented customer who has been made a better driver and been more completely equipped to care for his car by this service. Scores of these owners, hearing of a man or woman who wishes either a first car or to replace an old car, write or phone to the company, BECAUSE THEY HAVE RECEIVED REAL SERVICE AND INSTRUCTION FREE OF CHARGE from the company from which they bought their own car.

Every employee of the company is drafted to assist this preventive service in this manner:

Complaint reports, shown in an accompanying illustration, are furnished to every employee, no matter what his or her position with the firm. Every time that employee sees or hears of any dissatisfaction on the part of any Hudson or Essex owner, or meets any such owner who is not getting the best out of his or her car, a detailed report is made to the home office. That report is IMMEDIATELY investigated. A preventive service man is sent to the owner, and the department—sales, service or repair—is immediately called on to set that owner right, to restore his or her satisfaction with whatever deal he or she may have had with the company, and to see that the owner is left smiling, with the car in such condition that it will do everything in its power at the owner's command.



Says Alexander: "We are daily increasing our facilities for keeping in constant touch with the owner of every car purchased from us, *as long as he owns and drives that car.* We are as much interested in the three-year-old Hudson and Essex as is the owner. We are devoting a large part of our energies to letting the owner know this. We are making every effort to learn:

"1.—*How every owner of a car bought from us feels toward the car and toward us.*

"2.—*What every owner of a car bought from us needs to make his driving more enjoyable, his car more essential and his maintenance costs low.*

"3.—*How they like the service we are giving, and what we can do to improve that service.*

Forms Used in the Harrison Preventive Service Plan

1—Form for report of preventive service man who called on the car buyer two weeks after delivery of car. These reports, which are filed, become part of the record which is kept alive on every car sold by this San Francisco dealer. 2—Complaint form which is carried by every employee of the Harrison firm, who fills one out on discovering dissatisfaction on the part of any owner. Turning in of such a report results in the sending of a service man to see the owner. 3—Daily report card of preventive service men, who are constantly calling on owners of cars the Harrison company sells

Automobile Doctors

"Our 'preventive service' men are literally automobile doctors. They prescribe for cars and then report to the home office. Their object is not only to report dissatisfaction, expressed or implied, but to prevent the owners from becoming dissatisfied, to eliminate the occasion for complaints. When an owner is reported as dissatisfied with any feature of his dealings with us, or with the operation of his car after he gets it, we put a red flag on that report, and we NEVER TAKE IT OFF UNTIL THE CUSTOMER IS SATISFIED. If one of our preventive service men reports anything wrong with a car bought from us, we follow up the case, even when the owner does not bring in the car; we send experts to see the car and to talk with the owner, and many, many times their words of advice have averted a trip to the repairshop. We send out instructors to teach owners how to drive, and we are daily putting better drivers on the roads of California as a result of this service.

Makes Better Motorists

"Showing an interest in the customer after he or she gets the car not only makes him a better motorist, assists the movement of traffic and gives Hudson and Essex owners more pleasure out of their cars, but prevents him from becoming dissatisfied with us or with the automobile. From the commercial side, this system builds up a fine set of prospects and increases our repair work. But the best and most worth while result of all is the establishment in the customer's mind of the idea that this firm is not through with him or with his car when it gets his money."

Thanking the Buyer

MOST dealers write a letter after the sale of a car to show the purchaser their interest does not stop with the sale of the car. Here is one that is used by Frank P. Allen of the Wills Sainte Claire Co. of New England:

"This is to thank you for purchasing the Wills Sainte Claire which we have just had the pleasure of delivering to you.

"Believing that he profits most who serves best, it is our earnest desire to be informed at all times just how your car is running and how it pleases you.

"Your motor car problems are going to be ours from now on; and we want you to know that every resource we possess is at your command to the end that you may derive the greatest measure of satisfaction and enjoyment from the Wills Sainte Claire."

Making Used Cars Pay a Profit and Sell New Ones

How the Parts and Service Departments, as Well as Sales, Benefit by Trading—And How Making 'em Look Right Counts

By JOE TROUT
General Manager, The Frank Hatfield Co., Indianapolis

NEARLY everybody in the automobile business admits that the rapid turnover of used cars stimulates new car business. With the maxim as stated, it is not difficult to decide that a conscientious effort should be made by every dealer to move used cars.

This moving of used cars is a science in itself and should not be confused with the new car business. In any plant where it is possible the used cars should be sold from one section of the building and the new cars from the regular sales rooms.

OURS is a Ford agency. When business slumped some months ago we came to the conclusion that one way to stimulate the sale of new cars was to rearrange our ideas about the used car.

When the idea strikes any of us that we want something we haven't got, we are in a buying mood. When we buy, we buy the particular thing we buy because of its appearance. There are a few exceptions to this, but mighty few. *Pleasing the eye is ninety-nine per cent of the battle of salesmanship.* Just for example, the other day I went down to the salesrooms of the local gas company. A woman came in and was in the market for a stove. The salesman showed the exceptional qualities of one range—its oven control and everything. But she bought one of another make because it was white enameled all over. There is no doubt she turned down the better stove. *It did not strike the eye.*

Buyers Consider Appearance

This thing of buying from the appearance standpoint is particularly true of women with the exception of when they choose a husband. *In our merchandising of used cars, we try first to appeal to the eye. Every car we send out has a new paint job.* Say it costs us twenty dollars or more to paint a job properly—the money is well invested. The job strikes the eye.

Only one man in our business makes an appraisal. I am he. The one man appraisal, we believe, is essential. In the appraisal, the condition of the transmission and the motor are the main points. I don't so much go into what the car is worth as it stands, but try to estimate accurately just how much it will cost to repaint it, replace worn parts, make the repairs needed and then estimate what the car will bring when it is put in shape. When this estimate has been made, I subtract the estimated cost of putting the car in shape from what I expect to get for it and make the offer.

$10 Profit per Car

We do not expect any great percentage of profit from the sale of used cars. When I make an appraisal, it is final—just like the umpire's decision. We feel we cannot sacrifice our legitimate profit on the sale of new cars to carry the losses incurred through paying too much for used cars. Nor do we lose sight of the fact that every used car purchase means a new car sale. It is because of this latter thought that we do not attempt to profit to any great extent through the sale of used cars. We figure on about $10 real profit from the sale of each used car.

When the appraisal has been made, the car is sent to the used car repair department. The superintendent of the department goes over it and lists what is needed. The repairs are made and the car is sent to the paint shop. If it is necessary to pull the motor, as is sometimes the case, the car is sent to the paint shop as soon as the motor has been taken out. In figuring the cost of repairs, we add to this cost the proportionate share of that car in the floor space overhead which is allotted the used car department. Naturally, to the purchase price of the car we add this fixed charge. Each piece of repair is listed, each minute of the mechanic's time is listed, every part is listed, the cost of painting is added and the car is ready for sale. To the total cost we add $10. We have made a profit on the repair work and on new parts and on the paint job. I don't know what the ten dollars represents unless it is my fee for appraisal. That seems like a small profit, but it moves used cars and incidentally new cars and amounts to about $300 a month clear profit.

You can build up more good-will for your company through the used car department than in any other way. First, if the department is handled correctly, you can satisfy the man from whom you buy it in the first place. Then the person to whom you sell it will be a friend of yours for life if you deal with him honestly. He is the very person you want to reach early. Here he is, without sufficient money to buy a new car, yet with the desire to have one of some sort. He eventually, as fortune smiles on him, will be in the market for a new car. Then, to whom do you suppose he will come?

Don't Force Trades

One should not be too anxious to get hold of good used cars. To illustrate: Some time ago one of our new car customers came in. He had had a sedan for a year. He asked concerning trading it in on a new car. I asked him what was the matter with his old car. He said nothing. Then I explained that until something radically wrong was the matter with it, to run it. His depreciation the next year will be slight and his repairs should not equal the depreciation. He saw the light and went away calling us blessed. It would not have taken much salesmanship to have sold him a new car, but while it may have been the business thing to do, it was not exactly the ethical thing to do.

When the repairs begin to amount up, then is the time to trade in the old car. We can make the repairs and repaint the car cheaper than the customer can, and he has a new car with none of these troubles. It is my firm conviction that the used car department can be made a business-getter for the new car department and for the parts and service department, if every used car is put in shape before it is sold and if it is painted and makes a good appearance.

Make 'em Wear Their Trucks Out and Avoid Trade

A Dealer Who Does It Sidesteps Used Truck Losses and Gets Profitable Repair Business, All in One Motion—Some Thoughts on Truck Merchandising

By A MAN WHO KNOWS TRUCK DEALERS

I KNOW a dealer in trucks who when he found business poor during the depression kept his head above water by pushing service sales. Now it's his best winter plan.

He sold one of the best and most favorably known trucks on the market and was one of the last to feel the depression and the first to recover.

"I decided five years ago when I entered the truck field," said he, "that the cost of selling trucks would probably be higher than cars. In the beginning my salesmen asked better commissions, and I agreed with them that they deserved extra compensation for doing the pioneer work.

"I saw a big future but I realized that unless I took on a good line I might better keep away from trucks because it took the easy repeat orders to pay the initial expense of introduction and if I took hold of a truck that was going to fall down, the repeat business certainly could not be obtained."

I know this dealer by his first name. He is one of those semi-self-made men who has a backbone instead of a wishbone and he knows every day where he stands financially.

He goes to his banker with his monthly statement regularly and because he kept a liberal balance in the bank in good times, he was able to make a good-size touch frequently during the pinch.

My friend is a merchant; I have longed to see him in action in a department store. I'll bet that boy would have the ladies standing in such a long line to get into his store before it opened in the morning that it would make the advance seat sale for the World Series look like seven days of guaranteed rainy weather ahead.

He saw the trade-in feature looming up in the truck field the same as it did with passenger cars. He was also selling cars and had been through the mill.

He figured that some of those repeat orders would be straight sales in building up fleets at first but in four or five years they would start coming back on trades.

Where to find an outlet for used trucks was a problem. It was just about the time when the depression hit him the hardest that he was ready to launch his plan to get the best of the used truck situation and he killed two birds with one stone.

He decided that he could save his customer money if he could talk him into wearing the truck completely out and save himself the bother of handling the trade.

"I decided to do business on but one basis or not sell trucks," he explained. "If the truck is beyond repair I allow only scale prices at the junk yard. That's all it's worth to me. If it's worth more to a competitor I can't stop him from taking it in. I am all through attending personally conducted auction sales. If it is worth repairing I show the owner that it is just as cheap for him to use it after it is repaired as anyone else. Nine times out of ten, my argument sticks.

"Then when it wears out we can deal quickly on a brand new truck. We are just beginning to have a few of the first we sold get beyond the point where it pays to repair them.

"The owners already have them charged off on their books to depreciation and in several cases they have credited them back with appreciation and they know I know it. I try to educate them all to keep a cost system. Those who do are the easiest customers to deal with. And I am thinking of putting one man out to do nothing else but install cost systems for my customers free of charge. It will reduce the sales resistance when a trade comes up and I will have the figures to help me solicit new customers.

"I was getting all set to have my boys call on the owners and solicit their repair business. I figured it would be easier to induce them to get the old truck repaired before they came to us for an allowance on a trade-in. Then they would be prone to take it as an evasion while now they would take it as a straight solicitation for repair business.

"That was my object but coming just as it did during my worst few months of the depression from a sales standpoint, it kept my shop busy and I showed a slight profit."

My friend now banks on this scheme for keeping his winter business in balance.

Truck dealers find that one reason why owners would rather trade than have the old truck repaired is that they don't want to be without a truck.

So my friend has a truck he rents them.

The average dealer can enumerate a dozen reasons why renting is a bad piece of business but they are all bridges they cross before they get to

This Story Suggests—

MAKING a calendar to show the seasons when different businesses are booming—and will buy trucks.

Getting winter business and year round business for the repair department by inducing owners to wear their trucks out, thus avoiding trade-ins at the same time.

Renting trucks to owners while theirs are in the repairshop.

Keeping a chart of time payments due on trucks to avoid running too high on accounts receivable.

Holding used truck stocks down to a definite maximum, thus saving losses when new truck prices are cut.

Digitized by Google

them and this dealer has never had a nasty argument or a bad loss resulting from this accommodation.

In this establishment the parts department is taught to sell. When a customer asks for a bevel gear they suggest he also purchase a pinion and it's a good suggestion from a mechanical standpoint. This is worked from every angle.

During the fall months they sell the overhauling idea. He makes money on parts and labor. He says there is as much profit in overhauling six trucks as selling one new one.

Besides, it educates the owners to wear them out, instead of trading them in.

In the proprietor's office is a table of business rotation. He knows what months are the height of the furniture business and when the manufacturing plants are operating at maximum.

This table shows that the opportunity for selling trucks is about as good one month as any other.

He starts campaigning the fish and oyster houses in August and cashes in in September. In January he goes after the milk producers, creameries and condenseries and sells them in April. In March he shoots at the berry growers and takes their orders in June.

Some business is enjoying its heaviest trade every month and there are truck sales the year around, winter being no exception.

Any dealer who will analyze his locality will find both truck and parts business aplenty.

This dealer is not satisfied with what the trial balance alone tells him about the bills receivable account.

That he should have $9782 due him on notes is not enough information.

Every time he sells an automobile on the partial payment plan he not only posts the notes to the right account on his ledger, but he also posts it on a special chart. If the note covers six monthly payments of $50 each and the first payment became due in January he would post a $50 item on this chart in parallel columns for each of the six months.

In this way he can have before him the amount of money that should be turned in each month providing everybody pays.

I was talking to him five months before the depression hit and he told me at the time that he had advised the salesmen and the bookkeeper that on January 1, 1920, he wanted the amount outstanding on notes cut down to a certain figure. He had a minimum for June 1 and September 1.

With this chart system of keeping account of the separate payments in addition to the grand total of bills receivable they were in position to regulate the outstanding paper several months in advance.

When the depression hit, his notes were in good shape and not one penny was lost.

At the time he gave instructions to cut down on credit he also stated the maximum amount he was willing to have invested in used trucks on these same dates and when the depression blew over he had to take only less than a $200 loss on the mark-down.

Winter's Coming—Are You Looking for Winter Business Ideas?—

YOU will find something like a hundred pages of them in the Winter Business Number of Motor World, which will come from the press Oct. 18.

You know the Winter Business Numbers of Motor World—there have been six of them before this, all practical, helpful numbers for the man engaged in automotive sales or repair work. You know these numbers, yet we can't resist the temptation to tell you about the one that is to appear in two weeks. We want you to be prepared to use it.

This Winter Business Number will show how to use the winter months to—

Get winter business.

Prepare to get spring business.

Improve your business in personnel, methods, building and equipment.

There will be sections applying particularly to the business of the car dealer, truck dealer, tractor dealer, automotive equipment and tire dealer and repairman.

For these different branches of the business there will be—

A canvassing campaign.

An advertising campaign.

A display campaign.

Some readers of Motor World, successful dealers and garagemen, will tell in their own words how they make shop profits in winter.

And here is something that we'll just mention—you can't appreciate its bigness until you see it:

Page after page of illustrations will show *how the automotive man can make his place of business an active selling force.* Other trades do it. Why not ours? There will be suggestions aplenty in this picture section.

Put this down on your desk pad:

Watch for the Winter Business Number of Motor World, October 18

How California Enforces Its Headlight Law

State Dealer Association Campaign Provides Better Driving Lights for Motorists and Makes Sales of Equipment and Labor for Dealers and Garagemen

By ROBERT W. MARTLAND, Jr.

Managing Editor, The Radiator, Official Organ of the California Automobile Trade Assn.

WHEN the California Automobile Trade Association announced its intention of appointing official headlight adjusting stations there was skepticism on all sides. To say "skepticism" is putting it mildly. Business and civic organizations said it would be impossible to make illuminating experts out of mechanics and helpers. Many said that motorists would have to be driven in by traffic officers before they would have their lights adjusted. Others maintained that the Motor Vehicle Department would never give the stations official recognition.

The only ones who were right were those who sat tight and waited. Illuminating experts *have* been made out of mechanics, 22,000 motorists *have* come in of their own free will and the State Motor Vehicle Department *has* given official recognition, plus its entire support. To trace the early history of this achievement would fill a book but the details of its present status are interesting to say the least.

An adjusting station applicant must first have his establishment inspected by an illuminating engineer of the California Automobile Trade Association. If he is accepted, the engineers undertake to instruct all of his employees who will adjust headlights. There is no guesswork about it. Any man who cannot pass the final examination, which is the adjustment of lights with about 25 different makes of lenses, is not to be registered in the State office as an authorized adjuster for that station. To give an idea of the thoroughness of these engineers:—it has taken 8 months to appoint 200 stations. Usually only two or three men in one garage are given the course.

After appointment the State office forwards credentials for display and also complete adjusting equipment, which includes screen and frame, headlight rim removing wrench, bracket bending wrench, reflector polishing materials and many other items. In the initial shipment 500 certificates of adjustment are also furnished. These are in triplicate and numbered. One is given to the car owner, properly filled out, one kept by the adjusting station, and the other is sent into the State office for filing. The cost of the entire equipment is $30.00.

When Mr. Jones of Alameda County is picked up for glaring lights and presents his certificate, the officer looks it over. He reads that the lens requires a 21 candlepower bulb, and if he finds that the motorist has supplemented this with a 31 candlepower bulb—the cop wins. On the other hand, the motorist may have changed the certificate. In this case the officer writes into the State office asking for the original copy of the certificate. Not many car owners do this, as most of them are extremely well satisfied with their lights after the adjustment, but the association has left no loopholes.

THIS story tells how the efforts of the California Automobile Trade Association to secure general compliance with the State Headlight Law have reacted to the good of the public in general and to the profit of the automotive trades. By the appointment of large numbers of headlight testing stations with the equipment and men to do this work, the association has made it convenient and inexpensive for the motorist to comply with the law. And, by placing the enforcement of the law in the hands of dealers and garagemen, sales of lenses and bulbs, as well as of other equipment and service have been materially increased.

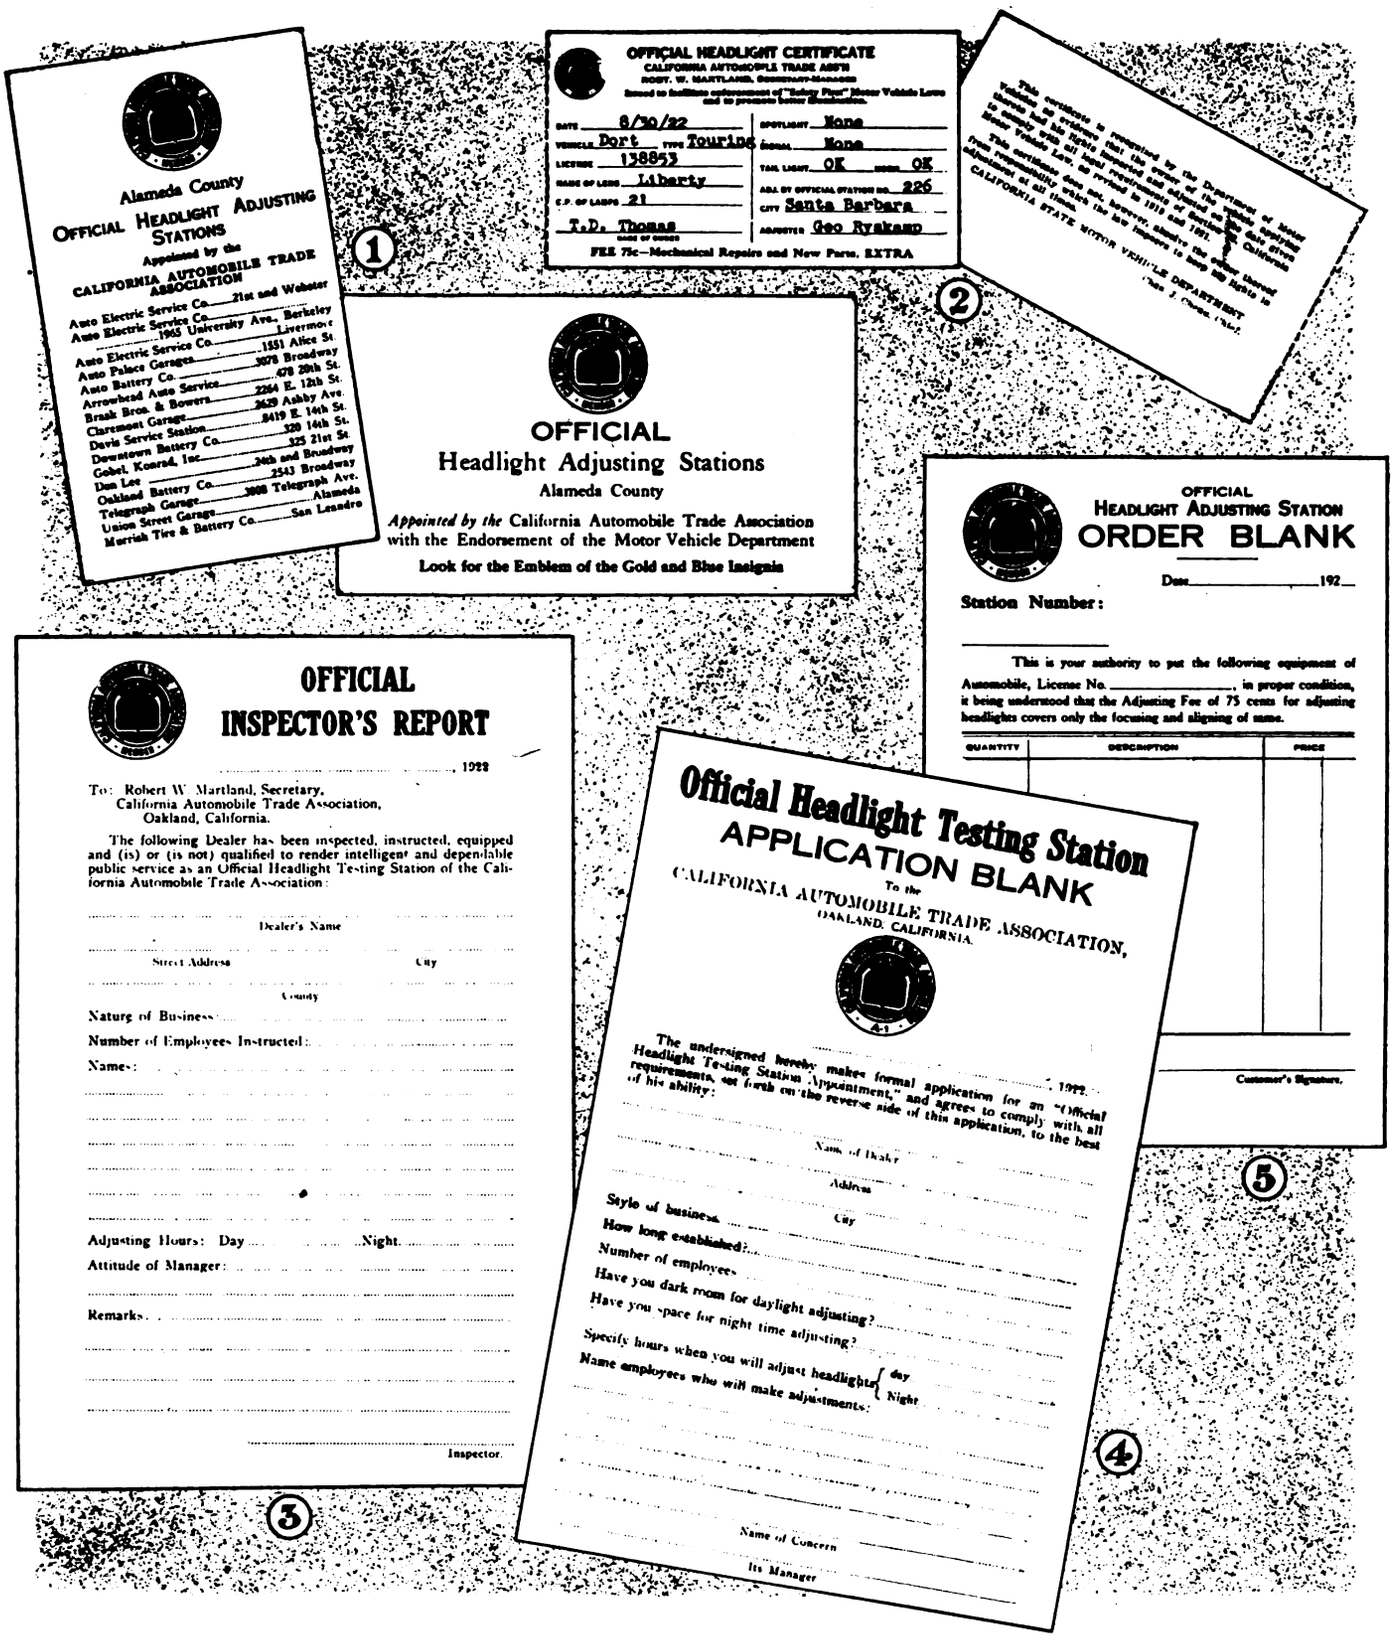
The work of the association has resulted in better and safer driving conditions, thus furthering the sale and use of motor vehicles. It has also resulted in direct benefit to the trade in increased sales of equipment and labor.

The charge for adjustment is 75 cents, which covers only the proper focusing and aligning of the lights. Parts and repair are extra. Eighty-five per cent of the stations report that their customers usually write a blanket order covering "the complete adjustment and installation of equipment necessary to have the lawful maximum of roadlight." The average order as taken from State records show $2.85 per car. Adjusting stations are "asking 'em to buy" and making money at it.

The possibility of selling new parts and equipment is unlimited. Bulbs, lenses, replacement sockets, reflectors, plating jobs, wiring and other things are easy to sell when a man drives in who really wants good light. Adjusters are forbidden to mention other lenses until after the adjustment is made. To do so will cause the revocation of their license. If, after adjustment, the car owner is not satisfied with the lens he is using, the dealer is then at liberty to demonstrate another lens and prove its superiority.

A Northern California dealer has this angle down pat.

He has mounted two headlights on the swivel bracket which swings out from the wall, facing the adjusting screen. These lights have been adjusted very carefully and are equipped with excellent lenses. When the car owner says he is not satisfied with the lens he is using, Mr. Dealer swings his headlights onto the screen and tells the owner he can have the same light if he wants it. That demonstration usually clinches the sale.



Another station has put in a small reflector plating outfit, and it has proven so profitable that he is installing a larger unit. This man gives 24 hour plating service and has a set price for various sizes of reflectors. He has been an electrical expert for years and finds that headlight adjusting not only turns out pleased customers, but brings in considerable electrical work.

A Ford dealer in Southern California employs one man at $250 per month to do nothing but adjusting. This dealer has averaged for the past 90 days over $35.00 per day net. He has advertised in the local newspapers until the motorists think he is the only adjusting station in the county. As a general thing, adjusting stations do considerable advertising, both independently and cooperatively.

Another source of business is through traffic officers. Very few actual arrests have been made, but it is common for State inspectors to stop from 100 to

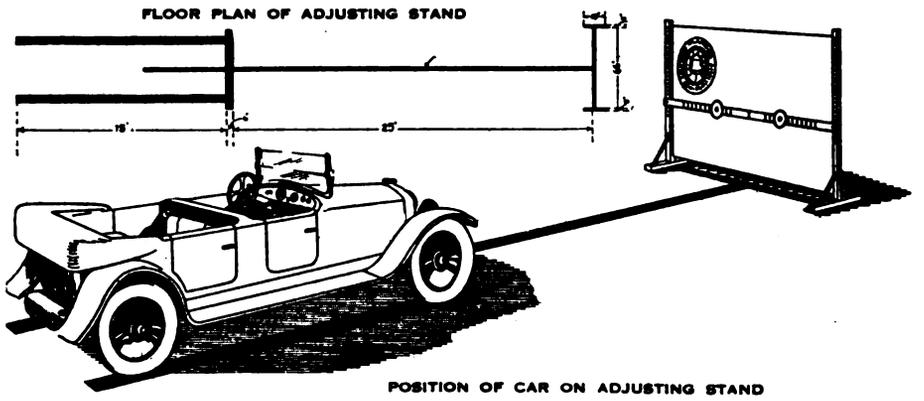
1—*A list of official stations like this is published by each local unit of the California Automobile Trade Assn. Pads of these lists are given to traffic officers for distribution.* 2—*Front and back of certificate given to motorist who has had his headlights tested and adjusted at a headlight adjusting station.* 3—*The official inspectors make out this report after approving station and instructing employees. Names of employees are filed in the State office, and each certificate is checked to see that only licensed adjusters are adjusting lights.* 4—*Dealer's application blank for adjusting station appointment. The reverse of this blank carries the rules and regulations.* 5—*All extra equipment and labor furnished the customer over the regular test and adjustment is covered by this blank*

Digitized by Google

750 cars in one night warning them that lights must be adjusted to comply with the law. The usual answer to this is, "Well, you tell me where to have it done *right* and I'll do it." The traffic officer then presents a small card with the names and addresses of all the adjusting stations in the county on it, and the motorist is told that he will receive a certificate from any one of those stations, which will be honored by all officials.

Every certificate has the California Automobile Trade Association insignia on it. The car owner sees it on sign boards, in newspapers, on his certificate, sometimes even in street cars. The great project has done more to secure the motorist's good-will and run business into members' establishments than any other program ever attempted.

Statewide adjustments by all official stations are now averaging 3901 per week, according to a recent check. It is estimated that 50 per cent of all adjustments call for a new pair of lenses.



The accompanying illustration shows the layout of the headlight adjusting station and the construction of the screen. The cross bar carrying the two circular targets is adjustable vertically and the distance between the targets is also adjustable. The following instructions are issued to Headlight Adjusting Stations by the association:

Headlight Adjusting Instructions

1—Line up car on adjusting stand, headlights 25 feet from screen.
2—Remove headlamp fronts.
3—Inspect device to be adjusted and determine:
A. Candle power "bulb" permitted.
B. Tilt adjustment, if any.
C. Focus position of "bulb" for device to be used.
4—Measure height of centers of headlamps, and distance between centers of headlamps.
5—Set cross bar of screen as follows:
For "No Tilt Device" same height as centers of headlamps.
For "One-Foot Tilt Device" 3 inches below centers of headlamps.
For "Two-Foot Tilt Device" 6 inches below centers of headlamps.
For "Three-Foot Tilt Device" 9 inches below centers of headlamps.
For "Four-Foot Tilt Device" 1 foot below centers of headlamps.
Note—If a device requires any other tilt than given above, divide the distance by 4 and place cross bar of screen accordingly.
6—Move "bull's-eyes" on cross bar so they are the same distance apart as centers of headlamps.
7—Inspect "light bulbs" for candlepower.
8—Polish reflectors if necessary.
9—Focus beams of light so that centers of beams can easily be determined.
10—Align headlamps so that centers of beams are on "bull's-eyes" of screen.
11—Focus lamps to requirements for device to be used.
12—Install device, making sure nothing has disturbed the position of the "bulb" reflector or device.

Spotlight Adjustments

1—Place car on adjusting stand.
2—Measure height of center of spotlight from floor or ground.

This diagram showing the arrangement of the testing station is furnished on a card which also carries complete instruction for making tests and adjustments

3—Set cross bar of adjusting screen according to following schedule:

When Center of Spotlight Measures Above Floor	Set Cross Bar of Adjusting Screen
44 inches	39 inches
48 inches	42 inches
54 inches	47 inches
60 inches	51 inches
64 inches	54 inches
68 inches	57 inches
72 inches	60 inches

4—Set spotlight so that top of beam cannot be raised above cross bar when beam is ahead of car.

Miscellaneous Instructions

1—Sidelights, except spotlights, must not have larger than 4 C.P. "bulbs."
2—Inspect tail-light for operating efficiency (tail-lights must show a red light).
3—Inspect signal devices, if any, for mechanical or electrical operation.
4—Test horn.
5—Always get written order from customers for any extra work done for which you charge extra.
6—Fill out Official Headlight Adjusting Certificate carefully in ink—write plainly and neatly.

Don'ts

1—Don't leave adjusting certificates around carelessly.
2—Don't touch reflector surface with anything but camel-hair brush or soft polishing cloth—don't use cloth except when polishing tarnished reflector with polish.
3—Don't ever, under any circumstances, put a larger candlepower lamp than is permitted for the particular device used.
4—Don't use circular motion for dusting or polishing reflector—remove "bulb" and stroke from center of reflector toward edge.
5—Don't polish reflector before dusting with camel-hair brush.
6—Don't issue certificates unless headlamps are in good condition.
7—Don't mark "O. K." on certificates if devices are not O. K.
8—Don't leave finger marks on light "bulb."
9—Don't let motorists leave your station without advising them on good safe driving illumination.

Universal Instruments Carry Starting Current

MANY of the early electric lighting and starting systems were of the single unit type in which the unit functioned as a motor in starting and as a generator when the engine attained a predetermined speed. At least two well known makes of cars still employ that type of system. With a system of this type, any ammeter or indicator connected in the circuit to show charging and discharging conditions usually must carry the cranking current. Obviously, the ordinary ammeter or indicator, which is designed to carry only the charging and lighting current would burn out very quickly in this service.

The Roller-Smith Company, New York City, supplies a line of ammeters and indicators called the "Universal" Type, which were designed especially for cranking circuit use. These instruments, which are offered in a variety of ranges and case styles and finishes may be inserted direct in the cranking circuit and will carry the heavy cranking current without injury and still indicate correctly the charging and lighting currents.

These "Universal" ammeters and indicators may be used on any car. The universal feature reduces the stock the dealer or jobber must carry to provide efficient service. The "Universal" instruments are especially recommended for early models of Buick, Chalmers, Dodge Brothers, Franklin, Holmes, Hupmobile, Scripps-Booth, White.

The ability of these instruments to carry the cranking current simplifies the matter of installation and connection, instead of having to trace the wiring to locate the proper point, it is only necessary to open the main battery lead and connect the instrument in circuit. This information will be of special interest to those called on to supply instruments for old cars where wiring diagrams are difficult to obtain.

Each instrument is packed in an individual box with complete instructions for installation and connection.

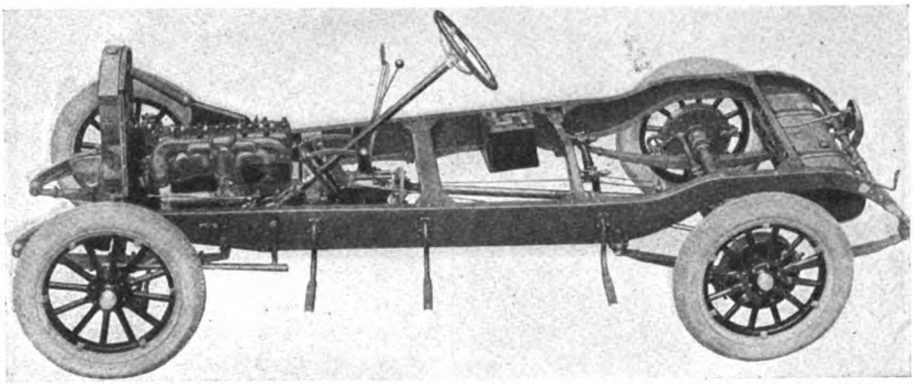
Barley Brings Out a Light Low Priced Six



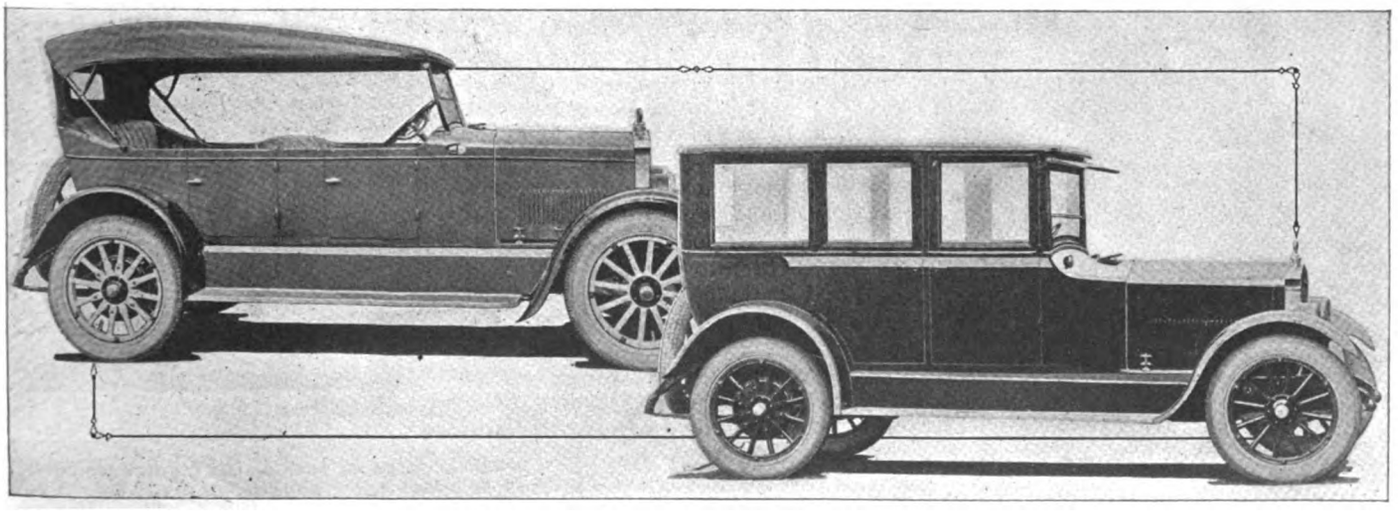
Car Assembled with Standard Units But Embracing Several Novel Constructions—Two Body Models Ready and Two to Be Announced Later

THE Barley Motor Car Co., manufacturers of the Roamer, have entered the low priced six cylinder field with a car bearing the company name and known as the Barley Six. This car includes a set of units well known in the automobile field. They are notably the Continental 6-Y engine, Borg & Beck 10-in. clutch, Fuller transmission gear set, Merchant & Evans fabric universals, Columbia axles, Jacox steering gear, and Delco electrical equipment.

These units are brought together in a chassis of 118 in. wheelbase and will be supplied with a complete line of bodies shortly to be put into production. The bodies are made at the Barley plant and are similar in appearance and characteristics to the low straight line types which have characterized the Roamer.

Although this is a car made up of units purchased on the outside it has nevertheless a number of distinctive points of design which distinguish it. The frame forming the structural foundation for the car has been made exceptionally stiff, the side rails are of channel with an 8-in. web and 2-in. flanges. The stock is ⅛ in. Integral gussets are employed for anchoring the cross members and there is a box section cross member at the center which contributes largely to the rigidity of the frame. In addition there is a heavy tubular cross member against which the side rails are drawn up by a continuous through bolt.

To prevent distortion of the radiator when mounting it to the frame this unit rests on two ball plates which find their own seat and is not apt to be distorted in mounting. The radiator is a Modine with a Spirex core.

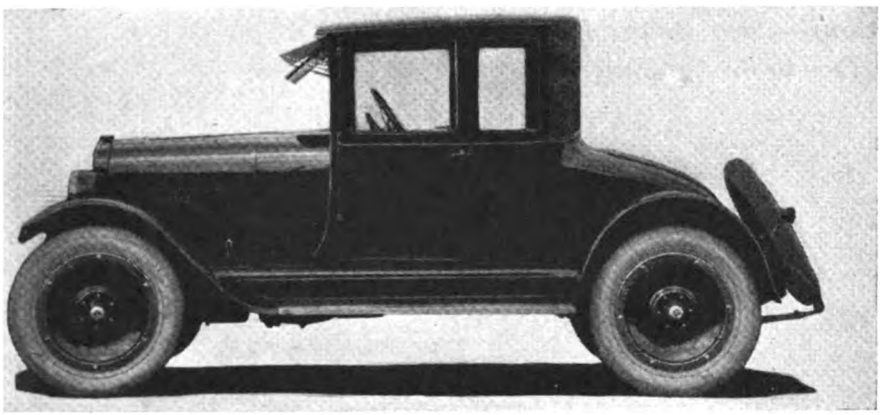


The chassis of the Barley Six

Both brakes are located on the rear wheels without equalizers. The brake-drums are 14 in. in diameter with a 2 in. face width. The spring suspension is semi-elliptic and Hotchkiss drive is taken through double front leaves both of these being wrapped about the front eye thus distributing the load. The rear springs are 56 in. in length and on the touring cars one dead leaf is inserted to reduce rebound. In the sedan there are two of these dead leaves. The front springs are 38 in. in length and are fitted with rebound plates. A ¾ in. caster is given the front wheels as a steering measure. The car has a 30-ft. outside turning diameter. Wood wheels 32 x 4 are standard. These wheels have twelve spokes each and on the rear wheels the spokes are embossed and carry six extra bolts for increased strength.

The bodies are so dimensioned as to be swung between the axles for suspension balance. The bodies, like the frame, are unusually rigid and substantially braced with structural forgings. The upholstery is genuine leather, an option being given of tan spanish, gray spanish or black long grain. Three color combinations are also afforded in the bodies, these being liberty blue, coach painters' green deep or moleskin deep, all with black fenders and chassis. The fenders are 10 in. wide with deep crown braced and bolted to frame and body.

Equipment includes one-man top with bevel plate rear window, Stewart-Warner speedometer, adjustable drum type head lamps, Empress lubricator system, complete set tools. The price of the phaeton is $1,395. There are three other types of bodies including a 5-pass. sedan at $1,850, a touring sedan and 5-pass. sport on which price has not been set.



The Barley Six phaeton, $1395

The Barley Six touring sedan, $1850

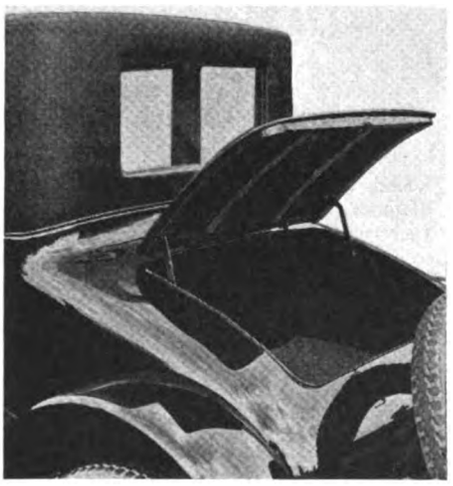
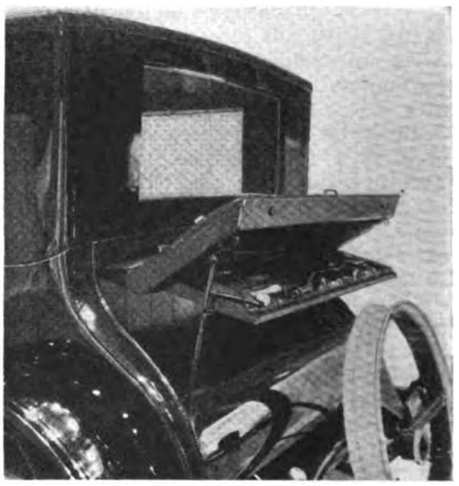
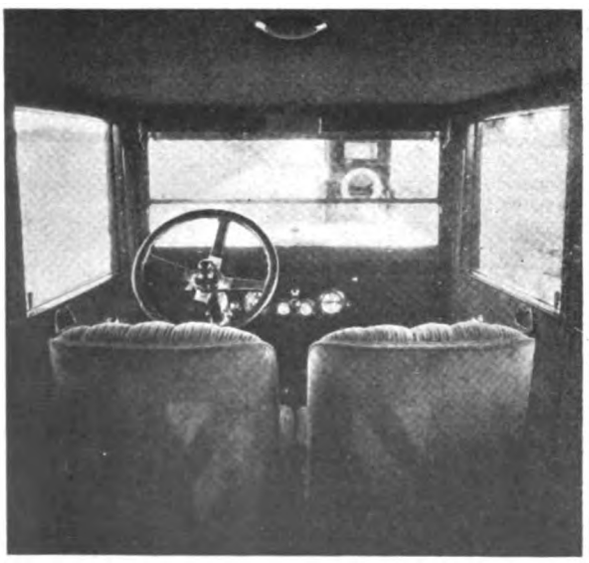
Features of New Body Models

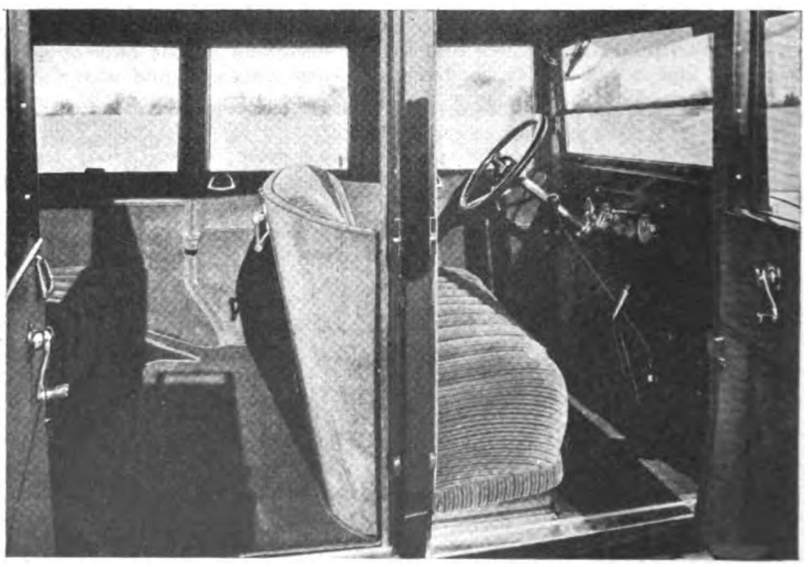




Maxwell Club Coupe, $985



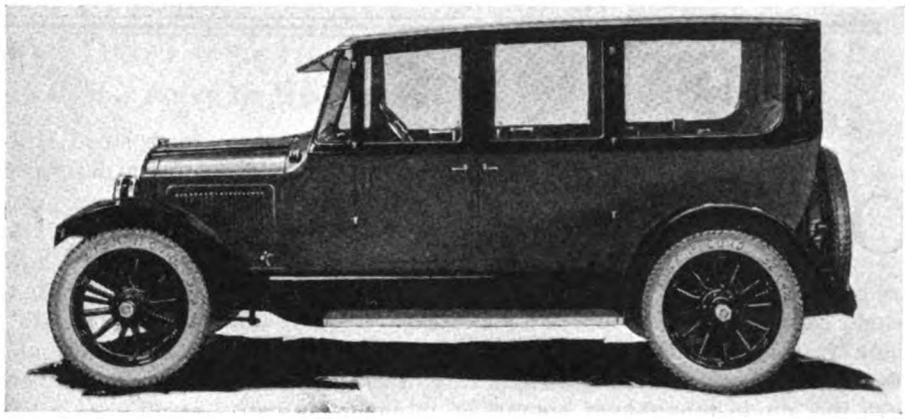
The quarter windows are a feature of this new model. They drop full length. The seating arrangement is the same as the roadster and there is a special type of windshield in which both sections swing outward. This has also been placed on other Maxwell closed cars



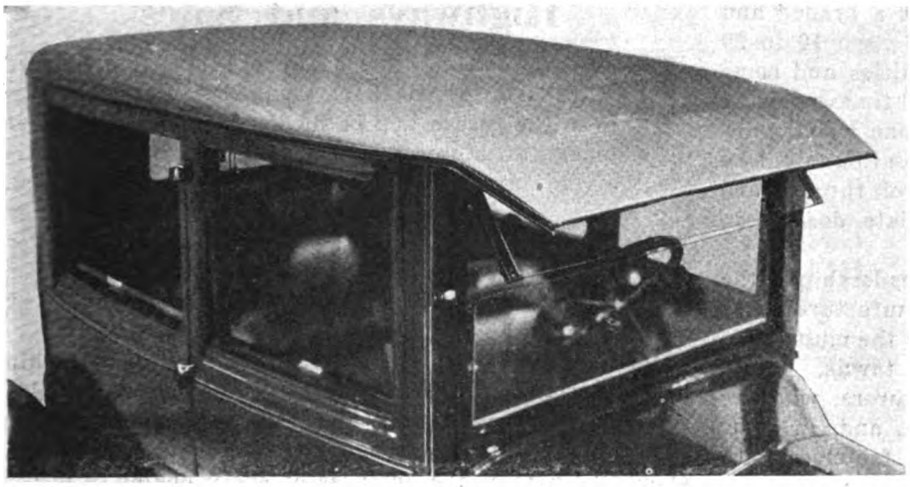
Two Ideas in Storage Space

At the left is the rear of the new Maxwell Club Coupe in which space is provided for tools and equipment. At the right is the tool and storage compartment of the Oldsmobile brougham in which the tools are buttoned on a hinged board

Interiors of the New Oakland Bodies



The coupe, at the left, and the sedan, at the right, are Fisher Body Corp. products fitted as part of the regular Oakland line. The bodies are distinguishable from their predecessors by a lower body belt line and a slightly lowered roof. The windows are deeper and wider and all pillars are metal covered. The door windows have crank control. The coupe is $1,545 *and the sedan* $100 *less*

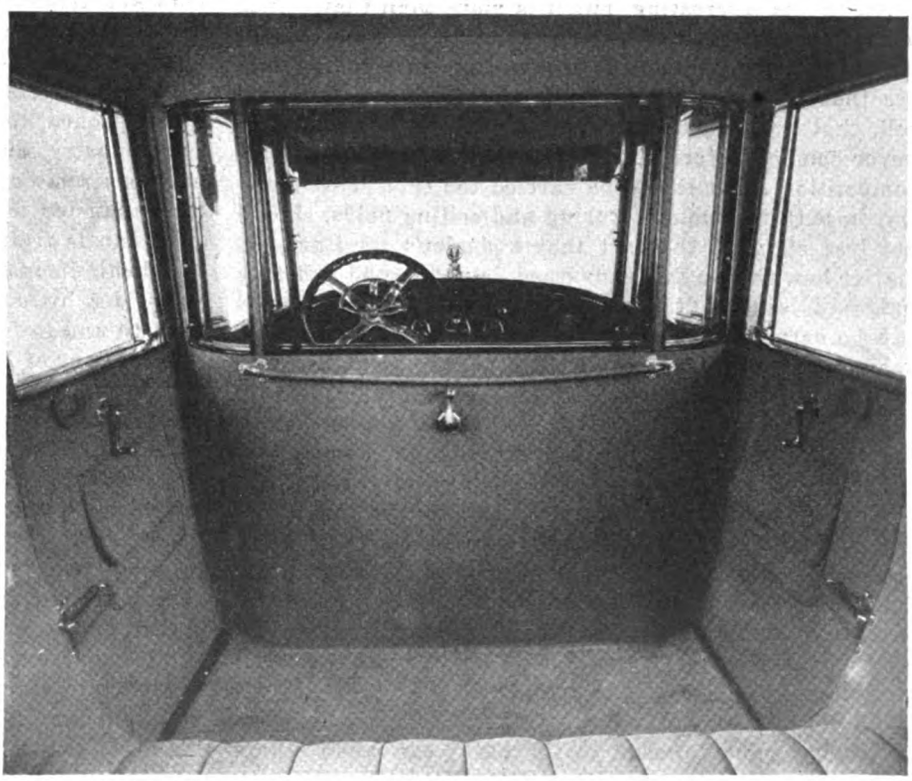


Digitized by Google

Bidding for Fall Business

The New Willys-Knight 7-Passenger Sedan

This is known as Model 27 and sells for $2,195. The general lines of the car are in conformity with the rest of the line. The rear quarter window is very wide and there are four doors, the rear ones opening forward and the front ones opening to the rear



Something New in Sun-Shades

A special body on a Dodge Brothers chassis. The top is extended forward to form the sunshade which is made solid and non-adjustable. The top covering which goes over both the sunshade and the top, is in one piece. The construction is such that side brackets are not necessary

A New Packard Body

The interior of the Packard Limousine Sedan fitted to the Single Six chassis. The price is $3,275. Two doors serve the rear compartment, which is separated from the driving compartment by curved quarter lights and a sliding glass which is lowered or raised by a crank the same as the door windows. Commodious pockets are fitted to the rear doors and the door stops are fitted with a link break to keep them out of the way when the doors are closed

Editorial Notes

Multiplying Dealers

OUTSIDE the larger cities the trade probably has not paid much attention to the appointment in many of the large communities of literally hundreds of associate dealers and sales agencies for passenger cars. The big production manufacturers, through their factory branches and larger distributors, have been multiplying agencies at a rapid rate in the past year, with the single thought, of course, of intensifying canvassing to find more buyers. In New York, for instance, several manufacturers who formerly had a branch and four or five dealers now have anywhere from 10 to 20 or more dealers, some with service facilities and some with salesrooms only, and perhaps several times as many garagemen acting as agents on commission without investment in cars. As another instance mention might be made of a car which formerly sold in Detroit through one distributor, who now has eleven associate dealers in addition to his own retail department.

The movement is part of the race for leadership in the industry in which a number of big manufacturers are close contenders. It is having an echo in the multiplication of dealers in the smaller cities and towns. "More dealers" is the cry of the big manufacturers, who are competing with each other to get them, and, in some cases, who are taking them away from factories with cars of lesser popularity.

All this is interesting, but it is more than that. It is a gigantic experiment in the efficiency of intensive selling. It will accomplish something in teaching many dealers that the more people they see the more cars they sell, that they must comb their territories as they were never combed before if they expect to stand the gaff of competition. But it can be carried too far. The industry, in both the manufacturing and selling fields, should not lose sight of the fact that a dealer's territory, no matter how thoroughly canvassed, is not a good territory unless it is a profitable one. Restriction of territories can be carried too far and so can the multiplication of dealers competing against each other in a single territory. It would be a pity if this race for leadership should result in the "breaking" of dealers to an extent to frighten capital, already wary enough, away from financing of automobile merchandising enterprises.

In this transitional stage of the industry manufacturers should be giving the most serious thought to the profit-making possibilities of every dealership they establish and dealers urged to take factory contracts should be equally inquisitive to learn before they sign contracts whether they can make money with the car and the territory offered.

This is no time for wild-catting. The automobile industry has gone forward in the past year when others have stood still and the inevitable replacement market, plus a natural growth in new demand arising from bettered living conditions and improved roads, promises a substantial future, but factories and dealers should consider every new contract proposal on this basis. Is it to be the basis of stable, profitable relations or is it just a makeshift to seize a few immediate orders? If the latter is the object either of factory or dealer the contract would better be left unsigned.

Highways and Sales

IN a recent letter to his dealer organization Edward S. Jordan observed that "Quantity sales of motor cars in the future will be in direct proportion to the development of highways." Jordan follows his statement of opinion with a request of his dealers to read the address of T. H. MacDonald, Chief of the United States Bureau of Public Roads, urging as a basis for future highway financing, long-time serial bonds for road building and current revenues for maintenance of roads already built.

Jordan's observations as to the direct relationship between road building and the future of motor car sales reinforce the urgings of Motor World extended over a period of years that agitation for better highways should be part of the business of every dealer in motor cars and trucks. One has but to look at the motor vehicle registration figures and note the tremendous growth of motor vehicles used in such good roads states as New York, Pennsylvania, California and others that might be mentioned, to realize that the growth of the automotive industry, and so of every manufacturer, merchant and repairman connected with it, is directly tied up with the expansion of improved highway mileage.

Jordan is trying to put the influence of his organization behind constructive development of the better highways idea by asking his dealers to read the MacDonald address and to forward to him their own and their bankers' opinions of MacDonald's suggested method of financing future highway building and maintenance. Other manufacturers and associations of the industry, national, state and local, are co-operating in one way or another with better highways movements. It remains a fact, however, that many hundreds of distributors, jobbers, dealers and garagemen are paying little or no attention to good roads and doing little or nothing to encourage their building and adequate maintenance.

Any dealer or garageman who shows indifference to the pleas of a state or local association that he lend his influence to secure legislation for highway building and maintenance, is building a fence of limitations around his own future.

An Association Secretary Writes a Used Car Letter

Aftermath of National Used Car Conference Seen in Stirring Letter of Secretary to His Dealers

EDITOR Motor World:—Perhaps some of your readers would be interested in the effort we are making to put a stop to used car trading losses by adoption of the Boston plan of maximum allowances and market value information reports. As we have yet to work out the details of the plan, I would rather you would not publish the name of our association. My letter to our association members follows.—A. B. C., executive secretary, —— Automobile Dealers Association, ——, N. Y.

If you are one of those who think that the used car problem cannot be cured, ask Boston.

Boston has done what many dealers have said for years could not be done.

Boston's plan came before the National Used Car Conference at Chicago. It stood out above a score that were discussed.

Boston dealers have practically no used cars on hand. Their prices are such that practically every used car is sold as soon as it is taken in. *Boston's allowances are right.*

What Boston has done this city is going to do.

It is going to be a big job, but we are going to do it.

$233,000,000 Lost In Used Cars

Did the figures we sent you a short time ago relative to the number of dealers who have gone out of business in this city in the past year mean anything to you? They did to me and to some others with whom I have talked. They show why our bankers are none too kind to us. They show that slowly but surely the "wild-cat" used car processes we have been practising for years are driving us to the wall.

This is by no means the only city where this is true. There are a lot of other association secretaries and managers who went home from the National Used Car Conference with fire in their eyes, vowing that their city would no longer let the tail of its second greatest industry wag the dog.

Do you realize that $233,000,000 was lost by new car dealers in this country last year in used car transactions? Boston alone lost over $300,000.

What are we going to do about it?

Well, first we ask you to read carefully the statement below on the Boston plan of operation. Think it over. Then in a few days we will call a meeting of all dealers. At that meeting the plan will be discussed in full and you will be given an opportunity to line up for a system that is going to mean doing away with the used car losses.

Take Stock of Yourself

In the first place, the success or failure of this system lies with you—with every individual dealer.

Are you ready to deal squarely with every other dealer? Will you play fairly every minute and in every deal that comes along? You have got to be certain that you are capable of living up to the rules of the business. certain that you will not allow a few dollars more than the fellow up the street "for the sake of making the sale." No dealer is worthy of a place in the Automobile Dealers' Association or its used car system who cannot positively purge himself of all past practices and answer those questions wholeheartedly in the affirmative, and then stick to his answer year in and year out.

Having made that vow, you will be ready to consider the plan.

In the first place, Boston dealers took the Chicago Blue Book and the local reports on the sales of used cars and figured out an appraisal, a take-in value, for every make and type for a period of five years back. Notice, they did not allow any dealer to fix his own value on his own cars.

Having accumulated this data, they then deducted from each figure 10 per cent to cover selling expense and overhead in handling cars taken in. The resulting figure was set down as the maximum that could be given for any car. If certain repairs were needed to put the car in salable condition, the cost of such repairs were also deducted before giving the owner his allowance figure on the car to be taken.

The maximum valuations for each car and type were printed in a loose-leaf book that could be carried in the dealer's pocket. These books were not put into the hands of salesmen. They were only for the use of the dealer or his sales manager.

To keep a sharp watch on what is going on, every dealer files with the Boston Used Car Bureau detailed reports of his used car business. These reports give the used car sales, showing make, number, type and year of each car sold, whether or not another used car was taken in and if so the value of that used car and its number, amount allowed for the first used car mentioned, amount spent on it for repairs or reconditioning and the total sale price. This complete record shows the bureau instantly how every dealer is handling his used cars and whether or not he is living up to the rules of the system. Padding of the reports also easily crops out.

While the allowances were arrived at from the current market prices, they in reality are based on the percentage basis for yearly depreciation. It varies. An allowance for the year-old car is based on a deduction of 42 per cent, increasing year by year until the fifth year, when 82 per cent is the deduction. There is a 2 per cent change in these allowances from month to month to take care of the advancing season A 1921 car sold in November, 1921, would have a smaller deduction than a 1921 car sold in March, 1921.

Deductions are made from the factory list prices and not from the delivered prices.

Whenever there is a change in the factory list prices of new cars, the allowances are changed correspondingly. That is, a 5 per cent reduction in the factory price of a certain make immediately brings about a 5 per cent reduction in the allowance on the used cars of that make, and new allowance sheets are furnished each dealer to take care of the change.

In the Boston plan dealers live up to these allowances regardless of trade allowances or special factory offers when a change in model is contemplated. In such instances the dealers apply the extra margin to a lower price on the new car rather than a greater allowance on the old car.

Are You Ready?

There is the plan as far as space will permit.

I have talked with several of our members and they are ready to go into it heart and soul.

Our allowances must be made right. That 10 per cent handling charge must be provided for.

You are losing thousands of dollars that you cannot afford to lose. If you do not think so, look over your accounts and see if you have not failed to charge some items that should be charged against used cars.

If your association is worth anything, it is its duty to plug this disastrous waste. It is going to do it.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

The Equity Plan

Editor Motor World: In the issue of Motor World of Sept. 6, there was an article by "Eastern Dealer" regarding the handling of used cars in trade for new.

I think, without doubt, that comes nearer solving the trade-in proposition than any plan I have ever heard of. Howatt & Lee, Inc., Flushing, N. Y.

The County Fairs

Editor Motor World: We have found it worth while to have salesmen at the county fairs in our territory, picking farmers and others on the grounds and giving them demonstrations. The people at the fairs are in a holiday spirit and they yield readily to invitations to take a ride. We have made several sales and obtained many good prospects in this way.—Ohio Dealer.

The Foundation of Shop Profits

Getting the Business—Possible Sources of Repairshop Custom and How to Sell Repairshop Facilities—Advertising, Mail and Personal Selling

Article No. 4

By J. HOWARD PILE

THE automobile repair business, like any other repair business, must have a definite aim and be able to serve a definite class of customers. If the shop is part of a selling organization for a particular line of cars, it will be the aim and object to service this particular line of cars. By specializing it will be possible not only to perform this service economically and make a profit for the shop, but also to give such satisfaction to owners that the sales organization will be benefited by repeat orders when the owners desire new cars. The general garage repair shop will serve owners best by being able to take care of various models of cars and trucks quickly and efficiently, The specialty shop, taking care of batteries, carburetors, electrical equipment or tires, serves car and truck owners by reason of its speed and specialized knowledge on the particular equipment it specializes in.

Getting the business is the result of organized effort along certain definite lines. It is just as important to plan the sales of repair work as it is to plan the sales of cars and trucks. There are certain prospects that any repair shop can expect to get business from and all other effort is more or less wasted. It is therefore necessary to lay out a plan of sales which will be applied to bring results in more shop work.

Sources of Repairshop Custom

There are five definite sources of custom for the repair shop. These are:

1. Regular storage customers.
2. Transient storage customers.
3. Owners to whom you have sold cars or trucks.
4. Other car owners in your territory.
5. Gasoline and oil customers.

Not all of these classes can be utilized by every shop. If you are specializing in one or two makes of automobiles, the list is somewhat changed and some items eliminated. However, by taking your own particular case and taking those sources that fit your case, you can put a list of classes down on paper as the beginning of a plan.

Ordinarily the car owner brings the car to the shop after the damage is done. He has never been sold on repairs that would prevent accidents or damage. If the shop is depending on service work of this nature, the amount of work is sure to be erratic and far from regular in volume. It is not only profitable to the shop to perform light service, adjustments and minor necessary replacements, but it is far less expensive for the owner. The only thing you have to do is to convince the owner that a regular inspection and minor adjustments and replacements will save him money. Sell it as accident insurance if you will.

If the organization with which the shop is connected handles one or more lines of cars or trucks it is comparatively easy to educate owners to the advantages of regular inspections. This can and should be started under the guarantee period when any car will need certain minor adjustments and other attention. A weekly inspection of a new car will save expense for the dealer because it will enable him to catch any loose nuts or bolts or parts out of adjustment before the damage is done and it will also insure more satisfactory car service to the owner. The owner generally realizes this and as he does not have to pay for these minor adjustments it is not very difficult to get him to come into the shop for a regular inspection.

After the guarantee period has passed and the owner has to pay for adjustments and repairs, it is not quite so easy, but if the shop has been successful in bringing him in regularly before, it should not be very difficult to sell him on the economy idea of getting a dollar's worth of service before hand to save ten dollar's worth of service later. If this idea is diplomatically carried out, it can be made to bring in regular profitable business. It saves accident jobs which, in addition to the possibility of personal injury to the owner, are generally a losing proposition to the shop. The most profitable shop operations are minor preventative service jobs and overhauling jobs. It is pretty difficult to repair a bad wreck and expect the job to be perfect. The free service on the job afterwards generally cuts out most of the profit and sometimes brings a loss. Some other part that did not get broken or bent is strained or loosened and consequent trouble develops.

Inspections as Source of Business

When the shop is attached to a general garage business the inspection idea can still be carried out, but in a different way. There will be a certain number of regular customers that come to the garage for storage, gasoline, oil or supplies. A man who knows a good deal about the different makes of cars can be employed profitably in some position where he has a chance to observe all cars as they come in the door. Where the customers are regular storage patrons, inspections can be made at night or at other times when the cars are on the floor. A rough inspection of the exterior and a drive from one end of the shop to the other should provide sufficient material to call the owner's attention to something that needs fixing. Here are a few of the things that could be done during the owner's absence:

Test the battery with a hydrometer.

Run engine to observe general running conditions, noise, knocks, generator charging rate, clutch adjustment, water leaks, etc.

Inspect front wheels for bearing adjustment and alignment.

Observe tire condition, need for tire

Better Mechanics

Article No. 259

A Series of Four Stories on Shop Profits.

I—Layout and Equipment appeared in the September 13 issue.

II—Systematic Arrangement of tools and parts appeared in the September 20 issue.

III—Records and Forms appeared in the September 27 issue.

IV—Getting the Business appears in this issue.

The dealer or repairman can make shop profits if the business is properly conducted. These stories suggest fundamentals of profit making in the repair business.

Digitized by Google

repairing, etc. A spare tire is often neglected after a puncture or blowout.

Inspect springs for broken leaves, need of lubrication, etc.

Headlamp focus and alignment.

Lost motion or need for adjustment on steering gear.

Condition of service and emergency brakes.

Need for oiling and greasing car.

General condition of body, top and curtains.

Such inspections as listed here might be made once a month and the results of the inspection given to the owner with recommendations as to repairs or adjustments that would correct defects. Often owners do not know about some of these things because they have not the time or the mechanical ability to discover them for themselves. Sometimes they know of the condition of their cars but put off having the things done and the shop can sell them on the idea of repairs now to save bigger repairs later.

Transient cars do not offer an opportunity to go as deeply into inspections as this and it would hardly pay to do it anyway because from the nature of the custom, the owner will not be staying any longer than necessary. It is possible, however, to call attention to parts of the car in dangerous driving condition. Wobbly front wheels can be quickly picked out by simply shaking them and the steering gear can be given a very rough test in the same way.

Inspections at the curb while serving gasoline or oil will often reveal the need for necessary repairs that may be made while the owner waits or at some other time more convenient to him.

Crankcase service is becoming more and more an important part of the shop business. The present make-up of fuel makes it positively necessary to change the engine oil at periods from 500 to 700 miles in warm weather and not over 500 miles in winter. As winter approaches it is time to think of putting a thinner oil in the crankcase, depending on the temperature. The first touch of frost is generally the right season to change to the thinner oil. Selling this kind of service requires asking the owner when the oil was changed last and suggesting the change, which can be made in 15 minutes. If the owner has not changed the oil for some time, he should be told of the possible damage to bearings, cylinders and pistons through the thinning out of oil by condensed fuel.

Courtesy Helps Sell Repairs

Initial courtesy paves the way to selling anything and especially automobile repairs. There are several ways of asking a man to back up a little so you can get the gasoline hose in the tank. The way you ask him will determine how he will receive your suggestions as to buying something else or having some work done. The same thing is true in assisting him to back his car into a space in the garage. Some people have a knack of offending by tone of voice, by the selection of words or by facial expression. Others, by employing directly opposite methods, are able to make a customer feel friendly and apparently without effort encourage further conversation, which is the entering wedge for selling repairs and adjustments on the car. Almost every owner likes to talk about his car for a few minutes, and a few well directed questions will generally bring out a possibility of work to be done.

Using the Advance Estimate

A big assistance in selling repairs is the use of the advance estimate. In spite of all the advantages of the flat rate system that have been pointed out, there are some who, because of local conditions or for other reasons, believe some other system is better. Regardless of whether a straight flat rate or a maximum estimate system is used, some form of advance estimate will help materially.

A small shop will not find it economical to go very extensively into detail flat rates, especially if a number of makes of cars are to be handled. It would work out better to concentrate on a few of the more common operations and confine these to cars which are most liable to come into the shop. Other operations can sometimes be estimated from the shop foreman's experience and at other times some part of the car will have to be taken down for inspection in order to render an intelligent estimate to be made.

Fulfillment of Promises

The first order is always the hardest and also the most expensive. The repeat orders are the ones that pay because the sales expense is less. This principle can be applied to repair work as well as the sale of cars, accessories or parts. In order to get repeat work, the first job must be done well and must be done on time. In the past promises have been so glibly made and so poorly kept that the shop which finishes work on time almost creates surprise. Be one of the surprisers and the repeat orders will not be hard to get. A job poorly done and finished a couple of days after it is promised is almost an absolute bar to further work from that customer.

The fulfillment of promises is merely a matter of routine and system and the forms illustrated in Article No. 3 of this series (published last week) will assist materially in keeping track of things in the shop so that work will get out on time.

Repairshop Promotion

The promotion of the shop business is taken care of through local advertising, mail campaigns and personal solicitation. Advertising, to bring results, must be regular and must say something. It is not sufficient to buy a certain regular amount of space and expect to get results. The copy and the type or illustration arrangement can be made very attractive. One thing that brings good results, not only in newspaper advertising but in mail campaigns, signs, and other methods is a definite offer of some thing or some group of things for a definite price. This should bring in not only a reasonable amount of the work advertised for but should bring in other work. Here are some things that could be offered singly or in groups at different times. The prices can be made to conform to your own costs:

Clean spark plugs and adjust breaker points	$2.00
Drain oil and refill crankcase	2.00
Oil and grease entire car, including draining crankcase	10.00
Tighten body, fender and runningboard bolts	3.00
Adjust brakes, service and emergency	4.00
Flush cooling system and refill	.50
Wash car, clean inside and apply body polish	$3.00 to 10.00

An Effective Bumper Window

In this window bumpers are effectively displayed by using, as decorative properties, catalogs, cutouts and other factory literature supplied by the manufacturer. The bumpers rest on a dark cloth covering on the floor of the window. The cutouts and catalogs speak the merchandising message

A Schedule of Flat Rates for the Cadillac

Operations Totaling Three Hundred and Twenty-Five Distributed Under Twenty-Three Headings—Operations Include a Large Majority of Jobs Brought Into Any Shop

A SCHEDULE of flat rates on 325 operations has been developed by the Cadillac factory. The work on this schedule has covered a period of several years, and for the past year the schedule has been in practical operation at the Cadillac Detroit branch. All work at this branch is estimated according to the list which is sufficiently broad to allow that work to be done within the time limits in any shop that has the proper tool and jig equipment and is manned by competent mechanics.

In addition to operating on the flat rate system, this branch operates a flat rate of payment to mechanics on jobs. This system has worked out very successfully in conjunction with the flat rates. The schedule was originally in dollars and cents but has been converted into hours.

Group A—Wheels

		Hours
A-1	Installing One New Rim Lug	.2
	Each additional	.2
A-2	Installing One Rim Lug and Bolt	.2
	Each additional	.2
	Includes taking out rim lug and installing new one.	
A-4	Changing Tire	1.2
	Includes dismounting old tire and installing new tube and remounting tire. Does not include any repairs.	
A-4a	Changing Complete Set of Tires. Includes dismounting and remounting same.	5.2
A-4b	Changing Complete Set of Tires and Rims	2.0
	Does not include dismounting and remounting of tires.	
A-5	Lining Up Wabbly Rim	1.4
A-6	Tramming Front Wheels to Toe in 3-16" to ¼"	.6
A-7	Installing Disteel, Wire or Wood Wheels ..... Hourly basis	
	Includes changing mounting in hubs, changing the carrier and tail light, mounting of tires not included. Refer to A-4 reference to dismounting and mounting tires.	
A-8	Installing New Hub in Rear Wheel	1.6
	Each additional	1.6
A-9	Examining Wheel Bearings and Mountings in One Wheel and Installing New if Needed	1.0
	Each additional	1.0
A-10	Greasing All Wheels	1.6
	Includes adjusting of bearings. No charge if done in conjunction with A-9.	
A-11	Installing New Wood Parts and Felloe Band in Rear Wheel	6.4
	Each additional	6.4
A-12	Installing New Wood Parts and Felloe Band in Front Wheel	6.4
	Each additional	6.4
A-13	Installing One Spoke in Wire Wheel ..... Hourly basis	
A-14	Installing New Hub Cap on One Wheel	.2

Group B—Front Axle

		Hours
B-1	Removing and Installing New Front Axle or Overhauling Old	7.0
	Includes taking out and putting back axle, installing any new parts necessary, adjusting wheel bearings, and tramming wheels. Does not include straightening of axle.	
B-2	Straightening Front Axle Out of Car	12.0
B-3	Installing One New Spindle	2.0
	Two	4.0
	Includes examining bearings, greasing and adjusting same and aligning front wheels.	
B-4	Rebushing and Installing New Bolt in One Spindle	2.0
	Two	3.8
	Includes same as B-3.	
B-4a	Installing New Parallel Rod Bolt in One Spindle	1.6
	Including aligning front wheels.	
B-5	Installing New Parallel Rod	1.0
	Includes new parallel rod if needed, and aligning front wheels.	
B-6	Installing New Parallel Bolts Only	1.0
	Includes aligning front wheels.	
B-7	Aligning Front Wheels	.6

Group C—Frame

C-1	Installing New Frame	Estimate furnished on request
	Includes taking off body and installing same.	
C-2	Straightening and Repairing Frame	Estimate furnished on request
C-3	Installing Front Engine Support	18.4

Group D—Springs

D-1	Installing One New Front Spring. Includes new shackle bolts as needed.	2.6

THIS is the twelfth flat rate schedule published in Motor World. The previous schedules covered Buick, Chandler, Chevrolet 490 and FB, Dodge, Dort, Hupmobile, Marmon, Oakland, Overland 4, Paige and Studebaker.

D-2	Installing One Rear Side Spring. Includes same as D-1.	2.6
D-3	Installing One New Cross Spring. Same as D-2 and D-1.	2.4
D-4	Repairing One Front Spring Or Rear	4.4
	Includes taking down, replacing necessary leaves, rebuilding and installing.	
D-5	Installing New Shackle Bolts in Rear Side and Cross Spring	5.6
D-6	Installing New Shackle Bolts and Bushings in Rear of Front Springs, One	2.0
	Two	4.0
D-7	Installing New Shackle Bolts and Bushings in Front Springs	6.0
	Includes new bushings and bolts in rear end of spring and new hangers, also new bolts and bushings if needed in front of front springs.	
D-8	Installing One New Shackle Bolt and Bushing or Both as Needed in Any Spring Excepting Rear of Front Spring	2.2
D-9	Installing New Center Bolt in Front Spring	2.0
D-10	Installing New Center Bolt in Rear Side Spring	2.0
D-11	Rebushing Entire Chassis	34.0
	Includes spring shackle bolts and bushings, new parallel rod bolts, spindle bolts and bushings, torque arm, front and rear universal joints and swedge axle shafts.	
D-12	Tightening All Shackle Bolts and Spring Clips, Models 51-53	3.6
D-13	Tightening All Shackle Bolts and Spring Clips, Models 55-57-59	4.8
D-14	Cleaning and Painting Springs with Oil	.6
D-15	Cleaning and Spreading Springs with Graphite on Car	3.6
	Five springs.	
D-16	Tightening All Spring Clips	1.6
D-17	Installing New Rubber Bumper on Front Spring	.6
	Includes loosening of caps, installing new bumper and tightening clips.	
D-18	Installing Rubber Bumper on Rear Spring	.8
	Attach rg to frame.	
D-19	Removing Broken Bolt in Any Spring	1.0
D-20	Tightening Front Spring Shackles and Clips	1.6

Group E—Steering Gear

E-1	Overhauling Steering Assembly	24.0
	Including removing from car, completely disassembling and installing necessary parts, rebuilding, installing and adjusting throttle control.	
E-2	Taking out Lost Motion in Steering Mechanism	2.2
	Includes adjusting of worm and sector, adjusting thrust bearing, adjusting drag link and spindle bolts.	
E-3	Taking Rattle Out of Spark and Throttle Control at Sector	4.4
	Includes installing necessary parts.	
E-4	Freeing Up Spark and Throttle Control Installing New Parts if Necessary	1.0
E-5	Taking Play Out of Drag Link Both Ends	.6
	Includes taking off joint boots and packing with grease, making necessary adjustments. Also includes tightening of steering arm.	
E-6	Installing New Gear for Spark or Throttle Control	3.6
	Includes installing necessary parts. Same must be working correctly and spark and throttle control at top of steering must have full throw.	

Group F—Engine

F-1	Overhauling Engine	80.0
	Includes: Cleaning engine, dropping oil pan, pulling pistons, micrometering pistons and cylinders, installing reground blocks, fitting new pistons and rings, wrist pins and bushings, if needed, removing and overhauling generator, overhauling rocker plate, examining distributor and installing any new plates needed, taking up or installing new main	

Digitized by Google

		Hours
	and rod bearings, replacing with new if necessary, reinstalling new or reground camshaft if needed, installing new camshaft sprockets, examining oil pump and replacing any new parts, checking oiling system, including oil check relief valve, making necessary repairs if needed, installing timing chains and fan bearings, overhauling carbureter, replacing new parts where needed, overhauling starter clutch, flushing radiator, installing new hose where needed, seeing that throttle and spark control is working properly, replacing new parts where needed, replacing oil pan with new gaskets, regulating oil pressure, stopping all leaks and tuning engine.	
F-1a	**Installing New Crankshaft or Redressing Old Crankshaft and Fitting New Undersize Bearing in Conjunction with Above (Extra)**	2.0
F-2	**Installing New Crankcase**..... Includes disassembling and reassembling entire engine, using old parts. Does not include adjusting of bearings.	96.0
F-3	**Installing Reground Blocks and Pistons** ..... Includes draining of radiator, removing and putting back lamps, removing, cleaning and adjusting carbureter and generator, removing dirt pan and oil pan, pistons, removing valves and resetting in new blocks, adjusting connecting rod bearings, installing new if necessary, fitting pistons to cylinders, installing new wrist pins and bushings, reassembling, put up oil pan using new gaskets, installing dirt pan, radiator and tuning engine. Fitting new center main bearing in conjunction with above (extra).....	48.0 6.6
F-4	**Installing New Spiral Gears**..... Includes removing radiator and oil pan, removing water pump and installing new gears, also new thrust bearings and water pump shaft if needed.	13.6
F-5	**Cleaning Engine With Spraying System**	1.6
F-6	**Installing Timing Chains and Sprockets and Fan Bearings**.... Includes removing headlights, radiator, jacking up engine, removing timing case, removing chains and fan bearings and installing new, using new gaskets where needed, replacing radiator and headlights, refilling radiator.	11.6
F-6a	**Installing Front End Chains, Fan Bearings or Bushings, Sprockets and Spiral Gears**..... Includes same as F-6.	20.0
F-7	**Installing New Timing Chains**... Same as F-6a with the exception of fan bearings.	9.6
F-8	**Installing New Fan Bearings Type 51**	4.4
F-9	**Installing New Fan Bearings Type 55 and 57**	4.4
F-10	**Installing New Fan Bushings Type 59**	8.4
F-11	**Overhauling Wiggle Joint Type 59** ..... Includes taking off headlights and radiator, removing fan from case, examining crosses, sprockets, and driver, using new parts where needed, reinstalling case using gaskets, replacing fan radiator and headlights.	10.8
F-12	**Cleaning Baffle Plate**..... Includes removing dirt pan, taking down oil pan, removing and cleaning baffle plate, checking oil float and seeing that same is working properly, replacing baffle plate and pan using gaskets.	2.6
F-13	**Pulling Pistons, Micrometering and Reporting** ..... This operation subject to cancellation should engine be overhauled or new blocks installed. See operations F-1 and F-3.	4.0
F-13a	**Installing Same Pistons Without Replacing New Parts**..... Includes installing rods, pistons and bearings, installing oil pan using new gaskets, refilling with new oil, refer to F-12.	4.8
F-14	**Installing New Wrist Pins and Bushings** ..... (With pistons and connecting rods out of car)	4.8
F-15	**Fitting New Bearings in Conjunction with the Above Operations**..	6.4
F-16	**Adjusting Main Bearings**..... Pan off. Refer to F-12.	8.0
F-17	**Fitting New Center Main Bearings** ..... Pan off. Refer to F-12.	4.0
F-17a	**Fitting New Center Main Bearings** ..... In Conjunction with F-16.	4.0
F-17b	**Indicating Main and Rod Bearings** ..... Includes removing and replacing of pan. Refer to F-20 for new bearing.	4.4
F-18	**Installing New Pistons, Wrist Pins and Bushings. Taking Up or Installing New Main and Connecting Rod Bearings** ..... Includes taking down of pan, cleaning baffle plate, fitting new pistons and rings for cylinder, replacing baffle plate and oil pan, using new gaskets, refilling with new oil.	20.8
F-20	**Taking Up or Installing New Main and Connecting Rod Bearings**.... Includes removing and replacing of oil pan using new gaskets. Refilling engine with oil.	20.0
F-21	**Adjusting Single End Rod Bearings**	6.8

		Hours
F-22	**Overhauling Rocker Arm Plate. Refer to F-38**..... Includes removing generator, carbureter and rocker arm plate and overhauling, installing new rocker arms, new shafts and new bushings, installing cam slides and guides if needed, adjusting tappets and touching up valves, putting back generator and carbureter and tuning motor.	21.6
F-22a	**Overhauling Rocker Arm Plate When Done as Additional Order to Change Blocks**	11.6
F-23	**Grinding Valves Type 57-59-61**.... Includes burning of carbon and adjusting tappets, removing and cleaning carbureter, installing new port plug gaskets if needed, reinstalling carbureter and adjusting plugs.	12.8
F-23a	**Grinding Valves Type 51**..... Includes removing generator and carbureter, burning carbon, removing and refacing valves; and regrinding, adjusting tappets, replacing generator, carbureter and tuning engine.	16.0
F-23b	**Grinding Valves Type 53-55**..... Includes burning of carbon, adjusting tappets, removing and cleaning carbureter, installing new port plug, gaskets if needed.	14.0
F-24	**Burning Carbon Type 51-53-55**.... Includes freeing up of valves with kerosene.	3.2
F-25	**Cleaning Carbon Type 57-59**.....	3.2
F-26	**Adjusting Valve Tappets Type 53-55-57-59** ..... Includes removing carbureter and generator, adjusting tappets and oiling valve stems, replacing generator, cleaning and installing carbureter.	3.0
F-27	**Adjusting Valve Tappets Type 51** Includes removing carbureter and generator, adjusting tappets and oiling valve stems, replacing generator, cleaning and installing carbureter.	6.0
F-28	**Installing One New Valve Spring** When done in connection with adjusting tappets.	2.0
F-29	**Installing New Port Plug Gasket.**	.2
F-30	**Installing One Set of New Port Plug Gaskets**.....	2.4
F-31	**Installing New Priming Cup**..... Additional	.2 .2
F-32	**Installing New Fan Spring**.....	1.8
F-33	**Installing New Fan Disk or Hub and Spring**	1.8
F-34	**Tightening Fan and Installing New Cotter Key**.....	1.2
F-35	**Adjusting Timing Chains Type 59**	.8
F-36	**Eliminating Fluttering in Oil Spillway** .....Hourly rate	
F-37	**Installing New Felts in Distributor Housing** ..... Includes removing from engine, installing new felts and replacing.	4.8
F-38	**Overhauling Rocker Plate and Grinding Valves** ..... Includes same as F-22.	28.8
F-38a	**Installing New Camshaft Front End Chains or Overhauling Wiggle Joint in Conjunction with Above**	8.8
F-39	**Painting Engine**	2.8
F-40	**Installing Spiral Gears**..... This operation only applies when front end is torn down.	6.4

Group G—Cooling System

		Hours
G-1	**Flushing Radiator**..... Includes draining radiator and condenser, flushing out entire cooling system and refilling.	.6
G-2	**Removing Radiator** ..... Includes draining radiator and taking same off car.	1.2
G-3	**Removing and Installing Radiator** Includes draining radiator, installing new hose where necessary and refilling and stopping any water leaks in hose. Refer to G-6.	2.8
G-4	**Removing Strainers from Radiator on Type 51-53-55**..... Includes removing strainers from radiator or water pump, replacing hose connections and installing new hose if needed, refilling radiator.	2.4
G-5	**Removing Strainers from Radiator on Type 57-59**..... Includes removing plug on each side of radiator, taking out screens, replacing plug and refilling radiator.	.8
G-6	**Removing and Installing Radiator Shell** ..... Radiator off car. Refer to G-3.	1.4
G-7	**Installing One New Hose Connection T Hose**.....	.4
G-8	**Stopping Water Leaks at Hose Connections with White Lead, All Connections** ..... Includes installing new hose where needed.	2.0
G-9	**Tightening Water Pump Gland Nuts** ..... Includes refilling grease cups on pumps.	1.4
G-10	**Overhauling Water Pumps, Two.** Includes taking down dirt pan, removing water pump and installing any new parts found necessary and repacking, taking out and testing thermostats, installing new if needed, installing pumps, filling radiator with water and testing for water leaks, replacing dirt pan.	8.0
G-11	**Repacking One Water Pump**.... **Two** ..... Includes draining and refilling radiator, taking down and putting back dirt pan, removing pump, repacking and installing new hose on water pump if needed.	2.0 4.0
G-12	**Installing New Thrust Bearing on Water Pump Shaft**..... Includes draining and removing radiator and dirt pan, removing oil pan, installing new thrust bearing shaft, if needed, replacing oil pan and dirt pan, putting clean oil in engine.	8.8
G-13	**Testing and Adjusting Thermostats** ..... Includes replacing with new if necessary.	4.8

Digitized by Google

		Hours
G-14	**Installing New Lace on Radiator Shell** ..... Includes removing old and installing new.	.8
G-15	**Installing New Lace on Cowl**.... Includes removing old and installing new.	.8

Group H—Carbureter

H-1	**Carbureter Overhaul**..... Includes installing new parts needed, removing and installing same.	3.2
H-2	**Carbureter Cleaning**..... Includes removing, cleaning and installing, also adjusting.	1.2
H-3	**Adjusting Carbureter** .....No charge Includes adjusting air valve and leaning device.	
H-4	**Carbureter gasket** ..... Includes installing new top gasket to manifold.	.4
H-5	**Installing New Leather Seat in Carbureter**	1.4
H-6	**Removing and Installing Intake Manifold** ..... Includes using new gaskets.	1.2
H-7	**Installing One New Gasket in Intake Manifold** ..... Two	.6 1.0
H-8	**Regulating Air Pressure** ..... Includes finding if any obstruction in pump lines or valves and correcting same.	2.2
H-9	**Removing and Installing Gas Tank** ..... Includes cleaning gas lines and tank, installing new packing at shut-off valve and tank if needed, does not include any repairs to tank.	2.2
H-10	**Tightening Gas Tank**.....	.6
H-11	**Repairing Gas Tank Gage**..... Includes removing gas gage, setting float, adjusting same so that it operates correctly.	.6
H-12	**Gas Gage-Installing New Glass or Gasket. Test for Leaks**..... No charge if done in connection with H-11.	.2
H-13	**Throttle Control Overhaul**..... Includes new sector gear and pinion gear, removing and installing spark control and throttle gears on pinion to gas or spark or both, installing new shaft if needed, throttle must be working correctly, also includes removing and installing dirt pan.	4.8
H-14	**Installing New Air Pressure Regulator**	.8
H-15	**Installing New Choke Lever Complete and Adjusting Same**.....	.8
H-16	**Installing New Stop Pin on Choke or Steering Column**.....	.3
H-17	**Installing Gasoline Tank Filler Cap or Gasket or Both**.....	.2
H-18	**Repairing Air Pump on Engine**... Includes cleaning and inspecting and replacing any new parts needed.	1.2
H-19	**Removing and Installing New Hand Air Pressure Pump**..... Includes making any necessary repairs.	.6
H-20	**Installing One Length of Gas or Air Pipe**	1.2
H-21	**Cleaning Gasoline Strainers and Draining Sediment Chamber at Gas Tank**	.6
H-22	**Installing New Springs in Carbureter and Adjusting**	.6
H-23	**Cleaning Gas Screens, Battery Terminals. Adding Necessary Water, Painting Springs with Oil**	1.2

Group I—Electrical Equipment

I-1	**Ammeter Installation** ..... Includes installing new, test must be made for correct operation of ammeter.	.8
I-2	**Battery, Cleaning Battery Terminals** .....No charge Includes Testing and Refilling with distilled water.	
I-3	**Battery removal**..... Includes removing and installing. Repairing additional.	.6
I-4	**Installing New Battery Ground Lead** ..... Includes removing old ground wire, cleaning contact surface and installing new wire.	1.2
I-5	**Installing New Circuit Breaker**....	.6
I-5a	**Minor Repairs on Circuit Breaker** Includes removing, cleaning, adjusting and reinstalling.	1.6
I-6	**Installing New Negative Wire from Generator to Battery** ..... Includes removing old and installing new	.8
I-7	**Installing New Hold Down Rod Strap on Battery Box and Clamp** ..... Two	.4 .6
I-8	**Cleaning Terminals on Battery Connecting Posts**	.4
I-9	**Removing and Installing Combination Switch**	1.0
I-10	**Combination Switch Overhauling**.. Includes removing, repairing and installing.	3.2
I-11	**Stopping Grease Leak in Distributor Head** ..... Includes removing distributor housing, installing new felt washers, replacing housing, connecting up generator shaft and installing distributor cover.	4.8
I-12	**Installing New Distributor Head Type 51**.....	.6
I-11a	**Stopping Grease Leak in Distributor Head Type 59**..... Removing distributor housing, installing new felts and bushings if necessary.	9.2
I-13	**Installing Distributor Head on Types 53-55-57-59**	.8
I-14	**Installing New Condensor on Type 51** ..... Includes removing and installing carbureter, removing old condensor and installing new, connecting up and installing new resistance unit and spool if needed.	2.0
I-15	**Installing New Resistance Spool Type 51** ..... Includes installing new fiber bushing.	2.4
I-16	**Installing New Condensor Unit, Types 53-55-57-59**	.6
I-17	**Installing New Resistance Unit, Types 53-55-57-59**	.4
I-18	**Removing and Installing Generator**	2.8
I-19	**Overhauling Generator on Type 51** Includes removing carbureter, removing generator, disassembling, cleaning all parts, inspecting all working parts, renewing spiral hub driving clutch if needed, replacing of any ignition parts in generator, turning up armature, cutting down mica, sanding in brushes, reassembling in engine, connecting all wires, testing for proper operation in circuit, replacing carbureter and retiming engine.	10.0
I-20	**Overhauling Generator, Type 51**... Includes taking generator off car. Includes same as I-18.	6.4
I-21	**Overhauling Generator, Types 53,-55-57-59** ..... Includes removing generator from engine and disassembling, cleaning parts, inspecting all working parts, installing new driving clutch where needed, turning down armature, cutting down mica, sanding in brushes; reassembling and installing in engine, connecting up generator shaft, connecting all wires and testing for proper operation of generator circuit.	7.2
I-21a	**Installing New Brushes in Generator, Type 53-55-57-59**..... Type 51	4.8 7.0
I-22	**Overhauling Generator, Types 53-55-57-59** ..... Includes taking generator off car. Includes same as I-21.	7.2
I-23	**Installing Generator Clutch, Types 53.55-57-59** ..... Does not include removing and replacing generator.	1.2
I-23a	**Installing New Generator Clutch Type 51** ..... Includes removing and installing generator, disassembling and installing new clutch and reassembling.	6.4
I-24	**Regulating Charging Rate**..... Includes cleaning of commutator, sanding in brushes, inspecting for proper operation.	.6
I-25	**Turning Down Armature Out of Generator**	1.6
I-26	**Removing Short Circuit or Wire Trouble**	1.6
I-27	**Repairing Starting Mechanism**.... Includes removing generator, making necessary repairs and installing any new parts needed; replacing generator	6.0
I-28	**Installing New Outside Starter Pedal Pin**	2.0
I-29	**Installing New Inside Starter Pedal Pin**	2.4
I-30	**Installing New Throw Back Spring on Starter Pedal**	1.6
I-31	**Ignition Coil** ..... Includes removing, testing and installing new if needed.	1.0
I-32	**Installing New Bulb in one light**..	.30
I-33	**Installing One Head Light Complete** ..... Two ..... Includes focusing of lights.	.8 1.6
I-34	**Taking Rattle Out of Headlight Reflectors**	.6
I-35	**Installing One Side Light Complete** ..... Two	.8 1.6
I-36	**Minor Repairs on Lighting System**	1.0
I-37	**Focusing Headlights** ..... Does not include tilting mechanism.	.6
I-38	**Adjusting Tilting Device**.....	.8
I-39	**Removing and Installing Clock Light Complete**	.4
I-40	**Removing and Installing Speedometer Light Complete**.....	.4
I-41	**Installing New Horn and Bracket, Cadillac Standard**	.8
I-42	**Tuning and Adjusting Horn**.....	.6
I-43	**Installing New Wire from Distributor Spark Plug**	1.2
I-44	**Installing Complete Set of Ignition Wires**	4.4
I-45	**Overhauling Distributor** ..... Includes removing housing from car; disassembling and installing any parts needed, reinstalling on car, retiming engine.	6.4
I-45a	**Overhauling Distributor on Type 51** ..... Includes removing of carbureter and generator.	8.4
I-46	**Checking Timing (Ignition)**.....	1.4
I-46a	**Points and Plugs** ..... Includes checking of timing.	2.8
I-47	**Cleaning Headlight Reflectors**....	.6
I-48	**Installing New Felts in Distributor** ..... Includes removing housing from engine.	4.8
I-49	**Installing New Tail Light Complete**	.6
I-50	**Installing Tail Light on Fender**...	1.6
I-51	**Repairing Horn** .....Hourly Includes installing new diaphragm.	
I-51a	**Installing New Diaphragm and Adjusting Points and Tuning Horn**	2.2
I-52	**Installing New Cigar Lighter Tip**..	.6
I-53	**Overhauling Cigar Lighter**.....	1.6
I-54	**Removing Short Circuit in Tail or Dash Light or Both**.....	1.0

Group J—Clutch

J-1	**Clutch and Gearset**..... Includes removing and installing.	6.4
J-2	**Overhauling Clutch** ..... Includes removing clutch from car and disassembling and aligning plates, installing new if necessary, installing any other new parts needed; installing new bearings if needed, reassembling and installing in car, making all proper adjustments.	8.8
J-2a	**Overhauling Clutch Out of Car**.... Same as J-2.	4.8
J-3	**Adjusting Clutch Pedal** ..... Allowing 1 in. play.	.4
J-4	**Clutch Ball Race Grease** ..... Includes removing floor boards. Packing clutch inspection plate with grease, installing inspection plate and floor board.	.6

Group K—Gearset

K-1	**Overhauling Gearset** ..... Includes removing from car, installing the necessary parts, reassembling and installing.	20.0
K-1a	**Overhauling Gearset Out of Cars**..	14.4
K-2	**Filling Gearset with New Grease**.. Includes draining, washing out, examining and installing fresh grease, removing gearset cover, cleaning out old grease, installing gearset cover.	.6
K-3	**Installing New Gasket on Gearset Cover Plate**.....	1.2
K-3a	**Installing New Gasket on Top of Gearset** ..... Includes removing of shifter forks.	.6
K-4	**Gearset** ..... Includes draining and refilling with oil.	.4
K-5	**Tightening Gearset Flange**	.6
K-6	**Installing New Jackshaft in Gearset** ..... Includes taking down gearset cover, draining gearset, removing jackshaft, replacing with new or necessary gear, replacing with new gaskets, putting up cover, filling gearset with oil.	6.0
K-7	**Installing New Clutch Connection Shaft Only** ..... No guarantee given as to quietness of gearset.	12.0
K-8	**Installing New Slipper Gear in Gearset** ..... Includes disassembling and reassembling of gearset.	10.4

(Concluded in next issue)

Getting the Election Day Idea Into an Ad

How a Los Angeles Dealer Capitalized the Value of Timely Advertising with Special "Copy"

THE Paul G. Hoffman Co., Studebaker dealers in Los Angeles, used a most timely piece of advertising copy on the day following the primaries in the California State election. With the newspapers featuring the returns of the election, the Hoffman company bought preferred positions in all daily newspapers and published advertisements featuring the heading: "California Goes Studebaker —Studebaker Elected." Motorists were shown lining up before the ballot box casting their votes for Studebaker.

The "copy" in the box in the ad read as follows:

"When the final returns of the election came pouring in, Studebaker Six showed a big majority over all other candidates for six-cylinder popularity in the city, county and state. Its total poll of votes in Los Angeles exceeded that of the combined totals of the next five six-cylinder candidates as figured from the returns for 1922. Studebaker Six leads its nearest rival by more than 50 per cent.

"Every section showed a strong vote for this popular medium priced car; in Hollywood, where style is a big factor, it has a remarkable lead, while in the mountain and desert counties, where real hard service is a requisite, it has a wonderful preference.

"Studebaker Six ran on its platform of satisfactory performance. Every man who has driven one has gained from experience a true conception of the valuable transportation service it has been rendering.

"Every class was backing Studebaker Six. The working man who demanded economy of operation and preferred style and the smoothness of six-cylinder performance forsook his former four-cylinder candidate and voted Studebaker. The business man whose first consideration is reliability and low maintenance cost again supported Studebaker Six. Among the wealthier classes it made a wonderful showing for the closed models were in harmony with the finest homes and afforded a luxury of comfort and appointment that appealed to the taste of the discriminating buyer.

"After serving the original owner for thousands of miles many a Studebaker Six has passed into the hands of the second, third or fourth buyer and continued to maintain its record for satisfactory transportation performance.

"Judging Studebaker Six by years of past performance it is easy to understand its overwhelming majority. Going back for seventy years the name Studebaker has stood for good transportation. The high ideals, progressive methods and advanced ideas of Studebaker well deserve this public recognition of merit."

The ad, which was widely commented on in Los Angeles, may offer a suggestion to dealers in other cities where elections are to be held this fall. It is one of those ideas which catch popular fancy because of their timeliness, like ads which bring in the Thanksgiving, Christmas and New Year seasons when people are thinking and talking about those special days.

Advertising of this kind gets away from the usual run of copy. It attracts attention because it is different, and every dealer knows that attention is the necessary forerunner of interest and sales.

Date of Lien Fixes Priority in Michigan

Ruling in Recent Case Makes Time Deciding Factor Where Garageman's and Chattel Liens on Car Exist

IN a recent Michigan case it was held by the court that a garageman's lien in that state does not take priority over a prior chattel mortgage, but that different liens upon the same property have priority according to the time of their creation.

The garageman claimed possession of the automobile by virtue of his statutory garageman's lien. The defendant claimed possession by reason of the fact that it had properly filed a chattel mortgage before the work was done for which the lien was claimed.

The Michigan Garageman's Lien Law reads:

> Sec. 1. That every garage keeper who shall in pursuance of any contract express or implied, written or unwritten, furnish any labor, material or supplies shall have a lien upon any automobile or other motor propelled vehicle, stored, maintained, supplied, or repaired by him for the proper charges due for the storage, maintenance, keeping or repairing thereof, and for gasoline, electric current, or other accessories and supplies furnished or expended or expenses bestowed or labor performed thereon at the request or with the consent of the registered owner of the license plates of said motor vehicle and such garageman may detain such motor vehicle, automobile or other motor propelled vehicle at any time it may be in his possession within ninety days after the last labor or furnished the last supplies for which the lien is claimed. Act 312 Pub. Acts, 1915—Michigan.

The counsel for the garageman contended that the purpose of the legislature was to give a prior lien to garagemen but the court in refusing to follow this theory said:

In the absence of any language indicating a contrary intention we assume that the legislature did not intend to change the general rule of law to the effect that a prior lien gives a prior claim which is entitled to prior satisfaction out of the subject it binds for the benefit of garagekeepers. Sloat vs. Mid West Finance Corp., 189 N. W., pg. 52.

Liability Depends on State Laws

Editor Motor World: I am starting a livery automobile business and would like some information regarding the liabilities attached to this business. I am renting the cars out by the hour and am employing no drivers, the person renting the car doing his own driving. I would appreciate it very much if you would let me know just what the liabilities are and any information in connection with the business. I read several accounts in Motor World regarding a hire of autos, but none that covers a person doing his own driving.—A. Q., Paterson, N. J.

Answer—In the State where you live—New Jersey—the same rule of law applies as in New York, Connecticut, Massachusetts and most other States—a car owner is only responsible for accidents when a car is being driven under his control or on his business—so where you rent a car without a driver you would not be liable, unless perhaps you might be held for renting a car to an idiot or an infant.

It must be remembered, however, that all the States do not agree on this proposition, and some States like South Carolina have special statutes which give injured parties a lien on the car which injures them. Some States like Michigan have statutes providing that an injured party need merely show ownership on the part of another to make the other liable for injuries caused by a car owned by him, and that then the owner is responsible unless car was driven without his knowledge or consent.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Billing Federal Tax on Parts

Editor Motor World:

We want some information concerning the application of the 5 per cent revenue tax law as it applies to the retailer of automobile parts.

We understand that it is illegal for a retailer to invoice a part for a price including war tax but must show a separate amount as "war tax, etc.," paid the manufacturer.

For instance the retail list price of a part is $6.00. The manufacturer charges 10 per cent to cover transportation to his branch and to cover war tax. The manufacturer authorizes the retailer to charge $6.60 for the part over the counter but states that in billing the part, if an invoice is given the list price of $6.00 must be given and a separate item of 60 cents added and called "transportation and war tax paid the manufacturer."

Could we not bill the parts just as we sell them over the counter and have a rubber stamp to stamp on all invoices worded, for instance, "all prices for parts include Federal war tax."

We will appreciate some information on this subject.—C. B. Orangeburg, So. Carolina.

Answer: There would certainly be nothing illegal about the use of the rubber stamp you mention. Your manufacturer probably has some reason for wanting these items set out separately. It is a question whether or not it would be wise to set out the items other than as the manufacturer desires them set out. Why not write and ascertain the manufacturer's reason? It is very likely to prevent overcharging on the part of some dealers that it requires all dealers to set out the items this way.

Mortgage Must Be Re-Recorded

The Supreme Court of Washington in the recent case of Muller vs. Bardsher reported in 205 Pac. Reporter, at page 845, decided that where an automobile is removed from one county to another, if there is a chattel mortgage on it, the mortgage must be re-recorded in the county to which the property is taken within 30 days, or else the lien of the mortgage is lost as against a purchaser of it in good faith, in that county.

Salesmen Representations Are Binding

The fact that a contract for the sale of an automobile contained a clause providing that "there are no promises, verbal understandings or agreements of any kind pertaining to this order not clearly specified in it" was held by the New York Courts not to preclude a car purchaser from suing for damages on the claim that it was induced to make the contract by the false oral representations of the seller as to the condition and character of the car. Benedict Co. vs. McKeage, 201 Ap. Div. (N. Y.) pg. 162.

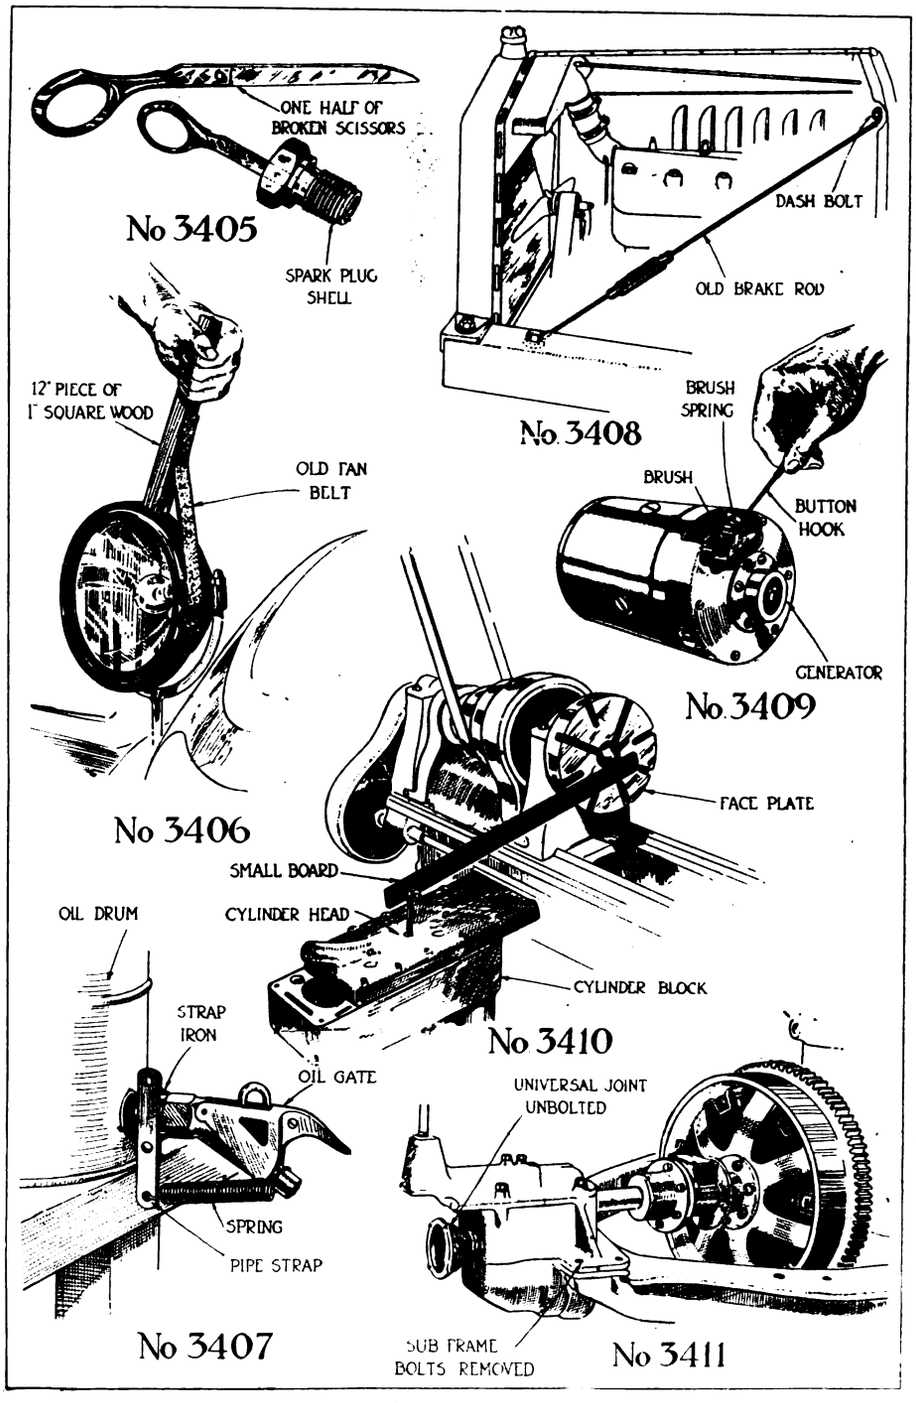
Repairshop Shortcuts

Read What Readers Write

SOME months ago we referred to a department conducted by a New York newspaper entitled "What did you see." This newspaper, the Evening World, has found the department so interesting that in addition to the usual prize for contributions it is now worth while to offer a first prize of a Ford car each day. It has been proved that the things that readers write are eagerly read by the rest of the readers. Motor World readers have for years been careful readers of this department, contributed by other readers. Let others in the trade hear of your time and labor saving ideas. We pay $1 for each contribution accepted. We will accept any that are practical and that have not been previously used.

No. 3405—A Spark Plug Scraper.—A scraper for cleaning the carbon from the inside of a spark plug shell is made from one blade of an old pair of scissors. If the edge is sharpened on a grinding wheel the carbon will cut out easily.—Edward Ruesch, Buffalo, N. Y.

No. 3406—Headlamp Door Clamp.—A clamp to remove or replace headlamp doors that fit tight is made from a piece of square lumber to which is securely fastened a length of fan belting. The leverage obtained will move the door without marring it.—William B. Wheatley, R. G. Edgerton & Co., Norfolk, Va.



No. 3407—Self Closing Oil Spigot.—The spigot is of the gate type and provided with a spring to close it as soon as the handle is released. This prevents men walking away, leaving the oil running.—Charles R. Kitts, Page Garage, Denver, Col.

No. 3408—To Ease Up Ford Front Doors.—When Ford front doors will not close, the cause is sometimes due to the sagging of the dash backward. This is overcome with a brace rod and turnbuckle from the dash to the frame.—H. R. Grigsby, Garage Superintendent, Oklahoma Gas & Electric Co., Oklahoma City, Okla.

No. 3409 — Lifting Ford Generator Springs.—Ford generator springs are lifted with a shoe button hook when removing the brushes.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3410—Lapping a Cylinder Head.—When a cylinder head is warped it can sometimes be brought to a fit by lapping. To do this mechanically a crank arm extends from a lathe face to a bolt on the cylinder head.—H. R. Ong, Smith's Garage, Spring Valley, Ill.

No. 3411—Removing Chevrolet Gearset.—By unbolting the universal joint ball and loosening the gearset sub-frame bolts on the Chevrolet 490, it is possible to lift the gearset out without pulling the rear end.—Floyd D. Elmore, Bethesda, Md.

Equipment to Sell

New Devices for the Car and Truck

Direx Rear Traffic Signal

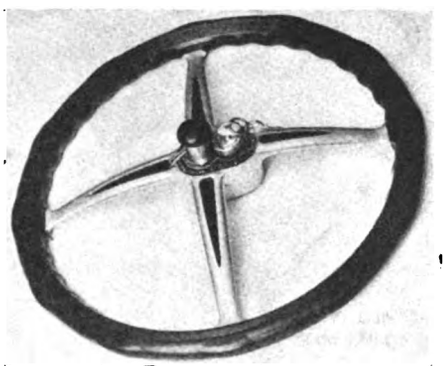
The Akron Signal Co.,
1178 Edison Avenue, Akron, Ohio.
Price $10.

The signal indicates left, right and stop. The stop signal works automatically from the service brake and the right and left signals are controlled by nickel plated buttons mounted on a steel arm which is japanned and baked and attached to the steering wheel column bringing control within easy access of the finger tips without moving the hand. If desired, the buttons may be placed on the instrument board, door or wheel.

Aske Electric Fuelizer for Fords

The Kase Electric Co., Duluth, Minn.
Price $9.50.

The fuelizer consists of a complete new intake manifold for the Ford included in which is the heating element of the fuelizer midway between the carbureter flange and the branch. The manifold is of cast iron with a chamber formed in the gas passage for the reception of the heating element which consists of four metal grids cased in a thermoplax cover, one terminal of which is grounded to the aluminum cap of the fuelizer. Only one wire is required for connecting up the fuelizer which operates by pressing a switch button for about five seconds. The current is automatically shut off when the finger is removed from the switch button. The current used is approximately one tenth that used by the starting motor. The device is not used when the engine is running.

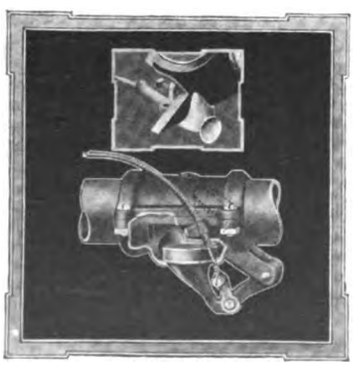


Amalie Oil

L. Sonneborn Sons, Inc.,
New York City.

A Pennsylvania base lubricating oil. It is packed in steel and wood barrels, half barrels, steel quarter drums, 5 and 1-gal. cans. The standard brand is Amalie 1-2-3 Non-Carbon. Special grades are made for Cadillacs and Franklins.

Surlok Steering Wheel Lock



Detroit Motor Casting Co., Detroit.

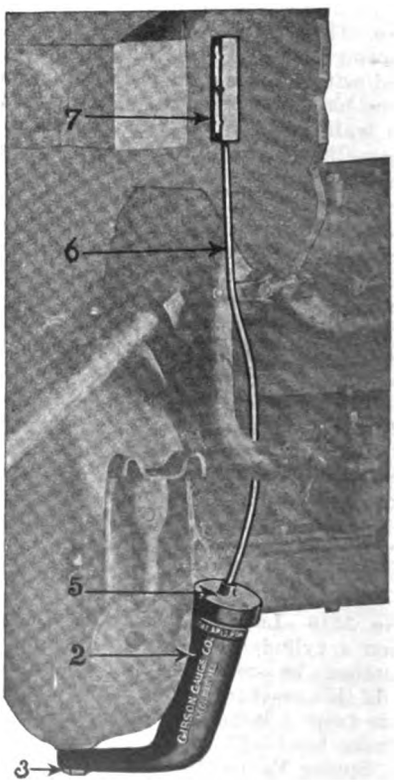
The lock is mounted in the case-hardened steel head of the steering wheel. It has two positive locking positions and when in one of these it is impossible to drive or tow the car in other than a circle. In the other the car can only be moved in an absolutely straight line. The device does not replace or modify any existing parts of the steering parts. The wheel is knobbed inside and out and has an aluminum spider. The keyhole of the lock is on top and easily accessible.

Ruby Muffler Cutout

Ruby Mfg. Co., Springfield, Ohio.
Price $3.75 to $7.

The cutout is controlled by a plunger on the instrument board through a wire in a flexible metallic cable from the instrument board to the cutout. It has no spring and has a heavy round valve machined to accurately fit the narrow angle seat. The valve pivots outside and away from the heat and carbon. The cutout clamps over a slot in the exhaust pipe.

Paul Tires and Tubes

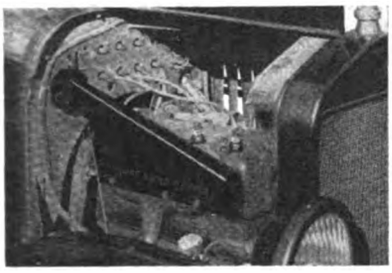


The Paul Rubber Co., Salisbury, N. C.

The cord casings are known as Clover-Leaf Cords and are made in sizes from 30 x 3½ to 35 x 5. The 30 x 3½-in. size is $14.50. Oversize fabrics are made in 30 x 3 and 30 x 3½ at $9.65 and $10.65. Two grades of tubes are made, gray and red. The red tubes are all equipped with Tirometer valves, which show the pressure in the tire at all times. The 30 x 3½ gray tubes are $2.25, red tubes with valves, $2.95.

Gibson Oil Gage for Fords

Gibson Gage Co.,
2304 Seventh Avenue, Moline, Ill.
Price $3.



The gage is attached at the bottom of the flywheel housing by removing the drain plug. The plug chamber extends upwards in front of the flywheel housing and a tube extends from the float chamber to an indicator on the dash. Owing to the fact that the flywheel picks up the oil when it is running, the gage only indicates the correct level when the engine is stopped.

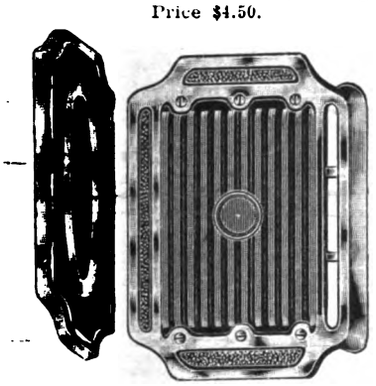
Digitized by Google

Fyrac Heater for Fords

Fyrac Mfg. Co., Rockford, Ill.
Price $2.50.

A car heater for Fords. It takes the heat from over the Ford exhaust manifold and to the dash through a metal pipe. The heat can be regulated from the driver's seat and can be shut off entirely when desired.

Detroit Tire Lock



Detroit Carrier & Mfg. Co.,
Comant and Derr, Detroit, Mich.
Price $3.50.

The device locks the spare tire to the carrier. It consists of two parts, one of which is bolted to the carrier and the other is snapped over to lock the tire. The lock is a regular cylinder Yale type, two keys being provided with each one. A revolving snap cover prevents dust and water from getting into the keyhole of the lock itself.

Sterling Aluminum Step Plates

Sterling Auto Devices Co., Inc.,
206 South Jefferson Street, Chicago.
Price $4.50.

The step and kick plate is made of aluminum highly finished and polished. It is complete with frame, rubber mat and kick plate, size 13 x 9. Packed two complete sets in a box, furnished with nickel plated screws.

Blue-Tip Transmission Lining for Fords

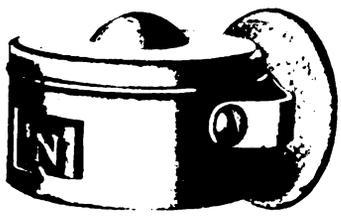
Libby Mfg. Co.,
111-121 Watchung Avenue, Plainfield, N. J.
Price, $2.50 per set.

The set consists of three lengths of brake lining, each length of a different type best adapted for the work it has to do. The reverse lining is 48 picks, the slow speed is extra heavy and the brake is asbestos. The set is furnished in a carton, complete with the necessary rivets.

Bu-Nite Steel Band Piston

Butler Mfg. Co.,
3234 West Washington Street, Indianapolis.

A light weight piston with a low expansion co-efficient due to thermostatic control. The weight is approximately one half that of a cast iron piston and it has solid steel bands cast within the skirt, which is a feature of expansion.

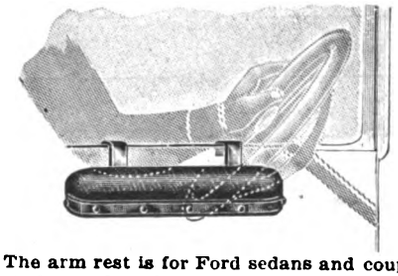


No-Rad Rust Oil

No-Rad Rust Oil Co.,
413-419 North Water Street, Lancaster, Pa.
Price, $1 per can.

A liquid which is claimed to dissolve slime, rust and scale in the radiator and cooling system of a car, truck or tractor.

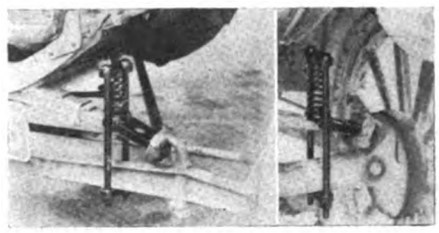
Cooper Directometer



Cooper Mfg. Co., Marshalltown, Iowa.
Price, $7.50.

A device for telling the direction that the car is traveling. The eight principal points of the compass have been marked on the dial in aluminum letters and are discernible either by day or night. It is made of brass and aluminum and is insulated after being attached to the windshield.

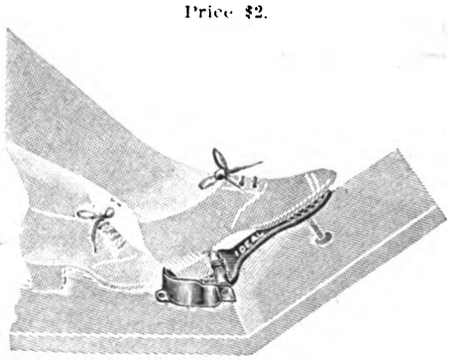
Comfy Arm Rest for Fords



Sterling Auto Devices Co., Inc.,
206 South Jefferson Street, Chicago.
Price $1.50.

The arm rest is for Ford sedans and coupes and is made of black leather, well upholstered. The arms are of aluminum and fit to the sides snugly.

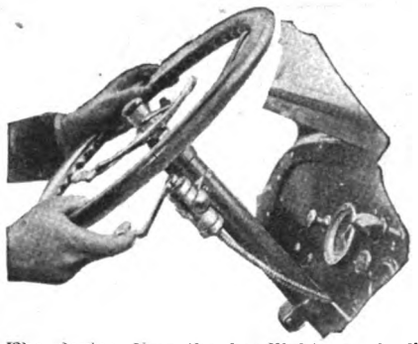
ReDee Shock Absorbers for Fords



Detroit Motor Casting Co.,
1067 Beaufait Avenue, Detroit.

The outstanding feature of this shock absorber is the loading of the springs in a way to produce the equivalent of a loaded car. The device is designed to put 600 lbs. of load on the springs, but only 12 lbs. on the tire. A stout coil spring rides on a cast saddle held in compression on the regular Ford spring, thus furnishing the stablized load. The same mechanism that loads the spring also checks the rebound.

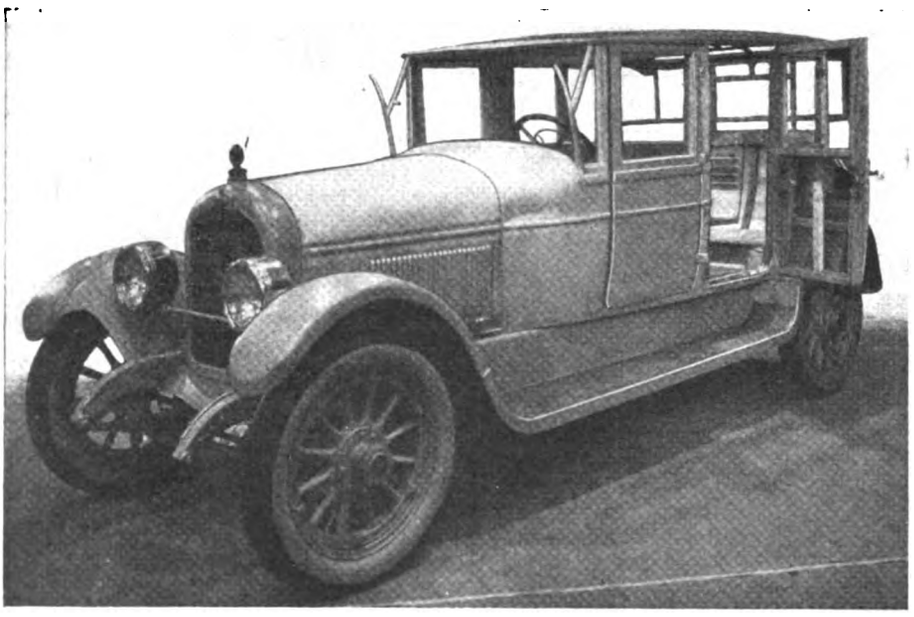
Ideal Foot Accelerator



Sterling Auto Devices Co., Inc.,
206 South Jefferson Street, Chicago.
Price $2.

The accelerator is made of aluminum with a heavy spring to give the foot a rest at all times. It does not touch the gas pedal until pressure is applied. It is 11 in. long and fits any model car. Packed one in a box.

Universal Headlight Controller



Universal Headlight Controller Co.,
Fisk Building, New York City.
Price $7.50.

The device dims the headlights gradually instead of abruptly. It is installed on the steering post and located so that the controlling lever is operated by a pressure of the finger without removing the hand from the steering wheel. The lights are dimmed by pushing the lever forward. The wiring consists of one control wire attaching to the switch and the other to the bright headlight wire, which has previously been disconnected. The controller and wire conduit are nickel plated and polished.

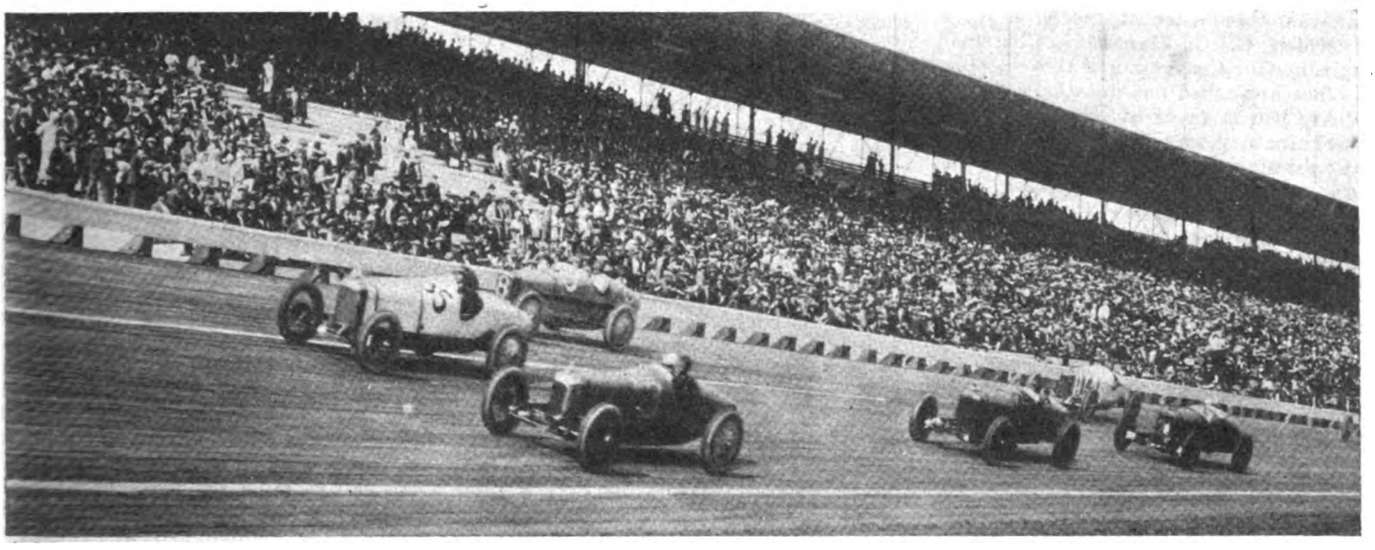
and There in Automotive Circles

A Legless Man's Ford

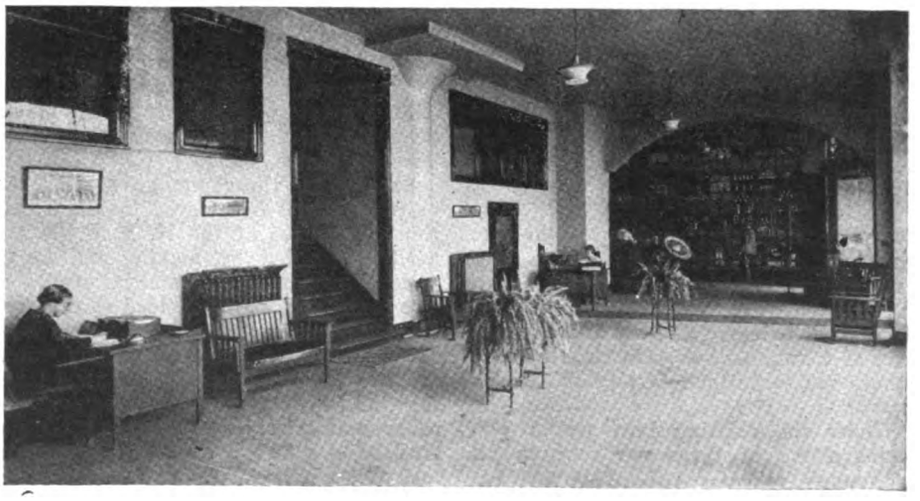
(At Right)

A HAND operated Ford truck is being used every day in Cincinnati, being driven through heavy traffic by the owner, J. A. Callahan, ice dealer and expressman. Being without the use of his lower limbs, he conceived the idea of installing levers to take the place of the necessary foot manipulation.



Two holes were drilled in each of the foot pedals and the levers attached with bolts. The low speed lever has a hand grip, as has the brake lever, while the reverse is a perpendicular bar.

At the New Kansas City Speedway



(Below)

THE new track was opened Sept. 16 with a race that resulted in one fatal and several serious accidents. In the picture car No. 35, in the lead, is being driven by Jimmy Murphy. It is a Miller Special. Tommy Milton, in a Leach Special, won the race. Milton is A. A. A. champion, having won the Indianapolis classic last May.

Display Helps Dealer Sell Accessories

EVERY day in the year there is either an accessory or a parts display in one of the windows of the Wangelin-Sharp Co., Ford dealer in Indianapolis. A merchandising plan that presents accessories as real necessities to new and used car buyers sells $65,000 worth of equipment and parts a year for this firm.

Will Ask Repeal of War Tax Laws

CONGRESSIONAL AID SOUGHT BY N. A. C. C.

Desire Is Not for Special Privileges But to Remove Discrimination

WASHINGTON, Sept. 29—The repeal of the discriminatory war excise tax laws of 1918 and 1921 will be sought by the National Automobile Chamber of Commerce in a campaign, launched here today, placing facts and figures before Congress, setting forth the Chamber's argument as to why the laws should be repealed and citing the present inequalities of the existing law.

The opening "guns" of the Chamber are being trained on the members of the House, Senate and more than 1000 nominees for seats in these two bodies.

Letter Asks Question

In a letter, carefully planned by the Taxation Committee of the N. A. C. C. of which C. C. Hanch is Chairman, aspirants for Congress and those already in office are asked one question:

"Are you in favor of the repeal of all discriminatory war excise taxes?"

Continuing the letter states:

The desire of Congress to repeal discriminatory war excise taxes was definitely indicated in amending the 1918 Federal tax law by removing such taxes on some articles and reducing them on others. In no case did Congress increase such taxes or add new ones.

The discriminatory war excise taxes in the Federal tax laws of 1918 and 1921, and the changes made in the 1918 law by the 1921 law, are graphically shown in the attached memorandum.

Apparently Congress believed it of greater importance to relieve musical instruments, sporting goods, chewing gum, thermos bottles, fur articles, picture frames, perfumes, toilet waters and hair dyes than individual transportation. In this belief we do not concur, and we feel that the only equitable thing in the interests of fair play and the welfare of all industry, as a whole, is to repeal all discriminatory war exise taxes.

The Chamber's letter closes with the request that the addressee favor the Chamber with his opinion in the premises.

Seeks Fair Taxation

The opening "shot" makes it clear that the automobile industry is not seeking any special privileges for itself as an industry but is merely seeking fair taxation on all industry and not the elimination of taxation on certain classes while others must continue to pay the excise taxes.

Under the existing law, section 900 levies a tax of three per cent on all automobile trucks, tires, parts and accessories and five per cent on all other automobiles, tires, parts and accessories.

The law of 1921, repealing in part the law of 1918, relieves manufacturers of musical instruments, sporting goods, chewing gum, thermos bottles, toilet soaps, toilet powders, picture frames, motion picture films, perfumes, toilet waters, hair dyes, patent medicines and ice cream from payment of the excise taxes. This the Chamber points out is unfair discrimination against the manufacturers of other, and in the majority of cases, more useful commodities.

Just what the excise tax means to the automobile industry is seen in the light of government reports showing that owners of motor vehicles paid into the public federal treasury in 1921 a total of $117,322,000 in excise tax alone, in addition to $212,978,000 in the way of state taxes and $11,000,000 in municipal taxes, or a total of $341,300,000 taxes for the year.

Accompanying the letter and extract of the war excise tax laws of 1918 and 1921 is a vest pocket story of the motor vehicle showing the census of automobiles by states, etc.

Success for the campaign against the existing law it is believed by the Taxation Committee of the N. A. C. C. can best be courted by making the broad general appeal for the removal of all excise taxes and it was decided at the concluding meeting of the committee in New York on Sept. 6-7 that the policy would be pursued that was adopted, thus leaving the way open for the support of other industries who feel that they are entitled to a measure of relief from war and post-war legislation.

2,809 CARS STOLEN; ALL BUT ONE FOUND

CHICAGO, Sept. 30—Reduction of about 37 per cent in automobile stealing as compared with the corresponding period last year in Chicago has been effected through the operation of a special motor division of the Police Department, according to statistics prepared by Captain John Naughton, commanding the motor division of the Police Department.

From Jan. 1 to Oct. 1, 1921, 4477 cars were reported stolen in Chicago and 2972 were recovered. So far this year 2809 cars have been reported stolen and 2808 have been recovered. The discovery of a number of organized theft rings and the arrest of the operators went a long way toward the reduction of theft.

PACKARD WILL ENTER INDIANAPOLIS RACE

Company Returns to Field with Factory Team After Interim of Many Years

INDIANAPOLIS, Sept. 27—The Packard Motor Car Co. will return to automobile racing in 1923 with a factory team, the first of the big factories to engage in the speed sport after once having retired. Incidentally the Packard is the first of internationally famous American factories with big production to engage in racing in the last decade.

This was announced by T. E. Myers, secretary and general manager of the Indianapolis Motor Speedway, who has been advised by Colonel J. G. Vincent that the Packard team would participate in the eleventh annual 500 mile international sweepstakes race next Memorial day.

Three Types of Engines

Colonel Vincent has not given out the details of the construction of the cars but they are now being built by the Packard organization. Three types of engines will compete for the $50,000 purse, four, six and eight. Packard has selected the six for its team because it believes the six will be most efficient in competition in this class. The cars will be one man, with the driver seated in the center. No drivers have been announced by the company as yet.

The return of Packard to racing will revive memories of the Packard Gray-Wolf, which was a sensation 15 years ago and one of the most successfully campaigned cars in the days when the acme of speed competition was achieved on the dirt tracks and beaches. It also will call to mind the work of Ralph De Palma four and five years ago when he successfully campaigned a Packard 12 on the speedways and smashed many straightaway records on the beach at Daytona, Fla. De Palma has been engaged by Packard as a consultant in the building of its team of racing cars for the Indianapolis event of 1923. He is working with Col. Vincent and the Packard engineering staff in perfecting the design of the cars.

Tests New Principles

DETROIT, Sept. 27—The Packard Motor Car Co. is re-entering automobile racing as a means of testing out new engineering principles and theories of design under the extreme conditions which racing presents. The team entered in the 1923 race will drive under the personal direction of Col. J. G. Vincent, vice-president in charge of engineering.

Freight Shortage Spurs Driveaways

SHIPMENTS HELD UP IN DETROIT SECTION

Dealers Notified of Conditions —Permanent Driving Staffs May Be Formed

DETROIT, Sept. 29 — Shortage of freight cars and congestion of shipping on the lake boats are causing factories considerable difficulty in shipping automobiles and are adding daily to the number of cars that must be driven to dealers. One company has gone to the extreme of notifying all distributers within one thousand miles of the factory to plan for driveaways on all cars required in the next ninety days.

The freight car shortage is more acute in the adjoining cities to Detroit than in Detroit itself, but even here shipments are being held up for several days to get shipping accommodations. There is almost a complete dearth of the big automobile cars, and companies making shipments to the coast are compelled to resort in a great many instances to cars holding only three automobiles as compared to five in the larger cars. This is entailing an additional burden to the already high cost of coast shipments.

Driveaways for Quick Delivery

Congestion in the Cincinnati railroad terminals is causing many factories to advise dealers in districts reached through Cincinnati to arrange for driveaways where cars are required quickly. Congestion in Eastern shipments is also marked and many delays are ensuing in getting cars through to cities in New England and along the Atlantic seaboard. This condition is made worse by the difficulty in obtaining space on the Buffalo boats. Independent boat companies are helping out somewhat but infrequent sailings make this meager at best.

Because of delays in getting cars on the boats distributers and dealers are compelled to hold their driveaway crews for days at a time in Buffalo and Chicago, and in an increasing number of cases the crews are coming through to Detroit and making the driveaway over the entire distance. Permanent driving staffs will be formed by many distributers for several months at least, it now appears.

Piston Ring Injunction

BALTIMORE, Oct. 2—Judge Hugh M. Morris of the United States District Court of the District of Delaware has enjoined the Bowman-Gould Co. and restrained it "permanently from making or selling, directly or indirectly, any one-piece piston rings so similar to the peculiar and distinctive type of piston rings manufactured by the No-Leak-O Piston Ring Co. as to be liable to deceive purchasers."

SAN DIEGO BOY WINS HIGHWAY ESSAY PRIZE

WASHINGTON, Oct. 3 — The first prize for the best essay on "How I Can Make the Highways More Safe," offered by the National Automobile Chamber of Commerce to the school children of the Nation, was won by 13 year old Stanley Newcomb of San Diego, Cal. He won from 400,000 competitors.

The prize winner is entitled to a gold watch and a trip to Washington, all expenses paid, where he will be the guest of the Highway Education Board and the N. A. C. C.

Second prize went to Miss Merlene Beck of Draper, Utah, and third honors to James Gillenwaters of Knoxville, Tenn. Many other prizes were distributed through the different States.

The contest has been beneficial in reducing the number of accidents among children, and a similar contest is being announced again by the Highway Education Board as part of its "Safety Season" for 1922.

COMMANDER MOTORS H. W. O. SUCCESSOR

NEW YORK, Sept. 29—The Commander Motors Corp., with headquarters at 49 Wall Street and a factory in Chicago, is the successor to the H. W. O. Motors Corp. of Chicago. It will build the Commander, a $5,000 car, designed by Hugo W. Ogren, at one time head of the Ogren Motors Co. of Milwaukee.

The officers of the new company are: Charles H. Wilcox, president; Nicholas Schmidt, vice-president; Hugo W. Ogren, vice-president and general manager, and Sidney R. Flett, secretary-treasurer. K. W. Zoeller is sales director.

The company is capitalized at $2,000,000. The Milwaukee plant will be used until the factory at Chicago, occupying 40,000 sq. ft., is completed. It is expected that the Chicago plant will be in operation by the middle of November.

Hydro-United Resumes

PHILADELPHIA, Sept. 29—The Hydro United Tire Co., has resumed operation at Pottstown, according to Receivers, John P. Hill and Ephraim Lederer. The resumption means a minimum production of 600 tires daily

SHOW DRIVES HOME CLOSED CAR UTILITY

Sales Made at Display in New York Exceed Expectations of Dealers Exhibiting

NEW YORK, Sept. 30—The Automobile Merchants Association's second annual closed car show was closed tonight with a decidedly satisfactory record of business. Dealers in practically all lines made some sales and quite a number in the popular and near-popular classes had sales records far exceeding what would be done in an ordinary fall week on the salesroom floor.

Aside from getting immediate business the show served two other important purposes:

First, it educated a great many people in the metropolitan territory regarding the utility and comfort of the closed car, and also regarding the widespread reduction of the differential between open and closed car prices. This education will have its effect in better closed car business throughout the fall and in promotion of the closed car idea.

Offer Convenience to Public

Second, the show served as an accommodation to a great many people who had their minds made up to buy closed cars but were uncertain as to the make or model which would meet their desires. The show enabled these people to compare makes and models without the inconvenience of traveling from salesroom to salesroom. That this convenience was appreciated was evidenced by remarks of many show visitors made throughout the week.

The attendance was large for a closed car show. Newspapers gave the show and the closed car idea a great deal of constructive publicity. Even some of the distributors and branch managers who went into the show only half convinced of its value admitted at the end of the week that they had got their money back in profits on immediate sales and, in addition, had added to their prospect lists names that they might not otherwise have obtained.

National Show Drawing Oct. 5

NEW YORK, Oct. 2—Drawings for space at the two national shows, New York and Chicago, will take place Thursday at the headquarters of the N. A. C. C. There will not be any more exhibitors this year than last for the reason that every available inch of space is used and there is no room for expansion. Applications are on file for space for 82 car manufacturers at New York and 81 at Chicago. The accessories exhibits will number more than 200 at each place.

CHEVROLET TO USE JANESVILLE PLANT

General Motors, However, Will Not Discontinue Making Samson Tractors

MILWAUKEE, Oct. 2—General Motors has decided to employ the greater part of unused capacity of its mammoth Samson tractor plant in Janesville, Wis., to relieve the tremendous pressure upon the present facilities of the Chevrolet division at Flint, Mich., and elsewhere.

Reports say that the prospective Janesville Chevrolet division will serve the northwestern territory, and will be the forerunner of a probable system of branch assembling and distributing plants similar to that maintained by Ford. Chevrolet business has experienced a remarkable increase, especially in the past six to eight months, which demands a very material enlargement of production and more ample means of distribution as well.

More Buildings for Samson

DETROIT, Oct. 3—Location of a unit of the Chevrolet Motor Co. in a section of the plant of the Samson Tractor Co. at Janesville, Wis., will not have the effect of decreasing the tractor capacity of the Samson company according to a statement by General Motors Corp. Chevrolet will take over some of the buildings formerly occupied by Samson and will erect additional buildings, but in giving up these plants Samson is moving into new buildings recently completed for its use.

Equipment and stock of the company will be moved from the present assembly building into the new foundry and implement plant. General Motors has no intention of quitting the tractor business, but is taking advantage of the present lull in this business to divert some of its facilities to taking care of the pressing needs of the Chevrolet company.

PHILADELPHIA FIRM FORMED BY DE BEAR

PHILADELPHIA, Sept. 28—The De Bear Motor Car Co. has been organized in this city by Harry J. De Bear, president; Fred J. Finkenauer, treasurer and secretary, and his brother, Elmer R. Finkenauer, vice-president. The company will distribute Maxwell and Chalmers cars in this city and vicinity, including a part of Southern New Jersey.

De Bear, during his previous residence in Philadelphia, was associated with the advertising departments of both the *Record* and *Evening Bulletin* and for a time was identified with the Philadelphia branch of the Olds Motor Works. For the last 11 years he has been connected with the trade in New York City, where he served as assistant sales manager for the Studebaker Corp.'s factory branch, and in 1914 opened the New York Maxwell-Chalmers branch as president and general manager. In that capacity he remained for eight years, leaving just prior to his coming to this city, when the Maxwell-Chalmers interests in New York were taken over by the Colt-Stewart Co. as distributor.

ASK DELAY IN MAKING NEW ANNOUNCEMENTS

CHICAGO, Sept. 30—Acting upon the complaints received from a number of individual members, the Board of Directors of the Chicago Automobile Trade Association has adopted a resolution protesting against the announcement of manufacturers of their new models and new prices as much as six months in advance of the season for which they are intended. It was stated that the association opposes the policy of mid-season announcement of new models and new prices because it has a tendency to slow up buying not only of the cars in question but of other cars as well.

FAIR GETS FIRST STAR LANSING FACTORY MADE

DETROIT, Sept. 30—The first Star car to be turned out at the Lansing plant of the Durant Motor Co. has been shipped to the Intermountain Motor Sales Co., which will exhibit it at the Utah State Fair at Salt Lake City. The assembly lines for the Star are reported almost ready for production at the Lansing factory.

Sales of the Durant four are reported to be brisk, a trainload being shipped to Chicago this week, with other trainloads to be shipped to other points in the next few weeks.

KELSEY GEAR-DRIVEN CAR NOW PART OF LINE

NEW YORK, Sept. 29—The Kelsey car may now be purchased either with the Kelsey friction drive or with the conventional gear transmission. The friction and gear-driven chassis are identical, except that the latter, instead of the Kelsey propeller shaft, friction clutch, transmission and rear axle, has a 10 in. Borg & Beck clutch, Detroit three-speed gearset, Standard Parts semi-floating rear axle and Snead propeller shaft. Torque and drive are taken through the springs. The tires are 32 x 4 in. and the gear ratio is 4.75 to 1.

Prices on the gear driven car are the same as for the friction drive models: Five-passenger phaeton, $985; five-passenger sport, $1,185; suburban sedan, $1,450.

Double Drive in New Plant

BENTON HARBOR, MICH., Sept. 28—The Double Drive Truck Co. announces that it is now located in its new plant in this city, which it recently purchased and is now equipping and getting ready for production.

DRIGGS WILL PRODUCE NEW DIAMOND TAXICAB

Expects to Turn Out 2,000 Within Year—Operator May Buy on Time Payments

NEW YORK, Oct. 2—Driggs Ordnance & Manufacturing Corp., New Haven, Conn., maker of the Driggs passenger car, has contracted with the Diamond Taxicab Co. to produce the vehicles which this new concern will put into operation. It is expected that 2000 taxicabs will be turned out inside the year.

Inasmuch as the Diamond company has announced that it will furnish transportation at 20 cents a mile, New York City, Driggs has been called upon to produce a light vehicle capable of economical operation.

The Diamond taxicab is powered with the same four cylinder engine that is used in the Driggs passenger car, an L head type with block cast cylinders 2⅝ x 4½. The chassis, however, has been especially designed to meet the demands of taxicab operation. The wheelbase is 108½ in., with the frame pressed steel and 2 in. alloy steel springs. The front axle is a drop forged I-beam section of 40-50 point carbon steel and the rear axle, of Driggs design, is of the three-quarter floating type. Cooling is thermo syphon and lubrication pump and splash. The carbureter is a Zenith and the ignition American Bosch. The weight of the chassis is 1400 lb. and the taxicab complete weighs 2200 lb.

Body a Landaulet

The body is made of 22 gauge steel and is a landaulet. One of the features is a removable panel in the rear which permits of replacement of that part in case of collision damage without forcing the cab to go to the repair shop. The official colors of the cabs are to be blue and white.

The Diamond Taxicab Co., for which this vehicle is being built, will sell it to the individual taxicab operator for $1,950, delivered in New York City. If desired this will be sold on time payments, one-third down and the balance paid in daily installments which are taken out of each day's receipts as reported by the driver. It is the intention of the Diamond company to extend its operation to other large cities.

White Co. Dividend

CLEVELAND, Sept. 28—The White Co. on Sept. 30 will mail to stockholders a dividend at the rate of $1 a share. Quarterly earnings from Jan. 1 to Aug. 31 have exceeded dividend requirements for the entire year, and a continued improvement in business is indicated by the volume of orders on hand and in prospect. The company employs 3700 men and is producing on a basis of 10,000 trucks a year. Rumors of a proposed consolidation with one or more other truck companies are denied.

A. E. A. STANDS FIRM; SHOW TO BE CLOSED

Board of Directors Meets to Set at Rest Rumors of Change in Plans

CHICAGO, Oct. 3—The annual merchandise show of the Automotive Equipment Association at the Chicago coliseum in November will be closed to non-members as authorized by the board of directors last March. This definite announcement is made in a letter to the membership, authorized by the board of directors at a meeting here to set at rest rumors that the closed show authorization would be rescinded.

The meeting of the board was called upon the petition of a number of members for the purpose of considering the closed show question, some agitation having been conducted in favor of opening the show to non-member jobbers. The board, in its letter, points out that at the summer meeting at Colorado Springs the earlier action authorizing the closed show was re-considered and affirmed and that later the membership failed to rescind the closed show action although a motion to that effect was offered.

New Members Admitted

Charles P. Hughes, secretary of committees of the A. E. A., tendered his resignation which was accepted by the board.

A number of membership applications were considered and the following were elected to membership:

Jobbers—Julius J. Bantlin Co., Cincinnati; Belcher & Loomis Hardware Co., Providence, R. I.; Corpus Christi Hardware Co., Corpus Christi, Tex.; L. L. Ensworth & Sons, Hartford, Conn.

Manufacturers — Buffalo Forge Co., Buffalo, N. Y.; Douglas-Dahlin Co., Inc., Kansas City, Mo.; General Automotive Corp., Chicago; Globe Manufacturing Co., Battle Creek, Mich.; Kokomo Automotive Mfg. Co., Kokomo, Ind.; King Sewing Machine Co., Buffalo; David Lupton's Sons Co., Philadelphia; Perfection Heater Co., Cleveland; Webster Electric Co., Racine, Wis.

All except 10 of the 265 available show exhibit spaces were allotted to applicants, the 10 being held open for new members.

LINSCOTT GETS KEY OPENING REO PLANT

BOSTON, Sept. 30 — Thirty-three members of the Linscott Motor Co.'s dealer organization, representing Vermont, New Hampshire, and eastern Massachusetts, were guests of the Reo factories in Lansing. One year ago their visit was the occasion of the shipment of Linscott's third trainload; this year his sixteenth trainload was traveling east as the dealers arrived. The party was met at Jackson by a special car bearing banners, "Trainload Linscott's Reo Salesmen," and the Reo Band, which met them in Lansing, led them to the factory, where they were greeted by the directors, who presented Linscott with a heroic replica of the key to the works.

In the evening the dealers were guests of the company officials at a banquet, where both dealers and factory heads gave testimony to J. M. Linscott as a leader and friend. As a representative of the department heads in the plant put it, "When production begins to get ahead of sales and cars begin to fill up the corners of the storage spaces, it is—Linscott! — Trainload!!—and everything is cleaned out again."

SHERMAN ON COAST IN A. E. A. CAMPAIGN

CHICAGO, Sept. 29—Ray W. Sherman, merchandising director of the Automotive Equipment Association, has left the Pacific Coast to conduct an extended campaign with the "Ask 'Em to Buy" and "Shop Profits" motion pictures among the jobbers, dealers and garage proprietors of that section. He will be gone until about Nov. 1.

Among the cities in which he is scheduled to hold meetings are El Paso, Tex.; Phoenix, Ariz., and the following California cities: San Diego, Santa Anna, Long Beach, Los Angeles, Bakersfield, Fresno, Sacramento, San Jose, Oakland and San Francisco.

500,000 STAR ORDERS PLACED FOR DELIVERY

Only 120,000 Accepted—Dealer Application Total 10,000 —Approval to 1000

NEW YORK, Oct. 2—Of orders received for 500,000 cars for delivery by Aug. 31, 1923, Star Motors, Inc., has accepted 120,000. Of 10,000 applications for appointments as distributors and dealers, 1000 have been accepted.

While the Star is in production right now at four plants—Lansing, Leaside, Ont., Oakland, and Long Island City—deliveries are slow at present. It is expected, however, that by the end of the first week in November the various plants will be up to the scheduled production and turning out 8000 Stars a month. Contracts accepted call for the construction of 18,000 cars by the first of the year and it is thought this obligation will be met.

Plants Have 330,000 Capacity

Whether or not Durant will manufacture to capacity between now and the end of its fiscal year, Aug. 31, 1923, is a question that has not been settled. The various plants have a capacity of 330,000 for both Durants and Stars in this period.

AUTOMOBILE ACCESSORY MAKERS PREPARE FOR ANNUAL MEETING AT ATLANTIC CITY

PHILADELPHIA, Sept. 28—The fifth annual meeting of the automobile accessories branch of the National Hardware Association will be held at the Ambassador, Atlantic City, Oct. 16 to 17. In connection with the meeting there will be an exhibit of accessory manufacturers. Both meeting and exhibit are open to wholesalers who are not members of the association.

A preliminary list of exhibitors is given below.

Advance Automobile Accessories Corp., Ajax Auto Parts Co., American Hammered Piston Ring Co., Appleton Electric Co., Apco Manufacturing Co., Apex Electric Mfg. Co., Asch & Company, Inc., and Automotive Products Corp.

The Benzer Corp., Franklin T. Berry, Biflex Products Co., Blublaze Motor Specialties Corp., Bonney Forge & Tool Works, Boyce & Veeder Co., Inc., and Buffalo Forge Co.

The Carborundum Co., Carter Carburetor Corp., A. C. Spark Plug Co., Clayton & Lambert Manufacturing Co., Columbia Tire & Rubber Co., The Corcoran Manufacturing Co., Crawford Manufacturing Co. and Culver-Stearns Manufacturing Co.

The Davies-Young Soap Co. and The Duluth Show Case Co.

E. Edelman & Co.

J. H. Faw Co., Folberth Auto Specialties Co., Fitzgerald Manufacturing Co. and The Fulton Co.

Gardner Printing Co., Gemco Manufacturing Co., General Asbestos & Rubber Co., Giant Grip Manufacturing Co., The Goodrich-Lenhart Manufacturing Co., Grigsby-Grunow Hauss Co. and Greenfield Tap & Die Corp.

Ideal Clamp Manufacturing Co.

J. & B. Manufacturing Co.

W. E. Kemp and Kraeuter & Co.

The LeCompte Co.

The J. C. McAdams Sales Co., McCord Manufacturing Co., Inc., The Mansfield Tire & Rubber Co., Marquette Manufacturing Co., Inc., Metal Specialties Manufacturing Co., Mitchell & Smith, Inc., Monkey Grip Rubber Co., Frank Mossberg Co. and Mitchell Specialty Co.

National Lamp Works of General Electric Co., National-Standard Co., A. Nelson Manufacturing Co., New England Tube & Stamping Co., Inc., No-Leak-O Piston Ring Co. and North Bros. Manufacturing Co.

Pennsylvania Piston Ring Co., N. A. Petry Co., The Polson Rubber Co., The Protexall Co. and Pyrene Manufacturing Co.

Rajah Auto Supply Co.

C. A. Shaler Co., H. D. Smith Co., Splitdorf Electrical Co. and F. W. Stewart Manufacturing Co.

Templeton, Kenly & Co., Ltd., Chas. O. Tingley & Co., The Trexler Co. and Thompson Neylon Manufacturing Co.

United States Chain & Forging Co.

Victor Manufacturing & Gasket Co.

The F. W. Wakefield Brass Co., Walden-Worcester, Inc., Warner-Patterson Co. and Wolverine Lubricants Co.

"X" Laboratories.

King Sewing Machine Co.

ALL INTERESTS UNITE TO FRAME GOOD LAWS

Seven Units Included in Newly Formed California Automotive Conference

LOS ANGELES, Sept. 28—In order to bring about a plan for concentrated effort in legislative matters there has been organized in this state what is known as the California Automotive Conference. This conference is composed of the following seven units: Passenger car dealers, truck dealers, franchised freight haulers, franchised passenger haulers, individual truck owners, fleet owners and motor draymen. Each unit has its committee with a chairman, who is alone empowered to vote.

The conference has been organized for the sole purpose of uniting the interests concerned upon proposed changes in the state motor vehicle laws. In the past when changes have been advocated or opposed the legislature has had to listen to claims from so many different sources that nothing but confusion resulted.

When candidates for legislative office this year were approached, they stated their willingness to help the industry if it were united on a definite plan. Numerous problems are involved and to date the conference has held five meetings in the effort to smooth out the difficulties. It was agreed among the various units that whatever decision was reached as advisable for the majority, all would support. This will result in a very much simplified procedure before the legislatture, which convenes in January.

More strict enforcement of motor vehicle laws is desired. California officials have claimed their laxity in enforcement has been due to inadequate funds. One of the proposals in the tentative platform of the conference provides for a charge of fifty cents for each motor vehicle operator's license.

No claim is advanced that a motorist should be required to pay for the privilege of driving a car any more than a clerk should pay for the privilege of selling hats, but the idea is to create a fund from the operator's license tax which would be used exclusively in the enforcement of the provisions of the motor vehicle act. A fifty cent operator's license in this state would raise approximately $400,000, and it is believed that with this sum an adequate patrol and enforcement system could be created and maintained.

Another one of the most important problems the conference is seeking to solve has to do with the tax on owners of motor stage and freight lines. At present these lines are taxed on their personal property values.

SAYS PRIVATE CARS USE DEALER PLATES

SPARTANBURG, S. C., Oct. 2—The South Carolina State Highway Commission has practically decided to discontinue the practice of issuing demonstration plates because of the gross abuse of the privilege. In the future such plates will be issued only for the full fee. As a courtesy to dealers they were issued by the highway commission for the nominal sum of fifty cents.

It was pointed out that instead of keeping them only for demonstration cars, hundreds of privately-owned cars are running about over the state with a fifty cent plate on the rear.

TRUCK USERS EXPAND ASSOCIATION SCOPE

Plan Will Permit More Members to Be Enrolled in Indiana Organization

INDIANAPOLIS, Oct. 2—Allied Motor Commerce of Indiana, which was organized last fall as a federation of organized trade associations of the state whose members used motor transport, has been reorganized, and the scope of its work broadened. While the federated idea is still a part of the organization plan the new constitution and by-laws make room for the thousands of individuals and firms of the state who use trucks but who are not members of other organized trade bodies.

There is also provision for the membership of those who though not commercially interested in motor transport or highway development are in sympathy with further expansion of the highway building and of the greater use of motor transport.

The three main features of the policies and plan of the organization are "Public Highway Development," "Fair (Motor Vehicle) Legislative Regulation," and "Reciprocal Highway Courtesy." The body will stand for the idea that the state ought to be vested with the regulation of rates of motor transport to the end that fair treatment will be accorded the transport people, the shippers and the general public.

Educational campaigns are planned that will make motor transport and its public benefits better understood by the general public and bring about more careful observance of motor vehicle and traffic regulations by all truck owners and drivers.

New York Service Men and Their Families

Nearly a hundred attended the third annual outing and clam bake of the Automotive Service Association of New York on Long Island Sound on Sept. 24. Anyhow, there are seventy-four in the picture. Count 'em! But it is one of those ring-around-a-rosy pictures where the camera starts at the left and swings to the right and the birds that have had the

GOVERNOR DEFEATED BY MOTORISTS' VOTE

California Executive Had Program for Enormous Increase of Tax Burden

LOS ANGELES, Sept. 29—The political power and influence of motorists were demonstrated as probably never before in connection with the recent California primary election. Faced by the announced plan of the present administration to increase the tax burden on motorists enormously, the defeat of William D. Stephens, present governor, and candidate for the nomination was accomplished.

Friend W. Richardson, the successful candidate, based his campaign on the policy of an economical administration. He appealed direct to the 800,000 owners of motor vehicles, telling them that if Stephens continued in office they would be called upon to meet heavily increased license burdens and a gasoline tax.

Stephens had all the influence of a powerful political machine behind him and his nomination was looked upon as a certainty until the votes were counted. Then it was learned Richardson had defeated him by approximately 25,000 votes, and there is no question of doubt but that it was largely the motoring vote that brought this about.

The State's Highway Commission had announced its needs as $12,000,000 annually for the next five years. Under the law, if the highway commission received that sum, the same amount would have had to be raised for distribution among the counties, with a ten per cent allowance for the conduct of the motor vehicle department. This would have meant that if the commission received $12,000,000 a year as its share, the total amount motorists would be called upon to contribute would be $27,000,000, and in addition the Stephens line-up had advocated a gasoline tax.

Not only was the influence of the motoring public brought to bear against the Stephens candidacy, but it also was directed along the line of choosing candidates for the legislature who would support Richardson and oppose heavy increases in motor fees. Many of those candidates for the legislature who in the past had followed the Stephens program were defeated for this reason more than any other and the turnover politically was the biggest on record in California.

RAILWAY MECHANICS FILL REPAIR SHOPS

BLOOMINGTON, ILL., Oct. 2—The strike of the railway shop crafts has been a blessing in one way as it has enabled motor vehicle repair shops to secure all the mechanics they required for the first time in many years.

Of late years, the majority of first class mechanics in the railroad shops, due to increased wages, as a result of the late war, purchased an automobile and most of them looked after their own repairs. When the strike was called July 1, many of these men, gravitated to the automobile repair shops, and, with a little coaching, developed into first class motor car mechanics.

It is likely that a large number of them will remain with the garages, even though the strike has been settled.

CHICAGO TRADE JOINS IN CLOSED CAR WEEK

To Be Held in Place of Show—Association Appropriates Advertising Fund

CHICAGO, Sept. 30—A concerted showing of new models of closed cars with attractive seasonal decorative settings will be made in the sales rooms of all dealers affiliated with the Chicago Automobile Trade Association from Oct. 14 to 22, inclusive. This was decided at a special meeting of the association this week at which $18,000 was appropriated to advertise the show.

This will be the first time that Chicago dealers have conducted a special display simultaneously in their stores and under the general direction of the trade association. Desire to hold a closed car show was general among the dealers, but some were of the opinion that it should be held in the Coliseum or other central place. The question was thoroughly discussed by all the dealers attending the meeting before a decision was reached.

The chief arguments in favor of the sales room show were that each dealer would have room to display all his models, the salesmen would feel more at ease in their own places of business and the visitors would be in a more receptive mood than in a combined show room. The final vote was unanimous.

Chevrolet "Superior"

A schedule of flat rates for both Chevrolet models, published in Motor World of Sept. 13, page 24, contained the heading "Supreme" as one of the models. This should have been "Superior." The model Superior is the model that was previously known as the 490.

Enjoy an Outing and Clam Bake on Long Island

experience always sit on the end, then run around to the other end and get in the picture twice. In addition to the abundance of clams and lobsters consumed, the crowd had a good time competing for prizes that were offered by manufacturers and dealers for various athletic events

JORDAN CUTS PRICES; MAKES SOME CHANGES

Closed Models Drop from $2,785 to $2,485—No Change Made in Open Cars

CLEVELAND, Sept. 29—Jordan Motor Car Co. announces a reduction of $300 in the prices of its brougham and sedan, the drop being from $2,785 to $2,485. No change has been made in the lists on the open models.

Several slight changes have been made in both of these closed models. The sharp corner lines have been changed to a broomstick radius, roof lines have been lowered two inches and the seats dropped a corresponding amount. The rear seats are wider and the pitch changed slightly. Both bodies are now trimmed in Windsor weave cloth. In the brougham this cloth is worked in plain trim without pleats, but in the sedan pleats are used.

A worm type regulator replaces chains in the doors, while removable panels make it easy to get at the regulators. Platinum finish hardware is used in dome lights, door pulls and regulator handles. A new steering wheel with walnut spider and rim, similar to that used on the new Play Boy, is standard on both closed jobs, with small polished aluminum control levers mounted in the center.

The sedan body has been lengthened to allow more room in the front compartment and a little more in the tonneau. A large trunk has been mounted on the rear of the brougham, carrying two large suit cases and having an extra compartment for packages.

Republic Truck Receivership

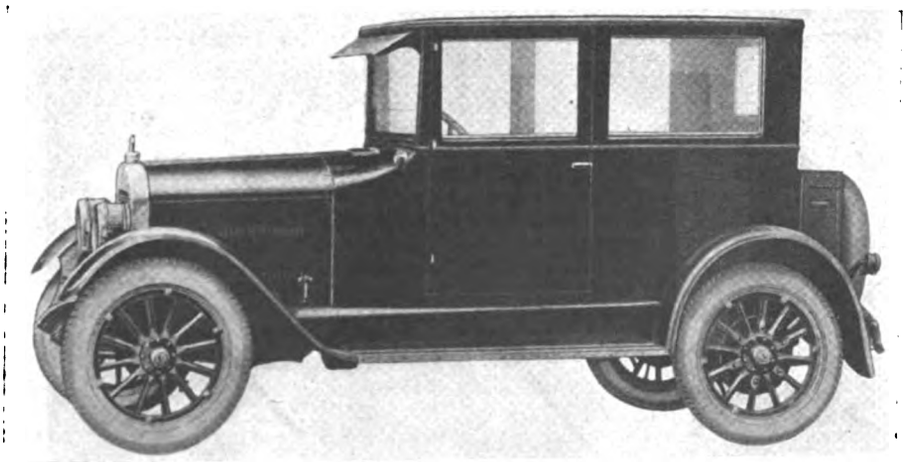
DETROIT, Oct. 2—On petition of the Acme White Lead & Color Works a receiver for the Republic Motor Truck Co., Alma, Mich., has been named by the United States District Court. The Security Trust Co. has been appointed receiver. The petition alleges that $2,500,000 of creditors have been secured by a mortgage on the plant which should be reviewed.

The company has answered the petition and has joined with petitions consenting to the receivership. Assets are claimed to be in excess of $7,000,000. Reorganization plans are said to be already under way. It is stated that the Republic Motor Truck Sales Co. is not affected and will continue to function as usual.

CANADIAN FORD CUTS PRICES OF ALL CARS

DETROIT, Sept. 30—The Ford Motor Co. of Canada, Ltd., has made reductions ranging from $30 to $60. The chassis now is $395; runabout, $455; phaeton, $495; truck chassis, $545; coupe, $780; sedan, $870. Starting and electric lighting are standard on closed models. On all others, $85 extra.

The Ford Motor Co. of Canada is independent of the American company, though Henry Ford controls both plants. No price change on the American side is announced.



Franklin Sedan Week

SYRACUSE, Sept. 30—During the week of Oct. 8, according to notice issued to-day by the Franklin factory, the sales organization throughout the country will devote its entire efforts to the showing and demonstrating of the company's sedan.

Receivership for Holmes

CANTON, OHIO, Oct. 2—Holmes Automobile Co., manufacturer of the Holmes air-cooled car, has been placed in the hands of a receiver, E. A. McCuskey being appointed, following the application of four petitioners with claims aggregating less than $4,000. Tangible assets of $850,000 and liabilities of $1,500,000 are reported. The company in a statement claims assets of $2,500,000.

Velie Six Model 58 Brougham, $1795

A new body added to the Velie line. It carries five passengers and is of the two door type. The front seats tip forward. Upholstery is broadcloth with head linings to match. The interior fixtures are dull silver finish. A trunk containing two suit cases and a hat box is part of the standard equipment

CLOSED CARS SHOWN AT MONTREAL EXHIBIT

Dealers Abandon Former Plan of Holding Displays in Separate Salesrooms

MONTREAL, Sept. 30—The interior of the Drill Hall is resplendent with decorative features for the opening of the closed car show which takes place to-night. Permission was secured from the military authorities and the Federal Government by the Montreal automobile dealers for the use of the hall.

The exhibition will be officially opened to-night when it is promised that among those present will be the Hon. Geo. P. Graham, minister of militia, Hon. J. L. Perron, minister of roads, Walter Mitchell, M. P., and Mayor Martin, who will be accompanied by the directors of the Montreal Automobile Trade Association under whose auspices the show is being held.

The interior of the drill hall has been elaborately decorated to give a winter garden effect. Special electric lighting helps to give the impression of a myriad of suspended icicles, forming a canopy over the whole area of the exhibition.

Depart from Custom

For several years Montreal distributors have held what they called closed car shows. The exhibits were, however, on view in the different salesrooms. This year the Montreal Automobile Trade Association decided that it was the opportune time to hold a big closed car show. The admission has been placed at 30 cents which includes the amusement tax outside of Society Night when the general admission will be $1. Band concerts will be given every afternoon and evening by the Royal Montreal Regiment.

Adelstan Levesque is show manager, and it is fully expected that the success of the first closed car show in Montreal will merit its repetition in future. The majority of dealers are linking up their show windows with the show by featuring special displays of closed jobs in their windows together with special decorations for the occasion.

Thirty-eight makes of cars will be exhibited, the space having all been allotted some time ago.

Appleton Truck Formed

APPLETON, WIS., Sept. 30—The Appleton Motor Truck Co. has been incorporated with an initial capital of $25,000 by A. G. Brusewitz, M. Rossmeissl and W. G. Jamison for the purpose of manufacturing and dealing in motor vehicles, parts and equipment. Brusewitz was one of the principal officers and stockholders in the Reliance Motor Truck Co. of Appleton.

New Buick Record

FLINT, MICH., Sept. 29—During the week of Sept. 23 a new high point of production was reached by the Buick company when the plants in this city and Detroit turned out a total of 4058 cars.

DEALERS WILL ATTEND OAKLAND 'DURANT DAY'

Four Pacific Coast States to Be Represented—Trade Undergoes Changes

OAKLAND, CAL., Sept. 29—All the cities around San Francisco Bay have joined forces with the Oakland Chamber of Commerce in the celebration of Oct. 12 as "Durant Day," to honor the official opening of the Durant Motor Co.'s plant in this city. Durant dealers from four Pacific Coast states will be here for the celebration, and dealers from virtually every town in California between the Tehachapi Mountains and the northern boundary of the state will drive in from their places of business in Durant cars.

The northern delegation will start at Seattle and pick up the Portland dealers on the way south. The southern delegation will start from San Diego and will be joined by another delegation at Los Angeles. The dealers will hold a sales convention at the Durant factory Oct. 12 and 13. The city will be decorated on the 12th, and there will be concerts, speeches, barbecues and other events on the program.

Changes on Row

Several important changes have taken place along Automobile Row in Oakland within the past week or ten days. Harold D. Knudsen has been appointed Chevrolet dealer for this territory, and is operating under the firm name of Harold D. Knudsen & Co.

Don Shortz, who has been manager of the F. H. Dailey Motor Car Co., Maxwell and Chalmers distributor in Oakland, has started in business for himself, having taken the Maxwell agency for San Pedro and Wilmington, in southern California. J. L. Brambila, formerly Maxwell man here, is now installed as Maxwell agent in Long Beach, and his movement southward induced Shortz to go along to the neighboring cities.

The Auto Necessity Co., formerly the Luthy Battery Co., has been named Vesta battery representative in Oakland by the J. P. Schiller Co. of San Francisco, northern California distributor. C. A. Anderson and D. R. Ruddington own the Auto Necessity Co.

Two former executives of the B. F. Goodrich Rubber Co., T. A. Worden and Carl Fitch, have opened a retail tire depot. Fitch was for fifteen years director of Goodrich service at Akron, and Worden was branch manager of the Goodrich company in Sacramento.

Scharps Succeeds Wetmore

NEW YORK, Sept. 30—John C. Wetmore, well known throughout the industry, with which he has been identified since its inception, as automobile editor of the New York Mail, has retired from the field of daily journalism and is removing to Los Angeles, which will be his future home. He will continue his connection with the automobile industry through the medium of a publicity bureau which he will establish on the Pacific Coast.

Wetmore is succeeded by C. E. T. Scharps, sales manager of the Poertner Motor Car Co., agent for the Durant. Scharps formerly was automobile editor of both the New York Tribune and Sun.

WIDEN CHICAGO ROAD PAST DEALERS' ROW

CHICAGO, Sept. 29—Work has been commenced to add 14 ft. to the width of Michigan Avenue from Twelfth Street to Thirty-third Street, through practically the whole extent of Chicago's automobile row. The widening is to be accomplished by taking 7 ft. from the space between the curb and the building line on each side of the street. This will greatly relieve the congestion along the city's most popular automobile highway, and, in the opinion of leading automobile dealers, will make it far more pleasurable to own and drive an automobile in Chicago.

"The widening of Michigan Boulevard is a pronounced step in the direction of progress for Chicago's motor way system," declared Henry Paulman, a veteran dealer.

MASON TIRE PLANS INCREASED OUTPUT

CLEVELAND, Sept. 30—The Mason Tire & Rubber Co. of Kent has found it necessary to raise more money to increase tire production.

The company will issue $2,000,000 of first mortgage bonds and will increase the capital stock from 150,000 to 350,000 shares of no par value, provided the stockholders ratify the plan. The income will be used to finance the purchase of the plant of the Owen Tire & Rubber Co., at Bedford, Ohio, near Cleveland, and to refund $540,000 worth of outstanding 7 per cent serial notes.

The company is producing 500 tires a day at its Owen plant and plans to increase the number to 1500. This will give an output of 6000.

CALIFORNIA FORBIDS TESTS OVER HIGHWAYS

SAN FRANCISCO, Sept. 30—No more long-distance, endurance, or any other kind of automobile racing or contests is to be allowed on the paved highways of California, according to announcement by the California State Motor Vehicle Department. In its campaign to stop such contests, inspectors of the department, late in September, arrested Wells Bennett, when he had only 100 miles to finish on non-stop run from Canada to the Mexican border.

ALL PARTS OF TEXAS REPORT IMPROVEMENT

Cotton Crop That Brings Good Prices Is Regarded as Chief Factor

DALLAS, Sept. 28—The retail lines of the automotive business in Texas have improved from five to 15 per cent during the past fifteen days according to reports from all sections of the state. The greatest increase in sales of cars is reported from North and Central Texas, the chief cotton belt. There has been a considerable gain in sales in South Texas while West Texas has been holding its own and East Texas showing increases.

In accessory and tire lines the dealers say there have been gains in business of from five to ten per cent. Garagemen report their business improving and the outlook generally better.

Truck and tractor men report business ten per cent better than for the first fifteen days of August with the outlook better than it has been for three years.

Back to Normalcy

A good cotton crop which is now reaching the market at a good price is given as a reason for better conditions. Retailers of cars, tires and accessories declare business should be humming for the next two months, and that it will probably not get in the doldrums again in this section. The automotive business in Texas is back to normalcy.

The distributors report better business than they have had for many months. One Dallas distributor placed an order for a train of thirty-five car loads of automobiles last week. This week he was trying to get another train load of the same make of cars. Other dealers were ordering heavily and reporting that practically all the cars they could get had been taken. The medium price cars are the favorites in this section.

DEALERS IN FORDS ORGANIZE ON COAST

LOS ANGELES, Sept. 28—Ford dealers of the Pacific Coast territory under the jurisdiction of B. L. Graves, regional director for the Ford Motor Co. over the branches at San Francisco, Los Angeles, Portland, Seattle, Salt Lake and Denver are being organized, and announcement has been made that the policy will extend throughout the entire country.

The purpose of the organization is said to be to familiarize the dealer with the improved sales plans, service policies and other matters of general interest as they affect each representative in his own locality.

Service is the point receiving most consideration. Attention is also being given to plans for furthering the sale of the Fordson industrial tractor. The meeting held here was attended by 100 Ford dealers.

CHANGES IN THE TRADE

H. P. Baldwin is to distribute the Haynes in Springfield, Mass.

William B. King has taken over the Brooklyn distribution of the Davis car.

E. M. Walcutt, Columbus, has been named central Ohio distributor for the Anderson.

Laybourn Auto Co., Minneapolis, has been formed to represent the King 8 in that territory.

Arthur Golden has been appointed assistant sales manager of the Advance Rubber Co. of Brooklyn.

Daggett-Yewdale Motor Co. has been appointed distributor of the Gray in Milwaukee and vicinity.

Tivoli Motors Co. of Chicago, distributor of the Noma, has also been appointed distributor for the Templar.

Meagher & Bouchie have organized **Hampden Motors, Inc.,** to distribute the Gray in Springfield, Mass.

B. W. Ellis and **Frank Babbitt** have organized the **Jordan-Columbus Co.,** to handle the Jordan in Columbus.

Wallis Baird, Galesburg, Ill., has been appointed distributor for the Star car in the Knox and Warren counties territory.

Hilmer Motor Sales Co., Springfield, Ill., has been appointed distributor for the Cleveland car in the Sangamon county territory.

Hallwood Motors is the name of a new concern in Columbus to handle the Westcott. **Nathan Hallwood** is at the head of the concern.

W. E. Heinemann, formerly eastern representative of the Templar Motor Co., is now with the Matthews Engineering Co., Sandusky, Ohio.

Columbus-Liberty Motor Co. has been organized with **E. T. Ash** as manager to distribute the Liberty in Columbus and central Ohio.

A. S. Johnson, formerly manager of the Stutz Chicago Co., has been appointed sales manager of the **John Nicol Co.** of Chicago, distributor of the Saxon and Liberty.

E. P. Hedberg has purchased the **Dodge Street Garage,** Omaha, from **Hastings & Hayden** and will operate it as a storage, repair shop and general service building.

Henry Gail Mason, formerly with the Allison Rood Co. of Chicago, has been appointed sales manager of **Lloyd Shanesey Co.,** Ford and Lincoln dealers in that city.

Ert Palmer Co. manufacturers' representative has been organized at Milwaukee. **Michael Ert** is president and **Paul E. J. Palmer,** vice-president and director of sales.

Templar Motor Sales Co. has been incorporated in Atlanta to distribute the Templar in the southeastern territory. Incorporators are: **J. H. Joyner, F. Waterman** and **F. C. Tindall.**

Russell Motor Car Co., Columbus, has been chartered under Ohio laws to distribute the Dort throughout central Ohio. **E. N. Russell** is president and **G. E. Spicer,** secretary and treasurer.

W. E. Grimes has opened a wholesale and retail accessory business in Dallas, Texas, under the name of the W. E. Grimes Co. He will institute a day and night service for his retail trade.

Orland Cadillac Co. has been formed at Orlando, Fla. to distribute Cadillac cars in that section of Florida. Officers are: **W. D. Rogers,** president and treasurer, **F. N. Bass,** vice-president; **B. B. Rogers,** secretary.

Haas Auto & Supply Co., Philadelphia, **Stephen Haas,** proprietor, has been appointed distributor of Ames-built bodies for Ford cars in the Philadelphia territory, which includes Pennsylvania, southern New Jersey and Delaware.

W. B. Fitzgerald, formerly secretary of the Atlanta Automobile Association, and later general manager of the Ford Car Clearing House Association, has been named to head the sales department of the Atlanta branch of the Ford Motor Co.

Arthur M. Kennedy, who has been sales manager of the Franklin Motor Car Co. of Philadelphia, has resigned and has established an independent business in sales, research and promotion which is intended to serve manufacturing and sales organizations.

Empire State Sales Co. headed by **W. C. Link,** former southeastern district manager for Durant motors, has established sales rooms and service station in Atlanta, for the distribution of the Durant and Star automobiles in Georgia and part of Tennessee.

L. O. Naylor, who recently severed his connection with his brother, T. W. Naylor, in the **T. W. & L. O. Naylor Co.,** Salt Lake City, has been appointed distributor for the Nash, for Utah, most of Idaho, Southern Oregon, Western Wyoming and Eastern Nevada.

James D. Flowers has purchased the interest of Williams in the **Futch-Williams Motor Co.,** of Montgomery, Ala. The name of the concern has been changed to the **Futch-Flowers Motor Co.** The concern handles Fords, Lincolns, and Ford trucks and Fordson tractors.

Rhoda-Rems Motors, Allentown, Pa., has been appointed Anderson distributor for that territory. **W. W. Griffin Motor Car Co.,** Portland, Me., will handle the car throughout the state. **Smith Brothers Motor Sales Co., Inc.,** Providence, R. I., has been named as Rhode Island distributor.

Ross C. Lowrie has been made director of the new Oldsmobile show room in the General Motors Building, Detroit, following a number of years of successful service in the Oldsmobile branch in Detroit. The company will continue to operate the branch under the management of **William J. Clemens.**

Jo H. Anderson has purchased the business of the Asheville, N. C., branch of the Byrd Motor Co., dealer in Reo passenger cars and trucks. The new firm will be known as the **Anderson Motor Co.** Anderson has been connected with the Byrd Motor Co. of Knoxville and Asheville for many years.

U. H. Strider has been named manager of the Hudson Motor Car Co. factory branch in Detroit, which succeeds **Bemb-Robinson Co.** as wholesaler of Hudson-Essex cars in the Detroit district. Strider was formerly wholesale manager for Bemb-Robinson, which continues to handle Hudson-Essex retail sales.

McWilliams-Moore Motor Co. will handle the Durant and Star cars in Madison, Limestone, Jackson and Morgan counties, Alabama. This concern is a partnership between **D. B. McWilliams** and **A. J. Moore.** They have purchased the repair shops of the **Love Tire & Supply Co.,** and will have their headquarters there.

Roy C. Ellis, for the past four years assistant sales manager and field representative of the automotive division of the Standard Steel Car Co. of Pittsburgh, has joined the sales staff of the **Courier Motors Co.** of Sandusky, Ohio, as factory representative. Ellis will devote much of his time to special dealer work.

Fred J. Crowley has been appointed salesmanager for Peterson Motors, Inc., Philadelphia, distributor of the Jordan car. Crowley for four and half years was connected in an executive capacity with the Studebaker Corp. of America and was salesmanager of the Cleveland branch of Willys-Overland, Inc., for a year and a half.

Max Geisler has been appointed secretary and general manager of the **Gillette Rubber Sales Co.** which has opened offices in Chicago. The sales company acts as wholesale distributor for the products of the Gillette Rubber Co. at Eau Claire, Wis. The ultimate aim of Geisler and his associates is to establish a national organization of dealers taking in the entire country.

Staff Selling Organization, with its central office at Canton, Ohio and eastern office at Lake Waramaug, New Preston, Conn. has been appointed exclusive factory distributor for the Lomar shock absorbers for Canton and Youngstown, Ohio, Pittsburgh and the states of Connecticut, Rhode Island and Massachusetts. It is appointing a number of sub-distributors in these districts.

H. H. Collins and **Earl B. Smith** have taken over the Chevrolet sales and service franchises in Houston and South Texas. The business for this line will be handled by two companies, the Collins Chevrolet Co. and the Smith Chevrolet Co., both located here. While the companies maintain separate headquarters and salesrooms and staffs they have a consolidated service station.

S. de B. Keim, general sales manager of Rolls-Royce of America, Inc., has returned from a trip through the Middle West making a survey of the sales situation, with the idea of increasing distribution. Keim is enthusiastic over the interest shown everywhere in the product. These sales representatives have been appointed: **R. E. Bell,** Milwaukee; **P. B. Burry,** Cleveland; **Curry & Southworth,** Denver, and **Van Kleeck Motor Co.,** Pittsburgh.

Wheeler & Manning, Inc. have opened three salesrooms to handle the Durant line in New York City. **F. J. Manning** was formerly sales manager for the Poertner Motor Car Co., Durant distributer for the metropolitan district. **Thos. R. Wheeler** has been indentified with the automobile business at New York for several years. The three salesrooms are located at Broadway and 106th Street, Seventh Avenue at 125th Street, and St. Nicholas Avenue at 161st Street.

Earl Philadelphia Motor Car Co. has disposed of its business to the **E. A. Myers Co.** of Pittsburgh, which, with the addition of the Philadelphia territory, will be operating in six states. The Philadelphia office will be headed by **L. M. Myers,** who for several years has served as sales manager of the Pittsburgh house. The territory will be in charge of **C. S. Miller,** formerly wholesale manager of the Pittsburgh office and more recently holder of an Earl dealer's franchise under the Myers organization. The former headquarters of the Earl Philadelphia Co. will be retained.

ASSOCIATION ACTIVITIES

New York State Organization

NEW YORK, Oct. 2—Dealers and dealer association representatives of seven New York state cities met here as guests of the Automobile Merchants Association of New York and discussed a proposal for a state dealers' association. It was decided to call a convention of dealers in Albany Nov. 9 and 10, when a decision will be reached as to whether such an association should be formed.

It was brought out at the meeting that it would be to the advantage of the trade throughout the state to be able to present a united front before legislative and administrative officers of the state on legislative and other questions affecting the sale and use of motor vehicles. It was felt that if dealers throughout the state in sufficient numbers want a central organization, and are willing to finance it, this fact will become apparent at the Albany meeting and plans can then be made to go ahead with the project.

The conference here was attended by representatives from New York, Brooklyn, Buffalo, Syracuse, Poughkeepsie, Utica and Binghamton. C. W. Bull, of Syracuse, acted as chairman of the meeting which was called by Thomas F. Moore, secretary of the New York association.

New Hampshire Dealer Outing

MANCHESTER, N. H., Oct. 2—There were 150 dealers and salesmen present at the annual outing of the New Hampshire Automobile Dealers Association held at Rye Beach. Following the dinner the business meeting began with the election of Perley P. Pillsbury of Manchester as president and Fred H. Lowe of Tilton, secretary-treasurer. The general report showed the association in good condition numerically and financially.

Governor Brown was introduced as the principal speaker. He gave a talk on the present registration fees, and the possibilities of taxing gasoline to increase the state revenues for better highways. Amos J. Shorey, New England distributor of the Velie, from Boston, representing the N. A. D. A. as its Eastern director, gave a strong talk on the need of belonging to a National organization. George H. Leghorn, New England distributor of the Gardner, also from Boston, spoke on the problems of the dealer in the big cities.

Bowling League in Louisville

LOUISVILLE, KY., Oct. 2 — A bowling league has been organized by the Louisville Automobile Dealers' Association. There are eight teams in the league made up from as many firms in the association. Trophies will be awarded at the end of the season to the winning team, and several handsome prizes will be given for various individual records.

Following are the firms having teams entered, with the captain of each team: Hannah-Miles Co., Sam Schang; Hite D. Bowman Co., Ernest McAllister; Price Wells Co., Theo. A. Henle; Roy E. Warner Co., H. M. Leslie; Leyman Motor Co., E. H. Menart; Triangle Motors Co., L. S. Buddington; O. K. Motors Co.; Packard Louisville Motor Co., L. G. Hannah.

The league was organized at a meeting held in the office of the association. L. J. Hannah of the Hannah-Miles Co., was elected president of the league and George T. Holmes, secretary of the association, was elected treasurer.

Syracuse Considers Show

SYRACUSE, Sept. 30 — Members of the Syracuse Automobile Dealers Association will hold either a closed car week or a fall automobile show. Secretary H. H. Smith recently sent a questionnaire to the membership on a number of questions but opinion was so divided that no plans will be made until later.

The questionnaire revealed that most of the local dealers are in favor of operators' licenses for all cars. Those favoring this proposal urged that the operators carry insurance and that proper examinations should be held to determine the fitness of car owners to drive. The dealers are opposed to a double license number for cars. They favor the warning card system in operation in New York City for the punishment of minor traffic violations.

George H. Norris and C. W. Bull were elected delegates to the New York State Conference of Automobile Dealers at Geneva.

Meeting of Midwest Regrinders

OMAHA, Oct. 2—At its second meeting here, the Midwest Regrinders' Association outlined a basis for permanent, constructive work on behalf of the regrinders of this section. Regrinders from Nebraska, Iowa and Illinois were present and others from Minnesota, Missouri, Kansas and Colorado have signified their intention of joining.

Different departments were formed as follows: Membership, J. G. Pence, chairman; selling, A. H. Kurtz; production, Carl Youngstrom; accounting, J. J. Fuchs and adjustments, M. Fleetwood, the last from Fort Dodge, Iowa.

The officers of the association are: President, J. J. Fuchs of Fuchs-Elrod Machine Co., Omaha; vice-president, Carl Youngstrom of Carl Youngstrom, Des Moines; J. G. Pence of W. H. Pence Machine Co., Fairfield, Iowa; treasurer, A. H. Kurtz of Sunderland Machine and Supply Co., Omaha and director, F. A. Jahn of Jahn Grinding Works, Davenport.

California to Meet Oct. 16

OAKLAND, CAL., Sept. 29—The annual convention of the California Automobile Trade Association will be held Oct. 16 and Oct. 17 at Santa Barbara. In addition to a fixed program it is expected that there will be important discussions of proposed legislation derogatory to the automobile industry. One of the proposed bills to come before the next legislature would exempt one truck and one car in every family from execution. This would mean that a dealer and maintenance shop could not attach or hold a car for a repair bill.

Detroit Service Heads Organize

DETROIT, Sept. 29—Service managers of Detroit retail establishments have formed a group affiliated with the Detroit Automobile Dealers Association, for the purpose of studying general problems arising in servicing of cars and will have monthly meetings at which these will be talked upon by factory engineers. The first of these discussions will be upon lubrication and carburetion in cold weather, set for Oct. 10.

Officers of the group are George W. Stroh, president; E. W. Baker, vice-president, and N. C. Rodgers, J. H. Ellis and J. F. Collier, directors. Headquarters of the service men will be in the D. A. D. A. quarters, with H. H. Shuart, secretary of the dealers association, acting in this capacity for the service men.

Secretaries Meet

OAKLAND CAL., Sept. 28—Secretaries and managers of the local automobile trade associations affiliated with the California Automobile Trade Association held a meeting early this month at the summer home of George Haberfelde in the Kern Mountains. Fifteen secretaries were present, among them being George Haberfelde, W. J. Haberfelde, Harry Leonard, Jim Granger, Arthur D'Ettel, Walter Biddick, L. H. Bennett, Otis Hymer, Dick Ingvolstad, A. F. Morris, Robert W. Martland and George Elliot.

Lynn Shaw, assistant manager of the National Automobile Dealers Association, explained the "One of a 1,000" membership program of the N. A. D. A.

Association of Associations

WASHINGTON, Sept. 27—Interest in a proposal for an Atlantic Coast Association of Automobile Trade Associations has been shown by dealers in the following cities: Boston, Brooklyn, New York, Newark, Philadelphia, Baltimore, Norfolk, Richmond, Greensboro, N. C., and Atlanta. A number of these dealers have offered to support the movement and, now that the vacation season is over, a meeting of delegates will soon be called to discuss possibilities of organization.

Oklahoma City Elects

OKLAHOMA CITY, Sept. 30—At the annual meeting of the Oklahoma City Motor Car Dealers Association the following officers were elected: President, E. L. Howard of the McDanial Auto Co.; vice-president, S. L. Lindsey; treasurer, Henry Lewis and secretary, Edgar T. Bell.

Pittsburgh Elects Hoeveler

PITTSBURGH, Sept. 28.—George A. Hoeveler, president of the Hoeveler-Stutz Co., Pittsburgh, Stutz and Cleveland distributor, has been elected president of the Pittsburgh Dealers Association.

HILL TAKES FRESNO RACE; MILTON NEXT

FRESNO SPEEDWAY, CAL., Oct. 2—Bennett Hill, driving a Miller motored special, took first place from Tommy Milton in the 150-mile race here Saturday afternoon, by a margin of less than 15 yards. Time for the winner was 1 hr. 27 min. 46 1/5 sec., an average of 102 m.p.h., the fastest time ever made on this wooden bowl.

Other drivers finished as follows: Kurtz, third; Wonderlich, fourth; Elliott, fifth; Hearne, sixth; Klein, seventh, Murphy, eighth. Melcher, the only other starter, went out at the 124th lap with engine trouble and did not finish.

About 30,000 saw the race. There were no accidents, though Milton hit Klein and turned the latter's car twice around, after Klein had blown a tire in the 149th lap.

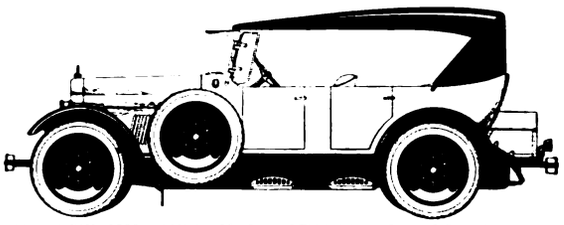
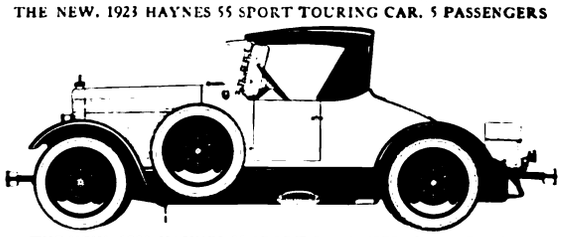
THE NEW, 1923 HAYNES 55 SPORT SEDAN, 5 PASSENGERS

ANNOUNCING THE 1923 HAYNES FOUR SPORT MODELS



THE vogue of the sport-model car is established. Haynes has been responding to it, and now meets it completely with four new models of this type of car for 1923. They are cars for those who love the thoroughbred—who want strength with beauty and power with comfort.

THERE ARE NO EXTRAS TO BUY. Each of these cars is fully equipped. The newest accessories are standard equipment. Front and rear bumpers, a spacious trunk, six disc wheels with six 32 x 4½ cord tires, sun and vision visor, polished protection bars at the rear of the body, handsome individual steps—everything that you naturally expect as an essential feature of a sport car. The open models are equipped with new design windshield wings and are trimmed in beautiful Spanish leather. All of the new 1923 Haynes 55 sport models have a 121-inch wheel base and are finished in a pleasing shade of deep maroon.



Graceful in design, they have the outstanding attractiveness of real individuality. Beneath their attractiveness is the famous Haynes-built six cylinder motor and the sturdy mechanical perfection which characterizes the Haynes. The demand will be great without a doubt. We suggest that you get in touch with us immediately regarding attractive territories. Write, wire or telephone. Communications will be held in confidence. Address Dept. 1052.

MOTOR WORLD
for
DEALERS, JOBBERS AND GARAGEMEN

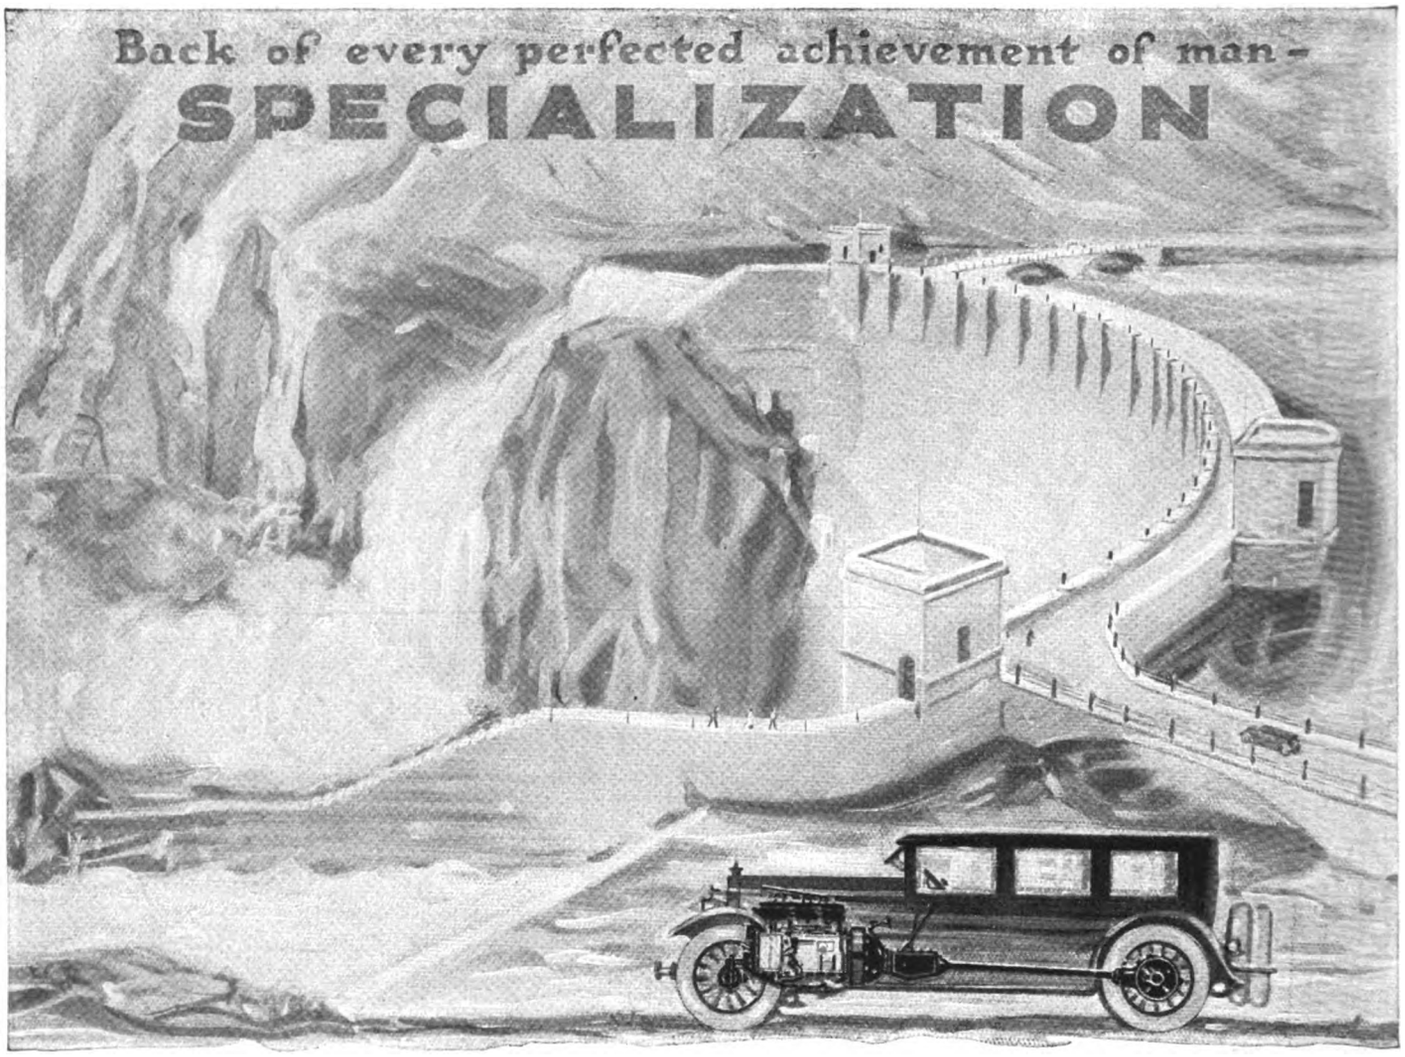
Volume LXXIII
Number 2

PUBLISHED WEEKLY AT 239 WEST 39th STREET
NEW YORK, OCTOBER 11, 1922

Thirty-five cents a copy
Three dollars a year

A dealer who sold one hundred and fifty cars of one make lost money.

But he happened to have the Jordan and sold forty of these. His profits on the Jordan saved his business.



I have a letter which covers about four pages which will tell you all the reasons for this.

If you are a dealer, and you expect to continue to be a dealer, you may be progressive enough to want a copy of this letter. Just send me a postal or a telegram and you will get the letter.

Edward C. Jordan

Entered as second-class matter Jan. 2, 1903, at the post office at New York, N. Y., under Act of March 3, 1879.

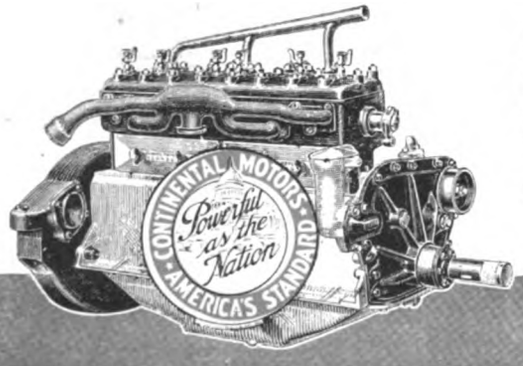
ROOSEVELT DAM—Greatest work of the United States Reclamation Service. Salt River, Ariz. Reservoir contains 61,000,000,000 cubic feet of water. Dam measures 284 feet high, 170 feet thick at base, and 1080 feet wide.

Progress toward perfection —the SPECIALIZED car



The exacting demands to be put upon the Roosevelt Dam necessitated its construction by co-ordinated efforts of many specialist organizations, each contributing an essential factor to the finished undertaking

Equally exacting demands, in their field, upon present day cars counsel that each performing unit shall be the product of an organization of specialists.

The SPECIALIZED car meets the demands made upon it through the perfection of its major units. Motor, transmission, universal joints, axles, clutch, etc., are all products of the leading SPECIALIZED unit manufacturers of the automotive industry.

Identify your organization with a SPECIALIZED vehicle. You will have back of your car the multiplied reputations of all the unit manufacturers, convenience of parts-distributing stations throughout the world and the public's great and growing demand for SPECIALIZED vehicles.

The first assurance of importance to make in considering the SPECIALIZED vehicle is that upon the crankcase of the motor is the leading symbol of SPECIALIZATION—the Continental Red Seal.

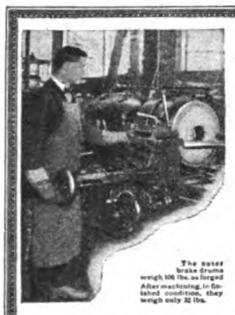
Leadership Under the Hood as Well as On the Road

The Goodrich Fan Belt is the Silvertown Cord of fan belts—*the leader*.

Are you pushing it? So remarkable are the dependability, durability and performance of the Goodrich Fan Belt that the orders from one dealer now call for hundreds where once you could count his quantity on your finger ends—*one sale makes many sales*. It's the final solution of the snapping, breaking, loosening, sagging, stretching and unsatisfactory fan belt.



The Goodrich Fan Belt is made *different*. In accurate sizes for all cars and trucks—10,000,000 potential customers.

The easiest and most profitable to sell—a big profit from a small investment. Write and let us give you full details.

THE ESSENTIAL FEATURE of *Rolls-Royce* brakes, is their large cooling area, which is about five times as great as that of the conventional type of brake; the almost indestructible lining, and the extreme rigidity and positiveness of the operating mechanism. Rolls-Royce brakes are built, from the rough forging, entirely in the Rolls-Royce works, Springfield, Mass.

The outer brake drums weigh 106 lbs. as forged. After machining, in finished condition, they weigh only 32 lbs.

ROLLS-ROYCE

brakes are heat-proof, water-proof, oil-proof; absolutely protected from road-dust; have exceptionally long life, and are always perfectly free when the lever and pedal are released.

They have a smoothness and positiveness of action not found in the average car, even of higher price. The use of the engine, as a brake, on long grades is entirely unnecessary on Rolls-Royce cars.

Great care is taken in the erecting of the brakes. Each lining is bedded, to the drum by hand, and must bed perfectly, all around, before it is passed, thus insuring smooth and positive action.

Rolls-Royce Brakes

WE REPRODUCE our advertisement of June 8th, in Motor Age, June 12th, in Motor World, describing the essential features of Rolls-Royce Brakes — five times the cooling area of the usual, conventional type; *the indestructible Ferodo lining*; the extreme rigidity and positiveness of the operating mechanism; a combination of braking design and construction making it unnecessary to use the engine on long, steep grades.

This was a statement of fact —below, *we give you the evidence in actual performance.*

ROLLS-ROYCE

No Rolls-Royce has ever worn out

On September fifteenth, Ralph B. Jackson, drove a Rolls-Royce standard touring car down Pike's Peak

with five passengers, a distance of seventeen and three-quarters miles, *down grades as steep as 10½ %, on the foot-brakes only,* without assistance from either handbrakes, compression from the engine or artificial braking or brake-cooling devices.

At the bottom, although the heat had burned the paint completely off the brake-drums, the brakes themselves and the Ferodo linings were in perfect condition. Without any adjustments Mr. Jackson drove, in the following two days, from Denver to Kansas City, 670 miles, demonstrating the constant, uninterrupted transportation service afforded by Rolls-Royce.

This is the only instance of such braking efficiency known to history. Affadavits covering this spectacular performance are on file in the Rolls-Royce Executive Offices.

Manufacturers and Dealers:

Let's Work to Improve Used Car Conditions

Fall and Winter Are Ahead of Us, With Plenty of Time to Think and Act—Let's Co-operate to Spread Education, the Only Cure for Used Car Losses

ONE of the country's well-informed men on used-car merchandising said, a few days ago, that no dealer can handle a used car and get away with a whole skin on less than a 20 per cent discount. He explained that the dealer's buying price on the used car must be 20 per cent less than his selling price, and if there is any reconditioning cost this must be taken from the buying price. In a word, the dealer needs the 20 per cent to cover selling cost and profit.

But that's all the margin the average retail dealer has on the new car, perhaps you are thinking. Which prompts the questions: Isn't it just as hard to sell a used car as a new one—often harder? And doesn't it cost just as much to pay the advertising charges, salesman's commission, insurance and so on?

It is quite generally agreed that a dealer with a 20 per cent discount doesn't usually make more than 3 to 4 per cent net profit on a new car. How, then, is he going to avoid a loss if his working margin is much less than 20 per cent on the used car?

And now that dealers' businesses are generally running about 50-50 on new and used cars, how are dealers going to stay in business, making profits for themselves and helping the manufacturers to make their profits, unless they look the facts in the face?

The question is giving a great many dealers and a great many dealers' financial advisers and a great many friends of the industry a great deal of concern. It is giving some factories a great deal of concern. It will have to be considered and answered by the industry as a whole—all manufacturers and all dealers—before the industry can go forward into the stable, substantial future to which the essentiality of the automobile entitles it.

To be perfectly frank, it must be said that only a minority of the dealers in the United States realize that *trading used cars at a loss MUST stop.* It is pretty hard for this minority of dealers to stop trading at a loss in the face of the competition of the majority of dealers who persist in doing it.

The industry has before it the task of educating the majority of dealers to realize that business can be done, that it must be done, without trading losses.

And this process of education cannot be carried on by dealers alone. Manufacturers must help.

Several manufacturers have undertaken during the past year or two creditable efforts to enlighten their dealers on the fundamentals of used-car merchandising. Two or three have issued campaigns of used-car advertising which their dealers have used to help move used cars. Two or three others have established clearing houses for used-car ideas, through their house organs or otherwise. One or two have issued books or folders that deal with the plain "whys" and "hows" of the subject. One or two have engaged used-car sales specialists to help their factory branches, and some of their larger distributor organizations dispose of used-car stocks.

Two manufacturers within the past week have written to Motor World asking where they could get "the best used-car man in the country" to act as used-car adviser to their dealers, prepare used-car advertising and generally assist in lightening this particular burden of their dealer organizations.

All this is encouraging. But it is only a start.

Until a majority of the manufacturers realize that their dealers' success, and so their success, in marketing new cars is inseparably tied up with their dealers' success in handling used cars we cannot expect any appreciable general improvement in the used-car situation.

If it is true that a dealer must have a 20 per cent margin profitably to deal in used cars—and it is difficult to argue against the statement—should not manufacturers be active in the know-the-facts squad spreading this information? If there are things to do and things not to do—and there are, definite things—to avoid losses and make profits on used cars, should not manufacturers be constantly on the alert to impress these things upon their dealers. If education regarding used-car values will help to cut down

Digitized by Google

used-car losses—and it is doing that very thing in a number of cities—should not manufacturers take part in the movement to establish used-car market values and tell the world about them?

Dealers, of course, must be the prime movers in such co-operative educational efforts. They must work out the local co-operation necessary to make them effective. But manufacturers can encourage such efforts.

Motor World has held consistently to the opinion that dealers cannot expect manufacturers to solve their used-car problems for them. No manufacturer's rule or suggestion will prevent a dealer from giving away his profits in long trades. But manufacturers can take an active part in the process of enlightening the entire industry concerning the elements of profit and the causes of loss in automotive merchandising.

If manufacturers will base their new-car allotments on the market possibilities of their dealers' territories, considering the used-car market along with the new; if manufacturers will eliminate trading discounts and other practices that help to create false used-car valuations; if dealers will put sufficient trust in each other to co-operate in exchange of information leading to establishment of definite used-car values; if dealers will study their businesses to learn the damage done by unwise trading—

If the industry—manufacturer and dealer—will recognize the used car as merchandise worth only as much as the public will pay for it and as a part and parcel of the new-car business, manufacturer and dealer will go through the winter and approach the spring in a spirit that will make 1923 the most pleasant and also the most profitable year in the history of the business.

Let's think it over this fall and winter. Let's co-operate!

A Frank Letter on Used Car Co-operation

By the Manager of a Strong Automobile Dealers' Association

EDITOR Motor World: When one digs to the bottom of the used car "problem," as everybody likes to call it, he finds that the manufacturers are equally responsible with the dealers; that it is necessary for the dealer to equip himself sufficiently to warrant the manufacturer's confidence and in turn expect confidence and consideration from the manufacturer and that any policy or any plan which we pursue must be fundamentally right and fair to public, dealer and manufacturer.

Trade allowances are an absolutely vicious practice, and as detrimental in the long run to the manufacturer as to the dealer.

Larger or smaller discounts, they are good, straight, competitive practice. If the manufacturer can put sufficient quality into his product to enable him to sell it through a dealer organization or a branch house organization with lesser sales resistance, and consequently lower margin of discount, he is not to be criticised. On the contrary, he is to be complimented, while the manufacturer who, to move his goods, finds it necessary to offer a longer discount will, I am afraid, find his volume will be limited and he can cater only to a certain class of people who always think they are buying something for nothing or pulling a sharp trade.

Perhaps an ideal condition would be a uniform discount, although I am not prepared to reach an opinion on that point at this time. Until automobiles themselves become more standardized and the dollar-for-dollar value is in each respective automobile I rather question the possibility of uniform discounts, and then again the question of manufacturing efficiency, volume, etc., enters into the problem. And, again, competition is the spice of business and I am not so sure but that is the cause of the present day condition among our dealers; the competition has not been sufficiently keen *along the right lines* to cause the dealer to study the problem and make himself more proficient as a merchandiser. To be sure we have had competition, but it has not been the kind of competition that builds men or organizations. Of course the dealer does not have to take an agency if he does not want to; of course he does not have to take more cars than he can sell, but, unfortunately again, a lot of our dealers are not awake to that fact.

So it is by education that it is all to be built from the ground up and it is a great big job. It is going to take a long time and the very earnest and best co-operation of the best and biggest manufacturers and dealers. As for the manufacturers, it seems to me that if the same amount of energy and effort on the part of the branch houses, distributors and district travelers were spent in teaching the average dealer to be a merchant, teaching him how to analyze his business, teaching him how to read an ordinary, every day, intelligently gotten up financial statement, as is spent in trying to get that particular dealer to borrow money from the bank, stock automobiles and maintain a certain schedule at the expense of his own organization, we would in the long run develop and build better and stronger dealers who would in turn buy more cars in the end from the manufacturer.

I think the dealer distributor discount as a whole is too small, but there is no gainsaying the fact that to some dealers it makes no difference how much discount you give them, they would insist upon giving a certain portion of it away. The cost of merchandising to-day is too great in proportion to the amount of discount received by the average retail dealer. We understand that it costs the average retail merchant, not automobile dealer, but average retail store merchant in this city, approximately 23 per cent to merchandise his goods.

If we can get more and more cities in sympathy with co-operative educational movements in regard to used cars our problem will be well in hand.

Find the "Boy" and Let Him Build Your Window Displays

This Is the Advice of a Kansas City Accessory Dealer Whose Windows and Store Are Always Interesting

THE Kansas City Automobile Supply Co., wholesale and retail, Kansas City, has been successful in a big way. Its big store looks interesting, with a great quantity of accessories arranged attractively. It doesn't look like a commercial institution; more like a playhouse for boys of the automotive industry. Everything is clean, and bright, and shown in such a way that a fellow can see what each item is, and what it is for.

This company secured its present location, on McGee Street, because it could get here a great big room and immense window space. It did a big business inthe former quarters, having less than half the frontage; and could have continued to build even larger volume there—but that would mean having stock stuck away in bins and boxes, on shelves in dark corners, and on various floors. The first floor of its former quarters was interesting, but things were packed in so closely that a fellow couldn't get at what he wanted to see to examine it. And there were always a lot of other fellows standing around, looking at things, who edged up too close for comfort. They always wanted to look at the thing you were looking at, too. About the time you had decided what the thing was for, and were having a dandy time thinking about it, another customer would butt in, maybe to look at something underneath what you were looking at.

BUT in this new store—O! Boy! It sure is keen. Room to wander around, any quantity of things to get close to, and a great lot of things that work, that a fellow can do things with and see the wheels go round.

And that window! Fifty feet. Panel back, built by a cabinet maker, with highly polished handwork. It is a continuous window, the entrance door being in the corner of the frontage.

Plenty of extensive window space in the automotive industry—75-ft. frontages with a cardboard picture and two tires, 100-ft. frontages with a couple of automobiles dimly visible behind, and so forth and so forth.

But these Kansas City Automobile Supply Co. windows don't make a person feel that he is going to church along a street where window shades are drawn. They are alive.

That word "alive" is good. There's always something moving in these windows, at least one space has in it a display with action. It may be some stock advertising device, like a seal balancing piston rings; or a clock-work mechanism, but something is always moving in one part of the window.

There's one piece of window display furniture that earns thousands of dollars a year because it never is idle. That's a little motor, hooked up to one of the devices in the window.

Where does the firm get the ideas for the mechanisms that provide "action" for the window displays?

HAVE you a "boy" in your accessory store?

Give him the job of decorating the windows.

(Insert here, some of the classic utterances you can call up by reflection, on the value of retaining the child outlook on life, the preciousness of the long, long thoughts of youth, the whole philosophy of "rejuvenation".)

This is not an essay, or a theory. It is a cold-blooded practical suggestion on window-decorating.

Find the "boy!" And when you find him, hold fast to him, encourage his boyishness, give him rope, give his fresh, ebullient nature a chance!

It makes no difference how many New Year's days this boy has seen. He may be 15 or 50. If he has the boy still in him, he's your one best bet as a window decorator.

From the "boys" of the organization.

George N. Lockridge, president-treasurer of the company, is one of these "boys." Talk with him a few minutes and you feel that you want to be out under a tree playing mumblety-peg with him. You are certain that he could make a dandy kite.

He's so interested.

The boy who has the window decorating job, however, is Jay Shumway. He has been decorating the firm's windows for eight years. He is floor sales manager.

He's a successful manager of floor sales, as well as a successful window decorator, because he is so much of a boy. Never having been a professional mechanic, he is, nevertheless, a good mechanic. He has made himself a motor car. He's intensely interested in motor mechanics and in accessories.

He's keenly curious about everything mechanical or automotive; he wants to know, he wants to see the thing work, he wants to make it work, himself.

Because he's so delighted with everything automotive, he exudes enthusiasm for these items. And he's eager to arouse enthusiasm in the other fellow. He wants somebody else to share his delights. His curiosity and interest have resulted in his intimate knowledge of automotive equipment, whereby he is able actually to serve the public and the dealers extremely well.

And it is the "boy" in Shumway that originates many of the ideas for window displays, the displays that cause people to stop and muse before

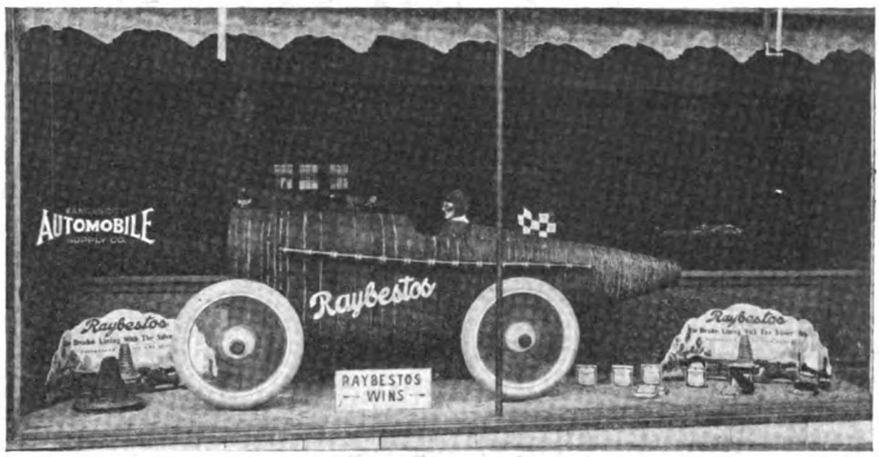
Digitized by Google

the windows. He makes for the window the sort of thing that any boy, from seven to a hundred wishes he had the materials to make, and the reason for spending his time on them. The sort of thing that causes most men and women to pause a moment, with a smile, whether the object is two sticks and a wheel, or an elaborate production.

The entire organization, by the way, is of "boys," even as to years of age. The president is 31; the oldest member is only 35, and many are under 21.

Take an August, 1922, window of this company, as an example. Shumway made a rude skeleton resembling a motor car body, out of boards and inch strips. He wound brake lining around this skeleton and produced the body of a racing car—stretching the imagination. Then he took two half-axles and set them up on iron standards in the window, placing the frame on them. He pinned a pulley into each half-axle and set up the little motor midway, running belts from the pulleys to the motor. He put motor car wheels on the ends of the axles toward the window; set up a cardboard bust of a driver suitably in the car and started the motor to turn the wheels.

The window was given other decorative features, concerning the brake lining used.



After a few days other items were added to the window, and to the car, since the background attracting attention could answer for display of almost anything. And the car itself could be adapted to display of other things than brake lining.

Shumway made this device working at nights, over a period of about three weeks. He got a lot of fun out of the materialization of his mechanical idea; and is increasing sales as a result of the adaptation of the idea to a business purpose.

The total cost of the car was $7.

Have you a boy in your establishment?

Give the boy in him a chance!

Using an Action Display in Accessory Window

This window is a particularly good example of what can de done with an item like brake lining in making an interesting, attention-attracting display. The brake lining was stretched on a form made from light wood strips. Half axles on iron standards held the wheels, which were driven by a small motor.

Some Selling Ideas for the Car Dealer

HERE'S a good stunt for graphically demonstrating how much better it is to drive a closed car in the winter than an open car. Drive around in five open cars on a cold day and take the temperature of these cars. Then drive around in five closed cars on the same day and take the temperature of these cars. Play up the average temperatures of the open and closed cars strongly in your advertising as a reason why folks ought to buy closed cars Such an ad might say: "Last Tuesday the average temperature driving in open model Sennetts was 42 deg. and in closed cars, the same day, it was 75 deg. Drive in comfort this winter in a closed Sennett."

SOME buyers have a mistaken idea that closed cars are suitable only for the use of physicians and people of similar occupations. So anything that can be done to demonstrate the universal utility of closed cars will help you sell more of them. It is, therefore, a splendid bit of advertising to run a list of the people who have bought closed cars of you and to give the occupations of these people opposite their names. With this list you will have some strong copy urging everyone who wants winter motoring comfort to buy a closed car.—Indiana Dealer.

CARDS in leather bound pouches faced with celluloid windows help salesmen of the Lawfer Automobile Co., Ford dealer in Allentown, Pa., to sell used cars. The cards are particularly useful in aiding the salesmen to give prompt and correct information to prospects, which is often of great importance in closing a used car sale.

The pouches containing the cards are hung on the steering wheel of the car. The information is put on the cards in code. For instance, if the selling price is $425, the numerals are reversed and letters placed before and after them (X524L). To the right of this selling price the former owner's name is spelled backward. This often helps the salesman to recollect certain points about the car which may help in selling. Note that the equipment and the cost of the equipment is listed.

On the reverse side of the card is listed the operations performed to put the car in running condition in the service station. The figures given are the retail cost of the operations, which helps prove to the prospect that the car is in good condition. The new parts and accessories are also listed.

TEN of the motor car dealers of Tampa co-operated recently in an unusual publicity "stunt" which was in the nature of a contest. A full page advertisement was published in the Sunday issue of the Tampa Tribune, each of the ten dealers having from eight to ten inches of advertising space thereon. At the top of the page appeared an announcement to the effect that ten new tires would be given free to the ten owners of the ten oldest automobiles in Tampa—that is, one tire free to each owner.

Owners of cars taking part in the contest were required to register with any of the ten dealers, bringing their car in for the dealer to see. At the end of the specified time all of the registrations were compiled, and the owners of the ten oldest cars received one tire each as above mentioned.

Needless to state, this contest attracted wide attention throughout Tampa, and considerable interest was manifested by automobile owners, many of whom registered their cars, and incidentally their names as prospects for new cars.

This Jobber Is the "Big Brother" of All His Dealers

And His Active Interest and Participation in Their Selling Plans Has Been the Foundation of His Own Success

ONE who talks for any appreciable length of time with E. A. Bowman of E. A. Bowman, Inc., Detroit accessory jobber, is very likely to find himself the recipient of a neatly typed saying of the late Theodore Roosevelt, to the effect that, *"Every man owes it to himself to devote at least part of his time to the upbuilding of the industry to which he belongs."* This statement so aptly expresses Bowman's sentiments that he keeps a supply of copies conveniently placed and hands them out to all.

Bowman preaches and practices co-operation in business. He was firmly convinced that the newspapers should give some space to accessories. He belonged to a club which embraced a number of newspaper men in its membership and he undertook to convince these men that accessories are just as important as are tires, batteries, or even cars themselves. He told them of the immense capital invested in the accessories business, of the large variety of goods produced and sold, of the number of manufacturers and dealers in the industry, and of other important facts.

FOR two years or more Bowman kept after the newspapers, and at last one of the papers yielded and made him a proposition. "We have no one to conduct such a department," they said, in effect, "but if you will undertake to furnish us eight or ten inches each week for a year we will give you the space."

Details were agreed upon and Bowman set to work on a series of talks on accessories under the heading of, "Round Table Talks," with the subheading, "Of Interest to Accessory Dealers," discussing such subjects as selling, displays, turnover, and specific articles such as brake lining, visors, piston rings, fuse blocks and mirrors. To make sure that all technical details be correct, and to save himself some labor at the same time, Bowman has made a practice of calling upon different manufacturers for help when discussing their products.

While the articles are addressed primarily to dealers, the general public reads them also, as is attested by the fact that the demand for an accessory usually takes a sudden jump immediately after that accessory has been featured in one of the discussions.

He presents new things, points out the advantages of others, tells his readers what type of accessory is best for certain purposes, tells them how to attach and to adjust others to the best advantage, and in general gives his readers a vast amount of genuinely helpful information.

While Bowman is of course increasing his own business by these published talks, **the important fact is that he is helping the dealers, the jobbers, and the industry as a whole.**

Bowman believes emphatically in the dealer carrying a wide variety of stock, a small quantity of each line, and making a quick turnover of his goods. He is a convincing talker and the subject of his discourse usually is this "gospel of merchandising," as he calls it. A few months ago two young mechanics came into his store and asked him to fit them out with a complete stock of accessories. They had rented a small store over on the west side of town, they said, and they wanted him to put in just such a stock as he thought they ought to have. Further conversation developed the fact that one of these young men had sat in a restaurant and overheard Bowman talking to a friend about his "Gospel of Merchandising" one day two or three

How One Jobber Helps His Whole Industry

The pet quotation of E. A. Bowman, Detroit jobber, is: "Every man owes it to himself to devote at least a part of his time to the upbuilding of the industry to which he belongs." He has made it his creed and one of the ways he is putting this creed into practice is in weekly "talks" in one of Detroit's leading papers. The above illustration shows how they are used by the newspaper

Digitized by Google

years before and had then and there determined that some day he would own an accessories business and that he would go to Bowman for advice when that time came.

These men were mechanics. They knew practically nothing about retailing and they admitted as much. They wanted Bowman to tell them what to stock, how to stock it, and how to sell it. He did just that. He selected their stock and sent a man out to help arrange the display. The place was thoroughly cleaned, suitable shelving was put up, stock was arranged, window dressed, and the men were given some instructions about merchandising. One of Bowman's salesmen happens to live near the place and he has made a practice of dropping in almost every evening after supper and talking things over with the men. They have now been in business several months and are making money. Had it not been for Bowman's talk, they both would no doubt still be working in a factory.

Bowman has given many accessory dealers their first lessons in retailing. His reputation for helpfulness and good sound business sense has spread, and men who have no experience whatever in the business trust him to get them started right. He gives unsparingly of his time and knowledge of the business and the men who have followed his directions have, without exception, been highly successful from the very beginning.

One day there came to Bowman a man, with a retiring manner, who informed him that he was a violin player in an orchestra, that he had saved about $300, and that he thought he might be able to invest this sum in a small accessory business in Battle Creek and make a little money during his vacation. He knew nothing whatever about merchandising and nothing about accessories. Bowman says his conscience troubled him a little over accepting the man's $300, because he felt that he would not be successful as a merchant, but the musician was sure he wanted to try it, and so Bowman selected a small stock and shipped it out to him. Three hundred dollars will not buy a very large stock of accessories, but Bowman gave him as wide a variety as possible and told him to wire or telephone for other supplies as fast as he sold out his small stocks. This the dealer did, beginning with the very first day.

This dealer, in addition to owning a large store in Battle Creek, now owns accessory stores in Muskegon, Kalamazoo, Grand Rapids, Bay City, Flint, Jackson, and Marshall; all being towns or cities in Michigan.

In Port Huron, Michigan, there is another successful dealer who knew nothing whatever about the business before going to Bowman. He had some money and believed that he could do something in the accessory business in Port Huron, but, he told Bowman, he knew nothing whatever about the business, not even what kind of shelving to put up. Bowman told him to go ahead and rent his store and hire a carpenter, then to telephone him what morning the carpenter would be ready to start to work. This he did and Bowman had a man at the store on the appointed morning before breakfast. This man took full charge, directing the carpenter, putting in the stock, dressing the window, and, in fact, presented the store to the dealer ready for business.

Other examples might be given, but they are practically all the same. Almost without exception Bowman selects the stock, puts it in, arranges the display, gives the new dealer a lot of advice about buying and selling, and then keeps in close touch with him personally or through one of his salesmen, until the man makes good.

Quick turnover is the ultimate goal of all Bowman's teaching. He insists that his dealers buy in small quantities, buy a large variety of goods, and select such goods as will sell. He, himself, keeps well posted at all times and he knows just what will sell and what will not sell.

Recently he offered to take back every dollar's worth of his goods that a large department store in the city had on hand at time of inventory, and the buyer had to admit that, although he had thousands of dollars worth of accessories on hand, many of them "dead" stock, he

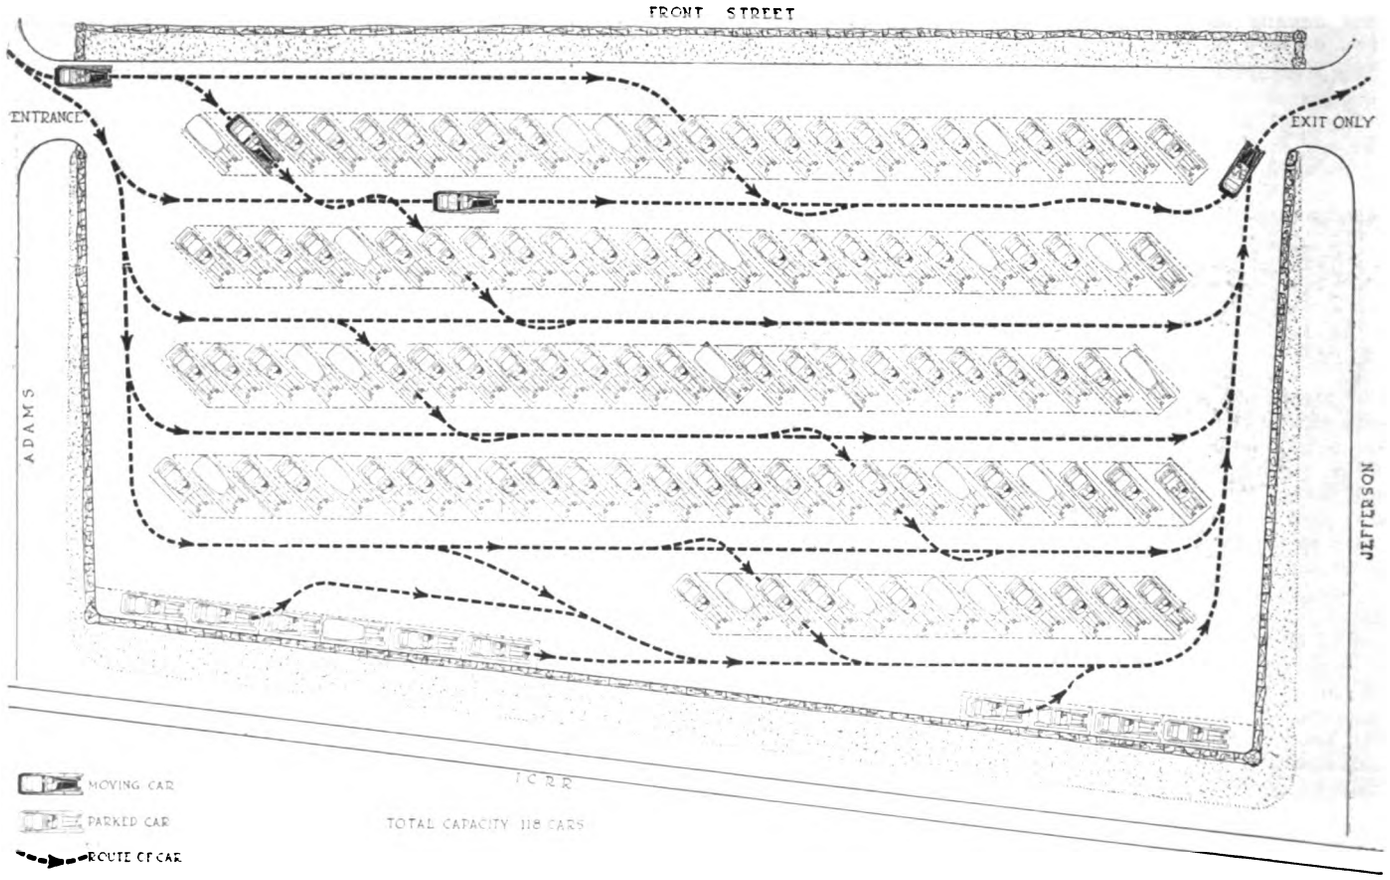
Interior Views of Bowman's Jobber Salesroom

E. A. Bowman, Detroit jobber, has many definite ideas concerning merchandising. Some of them in connection with helping dealers to be better merchants are contained in the accompanying article. The pictures herewith show interior views of Bowman's salesroom. He has definite ideas on this subject too, as may be inferred from his use of display tables instead of cases

Digitized by Google

had nothing to turn back to Bowman. On another occasion he made the same offer to a dealer who was not doing well and who was overstocked. The dealer jumped at what he thought was an opportunity to get rid of a lot of stock, but he could find only $16.75 worth of Bowman's goods in the house and this included a heater, which was unseasonable at the time.

He insists that his dealers who look to him for guidance keep in close touch with him at all times and *discuss their purchases with him before making them.* In order that he may at all times be prepared to advise them intelligently, he subscribes for a daily market service whereby he is kept informed of conditions in all lines that affect the accessories trade. The great failing of many merchants in every line, says Bowman, is their *desire to buy in too large quantities.* Even some of those whom he has trained get too prosperous and want to be big dealers and to show that they are such by buying in big lots. When they do so, Bowman warns them of the danger of overstocking.



"Tell the dealers to keep in touch with their source of supply," he urged. "They need the goodwill of their jobbers and manufacturers just as much as of their customers. The jobber or manufacturer is in a position to give them help in many ways, and if they are not getting that help it is largely their own fault."

He urges his dealers to study their trade and to study their goods; to know what goods they can sell and to know the goods that they do sell. In order that they may know their goods, he provides two large racks of manufacturers' literature in which at least 300 products are described in detail. This literature is classified and conveniently arranged and all dealers are urged to avail themselves of it by helping themselves to whatever they need. To make sure that they get at least some of it, however, Bowman always includes an envelope full of the pamphlets and papers with each shipment of goods.

For the benefit of those who desire to use cuts in their advertising, he stocks several hundred manufacturers' electros which he lends to any dealer free of charge. These cuts occupy a special cabinet of 54 drawers and are kept in classified order so as to be available at any time. New cuts are secured from the manufacturers as often as desirable or necessary.

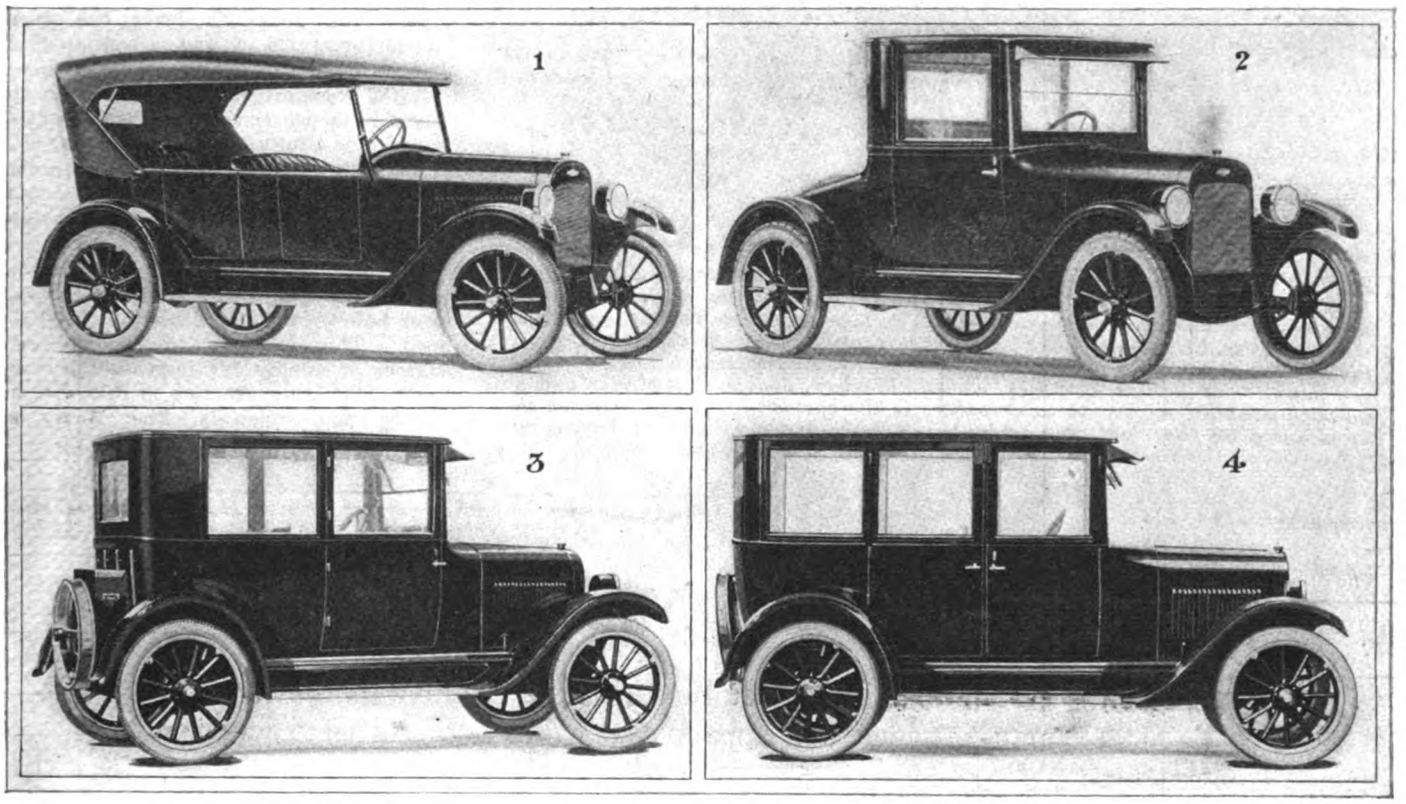
While leading so many others to success, Bowman has, of course, been making a success of his own business. He at present occupies an entire building, containing 21,000 square feet, equipped with many modern conveniences. The corporation of which he is the active head has been paying 8 per cent dividends and the business is growing rapidly.

No Backing or Squeezing in Memphis Free Parking Grounds

THERE may be a suggestion for your city in the free parking plan being developed in Memphis, Tenn. As seen in the illustration, cars will drive into the park, into their parking places and out again without backing and with none but easy turns.

Free parking space for 118 automobiles will be provided through the improvement of a large strip of ground between Front Street and the Illinois Central tracks running from Adams to Jefferson Avenues in Memphis.

Beginning of this work marks the first step in a general plan to make use of idle ground for parking purposes. It is estimated that Memphis needs space for 6000 automobiles, and the number is increasingly rapidly. The plan is to have the city provide as much space as possible for parking purposes.



The improvement of this space will cost the city practically nothing and will afford considerable relief from present congested traffic conditions. The plot is being filled with dirt taken from excavations for new buildings and the grading and pavement will be handled by the city engineering department.

Shrubbery is to be planted around the plot, lights erected and other improvements will give it the appearance of a park.

Many Changes in New Chevrolet Superior

Body and Chassis Redesigned—FB Model to Be Discontinued—Prices Unchanged

Four of the new Chevrolet Superior models. 1—*Phaeton*, $525. 2—*Utility coupe*, $680. 3—*Sedanette*, $850. 4—*Sedan*, $860. *The roadster (not shown) is* $510

A NEW model Chevrolet Superior made its first appearance on October 8th, and coincident with this came the announcement that the Model FB would be discontinued. While the car in general is much the same as before there are a great many refinements in design of both the body and chassis. The prices remain unchanged. The most noticeable changes are in the design of the bodies, hood and fenders. The radiator has been made very much higher and of greater capacity. It is now 4⅝ in. higher than before, but is narrowed 1¾ in. The shell has been changed so that the top corners are more square. The hood is higher and the curve has been taken out of the cowl giving practically a straight line from the radiator to the windshield. The fenders are of the crowned paneled type and the shape has been changed to conform to the new body lines.

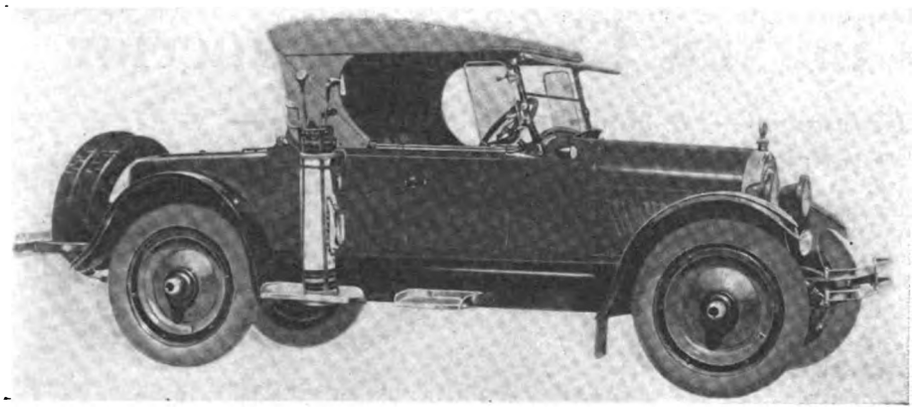
Heavier Sheet Metal Used

The metal in both fenders and body has been made of heavier gage and the entire redesign has been carried out with the idea of elminating vibration and rattle that might result from weak parts. The new headlights are of the drum type and are now fastened directly to the fenders. The windshield has been given a greater angle. The lower glass of the windshield on the open models pivots at a point more nearly the center of the glass than in the previous models which pivoted near the top. All closed models are equipped with sun visors of black metal.

The instrument board is now finished in enamel instead of the dull finish that was previously used. The wood backing to the instrument board has been eliminated. The rear appearance of the car is considerably different. The two small oval windows used in the open models have been changed to a single oblong plate glass window. The change from the gravity to vacuum fuel feed system has placed the gasoline tank at the rear on all models. Previously only the sedan was so arranged.

The upholstery is now made of Fabrikoid of a finer texture than before.

Features of the New Chevrolet Superior



- Higher and narrower radiator
- Higher hood
- Crowned and paneled fenders
- Drum type head lamps attached to fenders
- More slant to windshield
- Enameled instrument board
- Rectangular plate glass window in open car rear curtain
- Stronger frame
- Redesigned springs
- Worm and screw steering gear
- Emergency brake lever behind gear lever
- Vacuum fuel feed on all models
- Heavier flywheel
- Holley or Zenith carbureter
- Remy or Auto Lite ignition
- Curtains open with doors

Changes in the Chassis

A number of important changes have been made throughout the chassis. The frame is made much stronger to prevent weaving. The channels are of heavier section and the cross braces are also heavier. Both front and rear springs have been entirely re-designed — the method of fastening to the chassis being by means of a pocket anchor. The angle of the springs has been changed to take road shocks more nearly in the center line of the spring. The number of leaves has been increased and the leaves themselves are larger. The springs are still quarter elliptic but are now single curved downward instead of double curved, necessitating more clearance between body and axle which has been provided for by raising the rear of the car.

The steering gear is now of the worm and screw type instead of spur gear type

The Oldsmobile Light 8 Sport Roadster, $1625

A sport roadster, mounted on the light eight chassis has been added to the 1923 Oldsmobile models. The price is $1625. The body is finished in green with nickel trimmings and vertical nickel rails on the rear deck. The equipment includes disk wheels, cowl lights, cowl ventilator, windshield wings, spotlight mounted under the left front headlamp, aluminum steps, stop and parking lamp, cigar lighter, bumpers, windshield visor, double tire carrier and a nickel windshield wiper. A new feature is the carrier for a golf bag which is mounted on the right step. Lights set in both doors light automatically when the door is opened. The top is of Burbank

used on the older models. The gearset has been changed slightly. The position of the emergency brake lever has been changed from the side to the back of the gear-shift-over, thus giving considerably more room for the passenger in the driver's seat. The latch on the emergency brake lever is now of the spring and handle type instead of the button type. The gearshift lever has been moved forward 6 in. and is bent so that driver's hand will not touch the dash.

A CG vacuum fuel feel is used on all Superior models except the sedan, which retains the Stewart vacuum system.

The only change that is made in the engine itself is the increase in weight of the flywheel to make a smoother running engine.

A Holley carbureter will be used on part of the line and Zenith, which was used before, will be fitted to the balance. This is done to provide two sources of supply for increased production. The same practice is followed in the ignition, which is either Remy or Auto-Lite.

The Winter Business Number—Next Week

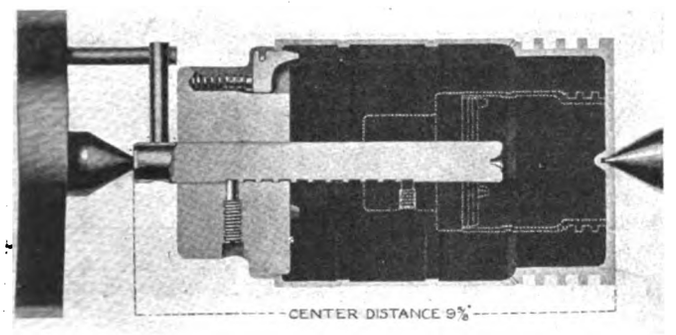
WORK of the editorial staff of Motor World on the annual Winter Business Number, which will appear next week, suggests some questions for readers:

Will there be some ideas that you can use in 16 pages of photographs showing how the automotive man's salesroom, store and shop can be made AN ACTIVE SELLING FORCE? This section will be in color, picturing exteriors, interiors and displays that have selling punch and showing readers how they can put them into their own places of business?

Will there be some ideas that you can use in seven pages of ideas that show how to keep a sales force profitably busy this winter?

Will there be some ideas that you can use in 12 pages of ideas showing how to sell automotive equipment this winter? And we might add that four pages of these ideas will be devoted exclusively to selling accessories for Christmas gifts.

Will there be some ideas that you can use in 10 pages showing how to make shop profits in winter?



Will there be some ideas that you can use in eight pages of advertisements and eight pages of sales letters written to help dealers and repairmen in all branches of the trade get business this winter?

These questions suggest some of the business-building features in the forthcoming Winter Business Number of Motor World. Don't they suggest that you will want to reserve time to study this number and apply the ideas presented to help you get winter business?

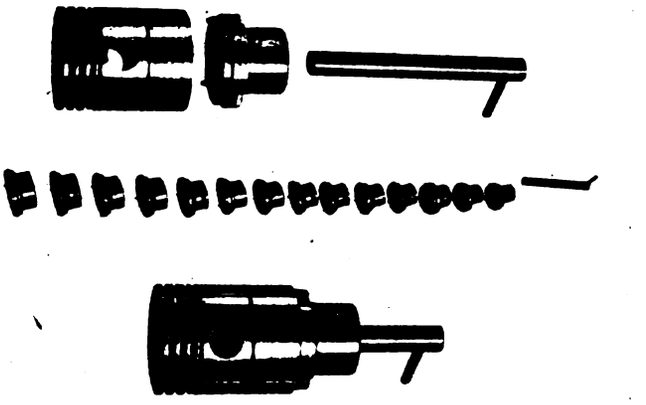
Spencer-Smith Piston Turning and Grinding Arbor

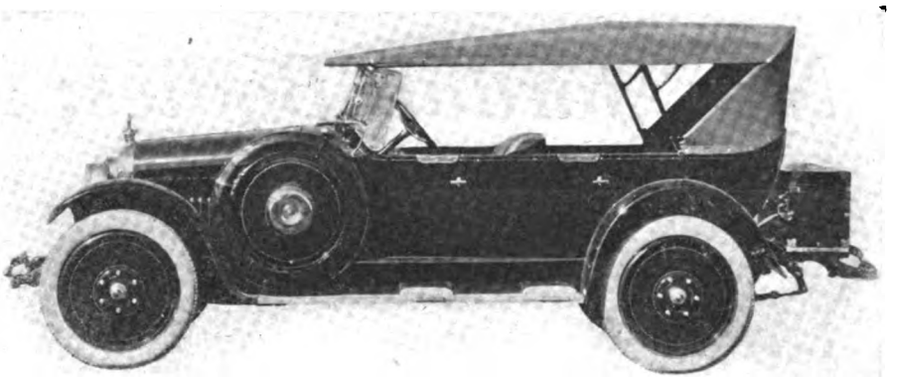
THE Spencer-Smith Machine Co., Howell, Mich., has developed a piston turning and grinding arbor designed to materially shorten the time required on the finishing of semi-finished pistons. The object of the machine, which is designed by J. E. Parker, factory manager of Spencer-Smith, is to shorten the time for finishing pistons by making it unnecessary to change the set-up on a lathe or grinder every time a piston of different diameter or length is to be finished. The principal factor in reducing the time to a minimum with this arbor is that the piston is held entirely on center and the arbor maintains the same center distance in the lathe or grinder for every size piston from 2 13/16 up to 5 in. in diameter. Because the arbor maintains the same center distances, a turning lathe or grinder once set-up is ready to rough turn or finish a piston of any length and



The driving arbor and the 14 adapter heads of which the Spencer-Smith universal turning and grinding arbor is comprised, and which makes possible the finishing of pistons from 2⅛ to 5 in. diameter

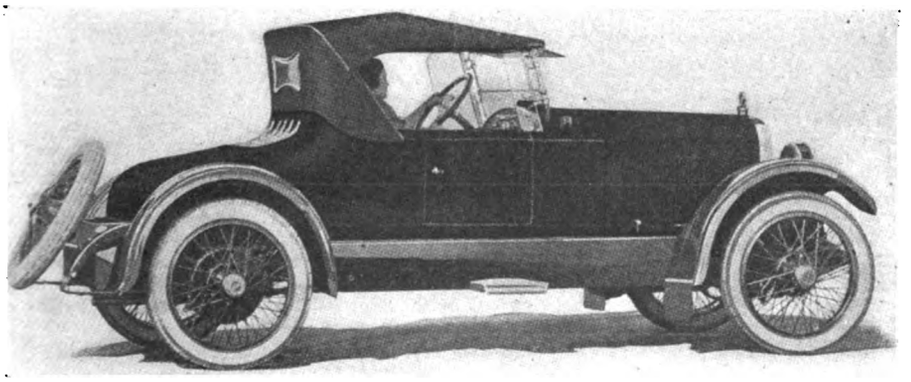
this operation will entirely eliminate taper.

On tests made recently on these machines, a set of six pistons was finished in less than 30 min. It is estimated that the usual time required to rough turn and grind a set of six pistons, including the change of set-up for a piston of different length and diameter averages about 1½ hr.



Included in the claims for this new arbor are those of accuracy. This is based on the holding of the piston on dead center. It is claimed that with this method there is an absence of chatter and that the finished piston will be nearer round than when held in any eccentric manner. Furthermore, it is claimed that strains resulting when the piston is held and driven from the bosses are eliminated, a feature which is particularly noticeable in light-weight pistons which become distorted around the bosses. Strains in the piston naturally develop high and low spots which are detrimental to the fitting of pistons in the cylinders. By eliminating outward pressure, which tends to throw the piston out of round, a result which often occurs when the piston is finished with a cone arbor and is mounted forcibly over this arbor, a gain in accuracy as far as roundness is obtained.

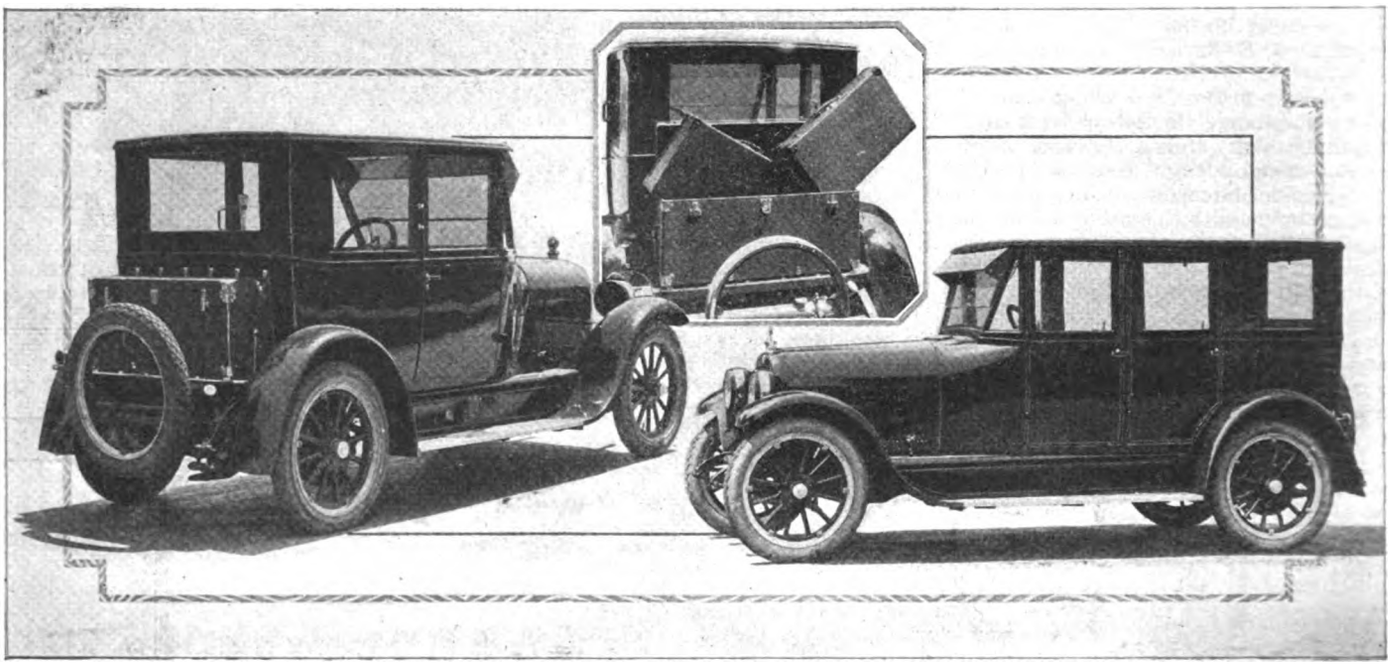
The Spencer-Smith universal turning and grinding arbor is furnished to finish pistons of fourteen different open end sizes ranging from 2⅝ in. to 4½ in.



The top view is the driving arbor, adapter head and piston, previous to assembly. The lower illustration shows the driving arbor, adapter head and piston assembly, ready to be placed in the lathe or grinder

A New Nash Six Sport Phaeton, $1645

The newest body to be added to the Nash Six line is a sport phaeton at $1,645. The finish is deep maroon on the body, ecru top and nickeled trimmings. The headlamps are of the barrel type and nickeled bumpers are furnished front and rear. The upholstery is in Spanish leather. The standard equipment includes a trunk mounted at the rear, nickeled bars on the rear of the body, six disk wheeels with cord tires, windshield wings, Moto-Meter, one-piece windshield, etc.



Chandler Adds a Special Roadster, $1595

The latest addition to the Chandler line is a special roadster with khaki top and what has come to be known as "sport equipment." The body is finished in maroon and five wire wheeels are regularly fitted. The top is unusual not only in material but in design and is framed by polished nickel beading around the front and rear top bows. Polished aluminum bars on the rear deck protect the body when the top is lowered. Spacious luggage capacity is provided under the rear deck and an additional compartment back of the seat holds a standard suit case. Other features are windshield wings, aluminum steps and underslung rear springs

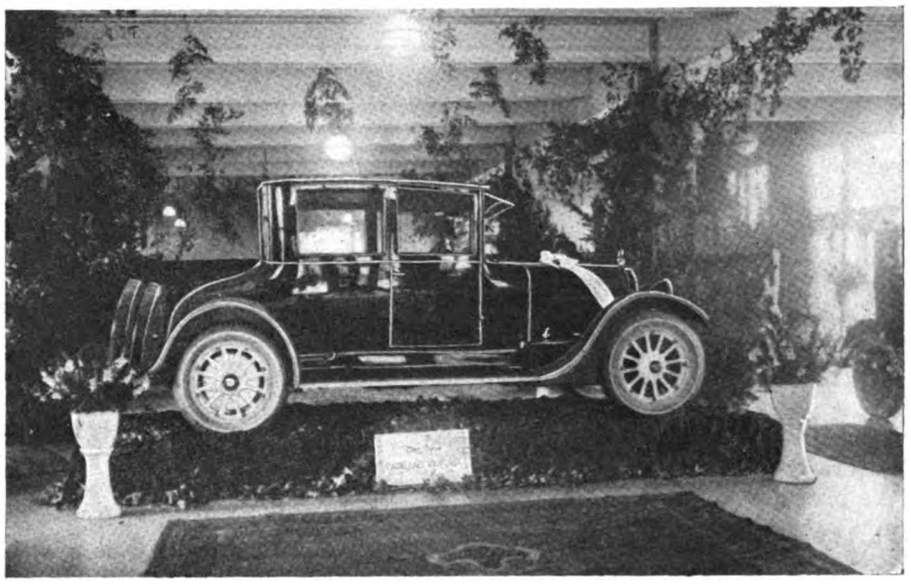
New Jordan Bodies; New Lancia

The new Jordan brougham, $2,485, at the left. The new Jordan sedan, $2,485, at the right. Standard trunk equipment on the new Jordan brougham, in the center

New Italian Lancia Has Unique Design Features

A new Lancia four-cylinder car has just been placed on the European market and will later be made in the United States under license. There are several novelties in construction, one being the elimination of the chassis frame. The body frame is worked out to serve as a carrying unit for the chassis components. The front axle is a triangular tube arrangement supporting the front of the car on a combination of coil springs and hydraulic shock absorbers. The engine, 2.9 x 4.7 in., has the cylinders set at an angle of 10 deg. from the vertical or 20 deg. between cylinders, the cylinders being also staggered. The weight of the 4-pass. phaeton with 122 in. wheelbase is only 1650 lb.



Dividing a Show Advertising Appropriation

COMMITTEES of dealers managing shows sometimes have considerable difficulty deciding upon an advertising appropriation and upon its apportionment among different forms of advertising. There is an interesting suggestion in the plan adopted by the Rochester, N. Y., Automobile Dealers Association for this year's show. Rochester has a population of 300,000 and a good representation both of distributors and retail dealers. It was decided to appropriate $4,000 for show advertising, and the money was divided as follows:

City newspapers	$1,500
Country newspapers	320
Window posters and one-sheets	650
Big Street banner	215
Advertising service	350
Publicity service	350
Incidentals	100
Lantern slides	15

Interesting Things Automotive

Boston Cadillac Holds Closed Car Salon

With a real autumn aspect to the salesrooms the Cadillac Automobile Co., of Boston, staged its eleventh Annual Closed Car Salon last week. It now has become one of the features of Boston's Motor Row, and each year attracts many visitors. On a raised dais was the Cadillac Victoria. The carpeting of the dais was brown velvet of the same shade found in the woodland paths in the Fall

When Edsel Ford Goes Motoring

He is very likely to be seen behind the wheel of this four-passenger phaeton on a Hispano Suiza chassis. The body was especially built for Ford by Brunn & Co., Inc., Buffalo automomobile coach builder

Tractor Used for Sheep Shearing

Sheep-shearing is the latest achievement chalked up to the credit of the light tractor. The attachment shown here, with which the wool may be clipped from eight sheep at the same time, was a part of the Fordson industrial and tractor demonstration held in Buenos Aires, early in September. More than 500 Fordsons, were reported to have been sold during the six days of the demonstration, which was visited by 69,431 persons. Many industrial and agricultural operations were shown, most of which are familiar to American dealers

Editorial Notes

Stop Discrimination

THE support of every automotive tradesman in the United States should be given the movement inaugurated by the National Automobile Chamber of Commerce to replace the discriminatory legislation loaded upon automobiles, trucks, parts and accessories. Purchases of automotive products are still paying excise taxes which amount to 5 per cent on cars, 3 per cent on trucks and 5 per cent on parts and accessories. All this naturally adds to the purchase and maintenance cost of the products which the industry manufactures and sells and so creates an artificial sales resistance.

It is significant of the attitude of Congress toward war excise taxes that some of these already have been repealed and others reduced. In the case of the automotive industry, however, the imposts of 1918 still prevail.

Congress has enacted relief from special taxation on musical instruments, sporting goods, chewing gum, toilet waters and numerous other commodities which can hardly be said to have the essential, utility features of motor transportation.

The N. A. C. C. has addressed letters to members of the Senate and House of Representatives and more than 1000 nominees for seats in those two bodies. The letters urge the repeal of all discriminatory war excise taxes, in which the war time burden on automotive merchandise is included.

This effort of the N. A. C. C. which will be carried directly before Congressional committees, when the time comes, is bound to have an effect, but men in the trade throughout the country can contribute materially toward bringing about relief from these taxation burdens by helping to elect congressmen and senators inclined toward lifting these taxes and by impressing upon present senators and members of the house elected in November the injustice of this discriminatory taxation and the hope of the trade that it may be lifted.

Who is running for Congress in your district? How does he stand on automotive taxation? Can you talk with him or write to him, stating your views?

The automotive industry is not asking for special favors. It is just working for plain justice. You can help get it.

Automobile Thievery

A SPECIAL motor division of the Chicago police force has done creditable work in cutting almost in half the number of motor car thefts in the first nine months of this year as compared to the same period last year. On top of that, it announces that out of approximately 2800 cars reported stolen all but one have been recovered. The discovery and breaking up of a number of organized thieving rings was responsible for the improvement.

If Chicago can make a record such as this other cities can and in cities where the authorities do not show any inclination to deal vigorously with the automobile thieving problem, they should be brought into activity by the men in the automotive trade who suffer both directly and indirectly through the operations of thieves. There are a good many police forces whose executives have never given serious consideration to enforcing measures against automobile thievery. Agitation by dealers to bring about such consideration would be effective in a good many of these communities.

Defeating a Governor

CALIFORNIA has given interesting proof of the power of the automobile owning public in the recent defeat of Governor Stephens, whose administration proposed a heavy increase in the tax burden on automobiles. The motorists of the State, it is said, were the deciding factor in the election of Stephens' opponent, F. W. Richardson, who called attention to the taxes which would be imposed upon the motoring public with the continuance of the Stephens' administration and who promised to administer the highway and kindred affairs of the State at a much lesser cost to the owners of cars and trucks.

The California experience suggests that the motor car and truck owners of any community or commonwealth can prevent the imposing of unnecessary or unjust tax burdens if they will try, which suggests, too, that men in the automotive trade, whose futures are bound up in fair treatment of users of cars and trucks, can take a hand when it is necessary in helping to organize the motoring public to defend itself.

OCTOBER 27 will be Navy Day. On that day the people of the United States are going to honor past and present members of the United States Navy who have given so much in service and sacrifice to make our country one of the great powers of the world and an agent of justice and law in world affairs. Navy Day is an idea that should be patronized with public expression, in every community, of the nation's belief in the Navy as an agent not only of American security but as a promoter of peace throughout the world. Only recently a squadron of American destroyers left for the Turko-Grecian zone of trouble, not to fight but to serve as an influence for peace. The Navy is a right and proper American institution and Navy Day is an effective means of recognizing it.

Sell Radio This Winter, Says Jobber

Millen of Montreal Tells How Garagemen Can Develop a Substitute Source of Profits

EDITOR Motor World: Some of your readers may be interested in an article which I have prepared suggesting that garagemen can make winter profits by selling radio apparatus. This will give some idea of how we are tackling the problem in Canada.—H. Fraser Millar, John Millen & Son, Ltd., Montreal.

No one could say that Nature sets herself out to help the garage business in Canada. With the exception of the larger towns, when snow comes the garageman shuts up shop and settles down to wait with as much patience as possible for the melting of the snow next spring.

During my connection with the wholesale automobile supply business over the last ten years this problem of crowding twelve months' business into the summer season has been a stumbling block, a problem which has received the most intense study from wholesalers and jobbing houses.

The coal man can sell ice in the summertime, but for the garageman in the country, beyond an occasional overhaul, there is no custom to keep his shop busy or help pay the rent. Wholesale houses for years have been looking for a balancing line which they could offer their garage trade, a line for which there is a winter market, but which in the summer will give place to the garage business.

This balancing line has been found in radio.

Radio is essentially a winter business. The wonderful music comes in clearly in the winter time, and with a good receiving set the finest concerts of the continent are as available in small towns and villages as in the large cities.

The garageman is familiar with the electric wiring of an automobile. The electric wiring of a radio set is very similar. It is a fact that the training of a good car mechanic places him on familiar ground in wiring a radio set and testing the accuracy of the electrical connections or the condition of the storage battery.

To show that radio has already been recognized as the winter line for the garageman, one may point out that many houses wholesaling automobile supplies have put in a full line of radio supplies and complete radio sets. In addition to this it is found that many manufacturers of automobile ignition have added radio equipment and, needless to say, from their years of experience with the accuracy necessary with this class of goods, the radio supplies turned out by concerns long renowned for car ignition are near perfection and altogether superior in appearance and results.

If you can wire a car, you can wire a radio set. If you can make a profit on the sale of an automobile accessory, you can make a profit on the sale of radio supplies. Most important of all, they can both be purchased from the same jobbing house; you are not dealing with an unknown firm, you are just continuing your business relations with a house which is just as anxious that the garageman should make money and do a good business in the winter as he does in the summer.

The garageman who has not yet looked into the matter should obtain a wholesale radio catalogue. He should make a list of his car owner customers and just figure what proportion of the thirty million dollars that will be spent this winter in radio is going to be spent by his customers, and then see whether it will be worth while for him to collect on this.

Radio will do for the garageman in winter what ice does for the coal man in summer. It will make an all year round business.

Write to Motor World About It

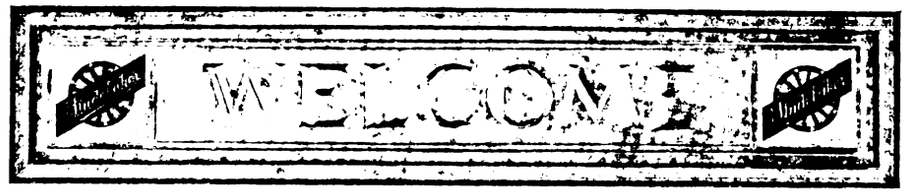
Dealers Need Co-operation on Gift Idea

Editor Motor World: We have read with interest your editorial in a recent number of Motor World suggesting that automobile and accessory dealers should make a special effort to sell accessories and car equipment suitable for Christmas gifts.



This is all very nice, but in the past the dealer has been severely handicapped by the manufacturers' lack of appreciation of certain fundamental things regarding the merchandising of their accessories during the holiday season.

We ourselves a year ago tried to pick out a number of articles that would be especially suitable for Christmas gifts and attempted to display and sell them. We were greatly handicapped, however, because we could not get proper containers for the various articles. We asked many jobber salesmen if they could supply us with appropriately decorated boxes, etc., and our only answer, in most cases, was a shrug of the shoulders and a curt dismissal of the subject.

Now, you know as well as any one that to make a Christmas display attractive and to really put over sales of necessary and timely articles of equipment, a properly designed and decorated package is necessary. In fact, a large number of articles are bought upon the appearance of the box alone; that is, providing the merchandise is at all suitable.

We believe that some few manufacturers this year have improved their containers wonderfully, and this will be a big help for the coming season. If, however, you will examine a list of really good accessory articles, and not consider some of the worthless trinkets that are on the market as accessories, you will see how few of the really good articles come packed in proper containers to enhance the display, and especially to make them appropriate as Christmas gifts.—Northland Motors Co., Menominee, Mich.

Studebaker Welcome Sign

Very often when a customer enters a salesroom the salesmen are engaged and are not always able to give immediate attention to each caller. The customer who enters a Studebaker store cannot fail to see the sign which bids him welcome and cannot help but feel that here's a concern that wants him to experience that feeling of hospitality which is too often lacking in present day merchandising. The Studebaker welcome promises to become just as famous as the Studebaker slogan, "This is a Studebaker year"

Would This Speed Up Gasoline Sales?

A Suggestion to Avoid Delays in Figuring Cost of Odd Quantities

TABLES similar to those printed below are useful around the gasoline pump for determining quickly the cost of odd quantities of gasoline. Such tables can be pasted on the inside of the gasoline pump cover. Many gasoline dispensers have pencil written tables but these are difficult to read and the tendency is to trust to memory, which is all right for 5 or 10 gallon lots, but the dealer is liable to lose money guessing at the "in between" amounts. Tables covering a range of prices, such as these, could also be preserved for future use when prices go through another change which they are liable to do.

Are You Going to Make a Hallowe'en Display?

Inexpensive Decorations Can Be Used in the Windows and Salesroom with Striking Effect

HALLOWE'EN, which comes on Oct. 30, offers an opportunity to make a striking window and salesroom display at a very little cost to the dealer. These opportunities are valuable not so much because they actually bring buyers into the salesroom as because they help to indelibly imprint the salesroom and the dealer's name on the mind of the public.

The decorative properties usually employed by merchants include: black and orange crepe paper streamers, cut out pumpkins, corn stalks, dummies dressed as scare-crows, witches, etc. A striking effect often can be obtained by covering the lights in the windows and salesroom with red or orange crepe paper, or dipping electric bulbs in water colors, which may be removed with careful treatment with damp cloths after the display.

A very striking display effect can be obtained by darkening the lights of the salesroom with colored paper and placing a closed car in the salesroom near the window where a few bright lights may be trained on it. The car may be decorated by tying a streamer of bright orange ribbon over the hood with a large bow. Strewing corn stalks on the floor around and under the car, with a few stalks standing behind the car will set off the display. A few cut-out pumpkins with electric bulbs inside, the eyes, nose and mouth lined with red crepe paper, placed in the darker parts of the salesroom, will make the background harmonious.

The thing to be remembered is that it is not necessary to go to any heavy expense to make a Hallowe'en display. But it is advisable to have one if possible.

Are You a "Nice Steerer"?

"GOOD Driving Is Mostly Nice Steering" is the title of an interesting pamphlet published recently by the Timken Roller Bearing Co., Canton, Ohio. The text, which is supplemented by numerous explanatory illustrations, takes up both the driving and maintenance of the car.

The first half dozen pages of the book deal with steering. Situations which commonly arise in city and country driving are described, and the correct steering of the car under these conditions explained. One page in this section pictures the various arm signals in common use and explains their significance.

The next ten pages discuss such subjects as starting the engine, braking, lubrication, gasoline feed and carbureter, cooling system, steering gear, battery, spark plugs, lights, tire chains, tire pressure, insurance and bearings. The last page describes a "Nice Steerer."

These pamphlets are available for free distribution.

Ideas On Selling and Management

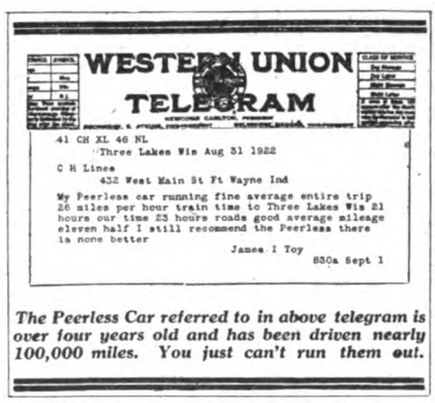
Car Dealer Truck Dealer
Equipment and Tire Dealer
Tractor Dealer Repairman



Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Distributor Has "Clinic"

"THE Overland Automobile Clinic" is the name of the new department which opened October 1 in the big Willys Overland building on Brookline Avenue, for the benefit of the New England dealers. "You know in medicine the only way you really find out about anatomy or ailments is to have clinics in the hospitals where the specialist and the leading doctors do the operating, or prescribe the treatment, while the juniors and the students stand around, watch and listen, getting the benefit of the knowledge of their superiors," says Manager A. S. Fitch. "Therefore, I determined to open a clinic.

"Letters have gone out to dealers and they pick out the time they can attend. A certain number will be chosen every week. We shall take down a car and illustrate to them all the short cuts, the methods of repairs, the faults of units—for even some units have faults—and in addition to our men detailing what they have learned through years of repairs, men from the electrical factories will discuss coils, timers, etc.; oil men will tell about fuel and so on until the dealer and his service manager will know a great deal more about the cars they are handling than ever before. The time has gone by when you order a carload of cars shipped to a dealer, and then forget him until another order is due him. You must reach out to aid him solve all his problems, and keeping his customers' cars in running order at low cost is the only way to meet the present day demand for transportation."

Telegram Used as Car Advertisement

WESTERN UNION

My Peerless car running fine average entire trip 26 miles per hour train time to Three Lakes Wis 21 hours our time 23 hours roads good average mileage eleven half I still recommend the Peerless there is none better
James I Toy
830a Sept 1

The Peerless Car referred to in above telegram is over four years old and has been driven nearly 100,000 miles. You just can't run them out.

Almost any dealer could arrange to have one of his enthusiastic owners send him a telegram like this while away on a tour. If such a telegram were reproduced in a newspaper ad, as it is done in this instance, it would carry a mighty effective selling appeal.

When the Open Car Prospect Really Needs a Sedan

HOW Cooper, a Detroit Wills-Sainte Claire salesman turned a touring car prospect, who really needed a sedan and could pay for it, into a sedan owner may help other salesmen in similar positions this fall. A demonstration had been arranged on a brisk, cool day. Cooper called for his prospect with a touring car, as previously arranged. Before leaving the salesroom, however, he had a sedan placed near the window where the sun warmed the interior. After a cold, disagreeable demonstration ride with his prospect, Cooper brought the prospect back on the pretext of showing him the sedan body lines, got him into it and rolled out for a short ride. Before attempting to close the deal, Cooper then opened all of the windows and the windshield, and when the prospect had time to appreciate the contrast, said: "Mr. ———, you now have an opportunity of deciding which car you prefer." The customer took the sedan and since then he has thanked Cooper for selling him it in preference to the open model.

L-3	Overhauling Tire Pump Out of Car—Types 53, 55, 57, 59.....	3.2
L-3a	Overhauling Tire Pump, Type 51, Out of Car	3.2
L-4	Tire Pump, Types 53, 55, 57, 59... Includes installing one new pipe from pump to dust shield.	.6

Group M—Universal Joint

M-1	Universal—	
	One	3.2
	Two	6.4
	Includes removing and installing new parts where needed, reassembling and installing, filling with grease.	
M-2	Overhauling Universal Joints, One Includes same as operation M-1.	3.2
M-3	Filling Universal Joints with Grease, Two	.6
M-4	Installing New Felt in Universal Joint Housing—	
	One	1.0
	Two	2.0
M-5	Tightening Bolts and Nuts on Flanges of Universal Joints	.6

Group N—Rear Axle

N-1	Removing and Installing Rear Axle Includes disassembling of brake rods and torsion arm, disconnecting drive from rear axle, installing rear axle and reassembling brake rods, torsion arm; connecting up drive shaft, greasing universal joints, adjusting brakes.	4.8
N-2	Examining Rear Axle Gears and Report ..... Includes removing of cover and peep hole plug, draining oil and thorough cleaning of differential; examining gears, reassembling and refilling with new oil. No charge if axle is overhauled or new gears installed.	3.2
N-2a	Overhauling Complete Rear Axle	22.0
N-3	Installing Rear Axle Housing .... Does not include disassembling of differential gears. Includes removing all parts in rear axle, cleaning and freeing up all working parts in connection with operation of brakes, reassembling axle under car, cleaning wheel bearings, repacking with grease and adjusting both sets of brakes, swedging axle shafts if needed.	22.8
N-3a	Relining Brakes in Connection with the Above—	
	Service	2.8
	Internal	3.2
N-4	Installing Rear Axle Housing and New Gears ..... Includes swedging of axle shafts; includes same as N-3.	24.0
N-5	Installing New Differential Carrier Includes installing new gears or any new parts needed and swedging axle shafts.	16.4
N-6	Changing Gear Ratio or Installing New Gears ..... Includes removing old gears, replacing with new gears, installing any new parts needed in connection with pinion gear housing and gear mounting, including adjusting of gears and installing cover plate with new gasket and swedging axle shafts.	16.0
N-6a	Cutting Grooves in Rear Axle Hubs for Shaft Retainer	4.4
N-7	Adjusting Rear Axle Gears..... Includes removing cover plate and peep hole plug, draining and thoroughly cleaning differential, adjusting gears, installing peep hole plug and refilling with grease. (No guarantee given of silencing of gears beyond a fair trial of adjustment.)	3.6
N-8	Swedging Axle Shafts—	
	One	2.0
	Two	4.0
N-9	Stopping Grease Leak in Rear Wheels ..... Includes draining grease out of differential, cleaning rear axle housing and installing new felts on axle shafts, cleaning all grease and oil from wheels, repacking wheel bearings with grease, filling differential with new oil.	6.4
N-10	Draining and Putting New Oil in Differential	.4
N-11	Adding Oil in Differential	.2
N-12	Installing New Truss Rod ..... Includes removing rear wheels, installing new truss rod, cleaning and repacking wheel bearings, installing wheels and adjusting same, lining up and adjusting both sets of brakes. Also includes mounting of new bearings if needed. (Does not include straightening of housing.)	4.4
N-12a	Straightening Rear Axle Housing, Axle Under Car ..... This is in connection with operation N-12.	6.8
N-13	Straightening Rear Axle Housing, (Timken) ..... Includes removing from car, completely disassembling axle and reassembling all parts in service housing, using old gears. Includes swedging of axle shafts. Does not include straightening of old axle housing.	
N-14	Installing New Truss Rod Only... Includes, when done in connection with the operation requiring removal of rear wheels and adjusting brakes.	1.6
N-15	Refitting Rear Axle Spring Saddles ..... Includes removing axle from car, refitting saddles and replacing axle under car.	8.4
N-15a	Refitting Axle Spring Saddle and Rebushing Rear End of Torque Arm	10.0

Synopsis of the Cadillac Flat Rate Schedule

In Last Week's Issue

Group A	Wheels
Group B	Front Axle
Group C	Frame
Group D	Springs
Group E	Steering Gear
Group F	Engine
Group G	Cooling System
Group H	Carburetor
Group I	Electric Equipment
Group J	Clutch
Group K	Gearset

In This Issue

Group L	Tire Pump
Group M	Universal Joint
Group N	Rear Axle
Group O	Torsion Arm
Group Q	Exhaust System
Group S.	Fenders, Runningboards, Floor Boards
Group T	Windshield
Group U	Oiling and Greasing
Group V	Speedometer
Group X	Accessories

Group O—Torsion Arm

O-1	Rebushing Torque Arm, Complete. Includes any new parts needed, and putting shaft in differential carrier if necessary.	7.2
O-2	Installing Torsion Arm Shaft and Bushing in Differential Carrier.. If done in connection with any operation where axle is out from under car.	2.4
O-3	Rebushing Rear End of Torque and Differential Carrier Axle Under Car	4.4
O-4	Rebushing Front End of Torsion Arm ..... Includes replacing of any parts needed.	2.2
O-5	Tightening Front and Rear Torque Arms	.8

Group P—Brakes

P-1	Adjusting Foot Pedal ..... Same must not strike floor boards.	.2
P-2	Installing New Felt Around Clutch and Brake Pedal on Floor Board.	1.2
P-3	Adjusting Service Brakes ..... Includes testing both wheels off floor, brake bands having equal clearance at all points, anchor studs being free.	2.4
P-4	Adjusting Internal Brakes	2.4
P-5	Freeing Up and Adjusting Brakes, Internal or Service ..... Includes freeing up all anchor bolts and pins, equalizer and shaft, truing up bands and adjusting brakes, removing, cleaning and adjusting rear wheel bearings, cleaning brake drums and housing, lubricating entire brake mechanism, reassembling and adjusting. Brake must be true on drums, rods and levers working properly, includes eliminating rattles in brake bands or rods.	5.2
P-5a	Freeing Up and Adjusting Service and Internal Brakes	6.8
P-6	Relining Brakes in Connection With Above—	
	Service	2.4
	Internal	2.4
P-7	Installing New Rod for Hand Lever of Internal Brake ..... Includes removing old and installing new, correct holding of pawl and ratchet.	1.0
P-8	Taking Rattle Out of Hand Brake Lever	.6
P-9	Relining Service Brakes Only	5.2
P-10	Relining Internal Brakes ..... Same as operation P-9.	6.4
P-11	Relining Service Brakes (Out of Car)	1.6
P-11a	Relining Internal Brakes (Out of Car)	1.6

Group Q—Exhaust System

Q-1	Stopping Leak Between Exhaust Manifold and Muffler Pipe, One Side ..... Includes removing old gasket, installing new gasket and installing new bolts and nuts if necessary.	.6
Q-2	Stopping Exhaust Leak in Exhaust Manifold Between Manifold and Block ..... Includes installing new gasket if necessary.	.8

Digitized by Google

		Hours
Q-3	Burning Carbon Out of Muffler, One	3.6
	Two	6.8
	Includes removing muffler from car, burning or cleaning dirt out of muffler and replacing on car.	

Group S—Fenders, Running Boards and Floor Boards

S-1	Removing and Installing One Front Fender	2.8
S-2	Removing and Installing One Rear Fender	2.8
S-3	Removing One Front or Rear Fender	1.4
S-4	Installing Corner Shield from Rear Fender to Body	.6
S-5	Installing One Runningboard Dust Shield	5.6
	Includes removing runningboard and front fender, removing splash shield, installing new shield on runningboard and fender.	
S-6	Installing Front End Splash Shield Between Fenders	1.4
S-7	Removing and Installing One Runningboard	2.4
	Two	4.4
	Includes new runningboard bracket if needed.	
S-8	Installing One Runningboard bracket	.6
S-9	Recovering One Floor Board	.8
	Each Additional	.8
S-10	Recovering One Runningboard	1.6
	Two	3.2
S-10a	Installing New Molding on Outer Edge of Runningboard	1.0
S-11	Installing New Molding Complete on Runningboard, Runningboard off Car, One	1.6

Group T—Operations on Hourly Basis

T-1	Removing and Installing Lower Windshield. Does not include outside charges.
T-2	Removing and Installing Upper Windshield. Does not include outside charges.
T-3	Installing Lower Half of Windshield.
T-3a	Installing Upper Half of Windshield.
T-4	Removing Old and Installing New Vision Shield.
T-5	Removing Complete Windshield.
T-5a	Installing Windshield Complete.
T-6	Tops. Rebuilding One Touring Car Top With Side Curtains, 57-59.
T-7	Rebuilding One Top Using Old Bows and Sockets. Includes plate glass in gypsy curtain.
T-8	Recovering Deck.
T-9	Recovering Side Quarter.
T-10	New Head Lining in Complete.
T-11	Furnishing and Installing New Gypsy Curtain with Plate Glass and One Set of Side Curtains.
T-12	Installing New Celluloid in One Curtain.
T-13	Repairing Side Curtains.
T-14	Tightening All Body Bolts (2.8) Includes new bolts if necessary.
T-15	Vacuum Cleaning Inside of Car and Polishing All Nickel Parts of Steering and Instrument Board (3.2)

Group U—Oiling and Greasing

U-1	Thorough Oiling and Greasing Including Wheels	4.4
	Includes changing oil in engine, turning down and refilling grease cups, refilling universal joints, checking gearset, and differential, bringing same to level, dope clutch ball race, and any other oil holes on car, oiling all parts where needed, oiling brake rods and clevis pins, springs. Also includes installing new grease cups where needed. (Does not include the freeing up of frozen bolts.)	
U-1a	Thorough Oil and Doping (Wire Wheels)	5.2
U-2	Thorough Oiling and Greasing Wheels	3.2
	Includes same as above.	
U-2a	Thorough Oiling and Doping (Less Dope Cups)	2.8
	Wire Wheels	3.6
U-3	Thorough Oiling and Greasing Alemite System Less Wheels.	2.8
U-4	Changing Oil in Engine	No Charge
U-5	Regulating Oil Pressure at Regulator	.6
U-6	Filling Universal Joints Only	.6
U-7	Turning Down and Refilling Grease Cups	1.6
U-8	Turning Down Grease Cups Only. Does not include refilling of cups.	.8
U-9	Checking Gearset and Differential for Oil, Bringing Same to Level If Necessary	.6
U-10	Installing One New Grease Cup (Drilling Out Old If Necessary)	.2
	Additional Cup	.2
U-11	Installing New Oil Gage on Dash	.4
U-12	Installing New Glass On Oil Gage On Engine	.4
U-13	Greasing Snubbers	1.0
	Each Additional	1.0
U-14	Doping Wheels (Wood) Includes examining bearings, replacing new if needed, replacing with grease and adjusting.	2.4
U-14a	Wire Wheels Same as above.	3.2

Group V—Speedometer

V-1	Repairing Speedometer Gears in spindle.	3.4
V-2	Installing New Speedometer Driveshaft in Spindle Includes removing broken parts.	2.4
V-3	Removing and Installing Speedometer Cable, Head or Both	.6
V-4	Repairing Speedometer Head, Outside Charge.	
V-5	Removing Tire Carrier	.4
V-6	Removing Old Tire Carrier and Installing New	1.1
V-7	Straightening Tire Carrier, Hourly Basis.	
V-8	Installing One New Clamping Screw in Tire Carrier—Models 51, 53, 55, 57	1.0
	Two	1.8
V-9	Straightening Tire Carrier and Installing New Ring If Necessary	4.8

Group X—Accessories

X-1	Ash Tray (With Match Box)	.4
X-2	Ash Tray (Without Match Box)	.4
X-3	Bumper (Type 61)	1.2
X-4	Installing Cigar Lighter	1.2
X-5	Installing Winter Front	.4
X-6	Installing Car Heater	3.2
X-7	Installing Special Cadillac Lamps. Includes headlights, tail light, spot light and side lights.	4.8
X-8	Installing Stop Light	1.2
X-9	Installing MotoMeter	.6
X-10	Installing MotorMeter Lock	.6
X-11	Installing Fender Mirror	1.0
X-12	Installing Rear View Mirror, Open Car	.6
X-13	Installing Rear View Mirror, Closed Car	.6
X-14	Installing Spring Oilers (New Car)	2.8
	Car In Service	4.0
X-15	Installing Runningboard Step Plate	.6
X-16	Installing Flower Vase (Large)	.6
X-17	Installing Automatic Windshield Wiper	1.0

Timely Appeal in Fall Window

GAUL, DERR & SHEARER CO., Philadelphia automotive equipment jobber, made a timely appeal in a display window the first week of September.

The window was filled with replacement parts, and the center of attraction was a letter, printed on framed cardboard, 3 ft. wide by 4½ ft. high. The letter read:

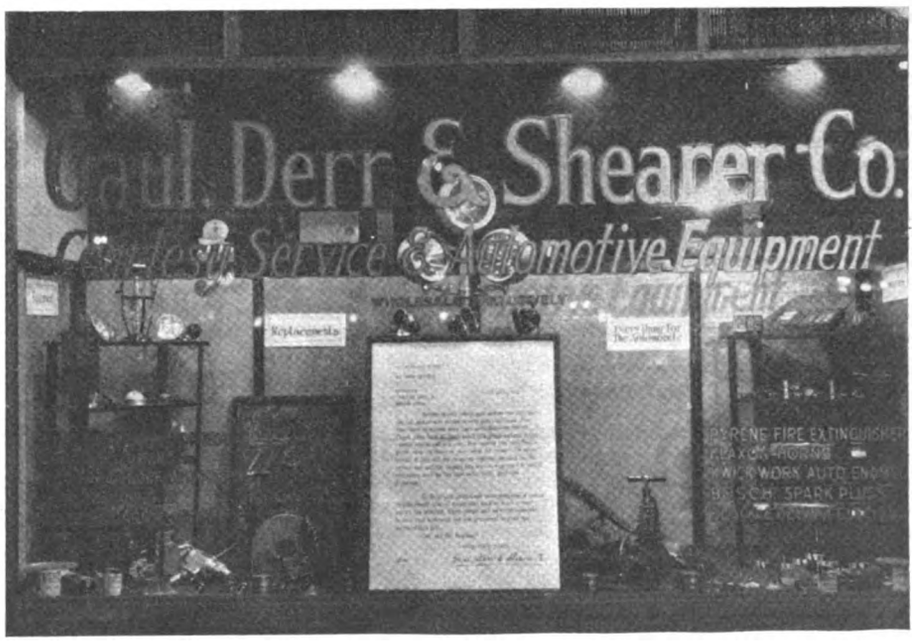
"An open letter

To

Dealers

Garagemen

Repairmen:



"Summer is very nearly gone and we now approach the fall and winter business with great optimism. This year there have been more cars sold than ever before. These cars have all been used to a great extent in the summer months, and in a very few weeks you will find a great many of these in your shop for repairs. The natural result of this will be an unprecedented demand on the repairman, and the repairman who is equipped to handle this work will be the man who will get the business.

"To help you do this we have prepared a special replacement line of equipment, such as will in most cases be needed. Step inside and ask our salesman to tell you how well we are prepared to give you service this fall.

"Get set for business!

"Yours very truly,

"Gaul, Derr & Shearer Co."

Letter in jobber's window makes timely suggestion concerning replacement parts

Changing the Oil in the Engine

Importance of Using a Lighter Bodied Oil as Colder Weather Comes —Advantages and Disadvantages of the Various Methods of Changing Oil

TOWARD the middle or latter part of October the northern part of the United States usually has a touch of weather cold enough to cause some trouble in engine starting and running due to thickened oil. In the southern States and some of the western States this drop in temperature does not come till a little later. It is well, however, to prepare slightly in advance and replace the engine oil with a lighter bodied lubricant.

It is not possible to make specific recommendations as to the proper body oil to use for two reasons. In the first place, the requirements of different engines are not the same. Engines operating at a higher temperature, especially those using a thermo-syphon system or thermostatically controlled system will require a slightly heavier bodied oil than those running at lower temperatures. The Ford engine is an exception to this rule, using a very light bodied oil. In the second place, there is no uniformity in the nomenclature of oils. What is "medium" for one oil refiner may be the same body as the "light" of another manufacturer. Or they may not use these designations at all but may use A, B, C, or some descriptive name. There are two recommendations that can be safely taken and those are the recommendations of the oil refiner and of the car manufacturer. As engines become older and pistons and bearings loosen up, a slightly heavier grade of oil can be used to insure quiet operation.

Methods of Replacing Oil

It was always customary, in years gone by, to wash the crankcase out when the oil was replaced. The washing was done with kerosene or gasoline and the purpose of washing was to remove particles of dirt, carbon and minute particles of metal worn from the bearings, pistons and cylinder walls. There was also a certain amount of grit that gradually loosened from the surface of the cast iron and aluminum in the crankcase and other parts and this had to be gotten rid of.

In the past three years, however, the quality of gasoline has gone down so that it is difficult for the carbureter to properly vaporize it all and a portion gets past the piston rings and into the oil sump, diluting the oil. This is especially apt to happen when the engine is cold and the choke is used. A rather remarkable feature about this is that some engines can go great distances without apparently consuming any oil as the level stays the same. Some other engines actually "make" oil or come in with the oil level higher than when they started. Of course the explanation of this is that the kerosene is continually diluting the oil and raising the level.

Troughs Catch Kerosene

With this continual dilution going on, it is therefore very important that no more kerosene be introduced into the lubricating system. If the ordinary procedure of draining out the old oil, putting in a few quarts of kerosene, draining again and then putting in the fresh oil is followed, there will remain in the system anywhere from a few tablespoonsful to over a quart of kerosene, depending on the design of the engine. Where the engine is constructed with troughs for the connecting rods to dip in, the troughs will catch quite a little kerosene and it is impossible to get this out by draining.

Another thing that has rendered such washing with kerosene less necessary is the fact that most engine manufacturers are coating the inside of the crankcase with a sort of collodian liquid which effectually seals all dirt and grit that may not have been removed.

If it is really necessary to wash out the crankcase, the two best methods are to use a light body new oil for washing, afterward draining this out, or to use oil which has been previously drained out and allowed to stand for some time so that the solid matter will have settled to the bottom. Either of these methods will remove any ordinary settlings or dirt. If there is a great amount of muck in the crankcase due to the fact that the oil has not been drained and replenished at regular intervals, of course it is more desirable to use kerosene for the washing. If the washing is followed by another washing with good clean oil or used oil, the dilution will be much reduced.

Oil and grease are affected by temperature. Too often we do not realize the great difference changes in temperature make in their consistency. A very good visual example is a piece of butter. On a hot day in summer a piece of butter will melt into practically a liquid. On a good cold day in winter the same piece of butter would be so hard that it could not readily be cut with a knife without breaking the butter. What happens to the piece of butter between 90 deg. and zero is exactly the same thing that happens to oil in the engine or grease in the rear axle or gearset.

A heavy oil used in the engine in winter will become a viscous liquid between the pistons and cylinder walls and there will be such a drag between these surfaces that it is with the greatest difficulty that the engine can be turned over. The same condition exists in the bearings, but the surface is so much smaller that it does not have so great an effect. The thicker oil is necessarily slower running and when it is cold and thick it does not get through the oil passages quickly. It is therefore possible in racing a cold engine to run all the oil off the bearings and actually cut them before the oil gets warmed up.

Although the heavier oil in the gearset and rear axle are subjected to the same variations in temperature as the engine, the change in viscosity is not quite so marked in the heavier lubricant and it is not usual to change the grade of the non-fluid oil in these places in the winter. If the grade of lubricant is too heavy, however, it is possible for the lubricant to get so hard that the gears will cut a path through the grease and after that they will not pick up enough to lubricate the teeth properly.

Changing Oil Regularly

A thinner oil will remedy this condition and insure lubrication of all parts, no matter how cold the temperature is.

The importance of changing oil at regular mileage intervals is even more important in the winter than in the summer on account of the greater condensation of fuel in the cold weather. Under the present fuels, it is not too often to change the oil every 500 miles in winter and every 750 miles in summer. Under no circumstances should engines be allowed to go 1000 or 2000 miles as suggested in some of the older car and truck instruction books. These figures were all right for the grade of gasoline in use then, but fuels have changed.

Better Mechanics

Article No. 260

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

State Lighting Laws Approaching Uniformity

Observance of S. A. E. Recommended Practice in Head Lamp Adjustment Brings Motorist Within Most Laws

IN studying the laws governing lighting requirements in the various States, it will be observed that although the laws vary in certain respects still the observance of a few set rules will make driving lawful and safe practically everywhere.

The proposed "Standard Head Lamp Law" which was approved by the Society of Automotive Engineers, the Society of Illuminating Engineers, the National Traffic Officers Association and The American Automobile Association, is now in effect in a number of States, and if a car is equipped in accordance with this law it may lawfully pass through any State at the present time.

From the tabulation it will be observed that an almost uniform requirement is that there be two front lamps of approximately equal candle power showing white lights, and a tail lamp showing a red light to the rear and illuminating a rear license plate with a white light.

These lights should be lighted one-half hour after sunset and not be extinguished until one-half hour before sunrise. The license numerals, front and rear, should be visible for 100 feet—the light should be visible for 500 feet—objects should be clearly visible ahead for 200 feet, and the candle power of the bulb should be limited to 21 c.p.

In certain States like California, Connecticut, Iowa, Maine, Maryland, Massachusetts, Nebraska, New Jersey, New York, Ohio, Oklahoma and Pennsylvania, there are published lists of so-called lawful lenses. Certain of these lenses are lawful only in particular States. However, a number of them are lawful in all the States.

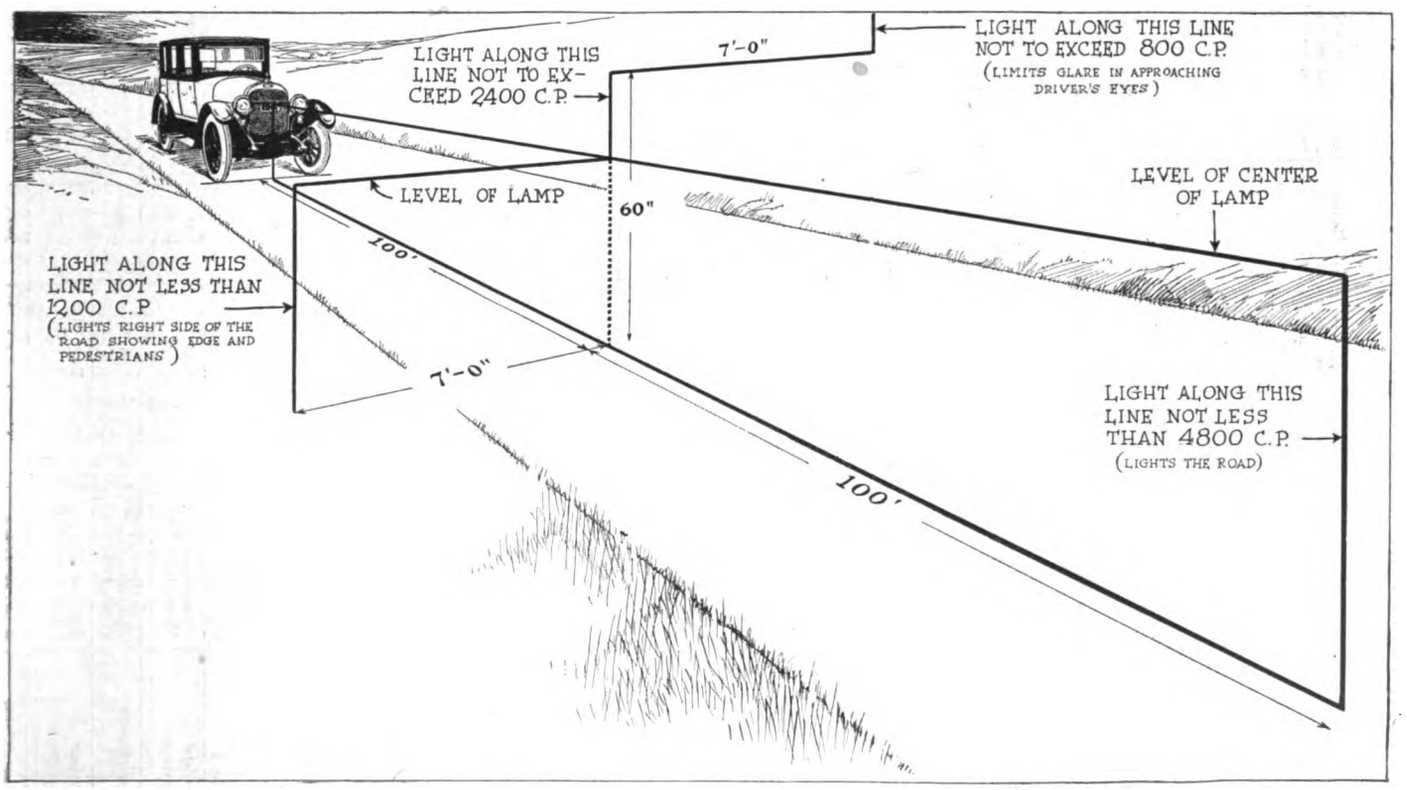
The drawing and summary of the S. A. E. Recommended Practice as to head lamp illumination, on this page, clearly explain this phase of the headlight regulation.

Head Lamp Illumination

S. A. E. Recommended Practice

Operating Requirements

THE head-lamps shall be arranged so that under normal conditions of vehicle loading:



1—The light produced on the level surface on which the vehicle stands at a distance of 200 ft. directly in front of the vehicle and at some point between the level surface and a point on a level with the centers of the lamps shall be not less than 4800 apparent candlepower.

2—The light produced at a distance of 100 ft. directly ahead of the head-lamps and at height of 60 in. or more above the level surface on which the vehicle stands shall not exceed 2400 apparent candlepower.

3—The light produced 100 ft. directly ahead of the head-lamps and 7 ft. or more to the left of its axis and at a height of 60 in. or more above the level surface on which the vehicle stands shall not exceed 800 apparent candlepower.

4—The light produced 100 ft. directly ahead of the head-lamps and at some point between the level surface on which the vehicle stands and a point on a level with the centers of the lamps and 7 ft. to the right of the axis of the vehicle shall not be less than 1200 apparent candlepower.

From the report of the Lighting Division, adopted by the Society March, 1918. Revised March, 1920, and August, 1920.

This illustration visualizes the S. A. E. Recommended Practice for headlamp adjustment, which has been made the basis of several state motor vehicle lighting laws

Equipment to Sell

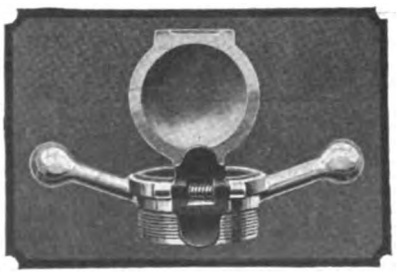
New Devices for the Car and Truck

New Columbia Battery in Steel Case

National Carbon Co.,
Long Island City, N. Y.

The No. 1461, four cellpower, 6-volt battery, which, up to the present time has been made with a fibre container is now being made with a steel container. The advantages claimed for the new type covering are the ability to withstand rough usage, waterproof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying. The fibre container type will be discontinued.

Koster's Dash Fixture



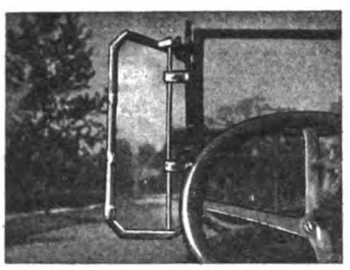
Koster, Inc., 1966 Broadway, New York City. Price, $5.

The device combines a searchlight, car light, trouble light, parking light and cigar lighter. It is finished in nickel and is installed on the dash. It has 11 ft. of cord on a self-winding spool which is out of sight behind the dash. Connection is made to the starting battery.

Snappy Radiator Cap for Fords

Bethlehem Spark Plug Co., Bethlehem, Pa.
Price $1.25.

A bar type radiator cap for Fords with hinged top. The threaded part screws into the radiator and is then left there as the filling is done through the hinged cap which springs open when the latch is touched and held closed when pushed down. Finished with glossy black top, nickel arms and body.

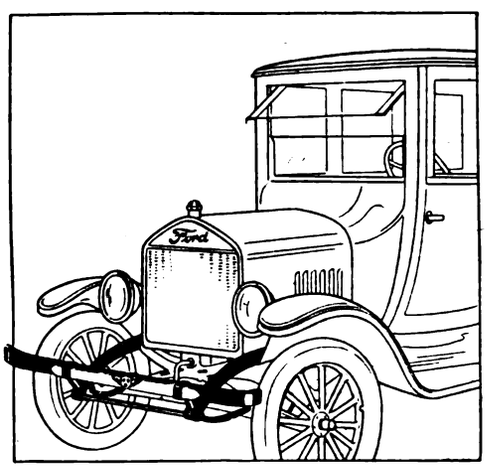


Green Link Fan Belt

Jewell Belting Co., Hartford, Conn.
Price $1 for most cars.

An endless leather belt made the correct length for all cars. The joint is made so that it becomes a part of the leather without stitches or fasteners. It is treated to make it waterproof and has considerable gripping power. Ford size 75 cents, a few longer sizes $1.50.

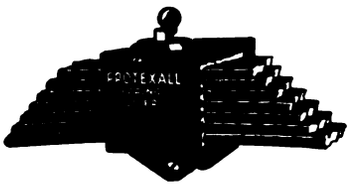
To-Nix Wind Deflector



Tooker-Nixon Co., Inc., Stamford, Conn.
Price $20 per pair.

The wind deflectors are of shatter-proof material. There is no glass used. They weigh 7 lb. The frame is of aluminum and the deflector of transparent pyralin, extra white or amber.

Artstrong Bumper for Fords



Artstrong Mfg. Co.,
616-618 Union Building, Newark, N. J.

The bumper is made on a new principle in which the bar swings back on pivoted arms when the car strikes an obstruction. The extensions to the Ford frame are unusually heavy. Attachment is made without any machine work and the design is such that if a pedestrian is struck, he falls backward into the space between the bar and the radiator but he cannot fall through.

Protexall Spring Oilers

Protexall Co., Abingdon, Ill.
Price $1.50 per pair; $2.50 for complete Ford set.

The oiler consists of a metal housing lined with a thick padding of felt which is kept saturated with oil from an oil cup and chamber on top of the housing. The cup is filled about once a week and the oil from the pad seeps between the spring leaves. The oilers are adjustable to any size springs. A special set is made for Fords. The oilers are made under the Grus patents.

Bulls Eye Spark Plug

Bulls Eye Spark Plug Co., Inc.,
200 Fifth Avenue,
New York City.
Price $1.25.

The electrode is made of one piece Monel metal. The shell and bushing are made of Bessemer steel. The closed part of the shell hanging free in the cylinder is heated sufficiently to vaporize oil and prevent it from entering the opening.

Mono-Step Aluminum Plate

Triangle Automotive Specialties Co.,
1931 Broadway, New York City.
Price $3.

A highly polished aluminum runningboard step plate, with shoe scraper to clean the mud from shoes. The raised rear guard protects the runningboard shield from damage. The plate is cast of 90 per cent aluminum and measures 12 in. x 8 in. The center diamond is separate and interchangeable and nameplates of various cars and monogramed initials are supplied. Packed in boxes, two set plates to the box, complete with nickel plated wood screws.

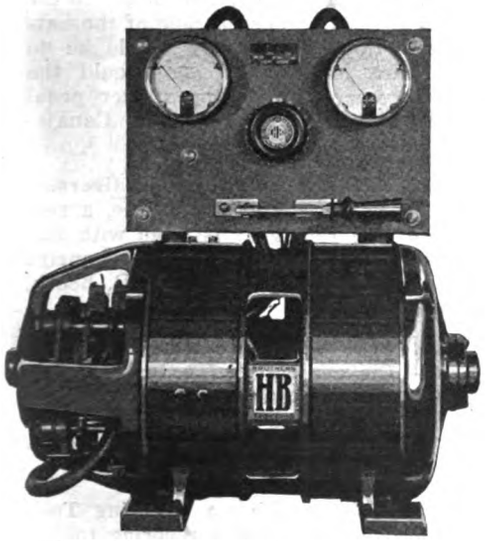
Equipment for the Shop

New Machinery and Tools

Nu-Angle Expansion Reamer

Vedoe-Peterson Co.,
Norfolk Downs, Mass.

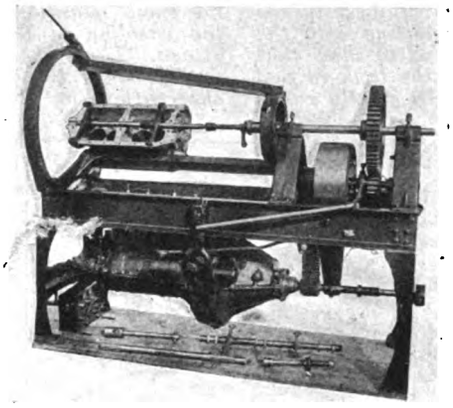
Price $4.50 to $10 each; set of 8, 15/32 to 1 1/16 in. $39.80; set of 11, 15/32 in. to 1 17/32 in. $64.80.



The expansion reamers are constructed with a set of blades having a varying angle from the points to the heel. The point which does the heavy work is set to shear its way in without hogging. The front rake is reduced at the center to produce a smooth cutting edge as the amount of stock removed is diminished. The heel is slightly undercut to produce a smooth round hole. The blades can be resharpened on an ordinary tool post grinder without taking the reamer apart.

HB 200 Ampere Constant Potential Charger

Hobart Bros. Co., Troy, Ohio.

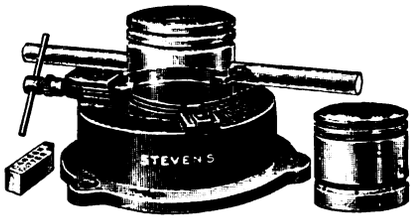


Price $365.75.

With this outfit practically any number of batteries can be charged providing the full load does not exceed the ampere capacity of the machine. The battery absorbs a large amount of current when it is nearly empty, providing the direct current is constantly maintained at 7½ volts. Most of the batteries charged under the constant potential method can take most of their charge in three hours time. The batteries regulate themselves as to the amount of current taken in under this system. The outfit consists of a ball-bearing, 5-hp. motor built in single unit construction into a 7½ volt, 200 ampere, constant potential generator. The equipment includes bus bars, terminals for leads and instruments, switchboard, and 12 ft. of connecting cable.

All-in-One Auto Machine

All in One Auto Machine Co., Maywood, N. J.



A combination machine for overhauling engines. It is a combined engine stand, power stand, burning-in and running-in machine and will handle all makes of engines. One model is built especially to handle Ford, Chevrolet Superior engines, etc. The latter type have attachments to perform all the necessary operations of a general engine overhauling job such as cylinder boring, rebabbitting, babbitt boring and crankshaft grinding, etc.

Stevens Piston Oil Groove Tool

Stevens & Co.,
375 Broadway, New York City.

Price $9.50.

The tool is for chamfering an oil groove and for use as a jig in drilling oil return holes in the piston. The tool chamfers the lower edge of any groove in the piston at exactly the correct angle. The cutter is made of tool steel and has proper clearance to obtain a clean, smooth cut. The feed screw has a stop to prevent an accidental deep cut. A bar is furnished for turning the piston and when the tool is fastened to the bench the piston is inserted disassembled as illustrated. A carbon cutter replaces the chamfering cutter and removes burnt deposits from the bottom of the ring groove. One of the steel jaws is a jig to drill the oil holes.

Vie-King Self Heating Torch and Soldering Iron

The King Co., Inc.,
50 Union Square, New York City.

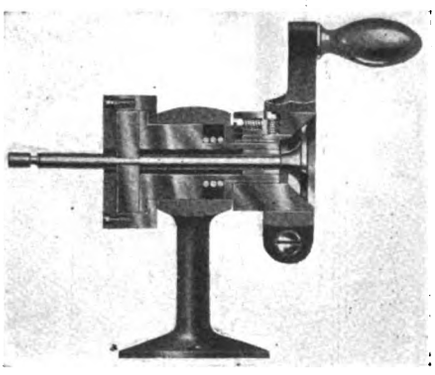
Price, $2.50.

The tool is a combination blow torch and soldering iron. It burns denatured alcohol and has no asbestos or cotton wicks. It burns in any position, either when used as a torch or iron. To use as a torch, the copper is simply unscrewed.

V-P Groove Cleaner for Pistons

Vedoe-Peterson Co.,
Norfolk Downs, Mass

Price $5.

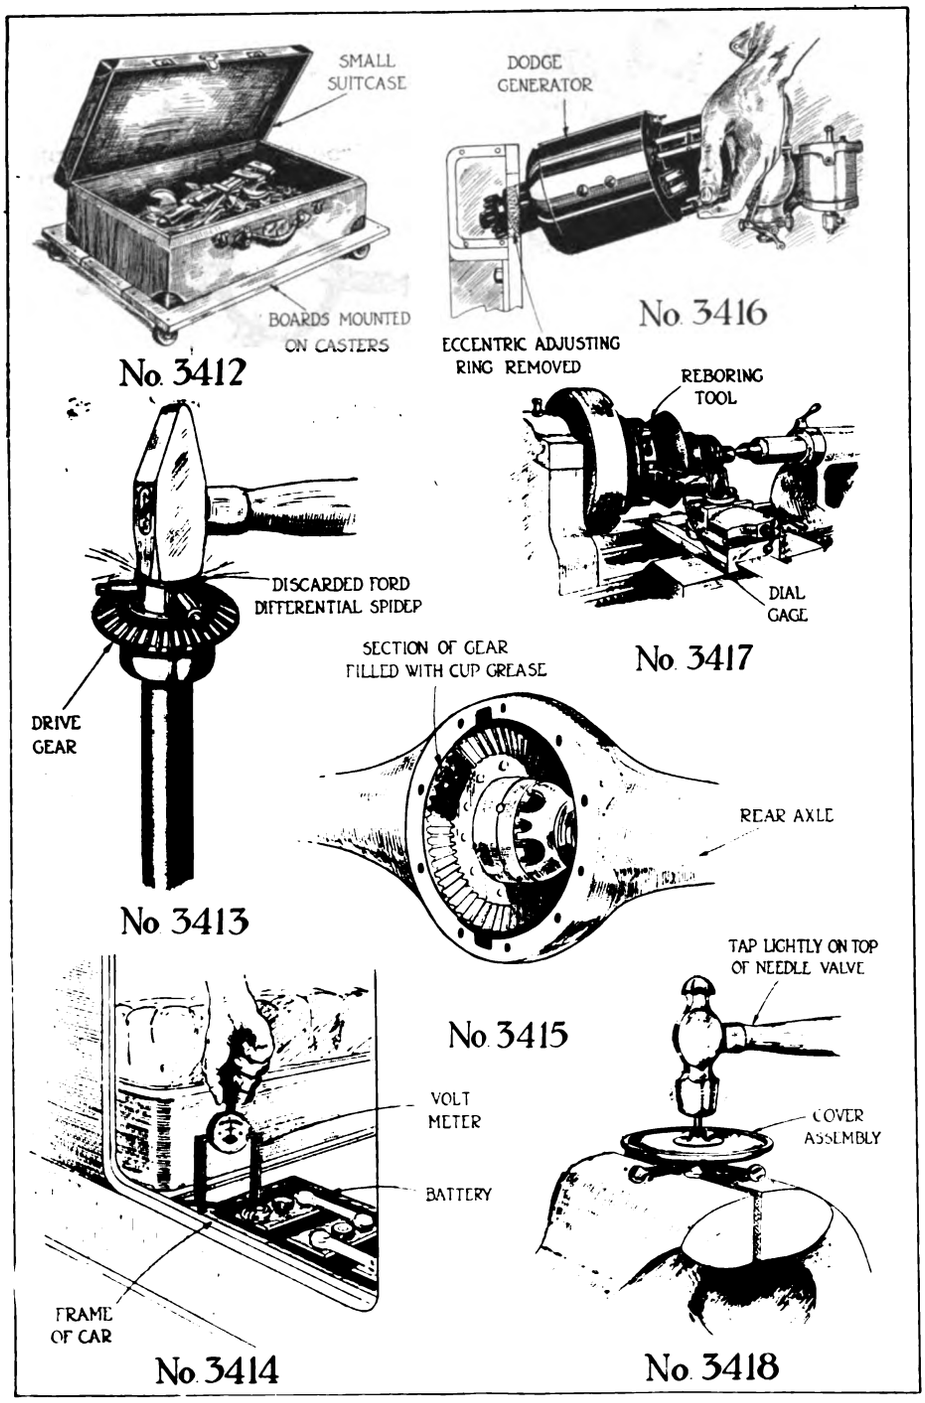


A tool for cleaning the carbon from piston ring grooves. The three cutters are adjusted to the approximate depth of the groove with adjusting screws, which are locked with small set screws. The piston is placed on an arbor in the vise and final adjustments made with a knurled screw and handle. Two or three easy turns are sufficient to remove the carbon. The cleaner will accommodate pistons from 2¾ to 4 in. in diameter. One set of three double ended cutters for 3/16 x ¼ in. piston ring grooves is furnished with each tool.

Wayne Valve Refacer

Wayne Tool Mfg. Co., Waynesboro, Pa.

Price $15.



The refacer is mounted on a stand which can be attached to the bench. The valve is held stationary and the cutter revolves with the handle, pressure being applied by the coil spring. The design is intended to eliminate chatter and tool marks. During the cutting the valve head is supported all around by the hardened and ground surface of the cutter head and the valve stem is held rigidly by the chuck. The tool includes two cutters which are regrôund free.

Repairshop Shortcuts

Where does it come from?

WE had been talking about sediment and water in the gas tank and kindred subjects such as the possibility of fire from straining gasoline through a chamois. One debater was of the opinion that if gasoline were carefully strained there would be no possibility of anything getting into the tank. Overwhelming evidence was brought out to show that water will condense from the atmosphere in the tank in cool weather, run down the sides of the tank, and finally cause trouble. Other evidence showed that gasoline will attack certain metals chemically. Galvanizing and copper are especially susceptible to this attack, which probably comes from the small quantity of sulphuric acid which is used to wash the gasoline in the refining. Tin is nearly immune from attack. These chemical actions cause powdery deposits which finally cause trouble at the needle valve. What are your observations on this?

No. 3412—A Portable Tool Chest.—A tool chest or suitcase which is used for a tool chest is fastened to a small wooden platform which is equipped with castors so that the whole equipment can be easily moved about.—Linn Jones, Athol, Mass.

No. 3413 — Driving a Ford Drive Gear.—When driving a Ford differential drive gear onto the shaft a discarded spider is placed against the gear to protect it from possible injury from the hammer.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3414—Locating a Poor Starting Circuit Connection.—A poor ground or connection in the starting circuit is located by placing a voltmeter across from the ungrounded pole of the battery to the front and then from one pole of the battery to the other. There should be no difference in readings nor should the reading change when the starter pedal is depressed.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3415—Adjusting Pinion Gears.—When the gears are hard to see, a section of the ring gear is filled with cup grease and revolved to give an imprint of the pinion for position.—H. D. Booth, Cortland, N. Y.

No. 3416—Removing Dodge Generator.—The generator of a Dodge is removed without taking off the carbureter by taking out the eccentric adjustment ring before removing the generator.—Frank L. Markel, Hillsboro, Ill.

No. 3417—Checking a Reboring Tool.—The performance of a reboring tool is improved by placing the head on the centers of a lathe and checking each of the cutters with a dial indicator held in the tool post. Slight variations can be corrected by loosening the screws and tapping the cutters.—A. N. Bostwick, Bostwick & Thompson, Minden City, Mich.

No. 3418—Resetting Zenith Carbureter Float Level.—In changing the float level on the Zenith carbureter the cover assembly is set loosely in a vise and the top of the valve stem struck lightly with a hammer to loosen the solder.—H. V. D. Sweet, Canajoharie, N. Y.

Plants Holding to Big Schedules

FORD AGAIN REACHES 5000 DAILY PROGRAM

Other Car Manufacturers Prepare Plans to Keep Factories at Capacity

DETROIT, Oct. 7—Though production has fallen off with the advancement of the season the larger factories, the "ten percenters" of the industry, are holding close to the schedules set earlier in the year. Cars in the high priced field have been less affected by the change in seasons, and unsettled business conditions, and are maintaining schedules of close to 100 per cent capacity.

Ford Motor Co., since its resumption, has made a quick return to its former high operating schedule and is once again approximating the 5000 daily mark. There is no indication of a slump in sales, according to Ford officials, and preparations are to continue at factory capacity.

Dodge Brothers is holding close to its schedule of 600 daily. Buick is operating at new high marks with the addition of the former Scripps-Booth plant, and established a mark exceeding 700 in the latter part of the month. Production will continue at approximately this mark in October. Studebaker is continuing to operate at capacity approximating 450 cars.

Production at Plants

Cadillac is building approximately 100 cars. Orders signed by distributors at the recent convention are reported to warrant this output to the first of the year. Packard is approximating 2000 cars monthly in all models and has placed commitments on this basis to the first of the year. Lincoln orders are several months in advance of deliveries and work is under way for a plant addition which will permit of a large extension in manufacturing facilities. Wills Sainte Claire will build more cars in October than in any previous month and reports a volume of business approximating 30 cars daily.

Hudson-Essex production is running at the rate of about 250 cars, a large percentage of which is in its closed models. Paige-Jewett production for September approximated 3000 and operations will be continued at close to this rate in November. Hupp Motors is maintaining a schedule approximating 125. Reo is building about 250 vehicles and is aiming to increase this because of demand for its speed wagons and the popularity of its new passenger models.

Oldsmobile is approximating 125 cars and is experiencing increases in sales under the stimulus of its recent price cut. Oakland is running at about the same daily rate. Chevrolet manufacturing in the past month has been limited because of manufacturing reasons, but preparations are complete for entering upon a schedule which will be increased to about 2000 by the first of the year. Columbia Motors is running at the rate of about 60.

Liberty is building about 25; Dort, about 75 and Rickenbacker continues on its schedule of 25 which represents normal capacity of its plant. Earl is building 60 to 75 cars.

Maxwell is building about 300 and Chalmers, pending the reorganization of its financing, continues on the existing schedule of about 25. Durant is building about 125 in its Lansing plant and is lining up its material sources for early production of the Star. A start on this is expected at any time now. The principal difficulty being an ample supply of bodies.

Gray Motors is now building 80 cars and will increase this to approximately 200 by the first of the year. The company is meeting with a large demand for its product both in the United States and abroad but is compelled to restrict its dealer appointments pending an increase in its production. As in a number of cases, Gray's problem is also one of bodies, but these are expected to come through in ample quantity soon.

COTTON GINS FIND USE FOR TRACTORS

SPARTANBURG, S. C., Oct. 6—Farm tractors are playing a new role in the Piedmont section of the Carolinas just now. They are being used to drive cotton gins and bale the fleecy staple.

Prolonged drought and the coal shortage have caused the power companies to curtail, and the first patrons they eliminated were the cotton gins. Necessity is said to be the mother of invention, and accordingly the gin owners backed up tractors, slipped on driving belts and put their plants going almost to normal

Since it has been found possible to operate gins with farm tractors it is possible that in a great many instances this form of power will be substituted for electric current, as the ginner can depend upon it regardless of whether Jupiter Pluvius or the coal miners are on a strike.

N. A. C. C. GETS DRAFT OF ANTI-THEFT LAW

Proposed That Every State Adopt It to Stop Possibilities of Resale

NEW YORK, Oct. 9—The annual members' meeting of the National Automobile Chamber of Commerce held last Thursday was well attended but the fact that few of the heads of the companies were present testified to the prosperous condition of the industry at present.

The meeting listened to reports on production, fall business, transportation difficulties and participated in an interesting discussion on the stolen car situation and pirate parts. The Motor Vehicle Conference Committee placed before the manufacturers a rough draft of a universal law which, it is thought, would aid in stopping thefts. In brief this is a plan by which a bill of sale would accompany each car and the sale would be duly recorded with the secretary of state. The car thus would be placed on record and could not be re-sold unless a record were made of the transfer, as is done in a real estate transaction.

Present Plan Not Effective

Michigan has something like it, as have Indiana, Pennsylvania and Maryland. In the last three states, however, this has not stopped thefts because the stolen cars are taken into states where a record of a re-sale does not have to be made. It is felt that if this law becomes universal and in force in every state the stolen car industry would be severely hit. The Chamber was interested in the idea to the extent that it has asked for further information.

Demand for closed cars is exceptionally good, it was reported. In some of the northern states 75 per cent of the cars sold in September were closed jobs, whereas in the South it was as low as 15. On the whole, however, the average was about 35 per cent.

The used car situation, it was reported, is a more serious menace now than it was earlier in the year. Dealers seem to have lost sight of the fact that in the fall, when sales are lighter, they cannot allow the prices they do in the spring. In fact they are overtrading.

Washington Hears of Exports

WASHINGTON, Oct. 8—Ways and means of discouraging the exportation of stolen automobiles were discussed today by representatives of the automotive industry and officials of the automotive

September Output Totals 206,000

RECORD ESTABLISHED FIFTH TIME IN 1922

Ford Closing Proved Big Factor in Keeping Total Production Figures Down

NEW YORK, Oct. 9—For the fifth consecutive time this year, monthly production records have been broken, September coming through with an estimated output of cars and trucks slightly in excess of 206,000. This sets the month apart as the best September in the production history of the industry, with the previous high mark of 185,000 in 1919 surpassed by a substantial margin. Compared with a year ago, production increased 31 per cent.

The showing is all the more remarkable taken in conjunction with the temporary closing of the Ford plants midway of the month. Ford's final figures are not expected to be more than 90,000, or 35 per cent less than August.

As was expected there was a falling off from the August total, due not so much to a seasonal decline in sales, although that element entered somewhat, as to the halt in Ford production and the fact that September, in addition to being a short month, was marked by a holiday. All of these factors were looked upon to bring the total down from the 272,000 level established in August.

Selling Efforts Shifted

The policy of manufacturers in shifting selling efforts from a section of the country where there appears to be a decline to a center where the demand holds strong is having the effect of keeping up sales in surprising volume. There is no indication now that the larger manufacturers are curtailing their schedules. In some instances they are opening the month on programs exceeding those of September.

The industry, however, is beginning to feel more acutely the results of the recent rail strike and is experiencing greater difficulty in getting through steel shipments from producing centers. Unless this situation improves materially it will have an adverse effect on automotive production for October and subsequent months of the year. This will prove of far greater detriment to sustained output than would any decline of sales that might come between now and the closing of the year.

Regardless of what may happen in the last quarter, however, 1922 will see a production of more than 2,000,000 cars and trucks. For the first nine months of the year a total of 1,873,000 has been reached.

Truck business continues steady improvement, a larger market developing for the heavy duty vehicles.

Parts business shows no signs of a let up, car makers continuing to order far ahead. Collections, in keeping with the general good condition in this branch of the industry, remain good.

"ERSKINE PARK," GIFT TO CITY IN INDIANA

SOUTH BEND, IND., Oct. 9—A. R. Erskine, president of the Studebaker Corp., and Mrs. Erskine have presented to the city 120 acres to be used as a park. The property is valued at $240,000 and is almost opposite the Erskine home on Miami road. The acreage is sufficient to permit of a golf course, ball park, picnic grounds and a general park for the public.

At a special meeting of the city council, called by the mayor and held during a dinner given by that official at which the gift was announced, it was decided to call this public playground Erskine Park.

OPERATIONS RESUMED AFTER BRIEF CLOSING

CHICAGO, Oct. 6—Two automobile factories in the territory surrounding Chicago have been shut down for short periods recently. The R. & V. Knight plant at Moline, Ill., was closed because the acuteness of the railroad shopmen's strike interfered with obtaining materials. It has now resumed operation. The Mitchell plant at Racine, Wis., closed for inventory and cleaning up some factory details, but resumed this week.

The Ford Motor Co.'s Chicago branch has returned to its normal schedule of assembling 250 cars a day. The Diamond T truck factory is operating on a fair schedule, finding an increasing demand for trucks in Chicago and other large cities, but very little demand from the small towns and farms. This company this week inaugurated a policy of giving every truck produced a 30 mile test under full load before permitting it to leave the factory.

Black & Decker Dividend

BALTIMORE, Oct. 9—A dividend of 2 per cent on preferred stock has been declared by the Black & Decker Manufacturing Co. for the third quarter of 1922. This makes a total of four dividends on preferred this year, totaling 8 per cent with the likelihood of an additional dividend to be paid at the end of the year.

RAILWAY ASSOCIATION WELCOMES MOTOR BUS

Says Industry Has Developed Vehicle of Great Service to Electric Lines

CHICAGO, Oct. 9—The motor bus, once considered a dangerous competitor by the electric railways, has been taken into the family circle and occupies an important place in the exhibits and deliberations of this year's convention of the American Electric Railway Association.

The report of the committee on railless transportation declares that "the automotive industry has developed a vehicle suitable for passenger transportation service," and that the bus serves an important function in feeding and supplementing the service of the electric lines. The important parts of the report are summarized as follows:

The automotive industry has developed a vehicle suitable for passenger transportation. The operating cost per passenger is higher with buses than with electric cars, but, in spite of this handicap, the bus is, in some cases, more economical for handling light traffic.

The public interest requires that electric railways should be the sole passenger transportation agency in their respective communities; this makes for the cheapest transportation for the public. It also involves the duty of studying all available transportation methods.

Development of railless transportation by electric railways, if intelligently carried out, should not adversely affect the railways financially. While a demand for a more expensive service for certain parts of the larger cities may be filled by the use of buses, their principal function is, and will be, as adjuncts to electric railway service.

Use of Buses Growing

Meanwhile the use of buses to supplement the service of the electric lines is rapidly growing and six manufacturers have installed elaborate displays of buses in connection with the association's equipment show. Republic, Selden, Fageol, Ace, White and Garford buses are exhibited. The White Company shows six different models; Republic two; Selden two and Fageol two. One of the Fageols, built for the newly announced extension service of the Chicago elevated lines, is equipped with air brakes.

Garage Building Active

PHILADELPHIA, Oct. 6—Garage construction here continues active. During the month of September, 172 garages were started at a cost of $273,345.

Digitized by Google

WILLYS MAY ASSUME DIRECT MANAGEMENT

Thought Probable He Will Take Over Duties of Charles B. Wilson, Resigned

TOLEDO, Oct. 9—The resignation of Charles B. Wilson as vice-president and general manager of the Willys-Overland Co., presumably to make way for President John N. Willys to take over those duties, was accepted by the board of directors at their meeting here.

While discontinuing his active association with the affairs of the company at a time when plans are being laid for a new fiscal year, Wilson will continue a factor in the Willys-Overland affairs, remaining a director in the Willys-Overland Co., president and director of the Willys-Morrow Co. of Elmira, N. Y., director of Willys-Overland, Inc., and president and director of the Wilson Foundry & Machine Co., Pontiac, Mich.

The following statement was obtained from Wilson:

I had insisted upon the acceptance of my resignation as vice-president and general manager of the Willys-Overland Co. for several reasons. In 1920 when I was urged by the management to assume the larger responsibility at Toledo it was with the dominating thought that I would ask to be relieved after the company had been re-established on a sound and satisfactory earning basis. I accepted, feeling that I had a great debt of gratitude to discharge to Mr. Willys personally and that the Wilson foundry had a great obligation on account of its relationship with Overland. Toledo is a fine city with wonderful possibilities, but the early return to my home in Pontiac is of extreme importance to me, as there are many things there to which my time should be devoted.

Overland has been re-established and has come through a period of gratifying earnings—$4,283,000 net for June, July and August—thanks to a good organization and a product that is eminently satisfactory. My deep interest remains with Willys-Overland. There is no reason why the company should not continue a dominant factor in the automobile industry.

Thompson Board Chairman

This is not the first time that Wilson has stepped into a breach in order to assist Willys. During the war Wilson left the Wilson Foundry & Machine Co. in order to take over the management of the Curtiss Aeroplane & Motor Corp. of Buffalo.

At the meeting at which the resignation was accepted, H. L. Thompson was elected chairman of the board and chairman of the executive committee.

Chalmers Joins Joyce

DETROIT, Oct. 7—Hugh Chalmers has identified himself with Frank H. Joyce in the formation of the Joyce Manufacturing Co. which will begin operations in November as a body paint and trim company and manufacturer of tops. Chalmers is to be chairman of the board of directors.

BIG BUSINESS DONE BY G. M. ACCEPTANCE

NEW YORK, Oct. 9—Since its inception in 1919 the General Motors Acceptance Corp. has financed under its retail plan more than 200,000 motor vehicles, reports President C. C. Cooper. Under the corporation's wholesale plan more than 140,000 have been financed.

The retail value, under both plans, totals more than $400,000,000. During its existence the corporation has negotiated more than $290,000,000 of its obligations with banking institutions throughout the United States.

OVERLAND HAS BEST QUARTER THIS YEAR

TOLEDO, Oct. 9—The greatest quarter of this year or last and close to the banner quarter of 1920 when 37,400 cars were produced is reported by the Willys-Overland Co. for July, August and September in which period the production exceeded 37,000 vehicles. Total current assets of $28,791,096 and total current liabilities of $26,843,347 show in the balance sheet, which is as follows:

Locomobile Schedule

BRIDGEPORT, CONN., Oct. 7—The Locomobile Co. of America has filed a schedule of assets and liabilities in bankruptcy court here. Assets are estimated at $3,129,200 and liabilities at $5,908,161. This is the beginning of final steps in the adjudication of the affairs of the company.

LAST MONTH BIGGEST IN OAKLAND OUTPUT

G. M. Truck Sees Steady Increase—Fisher Body at Work Building for Ford

PONTIAC, MICH., Oct. 6—September was the biggest month of the year in production and sales for the Oakland Motor Car Co., according to W. R. Tracey, assistant sales manager, who says that during the month the plant surpassed the mark of 150 cars daily, set as a maximum.

Prospects for October are that the sales and production will be greater than last month, with the two new closed models contributing largely. The Oakland sedan and five passenger coupé put on display in New York last week have brought an unexpectedly large response, Tracey says, and they will be rushed into production which will start about Oct. 15. Both the sport model and the two passenger coupés are over sold at present and demand is heavy for phaeton jobs.

General Motors Truck Co. foresees a steady demand with a gradual increase of business, says W. L. Day, general manager. With a total output for October scheduled to equal that of September, there is no likelihood of a shutdown.

Establish Engine Reserve

Fisher Body Co. expects to get into production of Chevrolet open bodies in quantity at the local plant, formerly Beaudette's, within a week, says manager F. E. Mills. The resumption of work on Ford bodies took place during the past week and a steady run through the winter is anticipated.

Wilson Foundry & Machine Co., making engines for Willys-Overland, has reduced its force somewhat and has placed material orders to maintain a steady run during the winter with about 2,000 employees. This will carry up to Feb. 15, says manager D. R. Wilson. The plant is establishing a reserve of Knight engines, which it has not been able to do since moving to Pontiac a year ago.

ELECTRIC VEHICLES SHOWN IN CHICAGO

CHICAGO, Oct. 6—The second annual Chicago show of electric vehicles was held in the down town show rooms of the Commonwealth Edison Co. Five makes of trucks and three makes of passenger cars were exhibited. Accessories and equipment also were displayed.

Considerable interest was shown in the electric trucks for which a wide market is said to be developing in this and other large cities. A representative of one make of truck manufactured in Chicago said that some large firms are operating fleets of as many as 200 electric trucks and buying more regularly. Among the large customers are laundries, bakeries, ice cream manufacturers and express companies.

KELLY-SPRINGFIELD CHANGES TIRE LISTS

Reductions in Price Average 20 Per Cent on Fabrics and 10 on Cords

NEW YORK, Oct. 9—Kelly-Springfield Tire Co. announces a new net price list effective immediately, which shows average reductions of about 20 per cent on fabrics and 10 per cent on cords. In addition, the excise tax is included in the new list, whereas in the old one this tax was extra. The list that was superseded to-day was put into effect Dec. 1, 1921.

Making the change in prices brings the Kelly-Springfield company's list to the same level as the other big companies which reduced in August. The company feels that the prices now quoted are the lowest that the public can expect and that they have been reached by economies in distribution and overhead instead of taking the reductions out of the quality of the tire.

The 30 x 3½ size cord, K.S. or B.B., formerly quoted at $18.75, is now $14.65, and the same size in the fabric, K.S., previously listed at $14.90, is $11.90.

The 32 x 3½ cord, K.S. or B.B., was $25.90, and is now $23.00; the fabric K.S., in this size, formerly quoted at $21, is now listed at $16.80.

The 34 x 4½ cord, K.S. or B.B., is now $39.50, as against $44.30 under the old lists.

The 35 x 5 cord, K.S. or B.B., is $49.25; the old price was $54.40.

Similar reductions are made with the remaining sizes.

ELGIN CUTS PRICES ON ALL SIX MODELS

ARGO, ILL., Oct. 5—The Elgin Motor Car Co. announces reductions on all Elgin six models, Kl-1922 series. The new list is as follows:

	Old Price	New Price
5-pass. Phaeton.....	$1,295	$1,125
Standard Scout.....	1,345	1,125
Special Sport.....	1,425	1,165
Sedan	1,695	1,645

The peak list price of the standard phaeton was $1,785, the new price being a reduction of $660 from that figure. The peak price of the standard scout was $1,895, the new price representing a reduction of $770. The highest price yet quoted for the sedan was $2,795, the new price being a reduction of $1,150.

The special sport model has been produced only since April 1, 1922.

To Sell Premier Assets

INDIANAPOLIS, Oct. 7—Assets of Premier Motor Corp. will be offered at private sale Nov. 14 or at public auction at the Courthouse here at any date to be announced thereafter, according to a decree issued here by Judge Linn D. Hay in Superior Court. As a result of a friendly receivership suit brought in June, the Fletcher Savings and Trust Co. was appointed receiver July 1.

At the time of the suit and the appointment of the receiver there was announced to the creditors a plan for reorganization that had been drawn up by a committee. It was one purpose of this plan to have the assets of the concern offered at a judicial sale to clear the property title preparatory to reorganization and operation on a new basis.

ROTARY CLUB GIVES BUSES TO SCHOOLS

BIRMINGHAM, ALA., Oct. 10—The Rotary Club of Aberdeen, Miss., has started a movement in that section that it is believed will have a widespread effect on the school systems using motor transport systems.

This club has purchased two large school buses and donated them to the schools of Aberdeen and Monroe County, Miss. They will be used in transporting the children to and from school. This is considered as only a starter, as there are 4900 school children in the Aberdeen school district alone.

Hart-Parr Sales Force Meets

CHARLES CITY, IOWA, Oct. 7—The supervisional sales force of the Hart-Parr Co., tractor manufacturer, from all parts of the United States and Canada, has just completed its fall sales conference at the factory here. Plans were made for an extensive sales campaign. It was stated that the extensive sales and advertising campaign started last June had been successful, and that on Oct. 1 the factory was six months behind with deliveries. A number of improvements are being made at the factory.

SHOW GIVES CLOSED CARS SALES IMPETUS

Good Prospect Lists Obtained at Ten Days' Exhibit in Cleveland

CLEVELAND, Oct. 7—The closed car show which was held in the Municipal Auditorium under the auspices of the Cleveland Manufacturers' and Dealers' Association, brought results that could not have been obtained through individual effort, says Herbert Buckman, secretary of the association and general manager of the show.

Most of the sales made during the ten days were of closed models. The patronage was not limited to any particular line, the larger and more expensive makes going as well as the smaller and less expensive ones.

It is estimated that 100,000 persons visited the exhibits, the advertising of the cars thus obtained being of immense value to the dealers.

Another factor that helped make the show a success from the dealers' standpoint was the obtaining of good prospect lists composed of persons, 90 per cent of whom the dealer had never heard of.

The show has given the dealers more prospects for closed cars at the opening of the season than they have ever had.

Receiver for Erie Truck

ERIE, PA., Oct. 8—On complaint filed by an Erie bank and other creditors, W. J. Stern has been appointed temporary receiver for the Erie Motor Truck Co. The indebtedness is placed at $34,000. It is said that an effort will be made to liquidate.

Show That Exhibited Only Closed Cars

Under the direction of Herbert Buckman, local secretary, Cleveland dealers opened their season with an exhibit that aroused such interest as to insure the trade of that city a busy time throughout the winter. The show was notable in impressing upon the dealers that ninety per cent of the prospects for new cars were persons who had never been considered

COST OF RUNNING CAR CUT IN SOUTH AFRICA

Tire Prices Lowered Although Gasoline Still Remains at High Figure

JOHANNESBURG, Sept. 6 (by mail)—Running costs have been considerably reduced lately. The tire companies have brought prices down to pre-war level, and further cuts are imminent. A tire size 30 x 3½ can be bought for about $17, and many of the well-known makes may come down still more. Gasoline still remains at a high figure, however, the retail price being about a dollar a gallon. Motor traders think that it is time the companies reduced their prices, and they say that the fuel should not cost more than 75 cents a gallon. The S. A. Motor Traders Association are keen to bring down running costs as they consider this the best way to create new motorists.

No Saturation Point

Lately there has been a good deal of talk about the "saturation point" and it is generally agreed that we are nowhere near it, and that we have no cause to doubt that many more cars will be bought by people who are not at present motorists. If motorcycles are taken into consideration the city of Johannesburg, with a population of about 150,000 whites, has about ten thousand motor vehicles actually in use, and this number is fast increasing.

It is fairly certain that the number of cars will now increase faster than motorcycles, as many motorists are drawn from the ranks of the motorcyclists. In this country the motorcycle holds a very similar position to the Ford in America—because of its low upkeep costs. It is possible that the proportion of motor vehicles in use in Johannesburg may be brought to about one in twelve within the next year or so. At present about a hundred cars a month are needed for replacements alone.

Farmers Interest Active

On a smaller scale the position in Cape Town, Durban, Pretoria, Port Elizabeth and East London is the same. In the country districts the farmers are showing a desire to buy new cars, and those who are not motorists will give up their Cape Carts soon. The South African farmer is sold on the question of motor transport, and it is only a matter of the ready cash now. Motor trucks are selling well throughout the country, although the bad condition of the roads is retarding development in this direction.

Bus lines have been started in all the larger towns, and a number of the smaller ones, and some really good vehicles are being put on the road. Up to the present the American manufacturers have supplied nearly all the buses in use. It is probable that bus lines will be started in Johannesburg to compete with the municipal electric railway. Two small companies now operate eight buses in one district and are making the Johannesburg Tramway Department think a little.

The residents in the Southern suburbs now have the best street car service in S. A., as an endeavor is being made to kill the buses by running a large number of cars.

M. EDWARD.

MODEL ROAD EXHIBIT FOR NEW YORK SHOW

NEW YORK, Oct. 9—In the cause of good roads the United States Government will make a display in the New York Automobile Show in January. This will be an art exhibit in place of last year's exhibit of different styles of roads.

There will be a landscape background, printed most artistically, while the exhibit itself will consist of miniature models of trucks and other motor transportation, road building machinery, etc. There will be a model road laid and the whole exhibit will occupy a space 21 x 17 feet. The Government may have a motion picture display of road development.

N. A. C. C. GETS DRAFT OF ANTI-THEFT LAW

(*Continued from page* 36)

division of the Department of Commerce, with treasury officials in charge of customs.

Hundreds of thousands of dollars annually are lost to automobile owners by virtue of the fact that well organized "gangs" annually export stolen automobiles, with a large margin of safety insofar as their being caught by State or federal authorities. The stolen automobiles that are exported go largely to Cuba, Mexico and Canada.

Under the plan placed before treasury officials this traffic in stolen automobiles that are exported can be largely minimized. Briefly the plan provides for a registration of all automobiles shipped out of the country. This would be accomplished by the filling out of a blank by the exporter, showing the last owner of the automobile (if it is a used car), where registered last, the engine and chassis number and the place of destination.

Wilson Tractor Absorbed

CHICAGO, Oct. 9—The Wilson Tractor Manufacturing Co., Ottumwa, Iowa, has been absorbed in its entirety by the Austin-Western Road Machinery Co. of Chicago. The plant at Ottumwa will continue without change in the personnel, though officials at Chicago will appoint one in charge of the factory.

TRACTOR PROFITABLE, INVESTIGATION SHOWS

Eighty-Six Users in South So Report to Question Submitted by Government

WASHINGTON, Oct. 5—Is the tractor more serviceable, the year around, than horse-drawn power on the farm? This question, more or less a mooted one, has been made the subject of a study by the Department of Agriculture, who to-day announced their findings, based on a survey of southern farms. In announcing the results the department makes it clear that the survey covers conditions in the South and is not to be construed as applicable to the entire farming industry of the United States.

Eighty-six per cent of the farm owners interviewed stated that their tractors were proving profitable, in comparison to horse-drawn equipment. Ninety-six per cent of them declared that they intended to use them the following season, as did also 52 per cent of those who did not believe they were profitable.

The canvass, which was made in the spring of 1921, included 684 tractor owners in Alabama, Georgia, North and South Carolina and Tennessee, all of whom had bought their tractors new between March, 1918, and September, 1920.

Farmers' Bulletin Issued

In order that farmers may take advantage of the survey, the department has issued a Farmers' Bulletin No. 1278 entitled Tractors on Southern Farms, showing in detail the department's findings. The experience of present owners is summarized with reference to the advantages and disadvantages in their use; the sizes now used on farms of varying acreage and the sizes they believe would be the most suitable for their condition; estimates of the probable life of their tractors; cost of operation; the kind, quality and quantity of work, as well as other related information. The booklet is free on request.

Most of the tractors reported on were pulling either 2 or 3 plows. The average size farm was 684 acres. A similar census of 1920 showed the average size farm, using tractors, of about 75 acres.

$5,006,521 EARNED BY FORD OF CANADA

DETROIT, Oct. 7—The annual statement of the Ford Motor Co., Ltd., of Canada shows net earnings of $5,006,521 in the fiscal year ended July 31, equal to 7½ per cent on the $7,000,000 stock outstanding. Cash on hand July 31 was $6,147,715; investments totaled $3,971,184; plant inventory, $4,560,908; goods inventory, $9,806,276. During the year dividends totaling $2,100,000 were paid.

The company produced 45,000 cars and 1192 tractors as compared with 46,832 cars and 3063 tractors the preceding year.

40,000 DURANTS MADE IN YEAR ENDED OCT. 1

Capacity Production at All Plants Assured for Next Fifteen Months

NEW YORK, Oct 9—Formal announcement is made by the Durant Motors that capacity production for the next 15 months is assured for all Durant plants, the production schedule calling for more than 300,000 cars.

Most of the production will be Stars, Carroll Downes, president of the Star Motors, Inc., stating that orders with deposits for 231,000 Stars for delivery within 15 months have been accepted. It is stated that orders for twice this number have been received.

As for the Durant, the parent organization claims that approximately 40,000 Durants, with a wholesale value of $36,500,000, were built and marketed during the year of operation ending Oct. 1. Six of the Durant plants are now in operation and the one at Elizabeth will be in production this month.

In a notice to stockholders Durant Motors states that it "enters its second year of production with a substantial cash surplus, an exceptionally small plant investment for the volume of business contracted, and an unusually good prospect for continued profit making."

FACTORIES PRODUCE MORE CLOSED MODELS

DETROIT, Oct. 6—Rickenbacker Motor Car Co. production in September will approximate 75 per cent closed cars, according to a factory statement. Indications are that October production will run 10 per cent higher in closed vehicles.

DETROIT, Oct. 6—Dodge Brothers will devote approximately 35 per cent of its production in the latter months of this year to closed car production. This compares with a closed car proportion last year of 13 per cent.

SYRACUSE, N. Y., Oct. 2—"Shipments of Franklin closed cars are now running 40 per cent ahead of open," says H. H. Franklin, president of the H. H. Franklin Manufacturing Co., "and on some closed types we are sold into December. Fifty-three per cent of our production for the year ending Sept. 1 was closed cars—the sedan taking the lead."

25 CARS, 150 TRUCKS WILL BE RE-IMPORTED

WASHINGTON, Oct. 5—As a result of a decision of the War Department the 2600 automobiles and trucks, used by the forces in Germany and later sold there, will not be re-imported to the United States, it was announced to-day.

This decision will settle definitely the differences between the War Department and the Department of Agriculture over the possession of the vehicles, formerly promised the Agricutural Department for use by the State Highway Commissions in connection with the Bureau of Public roads highway building program.

It was announced, however, that 150 trucks and 23 cars, unsold, would be turned over to the Department of Agriculture. Also the department will receive 1,000,000 pounds of motor vehicle replacement parts, 2,000,000 pounds of shop and machine tools, 7 tractors, 4 concrete mixers and 4 steam rollers—all of this equipment to be allocated to the State highway commissions through the Bureau of Public Roads.

MILWAUKEE DEALERS SEE FILMS OF A.E.A.

MILWAUKEE, Oct. 5—More than 300 automotive dealers from southern Wisconsin gathered at the Auditorium here to see the "Ask 'Em to Buy" and "Shop Profits" films of the Automotive Equipment Association and to hear the talks accompanying the showing of them. The meeting was actively promoted by Sam Fulton of the Fulton company, F. H. Suter of Shadbolt & Boyd Iron Co. and H. P. Mueller of Phillip Gross Hardware Co.

Suter welcomed the dealers on behalf of the jobbing members and Fulton made brief reference to the origin of the merchandising campaign.

B. W. Ruark, field secretary, presented the A. E. A. story as consisting of two phases, first, the turnover on merchandise, and second, the turnover on service. The meeting altogether was an enthusiastic rally which testifies to the growing interest of the merchandising work.

MICHIGAN PLANNING ROAD TOUR IN 1923

Pikes Association Lays Plans—Gilbreath Chosen President at Annual Meeting

DETROIT, Oct. 6—Michigan Pikes Association will hold its 1923 tour over a route having its eastern terminus at Ottawa, its northern point at Sault Ste. Marie, and includes on its Ontario leg London, Hamilton, Toronto, Peterboro, Prescott, Pembroke, North Bay, Sudbury, Blind River and Thessalen. In Michigan the cities touched will be Lansing, Ionia, Cadillac, Traverse City, Petoskey, Mackinaw City and St. Ignace.

In the trip the association will cover 1600 miles in a period of fourteen to sixteen days. The tour will be in July.

Officers elected at the annual meeting were Capt. W. S. Gilbreath, president; Willard K. Bush, secretary; Fred E. Shearer, treasurer, and Herman Lunden, John X. Ryan and G. T. Murphy, vice-presidents. W. D. Edenburn and D. C. Richardson were elected tour-manager and assistant tour-manager. John Ryan was named sergeant-at-arms, and William B. Mitchell and Alex L. Scott, pacemakers.

Directors for the ensuing year are W. S. Gilbreath, William E. Metzger, Willard K. Bush, D. C. Richardson, Horatio S. Earle, Harry H. Jackson, Fred E. Shearer, Fred S. Case and Elmer W. West. H. H. Jackson, the new director, is police inspector in charge of the traffic division of the Detroit department.

KETTERING PICTURES HIS IDEA OF WHAT AUTOMOBILE WILL BE FIVE YEARS HENCE

DAYTON, OHIO, Oct. 9—C. F. Kettering, president of the General Motors Research Corp., discussed before members of the Dayton section of the Society of Automotive Engineers at their meeting here the automobile as he sees it five years from now. He declared that it would be no more than one ton in weight, with better spring suspension, better adapted to fuel of varying qualities and adapted to changing traffic conditions.

"The car of the future," he said, "will bear tools plainly marked for their intended use. It will have an improved top that may or may not be lowered. It can be given a finish as good as new in an hour. It will have springs that will make it ride as well as the two ton car of to-day and it will handle even poorer fuel than is being sold now. This is all coming in the next five years."

The psychological element must enter largely into its construction, he added, as the public will not accept changes when they are in too marked departure from what is the custom.

Comparing an automobile of 14 years ago and the present model, he showed that they had the same fundamental parts and that the only improvement was through refinement of parts. This refinement will be carried much farther in the next five years, he predicted.

The question of lubrication, he said, is one of the most important of the unsolved mysteries of the engineering profession and one about which the least is known.

With the public demanding pre-war prices, he added, and with labor and materials still far above that scale, the economic problem of the present situation rests upon the engineer. Better training along economic lines must be given in engineering schools in order to meet the exigencies of the situation. He analyzed labor and material costs together with overhead to prove that the slice must come in a reduction of overhead. He declared that only through the engineer's understanding of the economic side of production can progress be made.

Kettering predicted the passing of the small town in a very few years and the rapid growth of the small city, with the great growth of improved highways throughout the country.

MAKERS DRAW SPACE FOR NATIONAL SHOWS

Seventy-Six Members of N. A. C. C. Get Assignments—Seven Others to Exhibit

NEW YORK, Oct. 9—Seventy six members of the National Automobile Chamber of Commerce were assigned space in the New York and Chicago national shows at the meeting of the manufacturers last Thursday. In addition seven other car concerns not members of the chamber were given the remaining spaces. These non-members consisted of Courier, Stanley, Noma, Hatfield, Rotary Six, Crawford and Climber.

As the space has been awarded, there are 80 car makers in each of the shows. Detroit electric, Sayers and Climber will not show at New York, while Noma, Hatfield and Rotary Six will not be at Chicago. For the first time no foreign cars are booked for display.

The New York show will as usual be held in Grand Central Palace Jan. 6 to 13 while the Chicago show Jan. 27 to Feb. 3, will be held in the Coliseum and First Regiment Armory.

The following assignments of space were made:

New York Space	Car Name	Chicago Space
A-19	Buick	C-5
A-15	Studebaker	B-2
A-11	Dodge	D-1
A-20	Chevrolet	A-6
A-14	Willys-Overland	C-3
A-16	Cadillac	D-5
A-12	Nash	C-6
A-17	Hudson	D-3
A-13	Maxwell	D-2
A-26	Hupp	C-1
A-4	Packard	A-2
A-5	Durant	A-4
A-3	Paige	B-6
A-27	Olds	D-6
A-31	Franklin	B-4
A-22	Essex	D-4
A-30	Oakland	A-1
A-23	Reo	B-5
A-21	Chandler	C-2
A-32	Lincoln	B-3
A-7	Nordyke & Marmon	F-4
A-25	Haynes	C-4
A-10	Peerless	A-3
A-8	Jordan	K-1
A-6	Wills-Sainte Clair	E-2
A-2	Dort	A-5
A-24	Cleveland	F-3
A-9	Pierce-Arrow	F-1
A-1	Velie	F-5
A-29	Chalmers	E-4
A-18	Lexington	G-1
A-28	Gardner	H-1
B-27	Moon	B-1
B-26	Earl	G-2
B-28	Cole	H-2
B-29	Stephens	E-1
B-12	Auburn	J-1
B-25	Columbia	O-2
B-24	Stearns	P-1
B-8	Mitchell	O-1
B-30	Liberty	E-3
B-23	Kissel	F-2
B-2	Lafayette	B-1-Y
B-16	Westcott	Q-1
B-17	R & V	M-1
B-1	Locomobile	B-2-Y
B-3	Rickenbacker	B-8-Y
B-4	Stutz	M-2-Y
B-18	Case	B-2-Y
B-15	Apperson	K-4-Y
B-31	Elkhart	Q-2-Y
B-11	Elgin	N-1
B-14	Templar	B-3-Y
B-7	Davis	Q-3
B-10	National	A-1-Y
B-6	King	A-3-Y
B-9	Barley	B-4-Y

D-1 to 15	Star	D-1
C-14	Courier	E-3-Y
C-13	Stanley	E-2-Y
C-7	Noma	.....
C-22	Hatfield	.....
C-8	Rotary Six	.....
C-11	Crawford	C-5-Y
....	Climber	Q-4

Note: In Chicago letter X after space means Coliseum or Annex; letter Y means Armory. In New York Show the A spaces are on first floor, B spaces on second, C on third and D on fourth.

NEW SPORT MODELS PRODUCED BY DORT

DETROIT, Oct. 9—The Dort Motor Car Co. has added two new sport models, a phaeton and a roadster on its standard chassis. Each of these new cars lists at $1,105 f.o.b. factory. Bodies are finished in maroon with aluminum stripe. The cars are trimmed in genuine leather and the top and side curtains are of khaki.

The special equipment includes nickel plated drum type head lamps, cowl light, spot light and combination stop and tail light, and front bumpers. A MotoMeter with a key locking device is also standard. The windshield is fitted with side wings and wiper.

WESTCOTT DELIVERS NEW CLOSED MODEL

SPRINGFIELD, OHIO, Oct. 6—First deliveries were made during the past week from the plant of the Westcott Motor Car Co. of a new type of closed car, the four-passenger brougham.

The week brought a doubling in production at the plant, based on unusually large orders for fall delivery. The present outlook is that October will be the best month in the point of shipments that the company has experienced.

Driveaways are increasing, brought about both by the uncertainty of freight shipments and by good weather.

PARIS OPENS SHOW; LARGEST YET HELD

Four Cylinder Engines Dominate Exhibit—Four Wheel Brakes More in Use

PARIS, FRANCE, Oct. 6 (*by cable*)—The Seventeenth Paris Automobile Show opened here yesterday in the Grand Palais. It is the largest automobile show ever held in France, there being 1050 exhibitors. There are about a half dozen American exhibitors and three British companies are represented.

The pronounced tendencies in design are a decrease in engine size, higher rotative speeds and lighter reciprocating parts. The use of aluminum is quite general. Four-cylinder engines dominate the show. The Fiat is the only 12-cylinder model shown, and there are no new 8-cylinder jobs. Some gains have been made by 6-cylinder engines, but this is confined largely to engines of 122 cu. in. or less displacement. Four wheel brakes are being used more extensively than ever before. In most cases these brakes are regular equipment, but some manufacturers offer them as an option.

Character of Engines

Poppet valve engines dominate the field, although Pannard has continued the sleeve valve engine and has dropped all poppet valve models. Peugeot is preparing to market the special two stroke cycle, semi-Diesel engine for passenger car work. Up to the present this engine has been used only in trucks and for stationary work. Bignan has an engine with a valve gear which positively opens and closes the valves. The demand for fuel economy has resulted in considerable work on high speed engines of the overhead valve type with small piston displacement. Speeds of 3000 r.p.m. are quite common.

Only a few firms have abandoned American makes of battery ignition. However, Bosch, Marelli and other battery and generator systems show increased popularity. There is considerable use of the new Scintilla generator and magneto combined in one unit.

There is an interesting display of small two seated cars. These cars carry engines not exceeding 67 cu. in. displacement. Practically all of them are 4-cylinder water-cooled jobs.

New Rolls Royce Announced

Coincident with the opening of the show came the announcement of a new Rolls Royce, 20 H.P., 6-cylinder model. The cylinder dimensions are approximately 3 x 4½ in. The chassis is not on exhibition at the show. It is stated that the engine will be an overhead valve type with camshaft in the crankcase. Engine and gearset will be of the unit type. Battery ignition will be employed. semi-elliptic springs will be used front and rear. The chassis price in London will be about $5,500 at normal exchange.

FLAT RATE SPREADS IN SAN FRANCISCO

Marmon and Buick Distributors Two Leaders in Movement—Changes in Business

SAN FRANCISCO, Oct. 7—Motor car dealers in San Francisco are adopting as rapidly as possible the flat rate system for repairs in co-operation with their factories. Butler-Veitch Co., Marmon distributor, and the Howard Automobile Co., Buick distributor, are two of the leaders in the movement to the flat rate. Nearly 300 operations are figured on their flat rate schedule.

Several business changes have been made among the dealers in this city during the past week or ten days. A retail truck department, with showrooms and repair station, has been opened by R. Jackson Jones, Western representative of the Traffic Motor Truck Co. of St. Louis. W. L. Wheeler has been named manager of the retail department.

James E. Power, tire and battery distributor and, incidentally, postmaster of San Francisco, is in the East combining business with pleasure, calling on Uncle Sam in Washington with respect to post-official business, and stopping at the Racine Rubber Co.'s offices in New York; the Cooper Battery Corp. in Cincinnati, and the Racine Tire factory, Racine, Wis. The Power Rubber Co. of this city recently was appointed distributor for the Cooper battery in this territory.

Roy C. McDowell, service manager of the Stephens Motor Co., was a San Francisco visitor late in September, making his headquarters with the W. J. Benson Co., northern California distributor of the Stephens. He is visiting every Stephens distributor in the country.

The Anderson-Smith Co., distributor of the Chevrolet, has just opened its fifth branch salesroom and service station in San Francisco.

TARIFF LAW PERMITS SEARCH FOR LIQUOR

NEW YORK, Oct. 7—Right to search without warrant and confiscate the vehicle if liquor is found is given in Part 5, Section 581 of the new tariff law, it is contended by those who have read the paragraph in question. This is in direct conflict with other laws which do not permit search and seizure of automobiles without warrant, and it is declared that this portion of the tariff law is unconstitutional; that a custom law cannot be enforced when it thus conflicts with the Volstead Act.

The tariff clause is intended to give officers of the customs or the coast guard the right to board vessels in search of liquor. It says that a duly authorized person can "at any time go on board of any vessel or vehicle and every part thereof, to examine the manifest and to inspect, search and examine the vessel or vehicle, and every part thereof, and any person, trunk, or package on board, and to this end to hail and stop such vessel or vehicle, if under way, and use all necessary force to compel compliance."

TRADE WARNED OIL SALESMAN IS FAKE

NEW YORK, Oct. 9—The Vacuum Oil Co. sounds a warning against the operations of a man calling on garage and automobile supply stores in various parts of the country offering special inducements in connection with the purchase of Gargoyle Mobiloil.

The man's plan is to state that he is a special representative from the New York office of the concern, or its advertising department, and to offer the product far below the lowest net price, and, in addition, he offers without charge a large electric sign or some other advertising scheme.

In each case a check for ten per cent advance of the amount of the purchase is demanded. This check, it is stated, is generally cashed in the town before he leaves it.

The descriptions so far furnished indicate that this fake representative is dark complexioned, weighs about 140 pounds, is rather short and probably of foreign extraction. He goes by the names of Bentz, Rentz, Berman and other aliases.

FORD IS TURNING OUT NEW FOUR-DOOR SEDAN

DETROIT, Oct. 9—The Ford Motor Co. is now in limited production of a four-door sedan which will sell at $725 f.o.b. factory. The model is more commodious than the two-door sedan and is designed to meet a particular demand that Ford dealers have been experiencing. The two-door sedan will be continued as the large production vehicle of this type.

Republic Tire Operates

YOUNGSTOWN, OHIO, Oct. 9—The tire department of the Republic Rubber Co., idle for two years, has begun production again on a part time basis. The company is in the hands of a receiver. The mechanical goods and inner tube departments here are working at capacity, while the tire department of the Canton plant is operating full time.

Receiver for Templar

CLEVELAND, OHIO, Oct. 9—The Templar Motors Co. is now being operated under a receiver appointed by Federal Judge D. C. Westenhaver on Saturday. E. L. Hausman of this city, formerly an assistant of M. F. Bramley, president of the Templar company, is the receiver under a $50,000 bond.

RADIO TO BROADCAST TALK ON CAR BUYING

N. A. D. A. Plans to Reach All Fans Through Converted Move on Oct. 12

ST. LOUIS, Oct. 7—A radio broadcast from more than 100 stations throughout the United States on the night of Oct. 12 will be used by the National Automobile Dealers Association to tell radio fans who are also motorists or prospective motorists "How to Buy an Automobile." As this is a subject that engages the attention of 2,000,000 or so persons in this country every year, it is expected that considerable popular interest will be created in the radio world that night.

This will be the first time in the history of radio that practically every broadcasting station of any importance will carry to its listeners the same message at the same time. The public will be told in this talk just what the automobile industry is doing to make the ownership and operation of a motor car more pleasant and profitable, and what the factors are that should be borne most strongly in mind in determining the purchase of a new automobile.

Particular stress is laid in the address upon the importance of buying the right kind of car from the right kind of dealer. Especial attention is called to the intimate relation between dealer and owner in the matter of the proper maintenance of a vehicle and advising the public to consider carefully the time in which the dealer has been in business, his financial strength and his reputation for honesty and fair dealing with his customers and fellow dealers.

The address, which will be given by the broadcasting stations, was prepared by W. J. Brace of Kansas City, president of the N. A. D. A. and one of the oldest and most successful automobile distributors in the United States. Copies of this address were sent to more than 100 leading dealers in 100 cities after they had obtained permission from the broadcasting station for its use.

It is estimated that several hundred thousand persons, perhaps more than a million, will be reached by this method with the message at the same time.

CANADIAN CUSTOMS DISCRIMINATION OFF

WASHINGTON, Oct. 9—Because a touring motorist is connected with the automobile industry is no reason why he should be denied the privileges granted persons not so affiliated, is the decision of the Canadian customs officials as reported to the Department of Commerce by Consul General Foster at Ottawa. Foster writes the department that the provision of the Canadian regulations that persons connected with the automobile business shall be denied the privilege of temporary free importation of automobiles has been repealed.

CHANGES IN THE TRADE

G. M. Anderson is now sales manager of the **McMillan Motor Car Co.**, Cincinnati.

Chesley C. Noland Co. of Guilford, Mo., have signed a contract to handle the Dort line in that city.

Eugene E. Shepard has been appointed sales manager for the **Western Massachusetts Cadillac Co.**, Springfield, Mass.

Clucker & Hickson have taken the Eastern distribution for Perfection silent timing gears made by the Perfection Gear Co., Chicago.

W. L. McCutcheon has been appointed retail sales manager for Chandler and Cleveland, distributed by **Herbert Bros.**, Philadelphia.

E. L. Bernard is new service manager of Willys-Overland, Inc., Toledo, succeeding **T. W. Skelding**, who has joined the retail sales force.

Harry Holden has succeeded **Roland P. Prickett** as accessory dealer in Holyoke, Mass. Prickett has opened an accessories store in Springfield.

C. S. Bash has been appointed Pittsburgh district supervisor of **Maxwell Motor Corp.**, and **A. N. Abend** has been named a factory representative there.

Nash-Newark, Inc., has taken over the business of the Nash-Newark Co., Nash dealer at Newark, N. J. W. G. Toland is head of the new company.

Gardner Motor Co. has appointed the **Gale Sales Co.**, Columbus, as central Ohio representative for the Gardner. **Gard Gale** is president of the new concern.

Wallis Baird, Galesburg, Ill., has been named distributor in Knox and Warren counties for the new Star. He also handles the Chandler and Cleveland lines, too.

William Schroeder has bought an interest in **Hailey Bros.'** garage in Springfield, Mass., and the concern has been incorporated under the name of the Oak Grove Garage.

J. H. Falk has been appointed district supervisor of the Maxwell Motor Corp. in Cleveland, succeeding **J. L. Justice**, who was transferred recently to San Francisco.

M. J. Dwyer, formerly with the Evans & Snyder Motor Sales, Wellsboro, Pa., and the Willys-Overland plant, Toledo, has joined the **S. Y. Brigham Motor Sales Co.**, Toledo.

Samuel Vance, Jr., has been appointed sales manager for both the wholesale and the retail departments of the **S. R. Blocksom Co.**, distributor of Stutz cars, Philadelphia.

Russell R. Cooper, formerly a real estate dealer, has purchased control of the Lovine-Haynes Motor Sales Co., Columbus, and will take over the sale of Haynes cars in central Ohio.

Aragona Auto Exchange of West New York, N. J., and **Thomas B. Golden** of Pottsville, Pa., have been appointed distributors for Traffic truck in their respective territories.

Kanouse Automobile Co. has been appointed Indiana distributor for the H. C. S., which for several years was handled by the Charles Stutz Sales Co., which is now the Indiana distributor for the Jordan.

White Co., manufacturer of motor trucks, will open a factory branch in Chattanooga in the near future. **Howard O. Goss**, formerly with this company at Nashville, Tenn., will have charge of the new branch.

Edward Berger, formerly of the Hampden Garage, Holyoke, Mass., has organized the Holyoke Velie Co. at the old Cabot Garage in that city, where a sales and service establishment for the Velie will be maintained.

Frederick G. Benn, former branch manager for the Willys-Overland Co., in Springfield, Mass., has been appointed manager of the wholesale division of **John S. Harrington, Inc.**, Hudson and Essex dealer, that city.

Rickenbacker-Philadelphia Co. will take over the sales representation of Winton cars in the Philadelphia territory. This move is in line with the policy of the Winton management in replacing its factory branches with dealerships.

Jirah D. Cole, recently field secretary of the Automotive Equipment Association and previously division manager of the Pyrene Manufacturing Co., has been engaged by the **General Automotive Corp.** as supervisor of merchandising.

T. E. Larsen has been appointed sales manager for both Paige and Jewett cars for the **Guy A. Willey Motor Co.**, Philadelphia. He was previously connected with the **Maxwell-Chalmers Sales Corp.** and was manager of the used car department for **Herbert Bros.**

John L. Brown, who has been associated with the Traffic Motor Truck Corp. for the past two and a half years, in the eastern wholesale territory, has been appointed retail sales manager of the **Traffic Truck Sales Co.** of Philadelphia, the local branch of the factory.

Western Automobile Co., Omaha, has changed its name to **Storz-Western Auto Supply Co.** to avoid confusion due to the similarity of names of other concerns doing business in the same territory. There has been no change in the personnel of the company.

E. L. Armstrong, until recently with the Lincoln agency in Columbus, has been appointed service manager of the **Jordan-Columbus Co.**, central Ohio distributor for the Jordan. Prior to coming to Columbus he was connected with the Cadillac factory at Detroit for 12 years.

Hustis & Hagar will handle the Hupmobile in New Rochelle, Pelham, Mamaroneck and Rye, N. Y. **Edward H. Corts**, former manager of the Hudson branch in New Rochelle and recentlyy identified with the Hupmobile company in New York, will manage the business in New Rochelle.

Lee H. Smith, formerly in charge of appointing of service stations and the sale of equipment to the regular trade in the Cleveland district for the **Briggs & Stratton Co.**, has been made assistant to H. V. Rohm, sales manager. From now on Smith will make his headquarters at the Milwaukee office.

W. W. Surrell, who has been the assistant sales manager of the **Jordan Motor Car Co.** for five years, has left the company to take charge of the wholesale department of **Peterson Motors, Inc.**, Philadelphia, and **Peterson Motors, Inc.**, Baltimore, distributor of Jordan motor cars. His headquarters will be in Philadelphia.

Lifesey Smith Hill Co., Atlanta; **Miller Motor Car Co.**, Dallas; **Colorado Motor Sales Co.**, Denver; **A. P. Sullivan & Co.**, Houston; **Robbinson Motor Co.**, Jacksonville, Fla.; **Harold Johnson**, Louisville; **Greenville Peerless Co.**, Greenville, S. C., and **Ledoux Jannings, Ltd.**, Montreal, Can., are among new distributors added since the new line of Peerless models was placed on the market.

Teetor Manufacturing Co., Indianapolis, manufacturer of piston rings, has changed its name to the **General Piston Ring Co.** Its product will be known as the General piston ring. The change is in name only, the ownership, management and business policy remaining as heretofore. Action was taken for the reason that there is another Teetor ring on the market, manufactured by the Indiana Piston Ring Co., Hagerstown, Ind., a company constituted of members of the same family but a few years longer in the field.

Dort Motor Car Co. has appointed the following new distributors: **Christenson-Davis Motor Car Co.**, San Francisco; **Charleston Rickenbacker Co.**, Charleston, W. Va.; **Chattanooga Auto Co.**, Chattanooga, Tenn.; **Logan Auto Co.**, Fresno, Cal., for the San Joaquin Valley; **Charles A. Day Motor Co.**, Mobile, Ala., for southern Alabama. Other recent additions to the Dort organization include **Perkins Sales Co.**, Utica, N. Y.; **C. R. Miller**, Jackson, Mich.; **Dort Sales & Service Co.**, Lansing, Mich.; **J. Wendell Green**, Pontiac, Mich.; **Waddles Garage**, Kalamazoo, Mich.; **Charles F. Henning**, Mount Vernon, N. Y., and **M. L. Shue**, Peterstown, W. Va.

J. G. Roberts, president of the Philadelphia Nash Motor Co., distributor of Nash cars and trucks and La Fayette cars in Philadelphia, and his associates, have purchased the minority interests of the company from **W. V. Faunce**, with Roberts in control. The company now is owned by **H. F. Stevens**, vice-president; **Clark D. Moody**, secretary and treasurer, and himself. The company is breaking ground for a new sales and office building at Broad and Thompson streets, which will give the building 75 feet on Broad Street and 160 feet on Thompson Street, running through to the next street in the rear. The building will be five stories high and devoted to offices and sales rooms.

COMMERCIAL CREDIT SEEKS CONTINENTAL

NEW YORK, Oct. 6—Stockholders of the Continental Guaranty Corp. of New York have been asked to vote favorably on the offer of the Commercial Credit Co. of Baltimore, which seeks to purchase the entire capital stock of the New York concern, or failing in this, to take over not less than two-thirds of it.

Both these corporations have been prominent in the handling of automobile credits, the New York company numbering John N. Willys and J. D. Dort among its directors. If the deal goes through the Commercial Credit Co. and its affiliations will have aggregate resources of about $55,000,000 and the combined annual volume of business will total in the neighborhood of $135,000,000. The cash capital will be $9,000,000.

The Continental Guaranty has financed sales of motor vehicles to the aggregate value of $265,000,000. Organized in 1916, of late it has branched into other fields than automobile finance.

Daniels Joins Buick

FLINT, Oct. 9—H. S. Daniels has resigned as advertising manager of the Dort Motor Car Co. to become a member of the advertising staff of the Buick Motor Co. He will do special publicity work.

ASSOCIATION ACTIVITIES

Stage Used Car Show

CINCINNATI, Oct. 9—The Bureau of Sales Managers of the Cincinnati Automobile Dealers' Association is staging its first annual used-car show, that is in reality a sale, in a tent on a local playground. The sale is backed by twenty automobile dealers, members of the association, each of whom is allowed to have not more than five cars at a time on exhibit and sale. An average of about 15 sales a day has been maintained since the opening of the show a week ago. The association members say that the purpose of the exhibit, besides being to help them move used cars before the arrival of winter, is to prove to the public what worthy merchandise in the way of used cars may be obtained when offered by a representative organization.

Cleveland To Close Sunday

CLEVELAND, Oct. 5—Commencing Oct. 8, Sunday closing will be observed by dealers affiliated with the Cleveland Automobile Manufacturers and Dealers Association, which is responsible for the policy. Twenty concerns have agreed to observe the rule and others are expected to follow the lead.

Akron's First Closed Car Show

AKRON, Oct. 7—Akron's first closed car show will be held the week of Oct. 16 at the Akron Armory, under the auspices of the Akron Motor Vehicle Association. It will also be the Rubber City's first fall automobile style exhibit, but will not conflict with the city's annual automobile show usually given each January.

Closed cars exclusively will be exhibited, over twenty Akron dealers having secured floor space for the exhibit of more than forty of the newest models of closed cars of all makes.

Dealers are staging the show to emphasize, they say, their conviction that the open car is being replaced gradually by the closed car. Sales of cars have been heavier in Akron this year than ever before in the city's history, the trend being very distinct in favor of the closed car, both new and used.

Battle Creek Joins State Body

DETROIT, Oct. 5—Battle Creek Automobile Dealers Association has voted to join the Michigan Automotive Trade Association in a body, inasmuch as only members of the latter association can participate in the winter show to be held under the auspices of the State body.

The Battle Creek association will hold a closed car exhibit in the individual show rooms of members Oct. 23 to 28. It was first planned to hold a collective show, but lack of a suitable sized building caused this to be abandoned in favor of the individual plan. President H. E. Loomis has arranged for a parade of decorated closed cars on the night of Oct. 25, at which the best decorated car will receive a prize donated by the dealer organization.

Truck Men Organize

FORT WORTH, Oct. 10—Truck owners, operators and dealers operating in the Texas oil fields want the laws as affecting the motor trucks interpreted uniformly.

Looking to that end, a temporary organization has already been effected here and another meeting set for the near future to make the organization permanent.

Under present conditions, so the truck men claim, so many varying constructions are placed on the same law that the operators are in a quandary all the time. A campaign seeking revision of conflicting or ambiguous statutes will be conducted by the organization.

Springfield To Hold Show

SPRINGFIELD, MASS., Oct. 6—At the annual meeting of the Springfield Automotive Dealers Association it was voted to have the annual show Feb. 26 to March 3, probably at a building of the Eastern States Exposition. Final decision respecting a closed car show was deferred until the question of a suitable show place could be investigated. Tentative plans call for a three-days' exhibition the last of this month. New officers of the association are: President, John S. Harrington; vice-president, J. Walter Norcross; secretary, Harry W. Stacy; treasurer, A. E. Reopell. Committee on the annual show consists of George G. Byrnes, chairman; R. M. Sauers and Charles W. Culver. It was decided to engage quarters for a permanent office of the association, with full-time secretary.

Prize for Slogan

NEW YORK CITY, Oct. 9—The Electric Motor Truck Association is offering a prize of $1,000 for advertising slogans which will describe electric truck service in city hauling. No slogan may be more than ten words and the applicability of each slogan to the electric must be shown. Prize money is to be distributed in 43 different prizes.

GERMANY INSTRUCTED BY N. A. C. C. BOOKLET

NEW YORK, Oct. 10—"If one had been more concerned about the United States and known more about its gigantic power, it is possible that things would have been different from what they are now," says Dr. R. Allmers of the Hansa-Lloyd Werke, Bremen, Germany, in his preface to the translation which he has made of "Facts and Figures of the Automobile Industry—1921," the statistical review of the year, published annually by the National Automobile Chamber of Commerce.

Dr. Allmers points out that the development of motor transportation has had a significant part in America's development and suggests that a stimulation of the industry there would help his country to economic recovery.

Gardner's Foreign Offices

ST. LOUIS, Oct. 9—Gardner Motors Co. announces the rounding out of its export organization by the following appointments: Consolidated Motors, Ltd., Winnipeg, Canada; National Auto Import Co., Mexico City, Mexico; Robertson & Malcolm, Ltd., London, Eng.; Sociedad Hispano American Gastonoyge, Madrid, Spain; Rudolph Schmidt, Copenhagen, Denmark; W. H. Carpenter, Sydney, Australia; John Burns, Ltd., Christ Church, New Zealand.

GILL BATTERY FORMS COMPANY IN OAKLAND

SAN FRANCISCO, Oct. 7—The Gill Storage Battery Co., with factory and general offices at San Bernardino, Cal., has awarded the rights to manufacture and distribute the battery in the Pacific Coast territory to a newly formed corporation, the Gill Battery Co. of California.

The new company, which is capitalized at $1,000,000, will erect a new modern factory at Oakland, Cal., the plant to be in operation probably in the early part of 1923. The original company will continue to operate from San Bernardino and handle its business in states outside of the limits outlined for the coast corporation, which include California, Oregon, Washington, Nevada, Utah, Idaho, Arizona, Hawaiian Islands and Mexico.

WANTS STATE TO RULE ALL MOTOR TRANSPORT

CHICAGO, Oct. 7—A plea for state regulations of automobile freight and passenger transportation in order to prevent encroachment upon the business of the railroads was made by John N. Glenn, manager of the Illinois Manufacturers Association, in an address recently at Aurora, Ill. He said:

So much business has been diverted from the railroads to automobiles, coupled with the inability of the public highways to meet the demands, that it is imperative that this control be assumed. Railroads, even with gasoline propelled engines, can not meet truck competition, because they pay enormous prices for original purchase and maintenance of right of ways while the commonwealths maintain the truck highways.

Illinois is spending $60,000,000 for new highways, which are being destroyed as fast as they are built by the heavy traffic.

Begin Work on Flint Motors

DETROIT, Oct. 6—The first unit of the new Flint Motor Car Co., organized by W. C. Durant is now under way and should be enclosed according to contract by July 1, 1923.
